I have known Senator GREEN intimately for more than a quarter century. I served under him while he was Governor of our State and we were both elected to Congress for the first time, on the same ticket, in 1936, he to the Senate and I to the House. I cherish the fact that he has been my friend, and I am thankful for his wide counsel.

He is a man of wealth with a heart of gold. Although endowed with this world's goods he has always taken a keen interest in those less fortunate than himself.

He was one of the first to sponsor cafeterias for workers in plants, and one of the originators of a banking system that made loans to needy people.

He always has taken a great interest in education and made possible the education of a number of youngsters who, without him, never would have been able to attend college.

He has devoted himself to the care of the unfortunates and during his service as Governor of our State he rehabilitated and expanded the facilities at our State institutions. The new and up-to-date buildings that he sponsored there is a monument to his humanitarianism.

This is only a minor part of what could be said of this great man.

Is it any wonder, then, that the leaders and Members of the Senate, and, particularly the members of the Senate Foreign Relations Committee, should have tried to prevail on Senator GREEN to continue as chairman, and paid such high tribute to him when he announced that he would retire? They know of his devotion to duty and his unrelenting efforts in the interest of our country.

In his retirement I wish him health and happiness. He can well rejoice at his many accomplishments for the benefit of humanity and I am sure he will take with him many fine memories that will help him in his retirement.

We of Rhode Island salute Senator GREEN. We love him.

Huntsville Says Farewell to Big M

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. HUDDLESTON. Mr. Speaker, on the occasion of his retirement as the head of the Army Ordnance Missile Command at Huntsville, Ala., and his retirement from the Army, Alabama and the city of Huntsville have expressed their sentiments about Gen. John B. Medaris by a citywide celebration in his honor. The following account from the Birmingham News of January 16, 1960, tells of this tribute to General Medaris, and I am pleased to insert it for the benefit of my colleagues.

COUNTDOWN ZERO—HUNTSVILLE SAYS FAREWELL TO BIG M

(By Dan Roper)

HUNTSVILLE, ALA., January 16.—This spreading young giant of a town shined its shoes, came to attention and saluted the man who put the rocket in "Rocket City" Friday.

"Big M Day" exploded here with the thrill of a missile piercing the sky.

What's the "Big M"? It's Maj. Gen. John B. Medaris.

It was the city's official sendoff to the two-star general who put white-coned missiles in its cotton fields and sent its name orbiting around the earth.

The head of the Army Ordnance Missile Command retires January 31 after 26 years in uniform.

Its a uniform the lean, steel-grayed general wore with style Friday afternoon as he stepped from the lead car with his Mrs. to review the parade in his honor.

From a bunting-bedecked stand on the west side of Madison County's Courthouse Square, Medaris saluted, waved and smiled, almost continuously, as 11 bands, 35 cars, marching units and floats passed.

The whole Tennessee River Valley was there—Scottsboro, Decatur, Athens, Florence, Sheffield, and the rest—with high school bands, civic club cars and citizens lining the parade route.

The Army's powerful family of missiles paraded past the man who helped engineer them and this country's first space satellite.

There were bare-shouldered high-school queens, getting a gloved-hand wave from the mustached general.

School patrols' snake-lined formations were met with a smart salute.

And there was a big grin when Emma Sansom High School's champion band,

formed an "M" and played, "After You're Gone," and a solemn, straight ahead stare with "The Battle Hymn of the Republic."

Along the parade route, flags snapped in a strong wind under 45-degree gray skies.

Red, white, and blue posters on every lamp post wished the general "Lots of Luck." Parade units carried similar greetings.

Medaris and Mrs. Medaris stood at one end of the reviewing stand. At the other stood a hatless and coatless Dr. Wernher von Braun, Medaris' missile scientist team chief.

Between stood Courtney Johnson, assistant secretary of the Army for logistics. He had huddled earlier in the day, and the previous, with Medaris on next year's budget requirements of the Army Ballistic Missile Agency.

A reception followed the parade and at 7 p.m., Huntsville's Community Center was packed with nearly 1,100 who ate chicken and heard Secretary Johnson describe Medaris as a "brilliant executive talent," and "magnetic personality."

After reviewing the accomplishments of ABMA under Medaris and crediting him as the only man with "creative imagination" to inspire von Braun's team, Johnson said:

"The record of performance General Medaris has built up has made him an outstanding executive in the entire Defense Establishment. The Army rates him peerless in his field."

Then came the presentation to Medaris. There was a portrait, to be hung in the local University of Alabama Extension Center; five albums of congratulatory letters from National, State, city, and business leaders, including Vice President NIXON and Governor Patterson.

Mayor R. B. Searcy, of Huntsville, presented the general with a plaque from the city which grew to 65,000 under the 4-year command of Medaris.

And Big M Day was over.

Medaris will review his last parade as missile chief January 30. He and his wife will fly to Florida for a vacation and then to Washington to testify at congressional hearings on our space program.

And, as a civilian, Medaris will announce his future plans. And, not before then.

Outstanding Community Service Award Given by Wilkes-Barre Kiwanis Club to Dr. Eugene S. Farley, President of Wilkes College

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of January 8, 1960:

OUTSTANDING COMMUNITY SERVICE AWARD GIVEN BY KIWANIS CLUB TO DR. FARLEY

Dr. Eugene S. Farley, president of Wilkes College, last night received the Wilkes-Barre Kiwanis Club Award for outstanding community service "as a symbol of the esteem of the entire community."

A scroll was presented to Dr. Farley by Benjamin Badman, Jr., during the annual ladies night program at Hotel Sterling.

More than 150 persons watched as the college president received the award commending him for his "clear vision, sound perspective, infectious enthusiasm and resolute faith." He was praised as leader of the college and community activities.

"In 1936, he became the youthful president of a small Bucknell Junior College," the scroll states. "He has since directed its transformation into a mature, accredited Wilkes College with a superior faculty, a commodious campus and thousands of loyal, grateful graduates. His broad concept of the function of such an institution in its community has made Wilkes College a prime asset to the Wyoming Valley in many facits of its complex life.

"Throughout those busy years he has generously contributed his time, his thought, and his talent for leadership to many laudable civic and cultural activities—notably to the Osterhout Library, the Boy Scouts, the Family Service Association, the United Fund, the Playground and Recreation Association, the Philharmonic Orchestra, the Sesquicentennial Commission, the Wyoming Valley Hospital, the Chamber of Commerce, the Industrial Fund and its committee of 100, and the Wilkes-Barre Kiwanis Club and its student loan fund. To all of them he has brough clear vision, sound prespective, infectious enthusiasm and resolute faith."

A telegram was received from the congregation of Temple Israel joining in tribute to Dr. Farley "for his constructive and creative efforts for the total community."

Members of Dr. Farley's family, Wilkes College trustees, and the college administrative council were introduced by Rev. Dr. Jule Ayers. Adm. Harold R. Stark, one of the guests, was given a rising ovation.

During his remarks, Mr. Badman, immediate past president of Kiwanis, said Dr. Farley has been "ready and willing to accept any job given him for any worthwhile endeavor or cause in the community." He commented the college president "has not hid in the ivy-clad walls of the college" but has gone out into the community "and done things." He reported Dr. Farley has been a Kiwanian 23 years and was president in 1943.

General Medaris Is Dynamic, Forceful Missile Command Leader

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. HUDDLESTON. Mr. Speaker, the accomplishments and contributions relating to the development of our missile system and our national defense of Gen. John B. Medaris have just been especially acknowledged in the course of a celebration in his honor at Huntsville, Ala., where he has commanded the Army Missile Command. General Medaris retires from this command and from the Army on January 31, 1960.

I am pleased to insert in the RECORD an article from the Birmingham News of January 16, 1960, outlining these great contributions to our Nation and to us all, knowing of the interest of my colleagues and the Nation at large in this outstanding military leader.

MAN OF MANY TALENTS—GENERAL MEDARIS IS DYNAMIC, FORCEFUL

(By Dan Roper)

HUNTSVILLE, ALA., January 16.—What type of man is honored with an hour-long parade, smiles from youngsters, and praise from leaders in a town in which he has only lived 4 years?

John Bruce Medaris is such a man.

"He is a man of many parts and many talents," Courtney Johnson, Assistant Secretary of the Army for Logistics, said Friday night of Medaris.

The man, and the legend, are indeed difficult to separate.

To his senior officer aid, Maj. Gen. J. B. Medaris is "without a doubt, as close to genius as any mortal human being can be."

To Congressman CHET HOLIFIELD, if Medaris "was put in charge of our missile program, we would not be behind Russia."

To Mayor R. B. Searcy of Huntsville, Medaris is "dynamic and forceful. The reason Redstone Arsenal is what it is today * * * and Huntsville and the surrounding area."

To Eighth District U.S. Representative BOB JONES, Medaris is "the most knowledgeable man in the whole missile business."

And to hundreds of Huntsville kids, he's "the general."

A man who has traveled with and known General Medaris perhaps best is Capt. Bill Brooks, who for 2 years has been his senior aide.

The crew-cut young officer knows the missile chief's many personal likes and dislikes; his penchant for swagger sticks, perhaps acquired as an under-age Marine recruit in World War I.

Medaris has a collection of swagger sticks. He has formal ones, informal ones; some fancy, some plain, and a dozen or more for every season and occasion.

Medaris is a coffee drinker, too, the captain reported. He prefers it black, with saccharine.

"We once made it in a motel bathtub for him," Brooks said. "The only container the manager could give us was so large that was the only place we could make it," he explained.

Medaris is a reader, too. He awakes at 5:30 a.m. each day, opens a book and reads. He prefers philosophy, history, and science, but will read fiction, often suggested by his wife, Brooks said.

He also reads from noon to 1 p.m., his lunch hour, the aide said.

Medaris is a pilot. He's made made than 80 trips to Washington since taking over at Redstone. He built up the base's air wing, and urged other officers to fly, Brooks said.

"He's told me that flying is the only thing that requires so much concentration that all other things are cleared out of his mind," Gordon Harris, PIO officer for Medaris, said.

Medaris also plays golf, but not as much now as before he took over the command, Brooks said.

The general has a photographic memory, too, his aide says. "Six months later if you miss one figure in a row of columns, he'll call you on it," he said.

Medaris also is an advocate of what he terms "prevision."

"He's not thinking today. He's thinking 5 days from now," Brooks said.

The general, who fought in Africa and Europe in World War II, also is a sentimental man, his aide revealed.

"This year on Christmas Eve, as in other years, the general spoke to all the people in headquarters building he doesn't normally get to talk with. Like the janitor and secretries. He also called them by name," Brooks reported.

What is this man to others, though?

He's the 57-year-old, ramrod-straight general who came to Redstone in February 1956, as head of the new Army Ballistics Missile Agency.

Under his command the Army launched the Nation's first earth satellite, developed the Jupiter intermediate range ballistic missile and others. In 1958, he became head of the Army Missile Command.

On January 31 he retires. He hasn't announced what he'll do, but has indicated it'll be in the field of education.

That is part of John Bruce Medaris—and only a small part.

The Steel Settlement

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, I would like to call to the attention of Members of the House an editorial appearing in the Green Bay Press Gazette for January 7, 1960:

THE STEEL SETTLEMENT

Settlement of the steel strike is, of course, wonderful news for America. Yet the manner in which it was brought about, and the terms of the settlement, leave unsolved several important problems in the labor-management field.

The steel industry and the Steelworkers' Union simply couldn't reach an agreement by themselves, so finally the Government stepped in. True, the Government played its role circumspectly and tactfully, with Vice President NIXON and Labor Secretary Mitchell acting as mediators in unpublicized meetings, rather than flamboyantly and with a flourishing of the state's police power a la Harry Truman. Yet the fact remains that a group of privately owned companies and their employees could reach agreement only through the so-called good offices of high officials of the Federal Government, which means of course that they were faced with the threat of open governmental interference in their affairs if they did not give ground.

In other words, collective bargaining in our basic industries is still not completely free; since both sides know that at a certain point the government will step in, they design their proposals and their postures with this in mind. Perhaps this will always be the case; after all, it is a fact that the country cannot tolerate a really prolonged strike in a basic industry, and the Government's role in these negotiations can be said to merely represent this fact. Another way of putting it would be to say that the Government's part represents the public's interest in the negotiations, an interest that certainly should be represented.

Another great problem that was not resolved is that of wage and price inflation. The settlement is not anywhere near as inflationary as the union wanted, yet it is not a non-inflationary settlement as was originally called for by President Eisenhower. The heads of the larger steel companies have announced that they will not raise prices immediately but they have carefully left the door open for increases a little later on; we have no doubt that such increases will come. Thus we have not won a victory against inflation, although the steel companies' determined stand against another round of highly inflationary wage increases apparently has brought about a slowing down of inflationary forces. For this we can be thankful; the Eisenhower administration's greatest contribution to our welfare—next to its work in the cause of world peace—may well be the at least partial stabilization of the dollar. We have been in considerably greater danger of a dollar panic in recent years than most people have realized.

And finally, the settlement included no real agreement on the problem of work rules; the union merely agreed to a joint study with management of this question. Yet here again, perhaps, we should be thankful for a small gain; the union at least has admitted, if only inferentially, that the problem exists. Next to inflation, the greatest challenge facing labor leaders today is the necessity of eliminating work rules which were written in a bygone era when jobs were scarce and unemployment was the economy's gravest problem, rather than productive efficiency. Such rules cause economic waste which eventually penalizes everyone including the workers.

Vice President NIXON's part in the settlement is another feather in the cap of this man with the amazing ability to appear in the right places at the right times, and to come up with the right answers. In the space of a year he has become the man who told off Khrushchev and set up the exchange of Khrushchev-Eisenhower visits which so far have turned out so well for this country and the free world; the man who started the chain of public acclamation of the United States in other countries including those behind the Iron Curtain, and now he is the man who "settled" the steel strike. No wonder Governor Rockefeller left the field before a shot was fired.

Some Suggestions for a Farm Program

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. SCHWENGEL. Mr. Speaker, when I was in the district this fall, I talked to as many farmers as I could in order to bring back a cross section of ideas which might improve some of the inequities in the farm program.

In many instances, I asked the farmers to whom I talked, to set their ideas down on paper so that I could make them known to Congress.

Mr. Emery Hemingway, Rural Route No. 5, Iowa City, Iowa, a long-time friend and a successful Johnson County farmer, is one of the first to outline the basic ideas which he feels will improve the farm program.

In presenting these suggestions to the Members, I do not make a wholesale endorsement of all of the ideas, but offer them for consideration with the hope that there may be some proposals here which can be incorporated into farm legislation and improve conditions, not only for midwest farmers, but for the entire farm economy.

Mr. Hemingway's proposal follows:

Any farm program must have at least three goals:

First. Full parity for agriculture.

Second. Be fair and equitable between producers, and protect the smaller family farm from being taken over by the larger farms.

Third. Promote good soil conservation.

Historic bases are erroneous and unfair between producers and we must have a sound base to start from such as the crop acres in the farm.

Some suggestions for a long-time farm program are, first, applying flexible price supports to soil conservation; or second, the higher the soil-depleting crops to the crop acres in the farm the lower the price supports; and third, let the farmer decide at what percent of parity he wants his crops supported, or not at all.

In the old AAA farm program the number of crop acres in every farm were recorded.

Now, let us have this sound fair, base to work from and apply flexible price supports to a soil-conservation program in about these percents:

First. The farmer who keeps his intertilled crops-soil depleting crops under 30 percent of his crop acres the Government gives him a price support of full parity.

Second. The farmer who plants between 30 and 35 percent of his crop acres in soil-depleting crops the Government gives him a price support of 90 percent of parity.

Third. Between 35 and 40 percent—80 percent of parity.

Fourth. Between 40 and 45 percent—70 percent of parity.

Then if you want to go farther than that, classify the farms according to their capabilities and let the higher capability farms have a higher soil-depleting base, or crop base, than the lower capability farms.

No producer should be able to turn all of his crop over to the Government to market in any 1 year.

The Government should only handle surpluses and not become the marketing agency for a producer's whole crop.

A better way would be to use the sound base we started with—crop acres in the farm—and let the farmer deliver up to 10 bushels to the acre times the crop acres in the farm as a limit.

What we need are longer crop rotations on a lot of farms that have been causing the surplus trouble.

By longer crop rotations some of us have held down our feed grain crops and built a soil fertility bank at our own expense, but the farmer who has been over-producing feed grain crops has destroyed the price and we are penalized for practicing soil conservation.

The soil-bank program has some good features, but in most cases only rewards the producer who has been causing the most trouble by over-croping his land, and puts all his poor land in the soil bank and lets the Government pay him to build it up again.

If we do not apply flexible price supports to a soil conservation program then we must set a crop base using the crop acres in the farms to start from, and have this base include cotton as well as the feed grains—corn, sorghums, and beans—and the farmer keep the production of all these crops under this base or no supports.

This would bring about cross-compliance on these crops.

Wheat has its own program and there should be some regulation so the wheat producer, if he keeps under his acreage

for price supports, he cannot put in other crops that will help defeat the other programs.

Rice, peanuts and tobacco have more or less a program of their own. We should have found out before this that no program will work without some cross-compliance.

A farm program of price supports and acreage controls, two price systems or commodity by commodity approach, will work if you put regulations and controls on the right producers in the right way at the right time, but none of them will work without these controls.

Not enough farmers will self-discipline themselves to make any voluntary program work.

This is the legislation that needs to be enacted right now.

Now, that Congress and the Department of Agriculture apparently have done nothing to keep production in line with market demand without building up huge abnormal surpluses of feed grains, and are creating an over production of live stock, the farmer is producing at an average of around 78 percent of parity. He is not getting his rightful share of the national income and the livestock producer is entitled to some consideration.

The sheep men have their subsidy program.

The hog producer should have a program in which the Government pays a subsidy between the market price and $21 for No. 1 hogs, market price; $20 for No. 2 hogs, market price; and $19 for No. 3 hogs and only on hogs weighing between 190 pounds and 240 pounds. This is to be based on 400 pounds to the crop acres in the farm up to 75 crop acres or 30,000 pounds as a limit to any one regular farmer producer.

Do the same for the cattle feeder. Pay him a subsidy between the market price and $32 for prime cattle market price; $30 for choice, market price; and $28 for good grade. The same to be paid on 400 pounds to the acre times the crop acres in the farm up to 75 acres and 30,000 pounds limit. No subsidy paid on cattle weighing over 1,250 pounds.

The Late Honorable Alvin R. Bush

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, I join my colleagues in paying tribute to ALVIN R. BUSH, one of the outstanding members of our Pennsylvania delegation. His untimely death brought sorrow to those of us who were privileged to serve with him on the Interstate and Foreign Commerce Committee.

AL BUSH was admired and respected for his humbleness and sincerity. He was a conscientious legislator with strong beliefs and courage of his convictions. We will all miss his contribution to our deliberations in the crucial months of this session.

To his family I extend my heartfelt sympathy.

Amesbury, Mass., Hat Firm Gives Scholarships

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BATES. Mr. Speaker, the Merrimac Hat Co., Inc., of Amesbury, Mass., continues to do the unusual.

In 1958, after more than a century of operation, the firm closed its doors. With no bidder for the plant, the Hatters Union made a proposal, began operations, and a year later declared a quarterly dividend of 50 cents a share. It was a new venture in business operation and it received nationwide publicity.

A few days ago, the company announced it would award four annual scholarships, each worth $1,250, to graduates of the Amesbury High School, starting this June. The scholarships are being given to the Amesbury Classroom Teachers Association for administration. It is the company's way of saying "thank you for helping us out when we were reorganizing." Members of the teachers association bought company stock from their own pockets, the dividends to be used for their association's own scholarships. The action of the company is a distinct gain for youth and education in Amesbury. I desire to insert in the RECORD the following article from the Amesbury News:

MERRIMAC HAT FIRM TO GIVE SCHOLARSHIPS

The Merrimac Hat Co. of Amesbury, announced today it will award four annual scholarships—each worth $1,250—to graduates of Amesbury High School.

The scholarship awards will start this June.

Making the announcement, company president Hans Rie said the decision to award the scholarships was made at a recent board of directors meeting.

Details of the scholarships were worked out at meetings between Rie; International Union Vice President Frank Cynewski; Joseph Dollen, member of the board of directors; Hawley Patten, purchasing agent; Robert Kozacka of the Amesbury Classroom Teachers Association; and Carleton D. Skillings, Amesbury High principal.

Rie announced that the scholarships will be awarded to four Amesbury High School graduates who have been accepted at a degree-granting college for a 4-year course.

A $500 scholarship will be awarded the first year with $250 grants for the second, third, and fourth years.

Administration of the scholarships has been delegated to the Amesbury Classroom Teachers Association.

Rie pointed out that there are no restrictions as to whom the scholarships will be awarded.

"The student may wish to study liberal arts or to become a doctor. He or she does not have to be an engineer," he said.

This year the Merrimac Hat Co. will be awarding $2,000 in scholarships with $3,000 next year, $4,000 in 1962, $5,000 in 1963, and $5,000 each year after that.

Cynewski said the administration of the scholarships was being given to the Amesbury Classroom Teachers Association in appreciation of the group's support during the days when the company was being reactivated.

Cynewski pointed out that each member of the teachers group purchased company stock "with money from their own pockets." Dividends from these stock purchases were to be used for their association's own scholarships, he said.

Voicing appreciation to the hat company, Amesbury High School Principal Skillings said:

"I am very pleased at any move being made in furthering education. The more young people in America who gain education in 1960—the better communities we will have in the country."

Robert Kozacka, president of the teachers association, said:

"The Amesbury Classroom Teachers Association takes deep pleasure in expressing its joy and gratitude at the happy announcement by the Merrimac Hat Co.

"We feel that these scholarships will do much to induce a higher scholastic achievement at the school.

"We also are grateful to our fellow townspeople who contributed stock in making possible the reactivation of the company which is so mindful of the importance of education on the community level.

"We also have a deep sense of responsibility at being entrusted with the administration of the scholarships. We shall make every effort to discharge our trust with justice and equity."

Why the Secrecy About the Steel Settlement?

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, on January 15 the Washington Post printed a letter to the editor from Wisconsin Assemblyman Frank Nikolay. He raised some pertinent questions about the secrecy which has shrouded the terms of the steel strike settlement. Under leave to extend my remarks, I would like to include Mr. Nikolay's letter in the RECORD:

BEHIND STEEL DOORS

I happened to be in Washington last week when the steel strike was settled. I looked in vain in several newspapers for a full report on the terms of the steel strike settlement. Yes; I know that the steel companies made concessions to the United Steel Workers, but what concessions did Vice President NIXON make to the steel companies?

All during the steel strike, the newspapers and the prosteel company columnists continued to indicate that the steel strike was a matter of national welfare and therefore the intervention of the Federal court was warranted. I am inclined to agree with this viewpoint, but what possible justification can there be for conducting the public's business in secret conclave?

If Vice President NIXON, the representative of the steel companies, and the representative of the United Steel Workers had nothing to hide in their negotiations, then why has not a transcript of the conferences been made available for public scrutiny? This is public business and the public is entitled to know.

I hope that responsible newspapers, such as your own, will raise this question again, again and again until Messrs. NIXON, McDonald, Blough, et al. make a full disclosure of the terms of the steel settlement.

FRANK L. NIKOLAY.

ABBOTSFORD, WIS.

Cleveland Editorial Comment on State of the Union Message

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mrs. BOLTON. Mr. Speaker, President Eisenhower's inspiring state of the Union message has received wide acclaim both here and abroad. In its central theme of dedication to the cause of world peace, the address eloquently testified to our continuing efforts to reduce international tensions. In its review of the Nation's economy, the message was confident and reassuring. Estimates of a $4.2 billion budget surplus during the current fiscal year have been greeted with enthusiasm, while the President's warning on inflation sounded an important note of caution.

The positive response to the state of the Union message may perhaps best be seen in editorial comments from various areas. As particularly thoughtful editorials appeared in the January 8 editions of the Cleveland News, the Cleveland Plain Dealer, and the Cleveland Press.

Under leave to extend my remarks in the RECORD, I include the following:

[From the Cleveland Press, Jan. 8, 1960]

STATE OF THE UNION

There was a strong note of national reassurance in President Eisenhower's state of the Union message to Congress. He spoke as a man who has an admittedly difficult situation reasonably well in hand.

On the two items of greatest interest, the prospect of peace and of national prosperity, his outlook was greatly improved as compared to that in his report a year ago.

At that time he was compelled to stress increasing tensions between American and the Soviet Union. Yesterday he spoke of a "somewhat less strained period."

In the economic field, the contrast from a year ago was even more marked. Last January he spoke hopefully of recovery from recession and offered, a few days later, a budget that was admitted to be precariously balanced.

Yesterday he could say with confidence that "1960 promises to be the most prosperous year in our history." Despite the crippling steel strike he could anticipate a $200 million surplus for this year and announce, surprisingly, that a surplus in the substantial amount of $4,200 million is in prospect for next year.

He proposed to use this as:

PAYMENT ON THE MORTGAGE

The President's estimate of a $4,200 million surplus by June 30, 1961, surprised everyone. This would be the biggest Government surplus since 1948—and the second biggest of all time.

The instant reaction, in some quarters, was either to spend more or cut taxes. This the President tried to spike when he said:

"Personally, I do no feel that any amount can properly be called a 'surplus' as long as the nation is in debt. I prefer to think of such an item as a 'reduction on our children's inherited mortgage'."

If the Government does manage to take in more than it spends, Eisenhower suggests the right place to put it: toward reducing the $290 billion debt.

Such a rare action would have these signally healthy effects: it would put the brakes on inflation; it would save the taxpayers $200 million a year in interest charges alone; it would mildly ease the complex problem of managing the debt.

The President eloquently urged:

HELP FOR THE NEW NATIONS

The President's major foreign policy appeal was for ample and cheerful free world support for the gigantic struggle to make democracy work on the Indian subcontinent.

He spoke as one just returned from a historic trip to the area where, in India and Pakistan alone, nearly half a billion people scratch to eke out an unbelievably wretched living. It also is an area where the temptation is very great to junk the slow, democratic methods and try the opium of totalitarianism.

As a course of action, he espoused the proposal sponsored in the Senate on a nonpartisan basis 2 years ago to enlist the help of the Organization for European Economic Cooperation to work out a program for India.

On another point, he entered a field of controversy in his discussion of:

SPACE AND MISSILES

The President's promise to practically double expenditures on space exploration will soften some of the past criticism that we are not trying hard enough to catch up with Russia in this field.

Overall expenditure for space and air research and development is about $800 million which, presumably, puts the 1961 figure at around $1,500 million.

But the relatively optimistic picture he painted of the military missile program—skipping all mention of any gap with the Russians—probably will intensify election year debate. Ike's critics insist a lot more should be spent for military missiles.

[From the Cleveland News, Jan. 8, 1960]

"PEACE AND PROSPERITY THEME"

President Eisenhower said what he was expected to say when he delivered his state of the Union message to Congress. Few surprises, no evasions, no sensations.

Most of the message is good commonsense, based on the best information available and solid conservative thought. The proof of its soundness is the Democratic reaction—weak criticism and half-hearted attack.

The general theme of the message—"peace and prosperity"—finds general acceptance in the country, simply because there is no denying the facts as outlined by the President. Moreover a balanced budget, plus a surplus will be applauded.

The United States and the Eisenhower administration are dedicated to the cause of peace and the President has carried out a crusade that has found wide support.

Actual achievement of peace, however, remains something for the future, based mainly on how far the Soviet will go on disarmament and honest control machinery. The best approach is one of cautious optimism.

A major point made by the President, one which deserves the closest attention, is that the United States missile strength is on a par with that of the Soviet Union and that the Nation retains massive power. Missiles, believed as accurate as it is possible to make them, are available and have proven their worth in test after test. Coupled with strategic bombers, American strength packs a wallop.

A most reassuring note is this statement by one of the world's most authoritative military statesmen:

"It is my studied conviction that no nation will ever risk general war against us unless we be so foolish as to neglect the defense forces we now so powerfully support."

On other topics, mostly domestic, Mr. Eisenhower followed the usual pattern. Inflation is a danger; Executive-Congress cooperation is necessary; agricultural surpluses must be reduced, and civil rights must be guaranteed to all citizens.

The Eisenhower message was a state paper of fact and substance. It should impress Congress as it does the people.

[From the Plain Dealer, Jan. 8, 1960]

STATE OF THE UNION

President Eisenhower's state of the Union message yesterday may well go down in history as one of the greatest state papers of these times. Certainly it will be classified as one of the most outstanding addresses of his administration.

Perhaps because this is his last year in office and he need not concern himself with reelection problems, the President deviated from the usual procedure of promising something for everybody and, instead, submitted to Congress a calm and reasoned view of world problems and how they affect the United States, as well as a review of our domestic affairs.

The prospect of world peace, naturally, took precedence over all other topics. He reported an apparent lessening in the strained relations with the Soviet Union, but whatever optimism he saw in the situation was tempered by caution that we must not be misled by pleasant words.

The President reiterated our position that we will not interfere in the internal affairs of other states, while serving notice that we will reject any Soviet attempt to impose its system on us or any other people by force or subversion. He expressed his belief that as long as we maintained our defenses no nation will ever risk war against us and, in rebuttal to those who moan about the "missile gap" and other alleged deficiencies in our arsenal, he expressed confidence that the weapons we have and those under development are adequate to deter aggression.

Mr. Eisenhower acknowledged that we are behind the Russians in the development of our space program, but he made the point that the conquest of space should not be confused with defense. Moreover, our expenditures for space exploration will be doubled this year, he assured the Congress.

The President devoted considerable attention to the problem of aid to underdeveloped nations and pointed out that this help should come from the free world if we want to prevent these nations from being absorbed into the Comunist orbit. But, he added, the United States cannot continue to bear this burden alone; other free nations must share it to the extent of their abilities. To which we say, Amen.

An analogy made by the President, that we must help in developing nations "just as we drew on Europe for help in our earlier days," was not well taken, however. It was private investments, not public money, which

stimulated the development of this country. Moreover, we had no restrictive laws which prevented private capital from reaping the profits of its investments and we did not nationalize or expropriate the properties developed in this country by foreign investment. If private capital is to be attracted by what Mr. Eisenhower called an age of productive partnership, it must have these safeguards too.

The President confirmed what the economists have been saying, that 1960 promises to be the most prosperous year in our history. But he warned against the futility of labor-management strife, saying it seemed absurd for us to advocate cooperation among the nations if we are unable to have cooperation among the segments of our own free society. His proposal for regular discussions among labor and management groups outside the bargaining table, with the public interest in mind, was in line with a suggestion made by George Meany, president of the AFL-CIO.

Mr. Eisenhower devoted more attention to the danger of inflation than he had in any previous state of the Union message. We must fight inflation like a fire that threatens our homes, he said, and this, of course, is the area in which most of the conflict between the administration and Congress will be centered during the next 6 months. For the Democrats in control of Congress appear oblivious to the effects of inflation. They are more interested in reaping the votes that come from big spending than they are in putting out the fire.

The administration expects to do its part, however. The President predicted a balance of $200 million when the books close on fiscal 1960 next June 30. And the fiscal year of 1961, he predicted, would produce a balance of $4,200 million to be applied on the national debt. He preferred not to call this a surplus, but a reduction on our children's inherited mortgage. This one reduction, he pointed out, would save the taxpayers $200 million in interest charges every year from then on. Succeeding reductions would pave the way for tax relief, he added.

Well, we can hope, can't we?

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. McDONOUGH. Mr. Speaker, the sudden and unexpected passing of Congressman DICK SIMPSON has left a vacancy in the House of Representatives which will be impossible to fill.

DICK SIMPSON was a close personal friend of mine, and his sturdy character, high integrity, unquestioned loyalty, and honest conviction commanded the respect of all of his friends and acquaintances.

He was not the type who would yield to expediency and was always ready and willing to use his great influence to protect the people of the district he represented as well as all people throughout the Nation against any attempt to subvert or subordinate the power and dignity of the United States.

It is difficult to express in words the feelings you have for the loss of a close personal friend.

I wish to join my other colleagues in expressing my sincere sympathy to his beloved wife and family for the great loss they have sustained.

The Need To Redefine Disability

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, our social security program is now on the eve of its 25th anniversary. During the almost a quarter of a century that the program has been in operation we have come a long way in securing the future of our workers and their families. But any program needs to be revised from time to time in order to strengthen the areas in which it is weak.

I feel that one of the parts of the social security program which needs to be reexamined and revised is the portion dealing with disability benefits. During the first session of the 86th Congress, I introduced a bill to eliminate the 50-year age requirement for the payment of disability benefits under social security. Today I am introducing a measure which would provide a more realistic definition of the term disability.

Under the rigid requirements of the present law, many thousands of men and women who are considered to be totally disabled by employers and by competent medical authorities still cannot secure disability benefits or qualify for the disability freeze of their incomes. For if such a person can perform any kind of work at all, no matter what it is or how far removed it may be from the type of work for which he is trained, then he is not disabled so far as social security is concerned.

Take, for instance, an accountant who has spent 40 years in that profession and who now is not physically able to continue in this field. If he still is able to sell apples in the street he does not qualify for disability benefits under social security.

This narrow definition of disability works a very real hardship on our senior citizens who no longer work on their regular jobs. Many of these people have no other skills. Employers are reluctant to train older people for new jobs that they would be able to perform. Unskilled jobs usually involve physical labor which is beyond the strength of the aging. As a result, these people suffer financial hardship and the humiliation of having to ask local welfare agencies for assistance.

As a woman from my home district in Wisconsin so ably put it:

You have to be ready for the coffin before you can draw social security disability benefits.

The bill I have introduced would change the definition of disability in the present social security law to provide that an individual shall be considered unable to engage in any substantial gainful activity if he is unable, by reason of his physical or mental impairment, to engage in the occupation or employment last performed by him on a regular basis before he became disabled.

In other words, when a person is disabled to the point where he no longer can do the job for which he has been trained and in which he has been working for years, then he will be eligible for social security disability benefits or the disability freeze.

We can not turn our backs on our responsibility to this country's senior citizens. When President Franklin D. Roosevelt signed the original Social Security Act, he called it "a cornerstone in a structure which is being built but is by no means complete." It is up to us to see that the resulting structure is worthy of its fine foundation.

The Late Honorable Will E. Neal

SPEECH
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BAILEY. Mr. Speaker, it is with profound sorrow that I join in paying tribute to our late colleague, Dr. Will E. Neal, who represented the Fourth Congressional District of West Virginia during the 83d and 85th Congresses.

A hard, conscientious worker, Dr. Neal was an outstanding public servant, a man greatly admired and respected by all who knew him and by all who were associated with him. By formal training, he was a doctor, a profession which he practiced with honor for over 50 years. His complete, unselfish interest in the welfare of others led him into public service where he served with distinction his community, his State, his Nation.

As a young man, after completing his medical studies, Dr. Neal established himself in the growing city of Huntington, W. Va., across the Ohio River from his place of birth. From his busy medical practice, he found time to devote to the civic affairs of his community. He served his city as mayor for two successive terms. In 1950, at the age of 75, he was elected to the West Virginia Legislature. From 1953 to 1955, and again from 1957 to 1959, he was a Member of this body.

Will Neal loved people. He loved his country. His life was dedicated to his fellowman and exemplified the true meaning of the word "humanitarian."

My heartfelt sympathy goes out to Mrs. Neal and the other members of his family.

Education—Investment in America

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BRADEMAS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD, the text of an address I was privileged to deliver at the seventh annual National Conference on Federal Legislation of the National Education Association in Washington, D.C., on December 11, 1959.

The text of the address follows:

EDUCATION—INVESTMENT IN AMERICA

I am delighted to have the opportunity to take part in the seventh annual National Conference on Federal Legislation of the National Education Association.

ROBERT WYATT OF INDIANA STATE TEACHERS ASSOCIATION PRAISED

It is a particular pleasure for me to be introduced by Robert Wyatt, executive secretary of the Indiana State Teachers Association. I think it is fair to say that Bob Wyatt has done more than any other man in recent years to win greater public support for education in Indiana.

I am glad, too, to be able to talk with leaders of the NEA. I come from a family of teachers, and my mother, who started teaching in a one-room country schoolhouse in Indiana and is still teaching school today, is a life member of the NEA as was my late grandfather, who was a teacher for many years in central Indiana.

During my first year in Congress, I have been deeply impressed by the splendid leadership which the NEA as a national organization and your representatives here in Washington have given to the cause of education. This conference is a first-class example of the continuing dedication of the NEA to lifting the level of education in America.

One of the reasons I have so much enjoyed my first year in Congress was my good fortune in being named to the General Education Subcommittee of the House Education and Labor Committee and thereby having the high privilege of serving with men like CLEVELAND BAILEY, FRANK THOMPSON, and STEWART UDALL and coming to know a person like LEE METCALF—all men who are deeply devoted to education and all unquestionably among the ablest Members of Congress.

My brief experience on the committee has only reaffirmed my conviction that, as Adlai Stevenson once said, "Our children's needs—the needs of education—have first priority over all other civilian needs."

Today we have more discussion of education, its purposes, its methods, and its facilities than we have seen for many years in this country.

SOVIET GAINS SPARK NEW LOOK AT U.S. EDUCATION

It is unfortunately true that the American people have been jarred into this reassessment not by any apocalyptic vision but by the sudden impact of the technological achievements of the Soviet Union.

We had until recent months been living under what Prof. Denis Brogan of Cambridge University describes as "the illusion of American omnipotence." Our reaction to the symbol of sputnik is represented by the fact that in order to pass an education bill, we had to call it the National Defense Education Act.

Yet Soviet competition should not be the only, nor indeed, the most important cause for our taking a new look at American education. It was Chet Huntley who said last year, "If tomorrow Russia became a pro-Western, two-party democracy, and international communism disappeared from the face of the earth, we should still need more engineers than we have, and many more poets."

STUDENTS MUST LEARN IMPORTANCE OF HARD WORK

Let me suggest that there are two major areas in education today to which we should give our concern.

First is the problem of quality. What are we turning out in our schools and universities?

A late president of Princeton once remarked, "Madame, we guarantee results or we return the boy."

For those of you whose chief responsibility is public education, there is no such simple solution to the problem of the student from whom no results can be guaranteed.

With respect to this first problem in education, I should like to say only this: in our pursuit of equality of opportunity for education, we must give far more attention to the element of quality of education. We must insist in the education of our young people on the central importance of hard work, on the futility of the search for shortcuts.

Let me give you the answer that Soren Kierkegaard, the 19th century Danish theologian, gave to the question, "What is education?"

He said, "I should suppose that education was the curriculum one had to run through in order to catch up with oneself, and he who will not pass through this curriculum is helped very little by the fact that he was born in the most enlightened age."

AMERICA HAS SHORTAGE OF CLASSROOMS AND TEACHERS

My chief concern this evening, however, is not with the problem of quality but rather with a problem with which Members of Congress can deal more directly—the resources education has for doing its job.

The simple facts are these:

We have in America a continuing shortage of buildings.

We have in America a continuing shortage of qualified teachers.

The result of these shortages is a serious crisis in meeting the Nation's needs in education. And if the crisis is with us today, consider the fact that within the next 20 years the present school-age population of this country will have increased by 60 percent.

Last August, Secretary of Health, Education, and Welfare, Arthur Flemming declared that "the number of pupils whose education is being impaired by the classroom shortage is about 10 million."

On October 14 of this year, the Secretary spoke of a shortage of between 130,000 and 140,000 classrooms. Yet he warned that the latest figures on school-bond sales—which showed a drop of fully 20 percent during the most recent 12-month period from the preceding 12 months—indicated that "marked declines in school construction are to be expected.

The State superintendent of public instruction in Indiana said this year that my State was short 3,000 classrooms.

There is widespread agreement then, that we need more school buildings in this country.

There is, however, another serious deficiency in our resources for education. We do not have enough qualified teachers. At the beginning of the 1958 fall term, our school systems were employing 92,300 full-time teachers with substandard qualifications.

INADEQUATE SALARIES A MAJOR CAUSE OF TEACHER SHORTAGE

Study after study has provided evidence of this shortfall, and study after study has pointed to inadequate teachers' salaries as a major cause of the trouble.

President Eisenhower himself, in speaking of "the importance of raising the standing of our teachers in their communities," said, "Higher salaries are a first requirement."

The president of the National Science Teachers Association blames low pay as a key reason for the lack of qualified science teachers.

The Rockefeller Bros. Fund Report on U.S. Educational Needs declares, "the root problem of the teaching profession remains financial. Salaries must be raised immediately and substantially.

And I am sure you are all familiar with Secretary Flemming's contention that doubling teachers' salaries in the next decade is a reasonable national goal.

It is clear then that we are not investing enough money in education, either in my home State of Indiana or in the Nation, either in classrooms or in teachers' salaries.

I use the phrase "investing in education" advisedly. In the American language, to "spend" suggests using up scarce resources—a wasteful and profligate notion. To "invest" however, suggests that dividends will be forthcoming—a wise and prudent course to follow.

INVESTMENT IN EDUCATION PAYS DIVIDENDS

Of perhaps no other area in our national life can the concept of "investment" more accurately be used than education. Some 10 years ago, the U.S. Chamber of Commerce published a book entitled, "Education, an Investment in People." The study showed dramatically that those States and communities in America which had the best educational systems had the highest levels of real income as well. The chamber of commerce survey showed that it paid, in dollars and cents, to invest in education. It was good business to put money into schoolrooms and teachers' salaries.

Again, let's look at my State of Indiana. Are we investing enough money in education there? The apostles of States rights piously tell us that there is no need for Federal support for education, because, they blandly assure us, the States can do the job.

The State of Indiana ranks 15th in the Nation in per capita income. If the State-righters were doing their job, Indiana would logically be 15th in the Nation in per pupil expenditures for public education. But we are 31st.

Indiana provides from State sources some 30 percent of public school expenditures as against a national average of 40 percent—so that we rank 32d in the Nation in this respect.

HOOSIER GOP POLITICIANS SHORTCHANGE EDUCATION

These facts are telling evidence of the intellectual dishonesty of those who argue that the States are meeting their responsibilities, and I remind you that there are few

politicians in America who preach the States' rights doctrine more but practice it less than Gov. Harold Handley and his political godfather, ex-Senator William E. Jenner.

At a recent subcommittee hearing, I asked the legislative representative of the Chamber of Commerce of the United States, which opposed the Murray-Metcalf bill on grounds that education was a job for the States and local communities, to provide me with a summary showing how State chambers of commerce across the Nation were leading the fight in their respective States for more money for education.

I am still waiting for that summary, not, I may say, breathlessly.

In Indiana, moreover, our State constitution limits the bonding power of school districts to 2 percent of their assessed valuation, a limitation which has forced schools to turn from general obligation bonds, ranging from 1½ to 2½ percent interest, to the transparent device of setting up holding corporations and issuing revenue bonds at 4 to 5 percent interest. How do you like that for sound, businesslike fiscal responsibility? How's that as an example of deep concern for the taxpayer's dollar?

PROPERTY TAX INCREASE NOT THE ANSWER

There may still be a few persons who contend that the way to raise more money for education is to raise the property tax. To understate the case, this is not an exceedingly popular approach in my part of the country, and any Republican who wants to run against me on a "let's raise the property tax" platform will be a more than welcome opponent.

We simply cannot get much more blood out of the property tax turnip.

The several considerations I have suggested with respect to financing education in Indiana and the Nation were among those which led the House Education and Labor Committee this year to report favorably H.R. 22, the Murray-Metcalf bill, a bill which now languishes in the House Rules Committee, another victim of the continuing Republican-Dixiecrat effort to starve America of vital resources at a time of great peril to our country.

MURRAY-METCALF BILL DESCRIBED

Because the NEA played a most significant role in the shaping of the Murray-Metcalf bill, most of you already know that this legislation would provide financial assistance for the support of public schools by appropriating Federal funds to the States to be used for constructing classrooms and/or improving teachers' salaries.

The bill provides a program of $1.1 billion a year for 4 years. Each State would receive $25 per school-age child.

Each State would be free to divide its allotment between classrooms and salaries, as it saw fit. Any portion of the funds expended for salaries would be distributed within the following guidelines: one-half to school districts on a per teacher basis and one-half on an equalization basis.

BRADEMAS STRONGLY OPPOSES FEDERAL CONTROL OF EDUCATION

We are all aware that one of the chief obstacles to the passage of the Murray-Metcalf bill is the issue of Federal control. As a former teacher, I certainly want no Federal control of what is taught in our schools. I am, therefore, very glad to say that this bill contains very effective safeguards against such control.

First, the procedures for the administration of the program by the U.S. Office of Education are so simple that the Office will have no opportunity to coerce the States.

Second, the bill provides that once Federal funds reach the State, they are thereafter deemed to be State funds.

Third, the bill explicitly provides that in the administration of the law, the Federal Government shall exercise no direction, supervision, or control over policy determination, personnel, curriculum, program of instruction, or the administration of any school or school system—which is about as clear a declaration of purpose as the English language can supply.

Fourth, each State education agency is required only to certify that funds granted under the act have been expended in accordance with the provisions of the act, the same procedure for Federal fiscal control which has been followed historically under the land-grant college program.

FEDERAL FUNDS NOW USED FOR EDUCATION WITHOUT FEDERAL CONTROL

I think finally that the best evidence that Federal funds can be used for classroom construction and teachers' salaries without Federal control is the fact that we have been using them for both these purposes for some years now.

It has been a source of constant surprise to me to learn that very few citizens in my district—indeed, very few schoolteachers—know that under Public Laws 815 and 874, the impacted area programs for school districts near defense plants or military bases, for example, Federal funds are now being used not only to build classrooms but to pay teachers' salaries and even to buy textbooks.

As a member of the General Education Subcommittee, I asked several witnesses, including Members of Congress and the U.S. Commissioner of Education, the following question this year during hearings on the administration's ill-advised proposal to cut funds for education under the impacted area programs: Have you any evidence that the use of Federal funds for calssrooms and teachers' salaries has led to any Federal control of education in these districts?

Here is a typical answer:

One Republican Congressman whose views are normally very conservative but whose conservatism was apparently greatly tempered by the fact that his district receives substantial amounts of such Federal aid to education replied, "I have not, sir. I think that has been one of the outstanding virtues of Public Laws 815 and 874. There has been no Federal control curriculumwise."

EISENHOWER EDUCATION COMMISSIONER ADMITS NO EVIDENCE OF CONTROL

Here is Commissioner Derthick's reply: "I am glad to say * * * that the question has not come up. On the contrary, there was a doctrate study done up at Teachers College, Columbia University, * * * to determine whether there had been any semblance of Federal control in the administration of these laws throughout the United States; and the conclusion was impressive and complete, that there has not been any indication in any of these approximately 4,000 school districts."

And the Commissioner went on to assure the committee that his statement applied to the use of Federal funds both for school construction and for teachers' salaries.

For those persons, therefore, who are sincerely troubled about the issue of Federal control but who base their conclusions on facts, I urge a look not only at the safeguards built into H.R. 22, but the actual record of the administration of Federal funds under present law.

I have tried to suggest why we must invest more in education. I have tried to suggest why it is imperative that we make use of Federal funds for building more classrooms and raising teachers' salaries.

I have tried to suggest why the Murray-Metcalf bill is the most effective avenue for achieving these goals.

And finally, I have tried to suggest that Federal funds can be used to support State and local efforts in education without infringing on their control of school systems.

INCREASED U.S. INVESTMENT IN EDUCATION ESSENTIAL TO SURVIVAL OF FREEDOM

Let me now attempt, briefly, to put the problem of increasing our national investment in education in a somewhat different perspective.

No one who watched television or heard the radio or read the newspapers during the time that Mr. Khrushchev moved across the face of this land can fail now to understand that in him we are confronted with an alert, intelligent, aggressive, and articulate leader and by a people in the Soviet Union who can be described in similar adjectives.

In the decade of the 1960's to begin in just a few days now, the American people will be faced with the most powerful challenge to our survival as a free society that we have known in all the history of this Republic.

It may well prove to be true that the struggle between ourselves and the Communist world that side—a struggle both economic and moral as well as political and military—will prove triumphant which more effectively marshals its brainpower.

Whether we are able to maintain a free and vigorous and civilized society here at home and to encourage such societies abroad wil, in large measure, depend on the quality and resources of our education.

OUR MOST VALUABLE NATURAL RESOURCE: EDUCATED MEN AND WOMEN

It seems to me, therefore, that we, in America, must invest far more of our national resources in the most valuable renatural resource we have: educated young men and women.

I salute you of the National Education Association for your dedication to the purposes of education. We share a common conviction that, as Adlai Stevenson has said, "The goal of education is to teach Western man not just to survive but to triumph, not just to defend himself, but to make man and the world what God intended them to be."

Words To Live By

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. CANFIELD. Mr. Speaker, Benjamin Franklin was born in Boston on January 17, 1706.

It has been said that other men may have been greater than Benjamin Franklin, but few have been more human. Philosopher, statesman, man of letters, Franklin was first, of all a man. That he was a witty and wise one, the New York Herald Tribune, in its magazine, This Week, contends is borne out by the following sayings which are described as "Words To Live By":

Lost time is never found again.

In this world, nothing can be said to be certain except death and taxes.

Laziness travels so slowly that poverty soon overtakes him.

Virtue may not always make a face handsome, but vice will certainly make it ugly.

A penny saved is a penny got.

Glass, china, and reputation are easily crack'd, and never well mended.

Wish not so much to live long, as to live well.

If you know how to spend less than you get, you have the philosopher's stone.

You may talk too much on the best of subjects.

Let thy maid servant be faithful, strong, and homely.

All would live long, but none would be old.

Marry your son when you will, but your daughter when you can.

He that falls in love with himself will have no rivals.

Washington Report by Hon. Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my newsletter of January 16, 1960:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS, JANUARY 16, 1960

The machinery of congressional legislation is picking up speed. Committees are meeting to evaluate their pending bills, Members are preparing speeches, political motivations of candidates and parties are becoming more evident.

The ingredients of this legislative year are these: (1) An election year for Representatives (2 years), the President (4 years), and some Senators (6 years); (2) split government—the legislative body, Congress, under Democrat leadership, and the administration, Republican; only Congress makes the law; (3) various problems or trouble areas, highly controversial, which are, (a) the military and economic cold war with Russia; (b) the monopoly power of unions and dictatorial power of labor leaders; (c) the fiscal situation—a national debt of $290 billion; plus already incurred c.o.d. bills of $440 billion or more ($90 billion now owing and $350 billion committed as future obligations); plus a $2 billion built-in budget increase; plus hundreds of billions of legislative proposals for additional spending now pending; (d) a financing problem—Congress expects the Treasury Department to borrow money without a flexible interest ceiling, thus forcing the Government to borrow in the short-term market competing with individuals and businesses; (e) a heavy tax burden with progressive rates that kill incentive; (f) civil rights, welfare programs, and other controversial bills, all politically explosive, are pending.

What will Congress do? The answer will result from the people's demands, of course. (1) The election year issues and solutions can be politically expedient or statesmanlike as to motivation and outcome. (2) There could be a rash of new spending proposals adopted or a balanced budget with debt repayment and an aim toward tax adjustment and reduction. (3) There will be blaming of the administration for congressional shortcomings or responsible acceptance of the legislative role by Congress. (4) There can be more regimented planned economy or an emphasis on free competitive enterprise. (5) There will be more labor domination by law or placement of unions under antitrust law. My recommendation is the acceptance of the second of each of these alternatives.

The citizens of this great Nation and the Congressmen have reached the place, as I see it, where we must either restate and practice our belief in free competitive enterprise or abandon it, as we continue to legislate ourselves into the planned, regimented society. We don't need more law; we need to examine, evaluate and eliminate stifling, antiquated policies. Balancing the budget, reducing the debt, and lessening the tax burden are what this Nation needs most, not more welfare spending. The basic choice is between siphoning off money into Federal programs or leaving the money in the hands of the people to reinvest as they see fit. The latter course is the only one possible for sound economic growth and prosperity for all. Only in producing more can we all have more.

The purge of 56 Congressmen threatened by Jimmy Hoffa, head of the Teamsters (including myself) will be met by a counter-offensive by those members who are now uniting for this effort.

The Ways and Means Committee (of which I'm a member) will: (1) Hold hearings February 1 on the taxation of cooperatives; (2) Bring out a social security revision, possibly including the Forand, allegedly "socialized medicine" provision, as an amendment; (3) Possibly permit a revision of the interest rate ceiling. Some of the language used in the Ways and Means Committee illustrates the special world of taxation (not all are self-explanatory, either)—multiple trust, retroactive correction, conduit, throwback rule, partial distribution, corpus, aggregating, spin-off, collapsible corporation, traps, loopholes, pitfalls, blind alleys, distribution in kind, election of choice, etc.

The weekly newsletter is available to anyone in Dallas by request.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BENTLEY. Mr. Speaker, it was with great grief and sorrow that Mrs. Bentley and I recently learned of the untimely passing of our beloved colleague, RICHARD M. SIMPSON, who had represented the 18th District of Pennsylvania in the House ever since 1937. We were particularly shocked over the sad news since we and the Simpsons were close neighbors in Chevy Chase, Md., and since one of our own children was a good friend of one of the Simpson boys.

While Congressman SIMPSON's notable achievements both before and since his first election to Congress have been fully covered in the remarks of his sorrowing colleagues, I merely wish to say that I considered DICK SIMPSON as a close personal friend and feel a personal sense of loss at the news of his passing. Mrs. Bentley and I certainly extend our deepest and heartfelt sympathy to the sorrowing members of the bereaved family.

Roman Holiday

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a speech delivered by Mr. Landon Nichols at a toastmasters' club breakfast, Phoenix, Ariz., December 1959. Mr. Nichols is 24 years of age. He majored in advertising at Arizona State University and is presently a copywriter for the promotion department of the Phoenix Republic and Gazette, Phoenix, Ariz.

The article referred to follows:

ROMAN HOLIDAY

The moral fiber of the Nation is weakening under the rapidly spreading "gimme" attitude.

People who don't work want to get paid. Some unions demand more money for less work. The Northwest States want cheap or free electricity. Arizona educators want free Federal aid to schools. Big city mayors and railroad men want the Federal Government to subsidize a nationwide commuter system.

"GIMME, GIMME, GIMME"

The decline of the Roman Empire started with a "gimme."

In one loud voice the unemployed hoards of Rome demanded relief. They yelled "gimme" to the Emperor. The Emperor was like politicians today, he was afraid of losing his office, which in those days also meant his head. He gave free bread to the masses. This increased the tax load, which increased the number of unemployed. The philosophy behind this move was, "Why work and pay heavy taxes, when the government will give us free bread and exempt us from taxes?" With nothing to do, the jobless soon became bored and demanded entertainment. The Emperor again relented and gave them entertainment. He declared a holiday and produced a circus. One holiday followed another, and soon every day was a holiday, and everybody quit work to see the circus. When the Germans invaded, the Romans didn't have the will to resist. They paid for their Roman holiday with their freedom.

Today, we have people yelling "Gimme." They don't feel that they should have to work for what they are asking free. The "gimme" people feel that the world owes them a living. They feel that the Government should assume responsibilities that are a little too rough for them to handle.

What happened to the responsibility of the individual? Abe Lincoln didn't have a GI bill to give him a free education. Paul Revere didn't have a guaranteed price for his silver products. Our Arizona pioneers didn't ask for Government subsidies or three squares a day and a guaranteed annual wage.

Individualistic action, free enterprise, and pride in accomplishment are the human elements that made this Nation great. There was no widespread "gimme" attitude in the building of this Nation. It couldn't have been built with this attitude.

We'll never get back to this frame of mind if the liberal politicians have anything to say about it.

They want to give money to people who won't work, force everyone to join a union,

give free electricity to everyone, and control education from a Washington bureauracy. They seem to be willing to give free medical aid to the aged voters, cheap housing to everyone, and aid to anyone who'll build an airport. They completely disregard the fact that somebody has to pay these programs.

Where can these giveaway programs stop? The ultimate end is to give everybody everything. This final step will eliminate worry and the individual will be cared for from the cradle to the grave. The programs cost more than money * * * they cost freedom. For everything that is given away, there must be control attached, and the individual must give up a freedom. Ultimately, you would not be able to choose which house you wished to live in or which job you wanted to work at. For some, this is good. It is not the life I choose. I choose to be free.

Dean Alfange has written a creed that speaks for me—I quote:

"I do not choose to be a common man. It is my right to be uncommon, if I can. I seek opportunity, not security. I do not wish to be a kept citizen and dulled by having the State look after me. I want to take the calculated risk to dream and to build, to fail and succeed. I refuse to barter incentive for a dole. I prefer the challenges of life to guaranteed existence, the thrill of fulfillment to the stale calm of utopia. I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid, to think and act for myself, enjoy the benefit of my creations and to face the world boldly and say 'This I have done.' All this is what it means to be an American."

The battlelines are drawn—on one side are those who work for what they want, on the other is the "gimme guys."

You have a stake in this fight—your freedom.

Too many say: "I'm against handouts. Don't give any more to anyone else. Just keep my check coming, but no more for anybody else," or they say, "I'm against handouts, but as long as the Government is stupid enough to give it to me, I'll take it."

Any time that you receive anything without working for it, you are indebted. Now is the time to pay your debt. Stand up and be counted as one who believes in the worth of the individual.

Find out how your public officials believe. I don't necessarily mean the President or the Governor. I mean your school board members and I mean your district representative in the State legislature and I mean your city and county officials, and your Congressmen. How much of your money and your freedom are they willing to give away? Find out how your public officials feel. Then tell them how you feel. Let's stop this "gimme" attitude, before we have a Roman holiday.

The Late Honorable Hubert Ellis

SPEECH
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BAILEY. Mr. Speaker, I would like to join with my colleagues in paying tribute to our late colleague, the Honorable Hubert Ellis, who died on December 3, 1959.

Mr. Ellis represented the Fourth Congressional District of West Virginia in the 77th, 78th, 79th, and 80th Congresses. It was our privilege to serve together in the 79th Congress.

Hubert Ellis was a warm and considerate man, a highly respected public servant, who served faithfully his State and the country.

To Mrs. Ellis and the other members of his family I extend my sincere sympathy.

How Many Farmers?

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BROCK. Mr. Speaker, the advance of the technological age in agriculture has depleted the farm population to the extent that now only one out of eight people live on the farm and produce agricultural products. It is a far cry from 50 years ago when one out of every three people lived on the farm and produced our agricultural products for the rest of the Nation.

While the technological advance has depleted our farm population, it also has increased our surpluses of agricultural products to the point where we have an overabundance of our needs.

In most of our industries the financial rewards are great for the finding of new and better methods of operation, for improved products, for efficiency in production, and for the many engineering skills and chemical and scientific findings of the new age. Unfortunately, these financial rewards have not been made to those engaged in the field of agriculture, despite their advances in the technological age. On the contrary, the annual income for agriculture has steadily declined while annual income for the industries has steadily gained over the same period of years.

The Omaha Journal Stockman, a very informative agricultural publication, has pointed out this lack of balance in our national economy in a recently published editorial.

Under leave to extend my remarks, I include the editorial herewith:

[From the Omaha Journal Stockman, Jan. 15, 1960]

HOW MANY FARMERS?

Latest word on how many people are living and working on farms comes in the form of a special report by the Bureau of the Census, the Department of Commerce and the Agricultural Marketing Service. This tells us that today's farm population is 21.2 million, which compares with 25.1 million just 10 years ago (1950). That is a drop of 15½ percent.

In simpler terms, one person in eight among our national population now lives on the farm. Back in 1950 it was one in six. Fifty years ago it was one in three.

These figures tell, as graphically as anything could, the story of agriculture's progress in America. Shortly after the turn of the century it was necessary for every third person to be engaged in farming in order that enough food and fiber could be produced for the Nation's needs. Now it is necessary that only every eighth person be a farmer. This frees the others for work in other industries and is one reason America is able to have so much of material goods above and beyond the basic needs of food, shelter, and clothing.

The decline in farm population is in no sense a defeat for agriculture. On the contrary, it is a victory, for it means that agriculture has progressed to the stage in which a relative minority can supply the majority with food and fiber in abundance. It means, too, that the farmer has progressed beyond the stage barely above subsistence and has become an effective, efficient, economic unit capable of carrying more than his share of the Nation's economic responsibilities.

The only deplorable aspect in this situation is that the farmer is not being consistently rewarded properly for his contributions to the Nation's well-being.

Two Souls Dwell in American Breasts

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. COHELAN. Mr. Speaker, in the following essay by D. W. Brogan, a distinguished British political scientist and author, the question of the role of government in the United States is discussed in terms of the American voter's attidues.

Professor Brogan notes the tendency to "let Sam not do it," the feeling that "Government is a nuisance that we could get rid of if all good men got together," the fact that "old and not so old men still dream of a country in which politics will be art for art's sake and Government will be confined to keeping the Indians on the reservation."

At the same time, he underscores these equally valid facts:

(1) Of course, the average citizen knows that he needs schools, roads, bridges, and he expects the Federal Government to help pay for them.

(2) A great deal of the current talk about giving power back to the States is nonsense, since it ignores the financial limitations of the States.

(3) There are lots of States and still more lots of cities which can't make ends meet, which never will be able to make ends meet out of local resources.

Under permission to extend remarks, I submit this article, which was printed in the Washington Post, January 17, for inclusion in the RECORD. Professor Brogan's conclusions are all important, for while he notes the American voter's antagonism to government, he gives full measure to what the same voter expects of his government.

MANY U.S. VOTERS CLING TO PAST

(By D. W. Brogan)

When I first went to the United States in 1925, there were tens of millions of American citizens who, post office apart, had no dealings with and no interest in the Federal Government. Not only was the in-

come tax low but, given the income level of those times, many didn't pay it. There was no pay-as-you-earn system, and unless for the rich, the direct taxes levied by the Federal Government, which had been quite high during and just after World War I, were minimal.

If you smoked, you helped to pay for Uncle Sam's little luxuries, but if you merely drank, you didn't, thanks to the 18th amendment. Nor did the Federal Government do much for you even if it did little to you. There were national parks, and pork barrel projects, and there was a Navy and an Army that only a minority of the population ever set eyes on.

Washington itself reflected the remoteness of the Union from the affairs of the Nation. The Plaza in front of the station was full of rusty war shacks. That masterpiece of the Grant era, the old State Department, housed not only State but War and Navy. Government offices in that pre-Hoover era were often hidden in shabby office buildings.

Pennsylvania Avenue was lined with shacks that Hollywood would hardly dare to show as background to a sophisticated western. Washington was still a village and, according to repute, many of the diplomatic missions of the minor nations (a third or so of those represented today) were useful to their occupants and their customers as high-class and legally immune bootlegging joints. It was an idyllic time—and it is over.

But, and it is an important but, many, many millions of Americans still live, emotionally, in that idyllic world that died in the New Deal and whose grave was bulldozed flat in World War II. Government is all around them; it affects every aspect of their lives. They know this; the tax bite makes that unavoidable, but old and not so old men still dream of a country in which politics will be art for art's sake and government will be confined to keeping the Indians on the reservation.

And a consequence is that the American's attitude to government is ambivalent. He is proud of the Constitution, of the Monroe Doctrine; he is all for Lincoln (deeply misrepresented as being first and last a kindly and ethical type, a sublimated Sunday school teacher). But he is unwilling to accept the fact that for good or ill, mostly for ill, big government and mostly big national government has come to stay.

"The business of the United States is business," said Cool Cal Coolidge in those days when "cool" had no musical or artistic meaning. Today the United States is the business of the United States (including business. United States Steel is big but U.S. Government is bigger. There are many reasons for this, but the impact, scale, cost of World War II, and the cold war are enough to explain most of the phenomena.

It was all very well for President Eisenhower's first Collector of Internal Revenue to dream of working himself out of a job by abolishing the income tax. But it was a dream, and yet so many millions of Americans live in the dream world of T. Coleman Andrews.

Government is a nuisance that we could get rid of if all good men got together. A strong tendency to anarchy, finding expression in some of the dreams (not in the practices) of Thomas Jefferson, is part of the American way of life. It shouldn't be taken too seriously, but it can be a nuisance.

For example, it bedevils sensible discussion among citizens about the role of the States, cities, counties. A great deal of the current talk about giving power back to the States is nonsense, since it ignores the financial limitations of the States. Sometimes the difficulty could in great part be dealt with by legislation or amending the State constitution, as in Michigan and New Jersey. Sometimes even cities could be solvent and competent if State legislatures extended their boundaries and relaxed too-jealous controls. But there are lots of States and still more lots of cities which can't make ends meet, which never will be able to make ends meet out of local resources.

Yet the tradition that I have talked of, as far as it does accept the necessity for governmental activity, wants to pass the buck to the State, the city, the New England town. Let Sam not do it. That way lies fiscal sanity. Maybe, but that way lies a Government that denies its responsibilities in the public sector from sputniks to schools.

The tenacity of the idea can be illustrated from an issue of the most serious journal in the United States, a copy of which has recently come my way. (I mean the Harvard Alumni Bulletin, of course.) A member of the class of '37 takes Senator CLARK of Pennsylvania to task for advocating Federal aid to education, asking with crushing scorn "an economically literate explanation of how a dollar raised by Federal taxes differs from a dollar raised by State taxes."

Senator CLARK does not need my help, but the author of the letter might reflect that in his State, which is also Senator CLARK'S, the taxable revenue per head is far greater than in, say, Mississippi. Left to itself, that State and many others can't provide, no matter how willing they are, the minimum social services that not only they want but that they need—and that it is desirable from the point of view of the Nation that they have.

No doubt this means raising money in one State to spend in another, but it is a long time since Lee surrendered and States' rights, hostility to internal improvements, etc., etc., have never been the same since.

Of course, the average citizen knows that he needs schools, roads, bridges, and he expects the Federal Government to help pay for them. Schools? Not yet, but soon. I have been struck in my recent peregrinations in areas like upstate New York with the resistance to the rising school taxes not because they are proof of extravagance, though sometimes they well may be (it depends on how important you think basketball is), but simply to the often unjust effects of the local tax system. Federal aid will come, and it is needed.

Then it is hardly necessary to contrast the theoretical hostility of the embattled farmer to all Government interference, with the sad reality of his no doubt shamefaced and resentful, but still steady, acceptance of those horrid parity payments. Nor, indeed, are business, so much of it dependent on the Pentagon, or the stiff-necked bourgeois, who don't necessarily despise the resources of the social security system, really hostile to the Government. And the sturdy, independent striker, member of a big union, does not always remember how much that union owes to Federal patronage.

Back to Jefferson, back to Calhoun, if you like, but only in dreams.

Two souls, as Goethe put it, dwell in American breasts. What are the consequences for politics, for the role of the citizen? As I have said, politics 35 years ago, when I first began to study the system at firsthand, was a game. It was not in Harvard, when I arrived there from Oxford in the golden age of Cal, a popular game. My habit of slinking off to political meetings, listening to former Mayor Curley or former Mayor Fitzgerald, even to Congressmen and Senators, was frowned on by all my friends. Why was I wasting my time like this when I could be in the library or in a speakeasy?

I did get to the library from time to time, but I also got out and about among the politicians, and I should say that today the average American, if his sense of duty as a voter is not impressive, does take more interest and a more intelligent interest in politics than he used to do. By British standards, he is idle and indifferent, but by the standards of 1925, he is Cato or John Quincy Adams.

But what kind of an interest? In his interesting panegyric of the U.S. Senate, "Advise and Consent," Allen Drury makes the valid point that many Americans, perhaps most active politicians, get their initiation into the political way of life by running for office in high school or college or in some organization. "Heeling," as I believe it is called at Yale, is a political education. But it is a political education of a special type.

It is about people, not projects, about men, not measures. The doctrinal content is nil or fictitious, like near beer in the 1920's. In the spring of last year I ran across one or two college elections, with parties, primaries, pamphlets, campaigns. They provided political education of a kind, but not of the best kind. For the parties were artifical divisions like the blues and the greens in Constantinople or like scratch sides of softball got up among more or less willing parents and children.

There may be campuses where there are genuine college issues debated and settled that way, but I haven't been on them. What was decided was the pecking order of the campus elite. What is often decided in local, State, and National politics is the pecking order of the political elite. There are other issues in politics; they are neglected, on the campus and on Capitol Hill.

I rush in to say that I am not demanding and would be horrified to get that panacea of so many political scientists, a rational political system. Parties based on defined and deeply dividing doctrines are what the United States, luckily, hasn't got. When she did get such a system in 1860, she got a civil war thrown in. But it seems to me that one reason for the comparative idiocy (in the Greek sense of the word) of the average American is his frustration when confronted with his duties as a voter.

He votes the straight ticket and what does he get? He doesn't know even what to expect, what to hope for. What has the big Democratic majority of 1958 got from this Congress? In State politics, the outrageous gerrymandering at the expense of the cities, as its worst in Georgia but bad in Iowa and existent everywhere, depresses the good or even the sporting citizen. After all, at the racetrack, your horse starts. In politics it often doesn't. The division of powers into three branches accounts for a lot of this frustration; so does the necessary ambiguity of party platforms.

But whatever the cause, boredom, frustration, apathy are not unnatural results.

The American citizen is asked to do more than any other citizen since the great days of Periclean Athens. (And the Athenian had often little else to do and was paid for a lot of his political duties.) There are too many elections, for too many offices. From President through Governor to dogcatcher. From U.S. Senator to selectman. No one has the time, energy or knowledge to do all that he is asked to do—well.

It is a surprise that so much intelligent cross voting takes place, that primaries and final elections so often make the right choices. Happy citizens of the District of Columbia, who have no rights, duties or worries.

Nor is this all. In too many States they have direct democracy. They elect practically every public official; they have initiatives and recalls. I remember in the election of 1952 looking at the ballot paper and the accompanying literature issued to the inhabitants of San Francisco County (Calif.).

There were propositions for the county and the State and endless officeholders were to be chosen. There were explanatory pamphlets. Altogether, the documentation issued to the voter weighed 14 ounces on this, bad paper and small type. It would have taken an expert a week's exclusive study to begin to know how to vote.

No wonder the American dreams of simpler days, no wonder he forgets to vote or to register, no wonder he doesn't know the name of his Congressman. Yet things have improved.

Everybody knows the name of the Vice President, which wasn't true in 1925 (who was he now? Dawes? Curtis? Marshall?). The presidential is a sporting event that eclipses the world series or the Preakness. And that justifies all the ballyhoo that the heirs of Washington and Jefferson are going to go through this year.

Even if millions of Americans won't vote, all will know who is running. In that lies the safety of the Republic.

Is Patriotism Old Fashioned?

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. ZABLOCKI. Mr. Speaker, under permission to extend my remarks, I am including a letter received from one of my constituents, together, with an editorial from the South Milwaukee Voice-Journal, with regard to loyalty oaths and affidavits required of students receiving grants. I am including this letter in the hope that it will be included in the RECORD.

SOUTH MILWAUKEE, WIS.,
January 10, 1960.

DEAR CONGRESSMAN ZABLOCKI: I'd planned to write you giving my views on the loyalty oaths and affidavits required of students receiving grants under the National Defense Education Act. But, I find that Mr. Gordon Lewis' editorial in the January 7 Voice-Journal pretty well expresses my view as well as my wife's. I've included it with this letter, with the hope that it might be read into the CONGRESSIONAL RECORD as a grassroots opinion on loyalty and patriotism.

Sincerely yours,
RAYMOND J. BRONIKOWSKI.

[From the South Milwaukee Voice-Journal, Jan. 7, 1960]

IS PATRIOTISM OLD FASHIONED?

We're beginning to get an inferiority complex because of the recent furor over the loyalty oaths and affidavits required of students receiving loans under the National Defense Education Act.

Apparently it's becoming so old-fashioned to be patriotic that we're going to let students bite the hand that feeds them.

What, we'd like to inquire, is so dreadfully wrong about requiring students to state their allegiance to the U.S. Government if they are going to accept financial handouts from that Government?

Why should U.S. taxpayers pay for the schooling of those who either can't or won't take an oath attesting to the fact that they do not support or believe in organizations aimed at the destruction of our form of government?

We may be old fashioned and we may be wrong, but we fail to see why requiring loyalty to the Government is too big a price to pay for providing a youth a good share of his higher education.

Exploding a Popular Myth

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "Exploding a Popular Myth," which appeared in the Arizona Daily Star, Tucson, Ariz., on Wednesday, January 6, 1960:

EXPLODING A POPULAR MYTH

One of the favorite practices that is going the rounds today among political and intellectual leaders and numerous commentators is the way they pontificate about our gross national product or income and its rate of growth. They assure us that our past rate of something like 2½ percent a year is not enough, because the Soviet Union has a rate of growth of 7 to 10 percent.

Therefore, they caution that unless we get busy and raise ours to at least 6 percent, we will fall behind the Soviet Union and inherit still more dangers. It is up to the Government to do something about this situation, because, they imply, our free enterprise system cannot assume such a task.

When it is remembered that possible presidential candidates as far apart as Nelson Rockefeller and Senator HUMPHREY have spoken out openly to this effect, it cannot be called a partisan matter. It does make a good political issue, because it is like siding with virtue against sin. Who doesn't want growth and prosperity?

However, the subject is not the serious one that so many of its sponsors say it is. Growth has been going on in the United States ever since the Constitution was adopted. It is going on today, and it will be going on tomorrow and in the coming years. It has been going on because here in America we have made a free society function. We have created a society whose Government has provided an atmosphere in which human beings could take the initiative to satisfy their desires and the desires of their fellow men.

The results speak for themselves. We have done a job that has made us the wealthiest and most powerful nation the world has ever known. It has ben done without economists and other thinkers, including political leaders, eulogizing gross national product, and its rate of growth.

Just why must we now look upon our record and system as outdated, and therefore find it necessary to turn over the task to politicians to direct? For that is what the demand for a doubling of our rate of growth implies. The Government would adopt a plan—similar to the way Moscow does it. It would give the orders and impose the discipline.

Those who assume that this kind of government-planned economy would work better have only to look at Great Britain and even France. If the gross national product is to be increased, an enormous increase in productivity must be made. If the Government is going to provide orders to make such an increase, it will have to increase taxation, or finance such increased spending by printing money in the form of bonds.

If the plan is really going to work, all strikes and lockouts must be brought to an end. All featherbedding must cease. Britain found out that dissatisfied workers will strike in government-owned industries. It would be a cinch that Americans would, too, just as they have always done.

Thus, the doubling of the rate of growth of the gross national product would be stymied. Those political and economic leaders who calmly assume that their plan would work better, because the government would be calling the turn, would find out how mistaken they are.

If we look on the past 10 years, the record will show that America has staged a truly remarkable growth and has done it at a time when her responsibilities abroad increased enormously. The 1960's can see equal and probably greater progress, if our Government maintains the healthy atmosphere of a free society in which the creative ability of the American people is free to work.

Cleveland's Veterans' Administration Regional Office Makes Outstanding Record in 1959

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mrs. BOLTON. Mr. Speaker, the Veterans' Administration can well be proud of the work accomplished in its Cleveland regional office during 1959. The area under the jurisdiction of this office includes 38 northern Ohio counties, wherein reside more than 713,000 veterans.

I have just received a copy of the annual statement of the regional manager, Col. William Holsinger, which shows that in spite of a reduction of full-time employees from 530 in 1958 to 500 at the close of 1959, or a virtual 6 percent loss in full-time personnel, the office had an unprecedented output in all operating programs, except that of the educational which is now tapering off to some extent. This record of production represents the untiring and conscientious energy of all employees of the Veterans' Administration in Cleveland and northern Ohio. Colonel Holsinger and the men and women who serve under him have every reason to be proud of their endeavors. Their record and achievement should serve as a stimulant and a challenge to all departments of our Government.

Believing my colleagues will be interested in reading the statement in its entirety, I ask unanimous consent that it be included as part of my remarks.

ANNUAL STATEMENT

The course of 1959 and that of the 1950's has been run and there can be no return by that route. Consequently, the Veterans' Administration program moves on to greater achievement and efficiency of operations.

The year just closed may be designated as the year of automation and mechanization and the introduction of electronic data processing systems into the tabulating and statistical phase of our official lives. No program as vast as that of the Veterans' Administration can progress in the tight competitive business world of today without modernizing fully every single adaptable step required in the pursuit of its objective. By virtue of the installation of this equipment our operations already demonstrate not only unprecedented speed of production but also a mechanical accuracy never before attained by human competations or performance.

Recognition by the national headquarters of the Veterans' Administration has been accorded the Cleveland office on a number of occasions during the year just ended. Particularly gratifying was the selection of the Cleveland Veterans' Administration Contact Division as the second most outstanding and efficiently operated Contact Unit of any Veterans' Administration field station or hospital in the United States for the preceding calendar year. This contribution paved the way for a subsequent rating by our superiors in Washington of outstanding in the field of community relations, thus fortifying the agency with the very durable fabric of public confidence.

Not by any means of lesser stature is the national award conferred by appropriate ceremony on the Cleveland Regional Office in September 1959 for having the best and most exemplary record of safety and fire protection of all the regional office installations of the Veterans' Administration in the United States. This is a highly coverted award and the employees of our station deserve great praise for their safety achievement.

During the year a number in our midst have answered the summons of the grim reaper and have crossed over to their eternal reward. Even in the closing days of December a great cloud settled over us all with the passing of Dr. Harold P. Timberlake, chief of the medical division, whose service to veterans extended over a period of 40 years. He was outstanding in his profession and all veterans mourn his death on Christmas eve. We reverently record our sorrow over these broken links in our chain, but the inspiration of their lives of service to this cause impels us forward with all the greater zeal in assisting him "who has borne the battle, his widow and orphan."

In spite of a reduction of full-time employees from 530 in 1958 to 500 at the close of 1959, or a virtual 6-percent loss in full-time personnel, the station wrestled with an almost unprecedented increase of pressure in all operating programs, except that of the educational.

The unusual growth in business in the Claims Adjudication Division receiving substantial impetus from action of our central office in decentralizing death claims to the field stations. As a consequence of this decision many thousand running awards were added to the normal caseload processed by this office and payments to beneficiaries further expedited. However, it must be recognized that this action created an almost phenomenal increase in workload pressure on the Administrative Division where our active file housekeeping detail has reached the rarified area of just short of 1 million files.

It will be observed that in spite of the steel strike and certain related industrial stagnation our GI Loan Division accomplished a 33⅓-percent increase in guaranteed loans for home building and buying during the year representing a $61,074,311 volume of business in this field.

True, the Vocational Rehabilitation and Education Division continues to show some decline since the World War II and Korean GI educational objectives come closer each year to achievement. But in spite of operating personnel reductions in this division, the quality of training and college instruction remains high and public reaction most gratifying.

Finance Division operations bear the brunt of our conversion to mechanization. This division has toiled conscientiously to service the financial aspect of our official functions and services. They have sustained personnel reductions but have shouldered their new responsibilities under the conversion procedure with remarkable restraint and composure. In the face of changeovers in processing methods this division shows a cash disbursement volume of beneficiary payments well above that of the preceding calendar year. Even further growth here will develop in 1960.

The area under the jurisdiction of the Cleveland regional office includes the 38 northern Ohio counties on a line extending from Belmont County on the east to the southern boundary of Defiance County on the west, wherein reside more than 713,000 war veterans serviced by this office.

	Year ending—	
	Dec. 31, 1958	Dec. 31, 1959
1. Number of veterans who visited the Cleveland regional offices and branches during year	160,237	182,213
2. Veterans given vocational training/education	21,502	16,442
3. (a) GI Loans guaranteed	2,900	4,551
(b) Net dollar value guaranteed loans	$38,146,720	$61,074,311
4. Grand total of running award benefits to veterans	81,808	102,678
5. Number of medical examinations/treatments	157,260	167,063
6. Total number of active veterans' files for all purposes in Cleveland regional office at end of year (32,263 files retired)	830,474	837,848
7. (a) Average number of beneficiary checks issued per month	98,069	99,173
(b) Average monthly beneficiary payments	$6,282,272	$6,490,559
8. Average full-time employees	530	500

This record of production represents the untiring and conscientious energy of the 500 employees of the Veterans' Administration in Cleveland and northern Ohio. Our Nation, grateful beyond mere words for the service of America's veterans in time of war, will tolerate no compromise with quality in administering their entitlement.

We who serve in the public trust of public office are delighted to expend our maximum capacity in the performance of duties entrusted to us, but signs and portents are discernible to the effect that further losses in operating personnel and the corresponding additional operating cost reductions may place in serious jeopardy the element of quality in our end products. It is on this basis that we plan the future.

WILLIAM HOLSINGER,
Manager.

The Late Honorable Alvin R. Bush

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. KEARNS. Mr. Speaker, in the death of Al Bush the country, the Congress, and the people of the 17th Congressional District of Pennsylvania lost the services of a most capable legislator.

Al Bush was a man of outstanding character, ability, and great courage. His affability and warm smile brightened many days for all of us. Personally, his friendship and consideration will always be one of my precious memories.

Again, I extend to Mrs. Bush and the family my deepest sympathy.

William R. (Bill) Boyd, Jr.

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, during the month of November 1959, Texas and this country lost a civic and religious leader in the person of William Boyd, Jr., of Teague, Tex.

During World War II, he served in the capacity as chairman of the Petroleum Industry War Council and was given a Presidential Award of Merit for this service to his country.

I am happy to say that I counted Bill Boyd as a close personal friend of mine and on my visits to Teague, Tex., it was always a pleasure to sit and chat with him on matters of National and State importance.

Bill Boyd was a great American, a great Texan, and will certainly be missed in this great country of ours.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a reprint of an article which appeared in the Teague Chronicle, of Teague, Tex., concerning this great individual:

WILLIAM R. BOYD DIES

Funeral services were held Saturday, November 7, 2 p.m., at the First Methodist Church in Teague for William Rufus (Bill) Boyd, Jr., Teague oil man, civic and religious leader.

Mr. Boyd died at his home Friday of a heart attack. He was 74. He was found in bed about 10:30 a.m.

Rev. Jewel McClure, pastor of the local church, officiated at the funeral, and Ham Bros. Funeral Home was in charge of arrangements. Brother McClure was assisted by Rev. Bob Kalb, Wills Point pastor. Burial was in Greenwood Cemetery.

Mr. Boyd was Teague's first mayor when he was only 21. He wrote most of the city ordinances, and many of them are still in effect.

He was born January 7, 1885, in Fairfield. His father, W. R. Boyd, Sr., was a lawyer and district judge in Freestone County. Mr. Boyd also studied law at George Washington University in Washington, D.C., and practiced in Teague with his father until he went into the oil business in 1920.

Mr. Boyd was owner and operator of a general store in Fairfield when he was 16. He also worked as a printer's devil on the Fairfield Recorder.

He founded the American Petroleum Institute in New York in 1920 and was president from 1941 to 1949.

Mr. Boyd came back to Teague when he retired in 1950. The whole town turned out

to celebrate all day. There were speeches and banquets in his honor.

Lone Star Gas Co. spudded in the Bill Boyd No. 1 on his farm east of Teague the same day, but it was a dry hole.

During World War II, he served the United States as chairman of the Petroleum Industry War Council and was awarded the Presidential Medal of Merit by President Harry Truman in 1946.

Two years ago, Mr. Boyd organized the Methodist Men's Club with only 20 members.

The membership has now risen to 1,154, and the club is now called the Inter-Denominational Men's Club of Teague.

Mr. Boyd changed the name because people of every faith joined. Members are from 35 States, England and Brazil.

Monday night, November 2, Mr. Boyd presided over a meeting of the club in which Secretary of State Zollie Steakley was speaker.

Mr. Boyd was a steward in the First Methodist Church, and an ardent worker in all activities. He was a member of the Teague Chamber of Commerce and several other civic organizations.

He married Miss Gertrude Watson, of Fairfield. She survives him.

Five generations of the family have the same name, William R. Boyd.

His son, William R. Boyd III, is assistant to the president of Cities Service Oil Co., in New York; his grandson, William R. Boyd IV, is assistant vice president of the First City National Bank in Houston. He also has one sister, Mrs. John W. Carnes, of New York. Also one great-grandson, William R. Boyd V, and two other great-grandchildren survive.

Gen. Dougas MacArthur 80 Years of Age January 26

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. DORN of South Carolina. Mr. Speaker, Gen. Douglas MacArthur will observe his 80th birthday this month, January 26. General MacArthur is one of the great men of world history. This Nation and the free world might well be under Communist domination today had it not been for his foresight in the Far East.

Mr. Speaker, I greatly fear some day we will fight a war at a great disadvantage with 1 billion atomic-powered Chinese Communists. This tragedy will face the next generation because we did not back up General MacArthur in 1951. Practically every person I talked with from Syngman Rhee on down in Korea, the Prime Minister of Japan, every member of the Japanese Diet, every high ranking U.S. officer of the Army, Navy, or Air Force, the enlisted men at the front all agreed the Chinese Communists were ready to be destroyed. Had General MacArthur's plan been followed of bombing the bases in Manchuria and driving again north, the Chinese Communists would have collapsed then and there.

We gave Red China the time she so desperately needed to liquidate the opposition and again build up her armed might.

Mr. Speaker, the following article by Saul Pett, of the Associated Press, which appeared in the Greenville (S.C.) News will be of much interest to General MacArthur's friends here in the Congress and throughout the country:

WALL OF SILENCE SURROUNDS "MAC"

(By Saul Pett)

NEW YORK.—Gen. Douglas MacArthur will be 80 years old January 26 and, as usual, will appear somewhat larger than life size.

There will be birthday greetings from all over the world for the general of the Army, the senior officer of all branches of the American military service, possibly the most decorated soldier in American history, a hero of St. Mihiel, Bataan, Corregidor, New Guinea, Manila, Tokyo, and Inchon and the man whose life has probably touched more history than any other living American.

There will be messages from presidents and prime ministers, from general and admirals, from the great, the near-great, the never-great.

But the climax of the birthday will come in the evening, as it has every year for the past 8 since General MacArthur returned under forced draft from Tokyo and Korea. At about 6:45 p.m., he will accept the arm of an escorting general, depart from the splendid isolation of his Waldorf Towers apartment and descend by elevator to a stag reunion of his old World War II staff.

AN OLD RITUAL

Judging by past birthdays, the ensuing program might remind viewers of the late show of the regimental ritual of the old Bengal Lancers back when India was still a Kiplingesque outpost.

As the general approaches the door of the hotel's Jansen suite, his old staff will be assembled inside, in black tie or uniforms for those who can still get into them. At a given moment, someone will shout "tenshun" and the general will enter, himself in black tie.

As he moves in, the men will sing "Happy Birthday." The general will pass among them, shaking each hand firmly, gazing deeply into each pair of eyes from a face which, though thinned by age, remains chiselled in epic lines. It is still a face which seems to suggest that it alone stands between mankind and Armageddon.

After a drink or two—during which the men will begin to refight the Second World War—the party will then pass into the mirrored dining room, to an elaborate three-wine dinner.

At the table, General MacArthur will be flanked by the ranking officer of each branch of the service under him in the Pacific—Gen. Walter Krueger, of the ground forces, Adm. Thomas C. Kinkaid, of the Navy, and Gen. George C. Kennedy, of the Air Force.

As the brandy glasses are drained and the old warriors light fresh cigars, the roll will be called and each man will rise and answer in alphabetical turn. Some names will be followed by goodhumored cat-calling even occasion bun throwing.

FRIVOLITY IS OVER

But there will be none of this when MacArthur rises. If there were, said one general and admirer, it would be "followed by the most silent moment in history."

Birthday greetings will be spoken for each branch of the old command by Kreuger, Kennedy, and Kinkaid. Then, General MacArthur will speak, perhaps in recollection or on the general theme of leadership or the state of the world. As always, he will speak in Ciceronian rythms, rolling phrases and rising clauses, each marching by in highly polished cadence.

The evening will close with all members of the staff rising and singing the old barracks ballad which ends, "old soldiers never die, they just fade away"—a line which has evoked the warmest emotion in the general's admirers and the coldest derision among his detractors.

The elevator will rise again to the 37th floor of the Waldorf Towers and General MacArthur will once more disappear into his seven-room apartment, from which he rarely departs these days.

Here in the muted magnificance of his Oriental furnishings, in a living room 47 by 28 and adorned by delicate carvings, ancient screens and a pair of gleaming, 2-foot-high silver vases given in gratitude by the Emperor of Japan, Douglas MacArthur lives out his years, making no direct contact with the public, seeing no reporters and allowing his past and present to come to him.

As chairman of the board of Sperry Rand Corp., (largely an advisory job which earns him $68,800 a year), General MacArthur runs board meetings once a month in his living room. All other business matters are dealt with in the apartment with one exception.

YEARLY MEETING

Once a year he must go out to conduct the stockholders meeting, which requires more space. Two years ago, history of a sort was made when the General of the Army, rolling through a long peroration about high taxes and the menace of the Soviet Union, was heckled from the floor by a lady stockholder from Brooklyn.

"I came here to hear about dividends, not Russia," she shouted. The general returned to his theme in the grand way generals have of ignoring snipers.

The general sees a variety of people, almost all of them in his apartment. His visitors are said to include government leaders from the Far East, Congressmen, businessmen, and military officers, including the last three chiefs of staff, all of whom were cadets at West Point when MacArthur was Superintendent.

Except for stockholder meetings, MacArthur no longer speaks out on public issues and makes very rare public appearances. One of these is an annual visitation to the National Football Hall of Fame dinner, where this year, without notes, he delivered a remarkably vivid speech on the effects of football in later life.

He recalled the death in Korea of a platoon commander who had been a star end at West Point.

"As he lay dying on the field," the general said, "his commanding officer knelt over him to catch his final words and through those bloody lips came that last gasping whisper—'Stupid, thinking they could turn my end.'"

The general recalled the football remarks made personally to him by Presidents dating back to Theodore Roosevelt, who at a Harvard-Yale game more than 50 years ago said to his aide-de-camp:

"Douglas, I would rather be in the Harvard backfield today than be in the White House."

He recalled comments made to him by Presidents Taft, Wilson, Harding, Coolidge, Hoover, Franklin D. Roosevelt—MacArthur was Chief of Staff under Hoover and Roosevelt—and Dwight D. Eisenhower.

A LAUGH FOR TRUMAN

"And then," he added to a rising laugh, "there was Harry Truman, who surely tried to look like a fullback when he kicked me out of Korea."

This was MacArthur's first public reference to Truman since he replied in a published statement to the Truman memoirs.

According to a man privy to MacArthur's feelings, the general still feels deeply hurt by the Truman firing—feels it cast a stigma over his military record, which will never be erased. He will go to his grave with a deep sense of bitterness.

But MacArthur remains convinced that Chinese Communist bases in Manchuria should have been destroyed, that it would have won the war in Korea and then and there aborted the rising power of China.

He is said to be concerned that the "time may be dangerously close when American soldiers may not have the heart to fight for their country." He attributes this, too, to the "fact that we failed to fight Red China through to victory after she caused huge American casualties."

This is paraphrase of MacArthur opinion as reported by a man who sees him almost every day but asks that his name be withheld.

NEVER TRAVELS

Since his return from Tokyo in 1951, General MacArthur has never traveled abroad although every year he receives invitations from the Governments of Japan, Australia, Korea, and the Philippines.

"The general feels," said the same source, "that the circumstances of his dismissal preclude his going back to the Far East even for a visit unless he went back as some sort of special ambassador with the dignity of the U.S. Government behind him."

MacArthur's longest trip in recent years covered 55 miles. On a rainy Sunday morning 2 years ago, he suddenly invited his former aide and old friend, Maj. Gen. Courtney Whitney (retired) to drive up to West Point.

They arrived unannounced at the Military Academy, where MacArthur led Whitney to the cadet messhall. An attendant stopped them; visitors, he said, weren't permitted at that hour.

The general said, "I'm sorry. We were just browsing. I graduated from here. MacArthur's the name."

The attendant almost disintegrated. At West Point, the MacArthur name is held in almost the same reverence given Robert E. Lee. They were allowed into the messhall.

As a general of the Army still on active duty but without specific assignment, MacArthur has a 3-room office downtown, manned by a master sergeant, warrant officer, and civilian administrative assistant. MacArthur is entitled to Army pay and allowances of $20,543.

The general rarely visits the office. His mail is brought to him every day. The Army motor pool also provides him with a driver and car, usually the same old black Chrysler he used in Tokyo.

Every year the general uses the car less as he spends more and more time in his apartment. Here he lives with Mrs. MacArthur and Ah Cheu, the Filipino nurse, who came out with the family by torpedo boat from Bataan in the dark days of 1942.

SON IS AT COLUMBIA

Arthur, the MacArthurs' son, has his own apartment uptown near Columbia University, where he is a senior majoring in English. A dark, reserved young man of 21, he has indicated a great interest in writing and little in a military career. However, after graduation next June he will be subject to compulsory military training.

The general is a great sports fan and will watch all forms available on TV, including wrestling. But his special passion is football—West Point football. In any given year of war or peace, we are told, he could give you the vital statistics of every man on the Army varsity that season. He can tell you the score of every Army-Navy game in the past half century.

On football Saturdays, when Army is not being telecast, he will watch another game on TV while listening to Army on radio. This year he watched Navy's massacre of Army (43–12) in long suffering silence. But within 2 days, General of the Army Douglas MacArthur shook off the shock and rose out of the still smoldering foxholes of disaster to inquire about West Point's prospects for next year.

President's Journey Biggest Security Job in History

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. CANFIELD. Mr. Speaker, Alvin Shuster, of the New York Times, has written, a most interesting article on an interview with Chief U. E. Baughman, of the U.S. Secret Service, on President Eisenhower's recent 22,000-mile trip abroad.

The Chief, who is one of the finest administrators in the Federal Government, and his loyal and efficient force do a most outstanding job and can be readily catalogued as "unsung heroes."

The story which appeared in the Times on December 24, last, reads as follows:

GUARD CALLS PRESIDENT'S JOURNEY BIGGEST JOB IN HISTORY—PRECAUTIONS TOOK A BEATING, HE RECALLS, BUT ALL OF THE SHOOTING WAS FRIENDLY

(By Alvin Shuster)

WASHINGTON, December 24.—Secret Service Chief U. E. Baughman looked back today over President Eisenhower's 22,000-mile trip and breathed a sigh of relief.

The journey, he agreed, represented perhaps the biggest security job in the history of the Presidency. It was not without its moments of alarm.

The stops Mr. Baughman remembered most vividly were those in India, Afghanistan, and Morocco.

"In Delhi," he recalled, "I saw more people converging on the President of the United States than I had ever seen at one time in all my 32 years with the Secret Service. It took us 2 hours to go 9 miles and for a while it looked as if we were simply going to have to stop and wait for the people to get tired and go home.

"They were all over the place. On the roof and hood of my car, which was in front of the President's; and they were pushing closer and closer to the President himself. Finally Prime Minister Nehru got out of the President's car and went up front into a police jeep to urge the crowds to step back. Two Secret Service men climbed in and sat beside the President. I don't recall that this was ever necessary before."

He remarked that more than 90 percent of all assassination attempts had been made within a few feet of the intended victim.

"With all those people so close to the President, all we needed was one crackpot," he went on. "It's a good thing they were for us and not against us."

Mr. Baughman, tanned but sniffling as a result of a 70-mile ride in an open car through bitter cold in Afghanistan, said there was a new element of concern to the Secret Service in Kabul.

There, he said, the cheering masses were throwing confetti and streamers. When thousands of people raise their hands and start throwing things at the President, the Secret Service is not at ease.

"All you can really do is look, watch, wait, and hope," he said.

In Morocco, Mr. Baughman recalled, mounted tribesmen fired into the air as the President drove in from the airport. It is their custom to honor their king that way, and "we couldn't stop that," he said.

They were using muskets with charges of gunpowder. No bullets.

"But in any event," he said wryly, "it was pop, pop, pop all the way into Casablanca."

None of the 40 Secret Service men on the trip received any reports of threats to the President's life. Mr. Baughman said, however, that there was a rumor of a plot to assassinate the king in one of the countries the President visited.

The report was checked, he said, but the source proved to be "a phony who wanted $500 to reveal the rest of the alleged plot."

One of the usual precautions over a Presidential route is to check manholes for people or bombs. In Madrid, Mr. Baughman reported, the authorities simply flooded the sewers and sealed them up.

The Secret Service men did not check the President's food. They left that to local security officers. But the President did take bottled water along.

Mr. Baughman reported one other unusual experience. In Paris, the Secret Service chief ate snails for the first time in his life.

Exit Mr. Purchio

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, a brilliant, young man decided to settle in Hayward, Calif., after World War II. He was a native of New York and a graduate of Fordham Law School.

Besides being a good lawyer he has a magnetic personality that draws people to him. Conscious of the public welfare, he entered politics.

John Purchio became a member of the city council and later on mayor of Hayward. He became a leader in the Democratic Party in southern Alameda County where his influence continues to increase.

As mayor he did an outstanding job. As a city councilman he helped to guide a community that grew from a town of 15,000 to a city of 70,000 during the period he has lived in it.

Gov. Edmund G. (Pat) Brown, recognizing John Purchio's ability as a public administrator, recently made him a member of the all-important State highway commission. This commission establishes policy and directs the spending of nearly $2 billion a year.

John Purchio's friends, among whom I am numbered, are confident that he will bring to his new position the same intelligence and energy which have characterized his public work in the past.

The following is an editorial that appeared in the San Leandro Morning News on January 8, 1960:

EXIT MR. PURCHIO

John J. Purchio is the second good man to leave the city council within a matter of weeks. He hasn't gone yet, but his leave-taking is a matter of mere formality. Otherwise, he would be in the novel position of having a conflict of interest in public affairs. It would be improper for John Purchio, councilman, to be a city spokesman before John Purchio, State highway commissioner, in matters pertaining to roads in this area.

In a figurative sense, it might be said that the Hayward council has lost two oppositely constituted anchor men through the resignations of John Purchio and Frank Biggs. The latter worked alone, though not to the exclusion of full cooperation with his comembers. Purchio, on the other hand, is a group worker, but not to the exclusion of individual decision and effort. His marked ability in both categories elevated him to a position of council leadership that was recognized throughout the city.

Perhaps the best illustration of this lay in the leadership he furnished and the group effort he enlisted in securing the State College. Success in that effort cannot be calculated in its effect on Hayward. The city will undergo a change and improvement that could not have been secured in any other way. Had John Purchio not worked as an individual and as a member of a team, had he lay supine under initial failure instead of being stung to redoubled effort, the college would not have a permanent site in Hayward. He is the man who made the difference.

As a member of the State highway commission, John Purchio must now adopt the State's interest in that particular field as vigorously and ably as he adopted the interests of a single municipality through the councilmanic post. His individual talent and his penchant for teamwork will be as fully employed, but on a wider scale.

Governor Brown, we believe, made a wise appointment. The only trouble with it is that Hayward will no longer be the focal point of John Purchio's public service.

The Late Richard M. Simpson

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, we in the Pennsylvania delegation mourn the passing of RICHARD M. SIMPSON, an outstanding and capable legislator and vigorous leader of his party's Congressional Campaign Committee.

A Member of this body for 23 years, DICK SIMPSON was respected by all of his colleagues. He had a most pleasant personality and a strong character. He was kind and friendly. He was able, articulate, and industrious in carrying out the duties of his office. Our State and the Nation will miss his service in these perilous times.

I extend my sincere condolences to his family on their great loss.

Rain of Death

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert herewith in the RECORD an article entitled "Rain of Death," from the November–December 1959 issue of Information Report, which is published by the Animal Welfare Institute:

RAIN OF DEATH

The effect of the most "popular" new poisons on life—whether human or animal life—becomes increasingly serious with every passing year, since more millions of pounds of these highly toxic chlorinated hydrocarbons and organic phosphates are constantly being spread more widely and their effect is often cumulative.

The effect on animals is well summarized by a responsible zoologist who has studied the problem, Dr. George J. Wallace of Michigan State University: "The current widespread program poses the greatest threat that animal life in North America has ever faced—worse than deforestation, worse than illegal shooting, worse than drainage, drought, oil pollution, possibly worse than all these decimating factors combined. If this and other pest-eradication programs are carried out as now projected, we shall have been witnesses, within a single decade, to a greater extermination of animal life than in all the previous years of man's history on earth." (Reader's Digest, June 1959).

In Long Island, N.Y., last year, citizens sought an injunction against mass spraying of DDT by airplane by the U.S. Department of Agriculture. Testifying on the danger to human health and life was Dr. Malcolm M. Hargraves, of the Mayo Clinic. Following is a summary of his statements as reported by William Longgood in the American Mercury, July 1958: "Dr. Hargraves testified that he was positive that DDT and its solvents cause leukemia, aplastic anemia, Hodgkins disease, jaundice and other blood disorders, many of them fatal. Of more than 200 people he has treated for those maladies during the last 4 or 5 years, he said, all showed exposure to chlorinated hydrocarbons. Dozens of them are now dead, he added. He emphasized that, while he spoke for himself as an individual, the majority of hematologists he works with at the Mayo Clinic share his beliefs about the danger of DDT. Dr. Hargraves was not the first to implicate DDT as a cause of cancer. Dr. W. C. Hueper, head of environmental cancer research of the National Cancer Institute, Department of Health, Education, and Welfare, has listed as carcinogens, the chlorinated hydrocarbon pesticides, especially aramite and DDT."

In "Public Health Aspects of the New Insecticides" (American Journal of Digestive Disease, November 1953) Dr. Morton S. Biskind includes a bibliography of 119 scientific papers on the subject. The great amount of careful scientific study showing the danger to human health has not, however, brought about any reduction in the use of the poisons. On the contrary, the amount used and degree of toxicity are constantly going up instead of down.

One of the biggest programs for spreading a chlorinated hydrocarbon, in this case heptachlor, is in the fire ant eradication program for which Congress voted an appropriation of $2,400,000 for the coming year, despite the protests of conservation agencies. The State of Alabama, however, has refused to accept the program this year. In 1958 State Conservation Department officials there found that up to 75 percent of all wildlife might be killed if the program continued. Other Southern States, however, will continue despite reports such as the following by Congressman LEE METCALF, of Montana (CONGRESSIONAL RECORD, March 18, 1959): "In two areas that were treated with heptachlor for eradication of the imported fire ant, birds were reduced 75 to 85 percent—quail and rabbit populations were virtually wiped out. Fire ant eradication work in Monroeville, Ala., last July was reported in the Montgomery Journal to have resulted in the deaths of hundreds of chickens, more than 50 dogs, many cats, some birds and an undetermined number of turkeys, ducks and squirrels. Veterinarian O. L. Poitevint, of Climax, Ga., has stated that the deaths of upward to 100 head of cattle and large numbers of chickens, turkeys, goats, and sheep, and reproductive failure in 100 to 150 brood sows, resulted from fire ant treatment around that community."

The reproductive failure mentioned above is characteristic of the effects of sublethal doses of this type of poison. For example, in an article by Dr. James B. DeWitt, Fish and Wildlife Service chemist ("Wildlife in North Carolina," September 1957), the author states in summarizing experiments at the Patuxent Wildlife Research Refuge: "In no case has it been possible to get reproduction from quail or pheasants which had been reared and maintained on diets containing insecticides, if the parents of these birds also had received insecticides in the reproduction diet." In other words, after the second generation, there are no more baby quail or baby pheasants.

Our national bird, the bald eagle, is apparently succumbing to this same form of decimation. Mr. Charles Broley, the leading expert on eagles, is reported (New York Times, September 13, 1958) as stating that "his observations had convinced him that 80 percent of Florida's bald eagles were sterile." He noted that the eagles lived largely on fish. In a recent issue of Audubon magazine he quoted the late Dr. Herbert R. Mills, a bacteriologist, as having found a large residue of DDT in many fish found dead in Tampa (Fla.) Bay. Mr. Broley said that "in 1940 there were 500 active nests in Florida; now the total is probably only 80."

There are other ways, too, in which these persistent poisons carry on their fight against living things long after their original application. Rachel Carson, author of "The Sea Around Us," wrote in the Washington Post, April 10, 1959: "During the past 15 years, the use of highly poisonous hydrocarbons and of organic phosphates allied to the nerve gases of chemical warfare has built up from small beginnings to what a noted British ecologist recently called an amazing rain of death upon the surface of the earth. Most of the chemicals leave long-persisting residues on vegetation, in soils and even in the bodies of earthworms and other organisms on which birds depend for food. The key to the decimation of the robins which in some parts of the country already amounts to virtual extinction is their reliance on earthworms as food. The sprayed leaves with their load of poison eventually fall to become part of the leaf litter of the soil; earthworms acquire and store the poisons through feeding on the leaves; the following spring the returning robins feed on the worms. As few as 11 such earthworms are a lethal dose, a fact confirmed by careful research in Illinois."

While birds and mammals are succumbing to the poisons designed to kill insects, what is happening to the insects themselves? Vast numbers of them have been

killed, of course. However, insects reproduce on a scale and with a speed unknown to warm-blooded creatures. They can develop new strains within a very brief space of time, and they have done so. In "Insecticides, Boon or Bane" by Paul F. Springer, Fish and Wildlife Service biologist (Audubon magazine, summer 1956) this passage appears: "Insect resistance to chemicals: After World War II, DDT was by far the most popular insecticide and was considered a panacea for insect control. But the insects were not to be counted out so soon. In an amazingly short time, resistant populations of certain species began to appear. Some were able it withstand dosages of DDT, 1,000 times greater than those originally needed to kill their ancestors. Now, in many parts of the country, such pests as houseflies, mosquitoes, roaches, body lice, fleas, bedbugs, lygus bugs on alfalfa, saltmarsh caterpillars, imported cabbage worms, cabbage loopers and codling moths are impossible to control economically with DDT. When resistance of these insects was first noted, it seemed a simple matter of turning to other insecticides for their control. But this didn't always work. While substitutes sometimes proved temporarily effective, it was found that resistance to poisoning by DDT frequently meant they were resistant to other chlorinated hydrocarbons or that resistance to these alternate compounds quickly developed. Hence, there is a need for an entirely different group of control insecticides which accounts for present increasing interest in the organic phosphates."

The organic phosphates are indeed interesting. As noted in the article by William F. Longgood quoted earlier, "Some of the organic phosphates are so lethal that a single drop in a person's eye will cause death within seconds."

At least one manufacturer of chemicals has recognized the biological facts. Mr. William T. Thompson, president of the Thompson Chemical Co. of St. Louis and Los Angeles, has stated: "We have decided to withdraw entirely from the production, distribution and research of the presently known agricultural insecticides. A 12-year study has convinced us that the currently known and used broad spectrum insecticides and their wide scale application to agricultural crops—although giving temporary control and temporarily increased yields—are at best palliative, and perhaps will prove dangerous and uneconomic in the long run.

"The growing number of insect pests of economic importance that are becoming resistant to presently used agricultural insecticides demonstrates a serious inherent danger in widescale use. The imbalance of the fauna population caused by the destruction of natural predators and parasites (thus allowing the uninhibited development of the insect pest) is further proof to us of the unsoundness of the current chemical insecticides. This can only result in rapid and dynamic development of the insect pest from the few not controlled by the application, but can easily cause heretofore unimportant insects to increase to the status of economic pests, once the predator-parasite balance has been unset.

"The ingestion of presently employed insecticide residues by humans and other warmblooded animals is a correlative problem of a highly serious nature."

These intelligent thoughts are the exception rather than the rule, however; most of the manufacturers are determined to defend themselves and their products. An article in the New York Times, November 22, 1959, headed "Pesticide Scare Worries Makers, Chemicals Producers Fear Bad Public Reaction to Cranberry Incident," states in part: "Leaders of the volatile argicultural chemical industry also are expressing deep concern. Some fear a possible reaction against the increasing application of pesticides and other chemicals in agriculture that eventually could cut into sales.

"It was an allegedly harmful residue from a chemical weed killer, aminotriazole, that prompted action with regard to cranberries.

"Some industry officials also fear the possibility of still tighter Government regulations governing the manufacture and marketing of agricultural chemicals.

"'In order to meet Government requirements we must now spend up to $2 million in research over a period of up to 5 years before a new product can be marketed,' said one top official of an agricultural chemical company.

"'We believe products now on the market are thoroughly safe and that any further restrictions would make our research costs prohibitive.'"

It is difficult to guess just what this spokesman means by the phrase "thoroughly safe."

The American Medical Association Council on Pharmacy and Chemistry states that "it is not reasonable to expect that human beings can avoid injury if they are exposed * * * year after year to a toxic agent in atmospheric concentrations that kill insects in a few hours." Clearly, it is fantastic to call such poisons "thoroughly safe." They are killing birds by the thousand, fish by the ton. Many of them have been shown to be carcinogenic when taken over a period of time in sublethal doses. The Food and Drug Administration has denied any tolerance rating to many of them, including heptachlor of fire ant fame and also DDT. Nevertheless, DDT has been found to be present in a high percentage of the milk tested for its presence, and the average American has DDT stored in his fat.

It is estimated (Congressman LEE METCALF, CONGRESSIONAL RECORD, September 2, 1959) that "at least 3 billion pounds of these chemicals were sprayed over more than 70 million acres of our crop and timberland to kill insects, weeds and plant diseases last year."

The 86th Congress has appropriated $2,565,000 for study of the effects of pesticides on fish and wildlife. It also passed an amendment to the pure food and drug law which prohibits sale of food containing any residues of any carcinogenic substance. These are steps in the right direction, but they have not stopped plans to continue the huge heptachlor dispersal in the South which will certainly kill birds and animals on a tremendous scale. Effective action to stop unnecessary dissemination of poison is urgently needed for the protection of our wildlife, our domestic animals and ourselves.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. McMILLAN. Mr. Speaker, I was shocked to learn of the untimely passing of our colleague, RICHARD SIMPSON. I do not know of any man who has served as a Member of the Congress during the 22 years I have been privileged to serve in the House who was more highly respected than RICHARD SIMPSON. He was a tower of strength on the great Ways and Means Committee and both we Democrats and the Republicans could always depend on him to render a sound decision and cast a sound vote on any legislation under consideration by that committee.

Mr. SIMPSON was certainly a leader of the highest caliber and will be missed by every person privileged with his acquaintance. He was never too busy to talk to any Member who had a bill pending before the Ways and Means Committee. RICHARD SIMPSON had just arrived at the age where he could be of some real service to the people of his great State and our Nation. He had the necessary legislative experience and had the respect of every Member of Congress and even though his proposals did not always meet with the approval of every Member of the Congress, they knew that he was expressing his real opinion which he thought would be best not only for his State, but for the Nation.

Mrs. McMillan joins me in expressing our deepest sympathy to Mrs. Simpson and the entire family. We can ill afford to lose men of RICHARD SIMPSON's caliber here in the Congress of the United States during these critical times.

Gordon Canfield Retires and the District Loses a "Champ"

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. GALLAGHER. Mr. Speaker, I share in the regrets which have been echoed by Members of Congress upon learning that the dean of New Jersey's delegation, GORDON CANFIELD, is to retire after a long and dedicated service to the people of New Jersey and to the country. I would like to include as part of my remarks the following editorial from the Paterson News of December 16, 1959, and the following letter which I have written to the editor of the Paterson News:

GORDON CANFIELD RETIRES AND THE DISTRICT LOSES A "CHAMP"

Things won't be the same in Passaic County politics from here on in—at least in the even years of congressional elections.

GORDON CANFIELD has been the Congressman from this Eighth District through a generation and only the youngish oldtimer will be able to recall that it was his "boss," the late George N. Seger, who was his predecessor. That was 20 years ago.

Thus for well nigh two decades CANFIELD has served us in Washington, and as a public servant and as a Republican candidate every 2 years, he was a veritable champion. In the Republican heydays and in the lean years when the magic name of Franklin D. Roosevelt was cutting down Republicans, the people remembered GORDON CANFIELD's beneficences and he was always top man on his ticket. Some good candidates fell by the wayside before the Canfield juggernaut.

The answer was Congressman CANFIELD's dedicated service, and in truth, it was this around-the-clock devotion which has finally determined him to retire from the political wars. To have continued in the only way he knows how to campaign or to serve in office might have permanently impaired his health.

So who can quarrel with his decision not to run again in spite of the void he will leave and the heart tug his decision to retire inspires? He has certainly earned the right to call it a day as a candidate after 37 years in Washington.

What was the secret of Congressman CANFIELD's unmatched success? It was being with and for people. It could just as well have been coined in his name when it was said that to have a friend one must be a friend.

Just a few years ago, an overexuberant Democratic candidate, seeking to probe the CANFIELD success secret, came up with the bombastic charge that all the Congressman had to offer was his friendship for the little man. That did it, touched off such an atomic indignation among the rank and file of the voters that the ingenious candidate was snowed under.

The "little man" was there at the polls to vote for his friend. It has always been so—no letter unanswered, no opportunity for service ignored. Thousands knew his friendly intercession, his always solicitous concern for the people of his district.

During World War II, Congressman CANFIELD became restive at home. So he shipped aboard a freighter, made the rounds of the camps where his hometown boys were serving, comforted them, brought messages back to anxious loved ones. He braved the dangers of the sea, walked in the historical London blitz, was horrified at the Nazi slaughterhouse in Buchenwald. Here was one man who knew firsthand what he talked about to his people, and they believed in him.

In Congress, Mr. CANFIELD stood up and was counted. He was one of the first to warn of the threat of communism, because he had seen its creeping infection spreading when he was in Europe. He fought for proper defenses, for recognition of missile preparedness. He alone of all Republican candidates was endorsed by labor, which constantly was on the Democratic side.

But he was no rubberstamp for any man or any cause. He had courage.

And so when GORDON CANFIELD decides now he cannot rally the strength of another vigorous campaign with all its exactions, when he feels he would like to nestle home with his faithful family and rest a bit on the laurels he has earned, who among us will say him "Nay"?

The Eighth District yields him to the inexorability of time only in Congress.

There will be other opportunities for service for this man of decency, integrity, and dedication.

Meantime, all, people of good will, regardless of politics, will wish him well as he begins his final year of service in Congress, and among these the News is happy to be counted as delighted that through all his years of matchless service, we were his stanch and unremitting supporters.

Of him it will be said with truth: "Well done thou true and faithful servant."

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 7, 1960.

Mr. HARRY B. HAINES,
Editor, the Paterson News,
Paterson, N.J.

DEAR MR. HAINES: I wish to applaud your fine editorial on the retirement of GORDON CANFIELD. He is a man for whom it is really difficult to find words adequate for the praise he deserves. You touched the core of the man when you said it was dedicated service. But there is more—for he possessed a sincerity which transcended everything else he did. He extended this sincere desire to help to all men regardless of politics. He believed that the Congress of the United States was deserving of the best effort of the men elected to serve in that body and that this best effort should not be dependent on any political label.

I am sure that some people feel that politics preclude praising men of the opposite party, but as a newly elected Democrat to the Congress, I can say without hesitation that no one was more inspirational to me than the dean of our delegation—GORDON CANFIELD.

He made a great contribution to the United States for no man in Congress was more dedicated, more conscientious or more aware of his responsibility.

I, as well as my colleagues I am sure, will miss him greatly. I join with all of his many friends and admirers in heartily endorsing the wonderful words you expressed in your paper. I hope that in the years to come he will enjoy the good health and happy life he so richly deserves.

With my best wishes.

Sincerely,

CORNELIUS E. GALLAGHER,
Member of Congress.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

The Challenge of Citizenship

EXTENSION OF REMARKS
OF

HON. B. EVERETT JORDAN

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 19, 1960

Mr. JORDAN. Mr. President, the National Conference on Citizenship held an inspirational 14th annual meeting at the Shoreham Hotel September 16–19, 1959. Those who initiated the conference in 1946 sought to preserve the spirit of unity that had reached such a high point during World War II. They bethat the ideals upon which this Nation was founded and built should be stressed in peacetime as in wartime. The U.S. Department of Justice and the National Education Association cosponsored the annual meetings until 1953, when the late Willis Smith, U.S. Senator from my home State, introduced a bill in the 83d Congress to charter the National Conference on Citizenship. Although Senator Smith died of a heart attack before the bill passed the House, both Houses of Congress passed the bill unanimously.

The 14th annual meeting of the conference again mobilized a mighty force for the cause of good citizenship. Delegates from several hundred organizations represented all levels of government; religious faiths, professional, veterans, farm, civic, and youth organizations; labor, business, industry, and finance, and other groups.

The theme for this year's conference was "U.S. Citizenship—Know It—Cherish It—Live It." The Honorable JENNINGS RANDOLPH, our distinguished colleague from West Virginia, delivered an address on the "Challenge of Citizenship" at the closing session of the conference. I ask that this challenging speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF CITIZENSHIP

(By Senator JENNINGS RANDOLPH, Democrat, West Virginia, before the 14th National Conference on Citizenship, Shoreham Hotel, Washington, D.C., September 19, 1959)

Judge Walter Bastian, delegates to the National Conference on Citizenship, and ladies and gentlemen, the deliberations and proceedings of your sessions these past few days have revealed again the capacity of American culture to generate honest inquiry and self-criticism.

As long as such meetings as this can prevail in our land, and continue to draw participants from varied areas and activities in life, there is hope that American citizenship will take on a continually broadening and deepening significance.

I am sure that some of you must have been impressed, as I have been, with the accidental, but peculiarly appropriate, conjunction of this conference with the presence in Washington of our notable foreign visitor. On the one hand, your gathering is the embodiment of the democratic process—a voluntary association of men and women and boys and girls assembling for a free exchange of ideas on the rights and responsibilities of citizenship. On the other, Premier Khrushchev—for all his air of comradeship—is the living expression of the autocratic state which defines for its subjects, rather than citizens, their rights and responsibilities—without reference to individual desire.

Within our system of allowing the individual the freedom to determine and express his own sense of loyalties, we must sometimes suffer the ignorance, the apathy and the irresponsibility of a significant number of our people. In one's more pessimistic moments, he is tempted to feel that these people are a majority. But this feeling passes, and from a more balanced and dispassionate view, I believe it is fair to say that the sense of citizenship responsibility continues to enjoy a healthy development in the United States. If this growth is not registered in the voting statistics—as it seems not to be—then that is a problem which deserves our attention.

But citizenship does not mean only the use of the ballot. It is not a role which is to be asserted merely every 2 or 4 years. The duties of the citizen imply the responsibility to engage in the vital dialog of democracy in the continuous day-to-day activities of our community. For one person it may mean participation in the Parent-Teachers Association and contributing special efforts to the development of our schools. For another it may mean engagement in the affairs of the League of Women Voters, analyzing and promoting understanding of public issues. For still others, citizen obligations may call for added contributions of time and energy to the building of a community park, to slum clearance, or to urban renewal programs.

In each instance, however, there is involved an active expression of one's loyalties to the welfare of the community. The genius of democracy is that it allows the individual to choose his own avenue of such expression. The challenge of democracy—and the challenge of citizenship—is to provide the framework and the inspiration to impel each of us to explore his own avenue of creativity to its fullest. For, as William James truly remarked, "When we touch our own upper limit, and live in our own highest center of energy, we may call ourselves saved."

Democracy still remains the most difficult and demanding form of government that man has created. And in the history of man's affairs, the failures of democracy outnumber by far its successes. It is not a form of society decreed for man by a benificent cosmos—but a way of life which men have won at great cost, and will maintain only with continued courage and imagination. And it is a way of life which men who are less than men have always sought to avoid—as the psychiatrist, Erich Fromm, noted some years ago in his book, "Escape From Freedom."

But the naturalization proceedings before the Washington Monument on Thursday of this week indicated that American democracy still remains the pole star of aspirations for men and women who will accept the hazards of freedom. Those people who stood upon the green under the late summer sun will add their transfusion to the continuing lifestream of American culture—a stream which has been borne along by the dissatisfaction of men and women with the old ways of penury and oppression.

Justice Learned Hand once referred to a comment by the historian, James Harvey Robinson, to the effect that mankind arose from the ape because, like the ape, he was always monkeying around. But man, unlike the ape, was able to remember the results of his meddling curiosity, to record them, and to pass them on to subsequent generations.

America is the rightful heir to this legacy of mankind. For this, I believe, is the nugget of liberty—the right to be meddlesome—to be dissatisfied with established forms and customs and to search, according to one's own predisposition, for ways of creating a better world. This is essentially the story of every naturalization ceremony—as it was the story of earlier settlers of this land.

For all Americans are either nonconformists or the descendants of nonconformists—the meddlesome, maverick, and malcontented people who in some way—religious, political, or economic—opposed the established forms of their society and believed in the ability of men to improve on these forms. They believed in the ability of men to create a new image of man, and they believed in the power of man to fashion society in the light of that image. This is the permanent revolution of America, and this is the revolution feared by autocracy everywhere. By referring to this as a permanent revolution I intend to imply that it is not and will never be finally won.

The rights and responsibilities of democracy are by their very nature, impermanent possessions. Each generation must nurture their growth during its own time, as this conference has been doing by searching out the methods for our time.

In the addresses which have been delivered here, and in the workshops, you have considered the varied activities and forms of citizenship. I would like now to consider the common denominator underlying these activities and ask your reflection on the challenge it poses to us today. I offer no original formula—only the observations of experience.

When we speak of the obligations of citizenship in daily life, I believe we mean something like this: the duty to engage in informed, intelligent, and active participation in the decisions of community life based upon one's capacity voluntarily to submerge his own private interests in the welfare of the community. All of these qualities are requisite, but particularly the latter—for if the capacity for voluntary submission of the individual will does not exist then there is no community—there is no society—but only an aggregate of individuals already deteriorating toward anarchy. For every social act presumes a sense of the community—an awareness of the ties that bind us to our fellow man. Herein lie both the greatest threat to and the greatest hope of the meaning of citizenship in our time.

The established and traditional meanings of the citizen are threatened—and indeed, have been radically altered—by the centralization of power in our society and by the atomization of the individual. To elaborate a bit further on this point—I believe we can agree that the role of the American citizen was first most clearly expressed in the writings of Thomas Jefferson. Here was developed the view of the American citizen as the independent freeholder, jealous of his own integrity and independence, informed on matters of public concern, and capable of exercising reasoned judgment in the light of this information. The underlying assumption of this view was that man acts of his own free will, is guided by the light of innate reason, and that all men are potentially capable of exercising reason.

During the 18th century and for the first half of the 19th century, this typical American citizen found himself in a society which was predominantly rural and agrarian. And with the continual advancement of the frontier there existed in general a harmony between the public interest and the interests of the individual citizen. We need not cavil at the literal truth of this picture in every instance. This, I believe, is in general a fair sketch of the surrounding conditions and the basic assumptions of the historic image of the American citizen. This is still the image that governs much of the political thought and rhetoric of today. But what of the change from the conditions that gave birth to this image?

And I speak not only of the fact of change, but the scope and depth—the quality—of change itself. No longer are a man's years measured in terms of gradual accretions and modifications of what he learned as a child and youth, but complete reversals and reconstructions of his view of the universe. Indeed, the world alters as we walk in it.

One of the most profound alterations, in terms of our concern here, has attended the process of centralization of power. The economic power of the modern corporation, the political power of the state, the power to control the flow of information through the mass media of communication—all have been subject to the force of centralization. I am not here concerned with passing judgment on this process as to whether it bodes ill or well for our Republic. I refer to it only as one of the facts of our existence, and a fact which is not acknowledged in the Jeffersonian concept of the individual and society.

Nor is this the only modern contradiction of our traditional assumptions. As part and parcel of the trend toward centralization, we have witnessed also what I have termed the atomization of the individual. I refer now to the segmentation of life and the alienation and isolation of the individual from the forces which shape his own existence. Here we look upon the source of the terrible loneliness and barrenness which fill the lives of so many who have become lost in the complexity and gigantism of the modern industrial society.

These are the people whose lives stand in contradiction to the traditional symbols and attitudes with which we have surrounded our concept of the citizen—a concept born of another time, even another world. This was a world of yeoman citizenry, of economically independent individuals and decentralized power. Now, I am not mourning the loss of that world; it is futile to assail the forces and facts of change. But it is foolhardy to ignore them.

And ignore them we have—at least with reference to our public attitudes and the ideas we use to fashion our understanding of public problems. Allow me to illustrate what I mean by this statement with reference to the field of economics. Our official views—what Professor Galbraith has called the conventional wisdom—were formed on the basis of an economy of individual entrepreneurship, an economy in which the offices of ownership and management of the means of production were joined, and an economy in which it was never quite possible to produce the necessities of life for all. These were the conditions on which our still existing traditional attitudes were based.

Yet, what are the facts of contemporary economic life? The modern giant corporations are not private enterprise in the hallowed terms of Adam Smith and Ricardo; they are public institutions in the most meaningful sense of the world, inasmuch as the decisions they make, the actions they take, affect the public welfare and the life of each of us. And they are institutions in which the functions of ownership and control are not always complete, the average corporate shareholder, owning often a part in a concern in which he is inactive in directing its action. These are basic alterations in the dominant economic institution of our society, alterations which are seldom reflected in the official rhetoric of today.

But more important than these changes—as it bears upon the citizen's responsibility in the decisionmaking process—is the fact that we have an economy of abundance, while our public policies are based too often upon the theory of an economy of scarcity. For the first time in man's history, we have achieved a form of social and economic organization in which we can produce enough for all. And yet we are embarrassed by our riches. We talk of a farm problem—because one working farmer cannot raise enough food for 24 people. Our tax policies, our national budget, our philosophy of private consumption against public service—all are based not on the facts of today, but on the fictions of yesterday.

Now, let me be quite explicit in stating that I offer these observations in no partisan sense. I am presently concerned only with pointing out the need for reexamining our traditional attitudes in the light of present political and economic realities. For this is the first duty of the citizen—to be informed and to think clearly. And in spite of all our modern communications devices, perhaps even to some extent because of them, the problem of achieving adequate information, and the difficulties of screening misinformation and mechanized information have probably never been as acute since we achieved universal national literacy.

The way we deal with this problem will, in all seriousness, determine the future destiny of the United States and the meaning of citizenship. It has become almost axiomatic in any public discussion to refer our national destiny to the conflict between the Soviet Union and the United States. But in this sense the reference is valid, and in this sense the burden of the future rests with each of us.

The conflict of our era is not only between capitalism and communism. The basic antagonism that creates the gulf between our two worlds is between our divergent concepts of the nature of man and the nature of history. It is in essence the conflict between our view that man is free to create history, and the dialectical view that history creates man.

Whether man will be bound to the iron chains of circumstance and the inexorable laws of a malignant fate—or whether we will have the freedom to choose a world of our own and create that world in the image we choose—that is the option offered humanity today.

We in the United States have already cast our own ballot—in the name of life, liberty and the pursuit of happiness. But let us be quite clear that Mr. Jefferson and our Founding Fathers did not mean by "happiness" the pursuit of hedonistic pleasures in the semi-narcotized state too prevalent today. They meant—and it is our duty thus to reaffirm—the opportunity for fulfillment of the distinctively civilized and human virtues—love, esthetic enjoyment, a decent regard for one's fellow man, and respect for the truth.

These are the values at hazard in the contest before us. Their loss under the dominance of the Communist autocracy will mean the fixation of human morality at a level less than human. These are the stakes for which we are playing—stakes which are surely high enough to call from each of us the utmost in intelligence, self-sacrifice and determination that he has to give.

In closing, I refer once again to some words of Justice Hand, spoken at a time when the United States was just moving out of a time of peril. However, they are equally appropriate to our own time as we face a new peril.

"If our Nation could not itself exist half slave and half free, are we sure that it can exist in a world half slave and half free? Is the same conflict less irrepressible when worldwide than it was 80 years ago when it was only nationwide? Right knows no boundaries and justice no frontier; the brotherhood of man is not a domestic institution.

"We may not stop until we have done our part to fashion a world in which there shall be some share of fellowship, which shall be better than a den of thieves. Let us not disguise the difficulties; and, above all, let us not content ourselves with noble aspirations, counsels of perfection, and self-righteous advice to others. * * * We shall need the wisdom of the serpent; we shall have to be content with short steps; we shall be obliged to give and take; we shall face the strongest passions of mankind—our own, not the least; and in the end we shall have fabricated an imperfect instrument. But the history of man has just begun; in the eons which lie before him lie limitless hope or limitless despair. The choice is his; the present choice is ours. It is worth the trial."

The frontiers of freedom are always forward. The challenge to a finer citizenship lies ahead.

Samuel M. Cohn, of Altoona, Pa., Honored for His Outstanding Service by the Associated Petroleum Industries of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. VAN ZANDT. Mr. Speaker, as a part of the petroleum industry's nationwide observance of the centennial year of the oil industry a banquet was held at Altoona, Pa., November 4, 1959, by the Associated Petroleum Industries of Pennsylvania.

During the course of the evening's program it was my privilege to deliver the principal address and to participate in the presentation of a plaque to Mr. Samuel M. Cohn, president of the Independent Oil Co. of Altoona, honoring him for his many years of outstanding service.

It has been my good fortune to know Sam Cohn and his family for many years and I regarded it as a special privilege

to be selected as the principal speaker on such a joyous occasion.

Prominent officials of the oil industry in Pennsylvania journeyed to Altoona to pay tribute to Sam Cohn, not only for his many fine qualities but for the worthwhile contributions he has made over the years as an aid in the progress of the petroleum industry. In addition Sam was warmly commended for his interest in civic affairs and for his humanitarian efforts as one of the founders of the Kiwanis Health Farm—a project in which he has devoted much time and effort.

As a further and well-deserved tribute to my good friend Sam Cohn, I wish to include at this point in my remarks a copy of the fine editorial that appeared in the November 6, 1959, issue of the Altoona (Pa.) Mirror, together with a copy of my address.

The editorial and address follows:

[From the Altoona (Pa.) Mirror, Nov. 6, 1959]

CITED BY INDUSTRY

Samuel M. Cohn, of Altoona, who is more widely known as Sam Cohn, was most deservedly honored this week at a complete surprise tendered by State and area petroleum industries representatives. At the Altoona celebration, marking the 100th year of the industry, the Altoonan was presented a plaque for outstanding service.

Mr. Cohn was designated as "outstanding man of the central Pennsylvania area" in a program sponsored by the Associated Petroleum Industries of Pennsylvania, Dayton P. Clark and W. F. Richardson, State officers, being on hand to honor the Altoonan.

Presentation of the handsome plaque was made by Congressman JAMES E. VAN ZANDT, who delivered the address of the evening to a gathering of oil industries officials from central State counties.

The honored guest was lauded as a "product of the grassroots and a graduate of the school of hard knocks." His name is synonymous with the industry in this area, and with his brothers he has carried on the oil business launched by his father. He is a pioneer in this area.

"Sam is truly a self-made man," stated Congressman VAN ZANDT as he lauded the city leader. "He is symbolic of the industry. As president of the Independent Oil Co., he is never too busy to play his part in the community as a leader in club, bank, and hospital board activity and in promotions for the city betterment. He is one of the founders of the Kiwanis Health Farm. He comes from sturdy stock. He is friendly to all. Tonight we honor not only him, but his loved ones, his family and his associates," concluded the speaker in his tribute and presentation.

The commendation was entirely unexpected, and Mr. Cohn was really surprised as he was greeted by his friends and industry leaders of many years' standing.

Altoonans also heartily congratulate Sam Cohn and laud his activities, also thanking the industry in this State for bestowing the fine honor on one of its sons and leaders.

SPEECH BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE OBSERVANCE OF THE CENTENNIAL YEAR OF THE OIL INDUSTRY BY THE ASSOCIATED PETROLEUM INDUSTRIES OF PENNSYLVANIA, NOVEMBER 4, 1959, ALTOONA, PA.

It is a pleasure to accept the invitation of the Associated Petroleum Industries of Pennsylvania and to join you in this observance of the centennial year of the oil industry.

This year the air has been filled with events celebrating 100 years of progress in America's most revolutionary of all industries, the oil industry.

Along with the excitement of this centennial comes the opportunity for quiet reflection upon the many ways this invaluable product has affected our lives.

Surely such reflection brings an added awareness of how lucky we, in the United States, are to have been able to reap the many benefits of abundant supplies of oil.

So important and versatile is this exciting product in itself, that sometimes we overlook the fact that it was the mind of man that enabled us to discover and extract petroleum, and that it is the mind of man that discovered and continues to discover ever-new uses for it.

For the story of oil is the story of genius, ingenuity, daring, determination, and unbridled initiative.

These are the qualities that made this industry great, and this is what I wish to talk about this evening.

However, before we give modern man all the credit for making use of oil, we ought to look a little further back than the mere 100 years we are emphasizing in A.D. 1959.

Oil was to make its imprint upon history and our lives several thousand years earlier.

Noah used pitch, which was the abundant and widely distributed "rock oil" in making his ark.

Again we might ask the question: "Where would we be now if it weren't for oil?"

Pitch served as a mortar in building the Tower of Babel.

Moses' mother used it to coat the "Ark of Bulrushes" that carried her son down the River Nile to the Egyptian princess.

Nebuchadnezzar used asphalt to pave his roads and to build his palace in sixth century B.C. Babylonia.

In the ancient land of Sumer, a physician gave his patient a "Petroleum prescription" for healing a sore, which was made of asphalt kneaded to form a salve.

A myriad of both major and minor uses of the substance that men found seeping to the surface of the earth reveals that petroleum had penetrated deeply into the economic life of the ancient countries of the Middle East.

The ancients had two uses for oil that have not found their way into modern life.

A law in Assyria stated that delinquents must submit to having molten bitumen poured over their heads as punishment for their crimes, and it was used in magic as a means of keeping out the evil spirits.

However, if keeping out evil spirits could be dressed up and given a more sophisticated interpretation, it would apply equally well today.

If evil spirits could be equated with economic stagnation, depression, and poverty, the oil industry could then truly be said to have kept them out of the United States.

One of the first Americans whose enlightened curiosity and penetrating insight led him to the conclusion that the material he saw bubbling from the earth might be of value was George Washington.

In 1753, over 100 years before Drake's successful drilling, Washington was visiting western Pennsylvania and saw the oil springs.

He felt that they must have some industrial importance and acquired some land on which there was a "burning spring."

He listed this in his will as his most valuable holding.

The world waited another century to see this vision realized.

It was actually a citizen of Titusville that supplied the initial momentum to the events leading to the first commercial oil well, aptly called "the hole that changed the world."

Dr. Francis B. Brewer, a physician, was convinced that the curative properties of petroleum were truly remarkable and declared that as long as he continued in his profession, he would keep it in constant use.

He gave a bottled sample to his uncle, a professor at Dartmouth.

It was at Dartmouth that it was seen by a young New York lawyer, George H. Bissell.

Bissell was supposed to have immediately seen the similarity between coal oil and petroleum and deduced that petroleum might be exploited as an illuminant.

He was further encouraged by a chemist, Benjamin Silliman, Jr., whose report predicted that "rock oil" had many uses and a great commercial future.

This opinion added stimulus to efforts to finance a project to extract petroleum in large quantities.

Such a story is typical of the important discoveries and developments of our country—flashes of intuitive insight backed up by determined efforts to see the idea carried to a successful conclusion.

And so the story of the first well continues along the same lines.

It was such a flash of inspiration that prompted Edwin L. Drake to bore, rather than dig, for oil.

After the insight occurred, Drake undertook the rest of the project with methodical and deliberate determination.

These were the qualities that allowed Drake to back up his theory that petroleum could be drilled for and obtained in substantial quantities.

An accomplishment such as this removed the major barrier to the development of this new industry.

Fortunately for the destiny of the product, there was an already pressing need for an ingredient to replace whale oil when the first oil started flowing from Drake's well—some 20 barrels a day.

Whale oil was the best lighting fuel of the day, but it was growing scarce and becoming expensive.

So while whaling captains were searching for Moby Dicks, less practical men were drilling for the material that was to replace the product of such adventures.

Others were developing new refining techniques to improve the process of the production of kerosene, such as the invention of Luther Atwood for the development of a process of "cracking" crude oil in 1860 which made the mass production of oil for illumination economically feasible, and the subsequent improvement by William M. Burton in 1913.

Not all the inventions, however, could be counted on to aid the petroleum industry, and when Thomas Edison perfected the incandescent electric lamp in 1879, kerosene began to be replaced as the main form of artificial illumination.

After all, we do have to give some other industries a break, too.

But rather than viewing this use of electricity as a setback to the industry, the inventive spirit of the Americans was employed to develop new uses for this versatile substance.

In 1870 asphalt was first used as a paving material in the United States.

It was the material which paved the street in front of city hall in Newark, N.J.

In 1879 George B. Selden applied for a patent on an automobile driven by an internal combustion engine and in 1893 Charles E. Duryea manufactured the "horseless buggy."

The year 1900 saw the first automobile show, and 3 years later the first cross-country automobile trip was made.

When, in 1909, Henry Ford had standardized his model T and announced that he would "make a motor car for the multitude," the gasoline market was off to a roaring start—and the following decade was appropriately named "the roaring twenties."

By 1924 Ford got his price for a model T down to $265, and secondhand cars could be found for as little as $25.

American initiative and enterprise were also leading to another great development which was ultimately to require large amounts of fuel from the petroleum industry.

The Wright brothers made the first successful flight at Kitty Hawk, N.C., in 1903, and Lindbergh flew from New York to Paris in 1927.

Without oil, the Wright brothers might still be trying to get off the ground.

Thus, the history of the oil industry itself and those industries dependent on oil is replete with examples of the outstanding progress made possible by the environment of the age, with its emphasis on individualism and initiative.

Oil first gave us something to read by, then something to grease our wheels and equipment with, an dsomething smooth to ride on.

As a fuel for vehicles and machines, it has formed the basis for the vast mechanization that changed the entire way of life of our country.

The transportation industry, with its trucks, diesel locomotives, airplanes, was revolutionized by oil.

And finally, the petrochemical industry, with its multitude of beautiful and useful products, has modernized our homes, offices, clothing, and has even made its contribution to the beautification of the fair sex in the production of cosmetics.

Every facet of American life has been touched and touched again by the magic of oil.

In a quite different way, oil is touching the lives of almost every country—especially those same lands that put it to use in ancient times.

In the middle eastern country of Saudi Arabia, it is almost the sole source of income; in Iraq it is by far the most important one; and the surrounding Arab lands are directly affected by pipeline or canal transport.

Oil is giving our Latin American neighbor, Venezuela, the opportunity to prosper.

This resource is so vital to these lands that any changes in American oil policy will of necessity have serious, and possibly worldwide repercussions.

Two and one-half years ago the world held its breath when a chain of events led to the Suez crisis.

Last year, Vice President NIXON held his breath when angry mobs shouted and threw stones at him in Venezuela.

These countries are too impatient to wait for the evolutionary developments that characterized the rise of the industry in this country.

Of such overriding importance is this one material, that oil, which has given mankind such great benefits, has come dangerously close to plunging the world into war.

This new and uncomfortable role for petroleum presents a challenge to the men in the industry, as well as to the policymakers in Washington.

The mind of man that so brilliantly developed new means of producing and using this material is now faced with this crucial problem—a problem that the industry itself has given rise to.

So far the oilmen have done a most credible job in their international dealings—perhaps the Washington policymakers could learn a few lessons from their public relations policies throughout the world.

The problems oil poses in the field of international relations are of the most serious and urgent nature.

These are questions that the oilman is not asked to solve by himself.

In many cases, decisions made in Washington that affect him directly, are entirely out of his hands.

I don't believe that it is unfair to speculate on the course history would have taken had the views of the representatives of the oil industry been considered in the relations of the United States with the oil-producing countries of the world.

I am sure such events as the Suez crisis, that threatened the peace of the world, would have been avoided.

Our brief review would not be complete if we didn't mention just one more role that oil has played in the history of the world—that is its role in warfare and in national defense.

Oil was the lifeblood of the mechanized army, the navy, and the air force.

Without oil, the machineries producing the materials of war would have come to a grinding halt; the arms and heavy equipment and artillery would have been rendered useless; and all means of transportation—the airplanes, ships, motorized vehicles, would have been helplessly relegated to idleness.

Even the supermodern atomic and hydrogen weapons are dependent upon means of delivery fueled by oil.

Ballistic missiles will employ other types of fuel, but as long as the debates continue on the possibility of limited or total wars, the weapons and aircraft using oil will continue to be produced.

Turning back to the domestic scene to review the history of the development of the oil industry, with its emphasis on individual daring and determination, leads us to speculate upon the future course the industry will take.

Estimates for the next decade all indicate that the Nation's consumption of energy of all kinds will increase at least 50 percent.

The Chase Manhattan Bank, in its studies of the petroleum industry estimates that domestic petroleum consumption will increase from the almost 20 million barrels a day in 1957 to around 30 million in 1967.

They estimate that oil will capture 45 percent of the Nation's energy market.

So the oil industry, as large as it looms in relation to the other industries in the country, is destined to get bigger and better.

I can still say "better," although I realize that it is inevitable that much of the color and the rugged individualism that was so typical of the early development will be subdued.

In an environment where many factors are at work to make the individual seek security rather than adventure, where the opportunities seem to lie in working for someone else rather than in the attempt to strike out on your own, it naturally follows that this industry, too, will wear a more conservative cloak.

I am sure that many of you here have witnessed this change and have felt its effects.

Perhaps you have wondered, along with many of us in other fields, if this attitude will retard the future technical and economic progress that the oil industry has contributed to the growth of the United States.

The answer is emphatically "No," because as long as the oil industry continues to produce leaders like our own Sam Cohn of Altoona the future is in safe hands.

It is fitting and proper that you have decided on this occasion to tender a well-deserved tribute to Sam Cohn.

You are to be highly commended for selecting Sam as the outstanding oilman of the central Pennsylvania area because he is a symbol of the success that can be achieved by honest and persevering efforts.

Very few in this room know Sam Cohn as well as your speaker does.

We grew up together in this city of Altoona.

To let you in on a little personal side of Sam's life we really got acquainted when Sam visited my neighborhood while courting his wife.

He is truly a product of the grassroots and a graduate of the "school of hard knocks."

Along with his father and brothers, Sam is a pioneer of the oil industry.

Today when you discuss oil in the Altoona area the name of Sam Cohn is symbolic of the progress and place oil occupies in the American way of life.

Always a "busy bee," Sam applies himself daily to his task as president of the Independent Oil Co.; yet he is never too busy to play his part as a community leader whether it be as a director of the bank, a member of the board of hospital trustees, or the president of the Altoona Kiwanis Club.

As an indication of the great interest he has in the underprivileged, it was during his presidency of the Kiwanis Club in 1928 that the Kiwanis Health Farm for Children was established in Scotch Valley.

Sam is truly a self-made man, that type of an American which has made our Nation what it is today.

So many times we forget to acknowledge the ones who have played an important part in the lives of those fellow citizens whom we honor.

Therefore, let me mention the sturdy stock represented by Sam Cohn's father and mother and the guidance they gave him.

Then, too, there is another person—Sam's good wife Margaret Mattas Cohn.

"Mag" as we knew her in her girlhood days has played the part as an ideal wife and her inspiration has played a great part in the success Sam has achieved.

Therefore, tonight as we present to our honored guest, Sam Cohn, a scroll as the outstanding oilman of the central Pennsylvania area we honor not only him but his loved ones and especially his wife, Margaret.

Before presenting the scroll to Sam let me emphasize that only in America can you find a product of the grassroots whose ingenuity, initiative, and perservance have elevated him to the high position he occupies in the business world.

Therefore, it is with great honor that I present this scroll on behalf of the Associated Petroleum Industries of Pennsylvania to a true American, an outstanding businessman, a community leader, your friend and my friend, Sam Cohn.

The Importance of Religious Faith in Public Administration

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which has been published under the title "True Christmas Spirit." The letter was written by Charles Kress, formerly the mayor of Binghamton, N.Y., and now a Washington consultant. His letter was published in the Washington Star on last Christmas Day, December 25, 1959.

What Mr. Kress says about the fine character and the deep religious faith of the Post Office Department employees applies equally, I think, to the employees in all the other Federal agencies. He has made a good point, and I think the public can be very proud of the average Government employee. And I feel it to be a great part of our strength as a Nation, that our Government consists of good citizens in public office. In America we have no ruling class, no dictatorial autocrats, to run our affairs. We are governed only by each other—the friends or neighbors we put in public offices. And it should be a great comfort to each of our good citizens to know that in all branches of our Government, in the House and in the Senate, there is a true cross-section of the best and the finest in American character, decency, and unshakable religious faith. Nothing could be more reassuring, or promise more for the safe and bright future of our Nation.

I know Mr. Kress personally; and on many occasions he has made important contributions to good Government and national defense by giving his services as a consultant, without pay, to various congressional committees. He well deserves public commendation for his unselfish and patriotic public services.

When he participated on the Edward R. Murrow program "This I Believe," in 1955, a copy of which I also ask be printed in the Appendix of the RECORD, Mr. Kress delivered another lesson on the importance of religious faith in public administration.

There being no objection, the letter and the broadcast were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Dec. 25, 1959]

TRUE HOLIDAY SPIRIT

We read doleful statements by some pessimistic members of the clergy that looseness and immoralities attending some Christmas parties are but symptoms of an alleged general breakdown in the character of our citizens.

Recently I was an unintentional "gatecrasher" at quite a different kind of Christmas party. While in the Post Office Department on business I noticed employees hurrying to the auditorium, so out of curiosity I followed along. At the doorway a pleasant young lady escorted me to a seat in the crowded chamber. The proceedings began with a short opening prayer. A choral group sang Christmas carols sweetly. Then the whole gathering joined in full-voiced song. Then came a recitation of the Christmas story from St. Luke. After this a modest appearing, kindly faced gentleman began speaking in a soft but clear voice. He was the Postmaster General, and he spoke of peace, friendship and human service—and of gratitude to the Almighty for giving us life today, the precious freedom and high privileges of American citizenship and our obligation for helpfulness to less fortunate people and nations. He spoke of his deep appreciation for his own privilege of working alongside other members of the postal service to usefully serve the public. Here was no stuffy bureaucrat exhorting his minions and lackeys. Here was a great and good man, a blessed servant of God—a Cabinet officer of the U.S. Government—humbly and sincerely talking to his friends and fellow workers. Here indeed was God-loving American democracy in action. And the crowd listened—attentively and understandingly. Then came the Lord's Prayer by the whole assemblage. Again I looked around. Every head was bowed in reverence—every voice responding in the prayer.

There they stood, crowding full the big auditorium. Young and old, Protestant and Catholic, Jew and gentile, colored and white, Republican and Democrat, all concentrated in a fervent prayer expressing their unfaltering faith in God Almighty, in America and in each other. One could feel the powerful spirit of togetherness pulsing from their hearts and one could sense that in hearts such as these rests the true and mighty strength of America. I wished that Nikita Khrushchev could have been there to feel the electric power and confident strength of that tremendous force which comes only from the hearts of free men and women completely dedicated to God, to liberty and justice, and to each other.

CHARLES KRESS,
Former Mayor, Binghamton, N.Y.

THIS I BELIEVE

(Edward R. Murrow broadcast—CBS program of January 22, 1955. Guest speaker, Capt. Charles Kress, U.S. Maritime Service, former mayor of Binghamton, N.Y.)

INTRODUCTION BY MR. MURROW

Charles Kress is an engineer, a former sheriff, police commissioner, mayor, and intelligence officer. During prohibition days he was a gangbusting Federal enforcement chief in New York. During World War II he became the U.S. Maritime Service intelligence officer in charge of the Atlantic coast area, and now holds the rank of four-stripe captain.

You will now hear the personal beliefs of Capt. Charles Kress, former gangbuster, and former mayor of Binghamton, N.Y.

ADDRESS BY CHARLES KRESS

In the late twenties I was in charge of Federal prohibition enforcement in New York State—a very young man for such a responsible job. Those were the bloody days of gangster rule—of great power for racketeer kings and their secret partners, the crooked political bosses. An honest Federal enforcement official who dared defy this corrupt power seldom lasted long. I felt deeply that the time had come to show these corrupt powers that our America could produce public officials who could not be compromised, contaminated, bribed, or frightened.

So I started after the very big, protected and previously immune violators, personally leading raids myself, tensely alert for the repeated attempts being made against my life. I was scorned by many people for not taking the easy pay-off money as others had done—scorned and ridiculed also for attempting to honestly enforce an unpopular law—betrayed, sold-out, and double-crossed by subordinates and some superiors. I was pretty much all alone.

There came a night when I escaped death by the narrowest margin. The underworld nearly won. Not seriously injured, but in great pain and emotional stress, it seemed that I just could not go on. As a child my religion had taught me that when you once put complete trust in God there is then no reason to fear evil. But until that particular night of crisis I had never put this teaching to any great test. Even on that night I was not consciously praying. It seemed more as though my mind was racing wildly, trying to find something solid on which to hold. And except for my religious faith there was no place to turn; so unconsciously almost, I did indeed test that faith. I said to myself, "This I believe—and if I believe, why should I doubt?" Suddenly there was no doubt, and from that moment on I never felt alone or uncertain.

Without the strength given me by this faith I would have either become discouraged and quit the fight, or lost my sixth sense which warned me against danger and always enabled me to escape death. In my territory of the United States I did succeed, through this faith and its power—not of course in stopping individual law violations, but in breaking the malignant power of the politically protected murder and racket syndicates. And this I will always believe—that it was only through the power of faith that I lived to tell about it.

I believe that religious faith is to the soul, what air and sunlight are to the body—giving life and brightness today and a hope for tomorrow. I believe that if God's will put me here today, I should faithfully follow His will—because the very fact that I do exist here in this world of today is indisputable proof of His power, love, and good intentions towards me if I but keep faith with Him.

I believe that life decrees that every human must at some time journey along through a valley of shadows. Personally, I know well this lonely journey. But I have found that when things seem to look the blackest, or when sorrow is the heaviest, in prayer and in feeling the presence of God's compassion and Christ's understanding there is to be found a strength which will carry one through the bleakest hours.

I believe that each day may bring some new tests of my religious faith. That the true test is not in proclaimed piety but in actually living and doing; in my daily life trying to render a living answer to His command—"Do ye unto others as ye would that they do unto ye."

I believe that not since the Roman days of Christian martyrs has there been such a challenge to religious faith as exists today. The clear issue now is whether God and His words such as peace, love, honesty, unselfishness, justice, charity, and decency shall be driven from the face of the earth. In each of us individually lies the answer. And each must make a choice—whether to be a Herod, a Pontius Pilate, or a simple Christian soldier marching onward in fearless and sublime trust.

A ship sets sail, cruising over a vast ocean for a distant port. Against the tremendous power of the sea, that ship seems a tiny, weak thing. But on that ship is a rudder, and the navigator has learned how to use it. He uses this rudder to safely guide the ship to its distant port. The need for God in the life of every human is just as simple as that. The ship is our mortal body. The navigator is our immortal soul. Religious faith is the rudder. The cruise is from the port of our birth to some far port along the shores of eternity. We can never hope to reach the right port without using the rudder of religious faith. Without this faith, the cruise is erratic and aimless, hopeless and futile. And when death, who is but a message between time and eternity, puts an end to the cruise, we have never reached the right port. By learning how as the navigator, to use religious faith as a rudder we can successfully and safely guide our course through all the storms, and past all the reefs and shoals of life, so that when the cruise ends we are sure to find ourselves in the right port.

This I strongly believe. And your faith can only be as powerful and helpful as the strength of your belief in it.

Recent Developments Affecting the U.S. Atomic Power Program

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

RECENT DEVELOPMENTS AFFECTING THE U.S. ATOMIC POWER PROGRAM

(Remarks by Congressman CHET HOLIFIELD, Democrat, of California, at workshop meeting of the Electric Consumer Information Committee, Washington, D.C., January 19, 1960)

It is always a pleasure to talk with a group interested in atomic energy, particularly from the consumers' point of view.

As we enter each new decade it is always wise—or it at least is always done—to take stock on the last year and have a look at the next 10 years.

GOALS AND PREDICTIONS

I regret to say, that from the consumers' viewpoint, we have not achieved economic atomic power in the United States by 1960. You will recall the rosy predictions by AEC and others on this subject some years ago. But economic atomic power still remains a will-o'-the-wisp—off somewhere yonder.

You will also recall the prediction of how many plants and kilowatts the United States would have in operation by 1960 or the end of this year. In 1955 the then AEC Director of Reactor Development foresaw about 2 million kilowatts of nuclear power capacity in service by the end of 1960. It now appears that less than 40,000 kilowatts will be in operation by the end of this year.

Predictions were also made as to the U.S. foreign atomic power program, which in large part was to be carried out in cooperation with Euratom. Former AEC Chairman Strauss adopted the goal established by the so-called "three wise men" of 15 million kilowatts of atomic power in Euratom countries by 1967, and 3 million kilowatts by the end of 1969.

The objective of the AEC-Euratom Cooperative program was scaled down to be 1 million kilowatts by the end of 1963. The Joint Committee extended it to 1965 for two plants. However, when proposals were received last fall, only one project was submitted. This was the Italian Senn project which was planned prior to Euratom and could be carried on independently of it.

So we see the chickens let out in the Atomic Energy Amendment of 1954 are beginning to come home to roost, or to change the metaphor, somebody laid an egg.

CURRENT STATUS OF PROJECTS

Now what are the reasons for our difficulties? In addition to the problems of the Madison Avenue approach, it should be understood that many people underestimated the difficulty of the technical problems which had to be solved. These in turn raised costs, delayed schedules, and presented financial problems.

Perhaps a brief rundown of the current status of various projects would help make this point clear. I hesitate to go into any detail, since the newsletters of your various organizations do this very well. I especially find Jim Grahl's APPA newsletter interesting and informative.

As of this date not one watt of civilian power is being generated in the United States by atomic reactors, except possibly the small Oak Ridge HRE experiment. The Shippingport reactor, our first and largest central station plant, has been shut down since October for planned replacement of fuel elements and will not be in operation until the spring of this year. The Atomic Energy Commission's experimental boiling water reactor at Argonne is under modification and will not be in operation until late this year. The Atomic Energy Commission sodium reactor experiment at Santa Susana has been shut down since October of last year to rectify a fuel element failure and will not be in operation until sometime this spring.

These shutdowns do not mean lack of progress. They illustrate the developmental problems we encounter.

Reactor plants under construction are also having their troubles—schedule and cost-wise. The first and largest privately financed commercial plant, the Dresden station, has recently run into trouble due to technical problems—fuel element cladding and control rod failures. The next largest commercially financed plant is the Consolidated Edison, Indian Point plant, which has already experienced an increase in the estimated cost from $55 million to $100 million—nearly 100 percent, and this may be only the beginning. Detroit Edison's cost estimate has gone up and it still hasn't been proved safe.

The public and cooperative atomic energy plants also have their troubles, as you know.

The first cooperative public atomic power proposal was submitted to the Commission in 1955 in response to the Atomic Energy Commission's first request for proposals. This plant is still not complete. The completion date has slipped from the original estimate of 1959 to 1962 and the original cost estimate has gone up from approximately $25 million to $50 million.

Of the seven public and cooperative atomic power proposals submitted to the Commission in 1955 and 1956 in response to the Commission's second invitation for cooperative atomic powerplants, only two are presently being pursued. These are the Piqua and the Elk River projects, neither of which is complete. The estimated cost of both projects has approximately doubled and the original estimated completion dates have been extended considerably.

The only bright spot in our power reactor program is our naval reactor program where reactors at this moment are performing a job which cannot be equaled by any other energy source.

DEVELOPMENT OF REVISED ATOMIC POWER PROGRAMS

The difficulties in which the atomic power industry found itself in 1956–58 led, of course, to demands for revised or accelerated programs.

Whether we are building enough atomic power projects can be debated, but no one can charge that not enough studies have been made of the atomic power program. There was the McKinney report to the Joint Committee in January 1956; the atomic energy acceleration report made by the Joint Committee on Atomic Energy in July 1956; the American Assembly and National Planning Association reports in 1957; the Joint Committee and AEC seminars with leading reactor and industry experts in 1957; the Edison Electric Institute reports in 1958; the Joint Committee staff report on a proposed expanded civilian nuclear power program in August 1958; the AEC ad hoc committee report in 1959; and now AEC is preparing its report on a proposed 10-year program; and Mr. Robert McKinney is reviewing the foreign situation for the Joint Committee.

All of these reports have agreed that it is important to develop economic atomic power, to meet sharply rising domestic needs for power in future decades and to establish and maintain clear international leadership in an important technology.

Several of the reports also agreed upon a goal of economic atomic power in the United States in 10 years. The Edison Electric Institute report in 1958 suggested that economic nuclear power might be attained by 1968; the AEC ad hoc committee report in 1959 chose 1969 as the target year.

This tendency to hope perennially that we will reach our goal in 10 years is not new. Back in 1955, the then-Director of AEC reactor development foresaw a 10-year induction phase and then a rapid expansion of commercial nuclear power capacity. Five years later, we may be still foreseeing success 10 years hence. Unless we take more vigorous action to make our predictions come true, I fear that we may be forever predicting that economic atomic power will be here in 10 years.

I would make the personal suggestion that we stick with the goal we established. In 1958, the Edison Electric Institute—surely a conservative institution—suggested that economically competitive nuclear power might be possible by 1968. That this is still feasible is indicated by the testimony of Dr. Walter Zinn to the Joint Economic Committee in October 1959. He said that the next generation of large-size plants will be competitive in some areas of the United States. Such plants could be built and in operation by 1965 or 1966, according to Zinn. But under present AEC policies this is not likely to be done before 1970.

Instead of making more studies, why do we not consider doing what Dr. Zinn says is possible, particularly since a recent preview of AEC's forthcoming report on its 10-year program confirms this view. In a speech in November, the Director of Reactor Development for AEC—Frank Pittman—said that the studies recently made for AEC show that with some further research and development a 300,000 kilowatt pressurized water plant could be built to produce power at costs competitive in some areas of the United States, and that this project could be started "in the near future."

The Pittman report on the AEC studies also concluded that, assuming success in further research and development, it would be possible to start construction by 1965 on 300,000 kilowatt boiling water and organic plants which should produce power at costs competitive in relatively high fuel cost areas of the United States. Presumably these could be in operation by the end of 1968.

POLICY ISSUES IN ATOMIC POWER PROGRAM

Consideration of the AEC 10-year program (as forecast by the Pittman report) raises again policy issues which have been with us for a number of years.

NARROWING DOWN ON REACTOR CONCEPTS

One is the Commission's alleged recent policy of emphasizing three basic reactor concepts—the pressurized water, boiling and organic cooled and moderated—and possibly cutting back the effort on other types.

I question whether we know enough yet to put most of our eggs in only two or three baskets. I suspect that AEC's deemphasis on the other concepts—some of which may in the long run prove superior—may be dictated more by budget considerations than by informed technical judgments. We have only one large power reactor in operation and are only in the early phases of this new technology.

If we confine our major bets now to only two or three basic concepts we may save money in the short run. But if we should find in the future that we had guessed wrong, the cutbacks being made by the Commission will prove to be extremely costly. I do not endorse, consequently, the present

Commission tendency to abandon our previous program of developing six to eight different types of nuclear plants.

SIZE OF PROTOTYPES

Nontechnical factors also seem to have influenced Commission views of the sizes of the developmental plants which should be built. I have believed that construction of a certain number of large demonstration prototypes will be required in order to develop any given reactor type to the point that it is commercially attractive. This view was confirmed unanimously in 1957 by a group of outstanding reactor development experts convened by the Joint Committee.

To my knowledge, nothing has developed since 1957 which would alter their conclusions. I consequently believe that AEC's ad hoc committee was mistaken in recommending a year ago that, in general, only plants of small and moderate size should be constructed. I believe that AEC was mistaken in accepting that recommendation. There is some suspicion that the so-called "prototype" plants may have been especially appealing to AEC for reasons having nothing to do with the technical requirements of the program. The smaller plants would cost less money, obviously, than large plants and this would please the budgeteers. Since their energy output could be more readily absorbed by AEC installations or else wasted, the disposition of any Government atomic power, which so frightens the AEC, could be avoided.

More recently, the Commission seems to be shifting back to the view that full-scale demonstration plants will have to be built. I understand that AEC is now shopping around for a utility or utility combine to undertake the 200- to 300-megawatt pressurized water project which I mentioned earlier.

LEVEL OF EXPENDITURES FOR ATOMIC POWER PROGRAM

The dominant policy issue in the past several years has been one of budgets and expenditures. We who have long urged a vigorous and effective atomic power development program find that the key program decisions in this administration are being made more and more by the bookkeepers and budgeteers rather than by technical authorities.

The bookkeepers seem unable to peer beyond the ends of their noses in determining what this country can afford in the way of public investments. In the atomic power field, a vigorous attack on the remaining technical problems in order to attain economic atomic power at the earliest feasible date could bring the consumers of this country very large savings. Such a development inevitably would restrain the steady upward trend in the costs of the fossil fuels. As you know, gas prices have been climbing at a startling rate and even the cost of coal, despite our huge reserves, has been increasing at an average rate of about 1.5 percent per year.

If the development of low-cost nuclear power were to achieve a saving in fuel costs of no more than one-tenth of a cent per electrical kilowatt-hour, this would mean savings to the American consumers by 1975 of more than $2 billion per year. We can well afford to invest another $100 to $150 million per year now in accelerating atomic power development. When the potential economic gains are considered, we cannot afford not to.

This annual incremental investment is about what was estimated as necessary by the Joint Committee Staff Report of 1958. Relative to the total AEC budget of $2.6 billion in fiscal 1959, or to the massive expenditures for missile development, for example, this is hardly an astronomical sum. (Indeed the total AEC expenditures for fiscal year 1959 are but a fraction of 1 percent of the total gross national product; are only 3.3 percent of total Federal expenditures, and 5.6 percent of total expenditures for national defense.)

FINANCIAL ASSISTANCE AND SUBSIDIES

A related policy issue which I assume will be reopened this year is the question of whether additional subsidies, in the form of capital grants, should be offered to utilities to enable them to build the additional plants which are deemed necessary.

In considering this question, we should take a look at how far we have come in subsidizing these so-called private plants. In 1954, when the Eisenhower administration and the Republican majority in Congress insisted upon rewriting the Atomic Energy Act, private industry spokesmen assured the Joint Committee that if the act were amended, private industry would develop economic atomic power with its own resources. Mr. Walker Cisler of Detroit Edison even declared that his utility would require no guaranteed buy back of byproduct plutonium as far back as 1953.

The fact is, of course, that private industry has not been able to proceed unaided with the development of atomic power, but has had to come back to congress with repeated requests for additional Federal assistance.

The fundamental Government aid, is AEC's reactor development program. Without the public research program, there is not one of the privately sponsored atomic power projects which could even have been proposed. Instead of diminishing after revision of the act in 1954 and the entry of private industry, AEC power reactor development expenditures have increased every year and now are at a level of $105 million per year—five times the 1954 level.

A second significant subsidy is the Government-guaranteed price for the power reactor byproduct, plutonium. The present base price of $30 per gram reflects a subsidy of about $18 per gram to a power reactor operator. Despite Walker Cisler's protestations in 1953, the subsequent financial plan for the fast-breeder reactor sponsored by Detroit Edison and others assumes Government plutonium payments of more than $33 million, about $20 million of which would be clear Government subsidy.

For the more usual nonbreeder reactors, the present plutonium base price represents a subsidy of about 1.5 mills per kilowatt-hour. For a 100,000-kilowatt plant, this will amount to about $1 million per year.

A third important public subsidy for the so-called "private" projects is the Government fuel loan program. The Government finances the production of all enriched uranium fuel and loans it to the utilities at 4 percent per year. As long as the utility generates power with enriched uranium, it will receive a perpetual series of loans and never repay the outstanding balance. A private industrial reactor expert (Menke) told the Joint Committee last year that the fuel loan program is "a very heavy subsidy" worth about seven-tenths of 1 mill per kilowatt-hour. This is because it would cost the private utilities up to 10 percent per year to finance their own fuel inventories. For a 100,000-kilowatt nuclear plant, the fuel loan subsidy alone will be worth almost a half million dollars per year to a private utility.

In view of its great affection for high interest rates, I am surprised that the administration has not proposed to raise the fuel loan charge above 4 percent. The latest short-term Treasury bonds were sold at an interest rate of 5 percent.

A fourth form of Government aid is the cheap enriched uranium fuel provided by the Government. The major element in the price of enriched uranium is the cost of power, and all enriched uranium in the United States is produced either with low-cost TVA power or with power from private plants which is also low cost because of the TVA "yardstick" and Government underwriting. Thus, with the advent of an atomic power industry, and the widespread use of enriched uranium fuel, the benefits of low-cost TVA power will be exported to all parts of the United States. Since about three-fourths of the benefits will go to the privately owned utilities, one would think they would be stanch friends of the TVA. However, they seem instead to want the cheap uranium fuel but to eradicate the power agency which makes its low cost possible.

The low cost of U.S. enriched uranium probably should not be called a subsidy, since the TVA and private utility power charges to AEC cover all costs, but it is a benefit to the nuclear power industry made possible by huge Government investments and underwriting.

Federal fuel reprocessing is another public subsidy provided for all power reactor projects. It has been estimated that if private facilities were available, the cost would be two to three times the charge made by AEC. For the privately financed plant of Commonwealth Edison, for example, at Dresden, Ill., the savings represented by the Government fuel-processing service will approximate more than $2 million during the first 5 years of plant operation, and for Detroit Edison's fast breeder, more than $8.5 million, and, of course, subsidies are also extended to cooperatives and public power associations under the AEC second round demonstration program.

In addition to these general forms of aid, the Government is providing specific grants of research and development funds and fuel subsidies amounting to millions of dollars per project for many of the privately sponsored developmental power reactors.

Thus, the picture today is quite different from that promised by the spokesmen for private enterprise when they declared in 1954 that rewriting of the Atomic Energy Act to facilitate private activity was about all that would be required, other than a continuation of a modest national research and development program.

Yet, as I pointed out earlier, the accomplishments of the publicly subsidized, privately sponsored program have fallen short of what was promised. For example, the original estimated completion date for the Yankee atomic energy plant, was 1957 and for the Detroit Edison plant, 1958. Both are now scheduled for full operation next year. Similar slippages have occurred with other projects and some have been canceled entirely.

Thus despite valiant efforts and a substantial program of Government subsidies and services, the private organizations have not been able to move forward with projects as rapidly as was promised by them and by the Commission.

Last year, to stimulate the proposals for additional projects, AEC Chairman McCone recommended a new subsidy program under which AEC would finance up to half the cost of a nuclear powerplant but allow title to remain in the sponsoring utility. This was to have been the first of a series of projects financed with such capital grants. This idea of capital subsidies finds favor with some members of the Joint Committee also. I respect their reasons, but I continue to have questions about it. We already have built into the atomic power industry a considerable subsidy system, and the results have fallen short of the promises.

In view of this experience, I wonder if still another and more substantial subsidy pro-

gram is clearly the best answer. I also feel concerned that initiating a capital subsidy program may open a "Pandora's box." Once started, Federal subsidy programs have proved difficult to shut off.

This question of how to finance additional projects is a complicated one, as long as AEC continues to oppose a sizable Federal developmental power reactor program. As you know, I joined with Senator GORE in 1956 to authorize such a program. Although recommended by the Joint Committee and passed by the Senate, the Gore-Holifield bill was defeated in the House due largely to strong administration opposition.

If the bill had passed and AEC had proceeded with such a program, the atomic power program would be well ahead of where it is now and we would have a series of developmental plants either in being or well underway, in addition to the projects sponsored by the utilities. We would not need now to be considering capital subsidies.

The great amount of invaluable technical information produced through the development, construction and operation of the Government's PWR demonstrates the value of this type of plant. Under the Gore-Holifield bill, a number of such heavily instrumented atomic power laboratories could have been undertaken. The relatively small amounts of power they produced surely would have done no conceivable harm to the private utilities, and the technological benefits to the entire utility industry would have been very substantial. In opposing the Gore-Holifield bill and, subsequently, every effort we have made to initiate a Federal developmental project, the private utilities have done themselves and the general public a grave disservice.

The private utility projects are not substitutes for the PWR-type facility. They are not being designed or equipped primarily for research and development nor will they be operated primarily to produce technical information. The privately sponsored plants will be operated primarily to produce power. They certainly will contribute to the technology, but to a much lesser extent than a truly developmental facility.

It has almost been forgotten that AEC proposed in 1957–58 that these private plants serve in part as test reactors for trying out improved types of fuel elements. This was a counter to our proposed governmental experimental-prototype type of plant. However, as in so many things, this program was dropped when the utilities apparently could not cooperate as their primary purpose was continuous power production.

GAPS IN PROGRAM

As in past years, I assume that the Joint Committee during this session will give attention to the gaps in our atomic power development program. One of the continuing lacks is a program for heavy water reactors using natural uranium as fuel. In putting this concept near the bottom of its priority list, AEC seems to overlook its important advantages. A successful natural uranium reactor would mean saving the power and therefore the coal consumed in making enriched uranium fuel. From a conservation standpoint, this makes sense. This reactor type also would allow development of a normal commercial fuel industry, free of Government loans and fuel ownership. For similar reasons, it would be more attractive to foreign countries, which hesitate to develop a nuclear power industry dependent upon enriched uranium from the United States. I am gratified that the present AEC has proposed a full-scale cooperative program with Canada in this field. This cooperation should not replace our own prototype development.

Another concept which seems well worth pursuing is the steam-cooled reactor, a variant on the nuclear superheat concept which may involve fewer technical difficulties.

I believe that the Joint Committee should also consider the project suggested last year of a 20,000-kilowatt plant on Guam if it is designed to contribute to the technology, and to another process steam reactor.

I feel certain that we also will take up the question of authorizing conversion of the new Hanford plutonium production reactor to a dual-purpose plant. This will enable the plant to produce at least 700,000 kilowatts of power—more capacity than in Bonneville Dam—rather than just warm up the Columbia River. General Electric Co. studies showed that such a dual-purpose plant will produce plutonium at less cost to the Government, with the power priced at going Bonneville rates. Almost half the power would be consumed by Hanford and the remainder sold to Bonneville for further marketing to the utilities of the region. Conversion needs to be authorized this year or next year if it is to be done on the most economical and efficient basis.

On all or most of these projects, I am afraid we will encounter the usual opposition by the budgeteers.

I am gratified to note, however, that the Commission has gone ahead with the projects which the Joint Committee added to the program last year, including the 50-megawatt boiling water reactor for municipal and cooperative systems, the organic moderated 50-megawatt prototype under third round terms, and the small nuclear superheat plant in Puerto Rico.

Unfortunately, however, there still has been a good deal of foot-dragging on projects like these which the Joint Committee adds over commission opposition. These projects were authorized last June and funds were appropriated in early August but AEC waited until the end of December to request proposals on the two 50-megawatt prototypes and has only now concluded negotiation of an agreement with the Puerto Rico water resources authority.

I understand all these projects were held up while Consumers Power of Michigan was haggling about the account of financial assistance it would receive in the unsolicited proposal program.

THE NEED FOR BETTER ORGANIZATION OF THE PROGRAM

In view of AEC Chairman McCone's remarks upon returning last fall from a visit to the Soviet Union, it is hard to understand why the Commission delayed about 6 months before getting started on these important projects. Mr. McCone, as you know, stated in November that he had been impressed "by the speed with which the Soviets appear able to reach a specific objective once they decide that it is of overriding importance." He declared that the United States "must be prepared to seize upon the undertakings which are of importance and advance them on an urgent basis. If we do less, our position of leadership soon will fade away."

I have been expressing the same sentiments for a good many years. I only wish that this administration would match its words with action.

It seems to me that the Commission's reluctance to back a really vigorous atomic power development program despite continuous pressures from the Joint Committee springs from budget and power policy considerations which are at best of only secondary importance.

The achievement of economic nuclear power is a technical problem and should be attacked as such. The technical problems which must be solved should be defined and systematic programs to solve them should be planned and carried out in a systematic way.

Instead, the Commission initially pursued a relatively planless approach to the construction of large, developmental power reactors. The PWR and the Oak Ridge gas-cooled reactor are exceptions but these were forced through over Commission resistance.

In 1954, the Commission initiated the first of a series of rounds under which utilities were encouraged to propose projects with Federal aid, not so much because this approach was considered the best way to get technical problems solved as that it avoided Federal expenditures for reactors and the possibility of Federal atomic power production. Some of the resulting projects were started more for political or public relations purposes than to solve specific technical problems and others bear only an accidental relationship to a coordinated program to achieve economic atomic power.

When the so-called partnership approach failed to produce an adequate program, the administration came forward in mid-1958 with the Euratom assistance proposal. This plan had several purposes but one obviously was to reduce the need for U.S. developmental plants by subsidizing their construction abroad, hopefully at less cost and of course with no power marketing responsibilities. Again, this was an attempted political solution to a technical problem and I criticized it severely for this reason. As of this date, the Euratom program has not resulted in one new atomic power project. As a substitute for U.S. developmental plants, it seems to be a fiasco.

What we need is a planned and coordinated program aimed at specific technical objectives and tied to a time schedule which puts the pressure on AEC, the national laboratories, and the reactor industry. I believe that unless we soon adopt such an approach we are not going to achieve truly economic atomic power. We suddenly will wake up some day to find that we are in second or third place in the world. Then, as in the missile field, there will be understandable demands for a costly crash program to try to catch up.

Now I think some progress has been made in this regard. In the spring of 1958, I recommended that AEC assume the positive direction of its experimental and prototype reactor program. This approach was outlined more completely in the joint committee staff report in August 1958. I am happy to say that AEC Chairman McCone adopted this policy in 1959, except for the unsolicited proposal proviso.

However, much more remains to be done in organizing and implementing AEC's positive direction of the program. AEC is still in need of a larger technical staff to provide technical direction. Too much time is spent in Washington haggling over contracts, and not enough is spent on seeing to it that adequate scientific and technical programs are planned and carried out in the use of experimental and prototype reactors. Here again the Shippingport project seems to be an exception.

I am also concerned that in recent months there seems to be a growing attitude by AEC and administration officials that the Soviets are cutting back on their atomic power program, and that we therefore can relax. The Russian atomic representative, Mr. Emelyanov, has even suggested that the U.S.S.R. and the United States should agree on which types of reactor prototype each country would emphasize, and thereby save development money. As you know, the United States and the U.S.S.R. already have signed a memorandum of agreement covering exchange of visits and technical documents and also provides for developing joint projects in certain research fields.

Although I am most strongly in favor of reducing the tensions between the United States and Russia, we would be foolhardy to relax our efforts in atomic power development for any such reasons. We do not know for a fact that the Russians are cutting back their atomic power effort. This is

only what they have told some U.S. visitors. On the other hand, I do know that if I were hoping to win a competition I would certainly try to lull my competitors into feeling that they could afford to relax.

I need not remind you that this country has been lulled before, only to wake up with the Russians running away with the ball. We received no prior notice when the big Soviet jet bombers first flew over Moscow, nor did we have any notice prior to sputnik and their other outer space accomplishments. We may be faced with another important surprise just before the summit meeting this spring.

Indeed, in atomic energy, AEC was quite surprised at Geneva in 1955 when the Russians announced the operation of their 5,000-kilowatt atomic powerplant. Again in 1958 at Geneva, although the joint committee was assured by AEC that there would be no surprises, the Soviets unveiled their 100,000-kilowatt dual-purpose powerplant amid great publicity.

I know also, that in 1953, the United States held undisputed leadership in atomic power technology, that we retained it as late as 1955 but that by October 1, 1958, Dr. Walter Zinn reported to the joint committee that Russia not only had closed the gap but in some areas had moved ahead of us.

Therefore I do not favor any cartel or other arrangements to parcel out reactor types with the Russians, or any so-called cooperative endeavor which would relax our pressing forward to maintain our slim lead.

Admiral Rickover has not paced his nuclear submarine program in accordance with what he thought the Russians might be doing in nuclear submarine development. He has pressed ahead as rapidly as possible, and as a result the security of the United States today is greatly bolstered by the possession of this unique and powerful weapon.

The same policy should apply in the field of atomic power development. Our own power needs, as this group knows well, will mushroom immensely in coming decades, and the sooner we have an additional source of low-cost power the better for the long-term well-being of the American people.

Abroad, two-thirds of the world's peoples are energy-starved. Electric power is essential if they are to improve their miserable living standards. As a means of meeting their potentially huge needs, atomic power is of great interest and will assume ever-increasing importance.

The battle has been joined with the Soviet Union and the Red Chinese for the friendship of the uncommitted and underdeveloped countries—most of the world's population. In this competition, American leadership in the new and vital technology of atomic energy and power can be a factor of great value.

To speed the realization of economic benefits by the American consumer, then, and to regain the decisive international leadership we once enjoyed, I will continue to urge a strong, coordinated, and purposeful Federal program for the development of nuclear power.

The Political and Psychological Aspects of the Space Race

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, January 19, 1960

Mr. WILEY. Mr. President, whether or not we admit it, and whether or not we like it, in the eyes of the world there is a space race between this country and Communist Russia. We have recently heard much about the military aspects of space. Yesterday, we heard about the budgetary considerations of space; and in the future we shall hear more and more about the peaceful exploration of space. I should like at this time, however, to make some comments on space from a political and psychological point of view.

Space has a tremendous appeal to the human mind and imagination. The challenge of space is not new. Since the beginning of time there never has been a period when man has not been actually aware of space. Man has always felt it his destiny to conquer nature, and he did well on land and water. The realm of the air and the vastness of the universe seemed denied to him until recent times. Now, the dream of space knowledge, travel, and conquest is becoming a reality. These are facts the Russians recognize and take advantage of.

It is imperative that we become aware of the Russian motivation in space and other research. Science, like everything else in Russia, is an instrument of communism. Science in Russia has also been used as an effective instrument of foreign policy. The Russians have promptly displayed their discoveries to the world, and employ them skillfully. Every successful Soviet launching seems to have been calculated in time to extract maximum propaganda value.

I believe that space, in years to come, is likely to be the arena for world competition and also world cooperation. It is important, therefore, that we map out our own independent space programs, make them fore effective, and recognize their impact on world opinion.

In an article that appeared in the New York Times magazine of Sunday last, January 17, Hanson W. Baldwin talks about the "neglected factor in the space race." He says that we are lagging only slightly in the scientific and military aspects of the space race. It is in the propaganda phase, however, that Russia is far ahead. It is imperative, therefore, that we—past masters in advertising and public opinion, in the development of mass media, newspapers, radio and television—find a better way of making our space research and accomplishments better known to the millions of people around the world who look at the space race as a symbol of national and human success. Let us not forget that the basic world struggle is for the minds of man.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEGLECTED FACTOR IN THE SPACE RACE—WE ARE LAGGING ONLY SLIGHTLY, IF AT ALL, IN THE SCIENTIFIC AND MILITARY ASPECTS OF THAT RACE; IN ITS PROPAGANDA PHASE, HOWEVER, RUSSIA IS FAR AHEAD

(By Hanson W. Baldwin)

Attack and riposte initiated a great space debate as Congress convened in a crucial election year.

In his state of the Union address, President Eisenhower looked upon the Nation's military and scientific efforts in space and found them good. But he was immediately answered, not only by critics in Washington but also by a Soviet announcement of impending missile shots into the central Pacific. These focused attention on the weak point in the administration's program—the propaganda, psychological and political aspects of space achievements. Two salient points emerged from the smoke of preliminary battle:

The United States is lagging only slightly, if at all, in the scientific and military aspects of the space race. But the Russians got to the moon first; they preceded us into solar space; they put the first living thing in orbit, and hence, in the area of international psychology and politics, they are far ahead in the establishment of prestige.

Critics of the Nation's space program are, in fact, once again stressing that a key decision has not yet been made—whether the exploration and exploitation of space represent an international race that the United States could and should win.

Two and a quarter years after Sputnik I, the determination to provide what it takes to win has not been made, these experts maintain. U.S. space ventures must still be fitted into the narrow pigeonholes of military or scientific requirements and are confined and limited by restrictive budgets. There have been few at the top level of Government (and their influence has been small) who have stressed the importance of national prestige or evaluated the tremendous impact of space accomplishments upon international politics and mass psychology.

In short, the Nation's space program has been too much under the authority of the mathematical scientists—the "pure" researchers to whom scientific facts and findings are ends in themselves—and the budget planners, economists and cost accountants. The political scientist, the master of mass communications and psychology, to whom the power of an idea, the lilt of a phrase, an adventure into the "wild blue yonder," the prestige of accomplishment are important factors in global power relationships, have had little, if any, influence in the U.S. space program.

The space scorecard indicates that this part of the indictment is largely true. Scientifically we have probably accomplished as much as or more than the Russians but as a Nation we have benefited from these accomplishments, far less.

We have launched 15 successful Earth satellites; the Discoverer satellite program is now so routine that it excites only temporary ripples of interest. Seven of the U.S. satellites are still circling the Earth, some of them still sending back data from the largely unexplored void.

Russia has launched three successful satellites, and of these only one is still in orbit. But the Russians launched the all-important first satellite in history. Their second carried the first living thing—the dog Laika—to be shot into orbit. Indeed, the U.S.S.R. has produced rockets with so much greater thrust than ours, lofting payloads so many times heavier, that global jokes about U.S. "grapefruits" have circulated from Paris to Saigon. There is nothing so devastating to prestige as laughter.

The United States has hurled a small payload past the Moon which went into orbit around the Sun. But again, the Russians got there first; their rocket preceded ours into solar space. The Russians, moreover, hit the Moon, and we are still talking about it. Their latest achievement, a missile shot into orbit around the Moon and Earth, photographed—again for the first time in history—the Moon's hitherto unseen side.

It can be argued, as it has been, that these accomplishments are offset scientifically by

Project Argus—the United States detonation of three small-scale nuclear weapons some 300 miles above the Earth—and by U.S. photographs of the Sun (and more recently of Venus) taken from balloons at high altitude. There is no doubt that Project Argus was a superb scientific, technological and military achievement; it has been described by some as the greatest scientific experiment of all time. There is no doubt about the Sun photographs; they were far superior in definition and clarity—and in scientific importance—to the Soviet radio-transmitted Moon photograph, and they and other U.S.-made pictures of the Sun and of solar flares have been excitedly hailed by Soviet as well as American scientists.

There is not much doubt either that, despite the small size of most U.S. satellites, we have made some major scientific discoveries. The Van Allen radiation belts were first detected by U.S. instruments in space, and our accumulation of space data is probably larger and more important scientifically than the total Soviet data.

If the Russians unquestionably have more powerful booster rockets of greater thrust than any U.S. rockets now operational, we have partly compensated for this by much better miniaturization of equipment; and it is probable, though not certain that our instrumentation and electronics are superior in quality. Moreover, our space efforts—sounding rockets, balloons, high-flying aircraft, satellites, moon shots and all—have undoubtedly been more extensive and have provided broader coverage than the Russian program.

Nor are we lagging perceptibly in developing the potential military applications of space. Our Discoverer satellite program, which is expected to lead to a reconnaissance satellite, is as far advanced as, or farther advanced than, any similar program about which we have knowledge in Russia. Weather, navigation, missile-early-warning, and communication satellites will soon be within the state of the art. However, the man-in-space program—which offers an unpredictable military dividend, if any—is far from culmination and the Russians may well beat us to this achievement, and hence to another tremendous psychological triumph.

Given our major scientific and military accomplishments—why are so many people disturbed about our standing in the space race?

The reason is simple: It is the Russian achievements, not our own, which have made the maximum impression upon the minds of the many. Moscow has, very simply, followed Nathan Bedford Forrest's prescription for victory—it has got there first with the most.

There are, clearly, three aspects of the space race, the scientific, the military, and the political-psychological. We are not lagging too far behind in the first two, even though we are not making an all-out effort. But we have not even recognized the third phase of the race; in fact, our official announcements—and more important, our official actions—have pooh-poohed the idea of a race at all. Yet Russia obviously has keyed her space program to the achievement, not only of scientific and military results, but of spectacular and prestige-building firsts.

In the Communist ideology every action has a political slant. Each of the major Soviet space achievements was calculated to excite the imagination of man and to reap political and psychological dividends. All of them were fitted deliberately to a political chronology: the moon shot prefaced Premier Khrushchev's visit to the United States.

There is no doubt that the Soviet space achievements have contributed in a major degree to the public image of the U.S.S.R. as an imaginative, energetic, technologically advanced society, imbued with the restless eagerness and daring of the great explorers of the past, and capable of feats which no other nation can equal. The global damage consequently done to U.S. prestige is incalculable, but there is no denying that it has been immense.

The reasons for this global psychological defeat are more important than rocket engines of inferior thrust. The reasons lie at the heart of Government. We learned to our cost in World War II and in the postwar period that "political-military" is a compound word; we lost the peace in large part because our military strategy neglected or minimized sound political goals.

Today, we appear to have forgotten that the basic world struggle is for the minds of men. Since the first part of President Eisenhower's first term there has been no one of much influence at a high level in the Government who spoke for public opinion, no one who has viewed governmental action or inaction in terms of their psychological effects upon the world conflict.

The most important and influential men in Washington in advising the President about space policies are not the Secretary of Defense, not Dr. T. Keith Glennan, the head of the National Aeronautics and Space Agency; not George V. Allen, Director of the U.S. Information Agency. (In fact it is doubtful that Allen has ever been asked about the global psychological importance of space achievements.) The Director of the Bureau of the Budget, who in this administration has assumed unparalleled power in both budget and policy formulation (military and foreign), is perhaps the keyman in the establishment of guidelines for our space efforts.

Last fall NASA attempted a moon-orbiting shot—the first of its kind and one of the most difficult of space achievements. When the rocket blew up, there was no backup available—simply because the money funded for the program provided for one rocket, no more. One cannot accomplish unprecedented and historical firsts on such a basis. The Russians have made no such mistakes; they have provided what it takes.

Closely circumscribed dollar guidelines have clearly inhibited and slowed this country's exploration of space. Moreover, they promise to continue to do so, despite our past disappointments. The Saturn 1,500,000-pound-thrust clustered rocket, which has been under development for more than a year, is this Nation's most immediate hope of overtaking the Soviet lead in high-powered boosters. It was funded for some $70 million in this fiscal year; its backers had asked for $130 million.

Next year a full funding program for maximum speed of development would require $250 million, but the budget will probably provide only $140 million. In terms of time there has already been a 6-month slippage in the program; as things stand now, Saturn will be ready at least 2 years later (1963 or 1964) than it could have been, had full funding been provided.

The second most influential man in Washington in our space-policy formulation—next to the Budget Director—is Dr. George B. Kistiakowsky, the President's scientific adviser. Like Dr. James R. Killian, Jr., before him, Dr. Kistiakowsky has immense power but no legal or direct responsibility, save to the President. He can, and does, oppose or support both NASA and Pentagon space programs, and his opposition can mean the kiss of death.

Both of these men stand for the orderly, progressive, scientific exloration of space—with emphasis on the word scientific. Rocketry is a technological tool, which should be subordinate to science, Dr. Killian (who has just returned to the chairmanship of the Massachusetts Institute of Technology) said recently in a speech. Both men are eminent physical scientists, and any program they support will undoubtedly be orderly, reasoned, and thorough. But neither man has shown any evidence that he appreciates the tremendous impact of space achievements upon global opinion; indeed, such a factor does not fall within the purview of the scientific adviser.

Furthermore, a sizable segment of the American scientific community has the same sort of negativism toward any space program (except one conducted on its own terms) that the nuclear physicists felt after Hiroshima toward the development of atomic weapons. This may be in part a reflection of a deep guilt complex; they may be appalled at the potential destructiveness of their own creations. It may represent the collective misjudgment of essentially cloistered men—men of precise facts and figures—suddenly elevated to positions of power in a world where intangibles and inexactitudes—the province of the political, rather than the physical, scientist—are dominant.

No matter what the reason, there is a well-defined attitude among many—though by no means all—scientists that space is too important to be left to the military, and that the military should be subordinated to a strictly controlled and orderly scientific space program. (The creation of a civilian space agency was, in part, a reflection of this.) In such a program, there is little room for the spectacular, the crash program, the all-out effort, the race.

This dichotomy—the military eager to exploit the potentials of space for military purposes; the scientist anxious to study and find rather than to fight or to impress—has not been completely resolved organizationally, despite the many refinements in our space administration concepts in the 2¼ years since Sputnik I. NASA and the Defense Department still have the same objective—the conquest of space—but for different purposes. Both must use the same booster rockets to attain their goal. At the present stage no one can say with finality just where the scientific objectives leave off and the military begin; no one can foresee all of the ultimate military uses of space; there are obvious overlaps.

For those reasons the closest possible harmony between military and civilian space organizations must come about. At last there are signs that the worst of the space program's organizational growing pains may be over. Late in 1959, after the Air Force was assigned responsibility for all big military boosters, an Air Force general was assigned to NASA to head a new booster rocket and test division. At the same time, the controversial Advanced Research Projects Agency in the Pentagon was subordinated to the authority of Dr. Herbert F. York, Defense Director of Research and Engineering. And now the President proposes—in organizational changes still to be spelled out—a kind of space czar to direct and coordinate NASA and the Pentagon.

These changes may improve liaison, but they will do little to stress the battle for the minds of men. Lip service is paid to the aims of psychological warfare—to impress the world with the power and knowledge of the United States—but it is lipservice only, and with the proviso that it must be done cheaply.

Clarke Newlon, executive editor of the magazine Missiles and Rockets, recently wrote that there is an almost universal feeling * * * that the Nation's space program is at present on dead center; that the present administration fails to recognize its importance; that we have no real space plan; that no significant action will be taken until we have a new head of Government.

Yet, as he pointed out, there is no lack of national courage, skills, and basic tech-

niques to overtake and pass Russia in the space race—if we start now. The starting means adequate funding, enthusiastic support, and real desire to win.

And, above all, it means a recognition at the top level of the tremendous political and psychological importance to our international prestige and our national safety of easily discernible scientific and military achievements. It is not good enough to say that we have counted more free electrons in the ionosphere than the Russians have, that we know more about cosmic rays. We must achieve the obvious and the spectacular, as well as the erudite and the obscure.

American Indian Day

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BERRY. Mr. Speaker, I have introduced today a joint resolution proposing to set aside 1 day each year to be known as American Indian Day.

The resolution proposes that the third Thursday in August each year be designated as a day to be set aside by the President to observe with appropriate ceremonies and activities the first American—the original American—the American Indian.

I have done this at the suggestion of the Governors' Interstate Indian Council which has done such an excellent job of helping to bring about recognition of the Indian problem. It was their suggestion that this be done as a means of making it possible to give special recognition and honor to the original citizens of this country. We have had several days for the recognition of other groups, we have had special weeks for the recognition of various industries, but never, Mr. Speaker, have we officially designated a time for the recognition of the American Indian.

I am confident the effect that this would have is significant and important for America's first citizens. One important thing that I see in this is making the people of America aware of the contributions that Indians collectively have made in this country and possibly to influence the Congress to take a more serious, dedicated, and active interest in Indian affairs.

It was the thought of the Governor's Interstate Indian Council that if a day were set aside by Congress as American Indian Day it would help to create many of the finer aspects of Indian culture and heritage and bring the knowledge to Americans everywhere that Indians still exist, forming a definite and constructive part of American society instead of in a fictional and romantic state. It would help to make the American people generally aware of the fact that the Indian people are no different than non-Indians, that they want jobs, employment, income and to provide for their families, not only the necessities, but the luxuries of life, and the opportunities for education that are available in non-Indian communities.

It could be pointed out that the Indian people were segregated into communities first for the protection of the non-Indian and then later, in an agricultural adventure in rehabilitation. It should be pointed out that simply because the Indian people resided on the land that they are not necessarily farmers and ranchers but have a high degree of manual skill and that if given an opportunity could and would raise the level of their own economic status.

It could be pointed out on these special days that industry has been reluctant to locate on these reservation areas without some special inducement such as a tax inducement, or something of that nature, but with such an inducement industry could and would locate on these Indian reservations, opening up a whole new vista of opportunity for the Indian people and give them an opportunity to lift themselves up by their own bootstraps.

These are some of the things that should be brought to the attention of the American people, should be brought to the attention of the Congress and could be brought out on the occasion of this special date to be established as American Indian Day.

The date of Thursday on the 3d week in August has been chosen because this is an era of time during the summer when the Indians of most areas are holding special events. The Indians of Oklahoma celebrate their Anadarko Exposition during this week. The Indians of the Northern Plains are holding their fall expositions and councils at about this time. Consequently, I have named the Thursday of the third week in August as a suggested date for recognizing the first American on American Indian Day.

Standard Oil Co. of New Jersey Sets Precedent by Establishing "Hands Off" Policy on Television Programs Which It Sponsors

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. NEUBERGER. Mr. President, I long have urged that advertisers sponsoring television programs be aloof and remote from the actual news or dramatic content of those programs. After all, when a firm purchases space in a magazine or newspaper, it does not receive the privilege of dictating what news, pictures, or feature articles should be located alongside those advertisements. I believe the same detachment ought to apply to TV and radio advertising, so that we can escape the humiliation of further rigged shows and similar debacles.

I have been heartened now to learn that the Standard Oil Co. of New Jersey has contracted to sponsor the "Play of the Week" over channel WNTA–TV, but that Standard Oil will follow a strict "hands off" policy with respect to the content and personnel of such programs.

I only hope and trust that this precedent spreads throughout the Nation, because it would be a healthy and salutary development for the broadcasting industry generally. Our national airlanes and television channels are a priceless possession; they should not be subverted entirely to commercialism. Standard Oil of New Jersey has established a pattern which other advertisers should likewise adhere to.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the New York Times of January 14, 1960, written by Jack Gould, radio and television editor of that great newspaper, describing the action of Standard Oil Co. in agreeing to remain aloof from any interference in the dramatic presentations it is sponsoring on channel 13 in New York City.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 14, 1960]

TV "PLAY OF THE WEEK" GETS SPONSOR—OIL COMPANY TO KEEP HANDS OFF

(By Jack Gould)

The Standard Oil Co. (New Jersey) announced last night that it would assume complete sponsorship of "The Play of the Week," the series of 2-hour plays presented on WNTA–TV, channel 13. The sponsorship will start February 8 and run for 13 weeks.

In a move that could have national repercussions in television, M. J. Rathbone, president of the company, said that Jersey Standard would follow a rigid hands-off policy with respect to the choice of plays, their content and the selection of actors.

Moreover, it was learned, Jersey Standard planned only brief institutional advertising that, so far as possible, would be presented wherever the playwright had decided there should be an intermission.

The volume of advertising, it was understood, would be only a small part of the maximum of 12 minutes allowed a 2-hour evening program under the code of the National Association of Broadcasters.

The decision of Jersey Standard to sponsor "The Play of the Week" provided a dramatic climax to a campaign by New York television viewers to assure the program's continuance.

When apprised 2 weeks ago that the series was in jeopardy because of inadequate advertiser support, more than 27,000 persons sent postcards and letters to WNTA–TV applauding the series.

David Ogilvy, president of Ogilvy, Benson & Mather, Inc., the advertising agency representing Jersey Standard, indicated that the response from viewers had been an important factor in influencing the company's board of directors to sponsor the series.

Mr. Rathbone said in an interview that it was at the insistence of Jersey Standard that the company's contract with WNTA–TV precludes sponsor interference in the theatrical aspect of the program.

APPROVAL IS COMMON

It is common practice in TV for sponsors and agencies to insist on approval of vehicles, usually with a view of avoiding controversy.

Mr. Rathbone said that he and his associates did not feel competent to control a the-

atrical venture and that the task should be left to those whose work had enjoyed sustained critical and public approval.

The head of Jersey Standard went on to note that it was part of the test of enlightened corporate citizenship for American industry to encourage the theater and the arts as it had education and science.

Ely J. Landau, chairman of National Telefilm Associates, operator of WNTA–TV, expressed gratification over the contract with Jersey Standard and also voiced his thanks to viewers who had written to the station.

While terms of the sponsorship agreement were not made known, it was understood that WNTA–TV would still incur a slight loss. The average cost of a week's presentation has been estimated at $40,000. However, the revivals of Broadway plays and classics have been recorded on tape and the station expects to recoup on subsequent showing of the series in other cities.

The contract between Jersey Standard and WNTA–TV covers one of the largest time sales ever registered by an independent video outlet. With six nightly performances and a Sunday matinee of "The Play of the Week," Jersey Standard will be represented on the air for a total of 14 hours a week.

Neither Standard Oil nor WNTA–TV would comment on reports that at a later date consideration may be given to sponsoring the series for one performance a week in such cities as Washington, Boston, and Philadelphia.

The Gannett Group—Enlightened Journalism

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. CAHILL. Mr. Speaker, it has been 4 months since the Gannett Co., Inc., assumed ownership of the Camden Courier-Post, the largest daily newspaper in the First Congressional District of New Jersey.

When the company acquired the newspaper on September 1, 1959, Paul Miller, president, set forth a statement of policy under which the company would operate the paper.

He said:

More and more, companies operating a number of newspapers are adhering to the principle of local autonomy long basic in the Gannett group.

The principle not only is good journalism, it also is good business. A competent local management is more likely to operate profitably and successfully under a minimum of outside control or interference.

The directors, officers, and staff of Gannett Co., Inc., will be available for counsel in specific fields of advertising, circulation, personnel, news, and general policy. But the direct responsibility will rest, as now, in the hands of management at Camden.

It will be up to the editors of the Courier-Post to print or not to print material received.

Briefly, we believe each individual newspaper should stand for everything that is best for its community, as the management sees it. It should not duck local or other issues. It should exert its best influence in governmental affairs and not mince words or withhold facts. It should contend for whatever it favors in the public interest.

In all its activities, however, a newspaper should be fair and unbiased in its news columns, no matter how strong the opinions expressed on its editorial page.

And, even on the editorial page, a newspaper should bend over backward to see that a hearing is given those with contrary views. In many cases, I believe, contrary views should be solicited; especially in a single ownership or one-newspaper city.

Now, 4 months after Mr. Miller issued his statement of policy, it is apparent to all readers of the Courier-Post that this policy has been implemented and strictly adhered to in the company's operation of the paper.

As the Congressman representing the First District, I have talked personally with hundreds of people in the district and all have expressed the opinion that the policy statement expressed by Mr. Miller has become a reality. This newspaper which enjoyed a high degree of success and a vote of complete confidence under the leadership of the Stretch family, its previous owners, will, I am sure, continue under the policy initiated by Mr. Miller to win many more State, regional, and national awards, will continue to serve the needs of the people of the Delaware Valley, and will continue to earn the confidence of all the citizens of the State of New Jersey. The Gannett group and the Courier-Post staff are to be congratulated on their enlightened system of journalism.

State, School, and Child in Today's World

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address I was privileged to give when I was invited to appear on the program for the South Dakota Educational Association Convention at Aberdeen, S. Dak., on November 4, 1959, and at Spearfish, S. Dak., on November 5, 1959.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

STATE, SCHOOL, AND CHILD IN TODAY'S WORLD

(Excerpts from the remarks of FRANCIS H. CASE, U.S. Senator for South Dakota, Education Association at Aberdeen, Nov. 4, 1959 and Spearfish, Nov. 5, 1959)

"The primary function of any legislative body is the education and training of its youth." In those words, Aristotle, some 300 years B.C., stated the partnership responsibility of the educator and the legislator.

Figures released by the Census Bureau show over 4,300,000 births in the United States last year, a net increase of more than 2,600,000 over deaths. At 30 to a class, that calls for 90,000 additional classrooms when the babies of 1959 enter school.

We also have the new space age and all the requirements of foreign language study, higher mathematics, physics and electronics that have come with it.

Here is the price tag on the public school crisis in our own State of South Dakota that was recently put forth by the Citizens' Tax Study Committee:

Total spent in 1946, $15 million; total spent in 1950, $23 million; total spent in 1958, $42 million. Projecting, that will be $46 million in 1960; a 100 percent increase in 10 years.

To you who measure school costs in terms of mill levy, here was the committee's figure on that: 17.2 mills in 1950; 21.7 mills last year in 1958; but 38.3 mills in 1970 on the State's total assessed valuation to raise the estimated requirement at that time.

BIDDING FOR TEACHERS

To be sure, our State's increasing population now should provide a greater annual income and our assessable values should increase—and in my opinion will greatly increase during the next decade, but anyway you look at it, the need for larger revenues for schools is very real and very large.

I can remember one year when a western school district advertised to let the job of teacher to the lowest bidder—and got one for less than $40 per month. But, the kind of education that is needed today is not to be found on any bargain counter of low standards and low salaries.

Some teachers may supplement their income by outside employment, but free-lance writing, baby-sitting, and even seasonal refereeing of athletic contests cannot be counted upon to recruit and retain the number and the quality of teachers that the needs of our country require today.

By whatever means is necessary, local government, State government, and Federal Government—mark you, I include Federal Government—must join in a common endeavor to provide the dollars necessary to offer the kind of education that will meet the challenge of the day in which we live.

AID NEED NOT MEAN CONTROL

Federal aid does not need to mean control. We have had Federal aid to education ever since Abraham Lincoln signed the Land Grant Act into law in 1862, almost 100 years ago.

Here are some of the possibilities to explore: Dedication of revenues from natural resource development is one way. Profits of the State cement plant over and above the $2 million now earmarked for highways is an example—and might provide a dividend on classrooms built with cement. A penny sales tax to be distributed to school districts on a per capita basis would not mean controls and would let South Dakota's growing number of visitors share in the cost of the communities they here enjoy.

In all taxation, it is well to remember the epigram of old Bob Doughton: "You can shear a sheep many times but you can skin him only once."

If government meets its responsibility in financing, then what?

Take the child. If government provides his education, does it have the right to possess the child? My answer is: "No."

However important it may be to have scientists and engineers, doctors and nurses, or whatever calling you name, the free world will lose the very faith that makes it free if government dictates the product of education. It can offer incentives for courses to pursue; it can provide facilities essential to certain training; but when the State seeks to possess the mind of the student, education fails.

COMPETITION IN LEARNING

Russian children, we are told, are required to complete 7 years of schooling and they are moving toward 10 years. The 7-year students have had 7½ Carnegie units in

mathematics, 1½ in history, 1½ in geography, 1½ in biology, 1½ in physics and chemistry, 2 in a foreign language. The 10-year exams are estimated by the College Entrance Examination Board in this country to be roughly equivalent to the advanced mathematics examination which is taken by only about 10 percent of the 12th grade students in the United States. The 10-year graduates must pass an examination in 7 academic subjects—Russian language and literature, one foreign language, algebra, geomery, physics, chemistry and biology.

Here is a sample question in history: "Set forth the universal-historical significance of the formation of the U.S.S.R.—the first multi-national socialist state in the world." Another: "The great advance of the Soviet Army in 1944 and its liberation of European countries abroad from Hitlerite invaders."

Here is one in physics: "An automobile which weighs 5 tons with its load proceeds along an arched bridge at a speed of 21.6 kilometers per hour. What is its pressure upon the middle of the bridge, if the radius of the bridge's curvature is 50 meters?" Or this: "A container weighing 250 kilograms falls from 800 meters. At a point 100 meters above the earth, what is its potential and kinetic energy equal to?"

But in our anxiety to improve our educational policies and methods, we must not abandon the regard for the individual child which is a basic corollary of our belief in the rights of the individual and the limits to which government can go in possessing the child.

HOW MEASURE PURPOSE OR DRIVE?

When the Committee of Five was created to plan the new Academy of the U.S. Air Force, Dr. Virgil Hancher, president of the University of Iowa, told us there has never yet been devised a satisfactory method to measure the drive in a young man's personality.

Who could have predicted that a small town high school sucir as Canton, S. Dak., in one school generation could have produced two of the world's greatest scientists of our generation, Dr. Merle Tuve, president of the Carnegie Institution in Washington, and the late Dr. Ernest Orlando Lawrence, inventor of the cyclotron which smashed the atom and ushered us into the age of nuclear power?

Badger Clark reminded us:

"That is the small town's latent power,
Some name upon its schoolroom page,
The future hero of the hour,
The future glory of an age.
'Twas always so; 'twill always be—
Small town, the great folks' starting place
A small-town boy in Galilee
Rerouted all the human race."

Close to this is our belief that in America, good citizenship requires minds capable of exercising the powers and responsibilities of self-government. There are values, to be sure, in taking public opinion polls—but woe to America if we ever permit our laws to be made solely upon the basis of the latest percentages. As someone has said, it's a good thing for us that the signers of the Declaration of Independence did not wait for a Gallup poll.

LET THE MIND BE FREE

If our schools are to perform the function the State needs, we will not demand conformity. We will let teachers maintain a certain amount of objectivity, independence, "academic freedom" if you will. We will expect even legislators to think for themselves once in a while.

Our own State of South Dakota is entering into a new day. Our preconstruction forecasts of the effect of the great dams on the Missouri River may be modified—greater interest in recreational opportunities than expected; slow progress in utilization of water for irrigation; insistent growth demands for hydroelectric power; but withal, a faster rate of population growth. More and more of our young people should find opportunities in their home State.

If we provide them with true educational opportunities, we shall expect not servile minds, trained to parrot self-serving doctrines of an all-powerful government, but persons with all the rights and strengths of human dignity.

Ann Mundelein, of Sioux Falls, in Pasque Petals, put it so plainly in these lines:

"Oh, Chinese mother sitting by the roadside beside your child,
What does the future hold for him?
Will he be taught the wisdom of Laotze or of Confucius?
And the proverbs of the Sages?
Will he learn great poetry—'The Lure of Jade' and 'The Gray Bird Flying'?
Will he take his place as head of the family
To become a Venerable Ancestor?
Or—will he be only a tool in the fist of the State?"

The third goal of education—this education for which we are to provide adequate funds—should be to provide society at large with leadership in the constructive use of the knowledge which the educational system develops.

A simple example would be to say that we should produce men and women who will show the world an increasing number of ways to use nuclear power for peace rather than for war. President Eisenhower has well said that "Peace is the paramount goal of our times."

WORLD'S PEOPLE WANT PEACE

It has been my privilege to attend meetings of the Interparliamentary Union as a delegate from the U.S. Senate. There, wistfully, almost despairingly, the smaller nations of the world appeal to those from the great powers to assure them that there will be no nuclear war. They know that radiation unloosed in such a conflict would engulf them.

On the 1st day of September last, I spoke to the general assembly of the Union meeting in the chambers of the Sejm, the name of Poland's parliamentary body. That was in Warsaw, destroyed over 80 percent in the last war but now remarkably rebuilt. That was the 20th anniversary of the day that Hitler invaded Poland and sent bombers over Warsaw.

I joined other speakers in praising the valor of the Poles and their efforts in reconstruction. I reminded them that people in other countries, in the large countries, also wanted peace. I assured them that people in my country did not relish the high taxes from every dollar of which over 60 cents go into maintaining the weapons of security.

Our President, with other international leaders, has called for reduction of armaments, but the arms race is the result of aggression from without and subversion from within. Tension comes from threats to freedom; mere promises of arms reduction are not sufficient; there must be agreement upon controls respecting nuclear tests, placement of weapons and deployment of troops; and finally, there must be the machinery to carry out the agreements.

Educators along with legislators and leaders of thought in all walks of life have a responsibility to help produce the climate of opinion and to turn out the mechanics by which the people on this planet can live in peace.

What would be your attitude, if you were an Asiatic and you had seen a great power unleash an atomic blast over Hiroshima that had burned and buried thousands of people who were noncombatants and of all ages, men, women, and children? And what would have been your reaction as an Asiatic if we had saturated the eastern provinces of China with the modern-day counterpart of the Hiroshima and Nagasaki bombs in an effort to immobilize Red China's effort to recover Quemoy by force?

We have stated we would not start a war, that someone else would have to be the aggressor, but a great many strategists argue we should not wait if the opposition seems poised to strike. That is not the position of General Norstad, commander of the NATO forces, but some others hold it.

WE CAN DO MORE

By the student and teachers exchanges with which you are familiar a great deal has been done; more needs to be done. By cultural and spiritual exchanges more can be done.

I have seen devout worshippers in the churches of Poland, the most Catholic country in Europe. I have seen people standing in the rain out on to the sidewalk for half a block away to get into one of three two-hour services in a Baptist church in Moscow; I saw two Catholic churches filled there, one crowded for standing room where a Polish priest administered sacraments.

People, people, human beings, deep in their hearts have a spiritual longing in every country. The barriers of race and language can be overcome if the desire is great enough and if the task of understanding is undertaken as a mutual problem and recognition is ready when mutual effort is given.

So, as partners in these matters, let us provide the means whereby education may do its task in our day.

Let us provide the child with the fundamentals of knowledge and a mind that knows how to work for the good of mankind.

Let us understand that the object of education is not to produce slaves of the state, but citizens with free, creative minds, able, and alert for self-government.

Let us provide a society with the leadership it rightly expects in solving the great problem of our day—finding the way in which peoples and nations can live on this planet in peace and oving to new heights of mental, moral, and cultural development.

When Alfred Tennyson dipped his pen into the future for his immortal Locksley Hall, he saw "men the workers, ever reaping something new; that which they have done but earnest of the things they shall do."

Remarks Before Business and Professional Women's Club of Lynn, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my speech before the Business and Professional Women's Club of Greater Lynn, Mass., on October 6, 1959, on the subject of "Social Security."

I was pleased to attend, together with head-table guests consisting of Miss Mary S. King, of the Lynn Telegram-News; Katherine Donahue, State chairman of health and safety; Mildred Caram, State president; Despena Zervas, local president; Grace B. Michaud, chairman; Rena A. Decatur, president of district No. 1; Margaret O. Hill, State

treasurer; Mrs. Anna M. Korsun, quota president; and Hazel Anderson, of the Lynn Item.

Greetings, social security is a very general description that includes such programs as old age and survivors insurance, old age assistance, aid to the blind, aid to dependent children, aid to the permanently and totally disabled, and unemployment compensation.

Old age insurance is earned through special taxes paid by the worker and his employer. Unemployment compensation is financed through taxes levied on the employer alone. The remaining programs come under the heading of public welfare—or charity—and are supported through Federal and State appropriations out of general revenues.

In order to avoid confusion, I shall confine my remarks to the subject of old age and survivors insurance, which might be loosely termed old age pensions, or earned monthly benefits to provide for persons during their retirement.

To understand social security we must look into the background of this revolutionary type of legislation.

Many older nations had modest social security programs in operation long before we even considered the subject.

Our young and growing Nation, isolated from the rest of the world while it busily tended to its own confident development, emphasized the values of hard work, private initiative, and saving for "a rainy day."

In earlier days when each family was a self-contained economic and social unit, raising its own food, building its own shelter, and providing for its other needs through handicraft industries in the home, the sick, the disabled, and the older people were taken care of within this family circle.

With the coming of the industrial revolution, and the employment of large numbers of people in the factories, with the consequent shift of population from the farms to the towns and cities, the old-style way of supporting the aged and the dependent members of society, was no longer effective.

We had to fill the vacuum by new social and economic programs.

But, as people cling to old and familiar routines, even when they no longer suffice, the dominant conservatism of the United States delayed action on these imperative changes until the serious depression of the 1930's forced our hand.

It is to the great credit of the United States and its people that they engineered the "peaceful revolution" of that time and, by a combination of realism and humanism, adapted our social and economic systems to solve these problems in order to continue the progress of our Nation.

Everyone wants and needs economic security.

As a free and independent people, we want to be dependent on no one.

In the vicissitudes of life, even the best of people are apt to find themselves in a position where it is difficult, if not impossible, "to make both ends meet."

Programs must be devised, not only to eliminate these financial hardships, but to maintain the human dignity that is essential to the lives of self-respecting free men and free women.

Security for the mass of our people can be achieved only when most of us have jobs. But in the farflung, complex, and impersonal organization of our industrial society, there are millions who become destitute even in times of general prosperity. People who are eager and willing to work cannot find jobs. In some industries, an able and experienced worker runs into an invisible barrier as soon as he reveals that he is 40 years of age or older. Unlike the old days, he and his wife cannot develop a homestead out of the wilderness to provide for themselves and their children by their own efforts. We live in a collective and interdependent society, where our jobs and our incomes often depend upon decisions made by those we never see.

The Social Security Act was born during the depths of a paralyzing depression. At a time when 10 million workers were without employment other than work relief, and when some 18 million people were dependent for subsistence on direct relief or welfare, the President set up a Committee on Economic Security To Study the Problem of Destitution and to Make Recommendations. That was in 1934.

After searching study, the Committee found that the heart of the problem is loss of earnings. It discovered that, in most cases, whenever earnings are cut off, destitution is not far away. The question, then, was how to spread earnings over a lifetime, over periods when the breadwinner is working and periods when he is not, how to provide an income throughout the whole cycle of life—in childhood, youth, middle and old age.

It found that this could not be done on an individual basis: relatively few people can save enough out of their income to take care of emergency periods.

The Committee came to the wise conclusion that the problem could be met to a large extent through savings on a social basis. The family circle concept of long ago, where the young and the strong helped the weak, and were helped in turn as they became dependent, was broadened to include our whole society.

This could be done on the principle of sharing the cost and spreading the risk.

By 1959 the people themselves, on a voluntary basis, had accelerated this development. Through group medical and hospital insurance plans, they are now able to protect their health in a way that they could not afford as individuals.

Disaster can happen to any of us, suddenly and with no chance to prepare for it. Actually, however, it strikes relatively few at any one time. If a small amount could be collected from the many who are subject to the risk, a fund could be built for payment of benefits to the few whom disaster or misfortune has struck. As a substantial part of its answer to insecurity and destitution, the committee, back there in the midthirties, recommended social insurance.

After studying the findings and considering the advice of the Committee on Economic Security, the Congress passed the Social Security Act in 1935.

The Social Security Act is a Federal law, but the Federal Government operates only one of the programs—old-age, survivors, and disability insurance. The other eight programs are operated by the States, with Federal cooperation.

It is common knowledge that most of us, because of living costs, social standards, and economic misfortunes, do not set aside enough money or other assets during our working years to provide adequately for ourselves or our families when earned income is cut off by disability, old age, or death.

The OASI, as it is known, is a Federal program operated by the Social Security Administration.

Because of many amendments through the years the law now covers, with few exceptions, all people who are gainfully employed. The program provides regular monthly benefits for insured workers and their families when the wage earner reaches retirement age (65 for men, 62 for women), for eligible survivors when the worker dies at any age, and for disabled workers aged 50 to 65 and their eligible dependents.

A person whose annual net income from covered self-employment is $400 or more, reports his earnings and pays the social security tax when he files his Federal income tax return. (Only the first $4,200 of earnings are taxed through 1958. Beginning with 1959, net earnings up to $4,800 are taxed. The contribution rate for self-employed income is 3¾ percent for 1959. It is scheduled to increase to 4½ percent for 1960 through 1962; 5¼ percent for 1963 through 1965; 6 percent for 1966 through 1968; and 6¾ percent for 1969.)

These earnings are also recorded by the Social Security Administration under the self-employed person's social security account number.

Although self-employment was not covered by the original social security act, most persons who work for themselves have been brought under its protection by amendments to the law.

To qualify for monthly payments when you reach retirement age, or to make payments possible for your survivors in case of your death, you must have been in work covered by the social security law for a certain number of "quarters of coverage."

You get 4 quarters of coverage for a year in which you have $400 or more in net earnings from self-employment.

If you have self-employment net earnings from more than one occupation covered by the law, your income from all of them (up to the applicable maximum) is counted toward old-age, survivors, and disability insurance benefits. A net loss in one business is deducted from net earnings in the others.

If you operate a business but close it during a year and open another, or if you operate more than one business, you still should make only one report of self-employment net earnings for the year.

There is no provision in the law which permits refund of social security taxes properly paid, in the event that you do not have enough work under the law to be insured.

In case of your death at any age, payments may be made to certain members of your family if you had social security credit for 6 quarters of coverage out of the 13 calendar quarters before your death.

When you reach retirement age, you and certain members of your family can get monthly payments if you have had 1½ to 10 years of work (6 to 40 quarters of coverage), depending on how soon you reach retirement age. (No one will need as much as 10 years of work to qualify for retirement benefits until after 1970.)

The minimum payment to an insured retired person is $26.40 monthly. The maximum retirement payment is at present $116. The maximum family payment depends upon the worker's benefit amount If his amount is $109 a month or more, the family maximum is $254.

My colleague, Congressman KATHARINE ST. GEORGE of New York State, introduced a bill on January 7, 1959 * * * Numbered H.R. 944, "to amend title I of the Social Security Act, so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder."

Mrs. ST. GEORGE, incidentally, is a member of the Spring Valley Chapter of Business and Professional Women, which explains her interest in the proposed amendment.

Although her bill did not pass in the last session of the Congress, I am confident that it, or a similar bill, will be enacted in the near future.

Under the present law, if a person earns more than $1,200 a year after he or she has retired, the number of monthly benefit checks due you (while you are under the age of 72) will be reduced correspondingly. In general, you lose your right to 1 month's benefit check for each $80 (or fraction of $80) of earnings over $1,200 in the year.

Beginning with 1959, no matter how much your total earnings are in a year, those earnings will not cause you to lose the monthly

payment for any month in which you neither work as an employee for more than $100 ($80 per month for 1958 and previous years) nor render substantial services in self-employment.

Generally you perform "substantial services" when you actively engage in the operation of your trade or business.

There is no single rule for determining when a person is performing substantial services in self-employment. Some of the factors considered are: the amount of time devoted to your business both before and after your retirement; the nature of your service; the presence or absence of a paid manager or member of your family who manages the business, and whether your activity is seasonal, etc.

After your 72d year, benefits may be paid to you no matter how much you earn.

This $1,200 ceiling on outside earnings is a holdover from depression days.

In 1935, the Congress had to keep in mind the millions of unemployed.

The purpose, in establishing this ceiling of $1,200 was to discourage retired persons from continuing in the jobs, or income-producing self-employment activities, and thereby make them available to younger and unemployed persons.

That reasoning is now obsolete, and the ceiling itself has no meaning because of the rise in the cost of living.

In the last session of the Congress, the income limitations for single veterans receiving non-service-connected pensions was raised from $1,400 to $1,800 and for married veterans from $2,700 to $3,000.

This precedent is certain to strengthen the case for a substantial increase in the amount that may be earned by a person retired under social security without jeopardizing his monthly benefit checks.

This is of particular interest to business and professional women who want to continue earning additional income after retirement.

It is appropriate that this issue should be stressed during the observance of National Business and Professional Women's Week.

I intend to introduce a companion bill identical with that already submitted by Congresswoman KATHARINE ST. GEORGE.

It is a proposal of such overriding merit that I expect it to be enacted into law during the year 1960.

USO Club Completes Year of Service—More Than 307,000 Members of Armed Forces Use Facilities in 1959—Moe Lerner Presents Splendid Message

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. RANDOLPH. Mr. President, it was my pleasure to be present at the luncheon session of the USO operating committee today, and to have installed the new officers of the Lafayette Square USO Club in Washington, D.C.

It is noteworthy that 307,567 members of our armed services visited the club, across the street from the White House, during 1959. This was an increase from 235,283 persons who were served in 1958.

Mr. President, the club has operated for more than 8 years, with a helpful program for our service personnel who come to the National Capital area. It is operated by the Young Men's Christian Association, and the National Catholic Community Service.

The operating committee officers and members for 1960 are: Chairman, Hyman J. Cohen; vice chairman, J. Robert Carey; secretary, Mrs. Walton C. Clark; treasurer, Sol M. Alpher.

Milo F. Christiansen, Mrs. Pinyon L. Cornish, Dr. Marion J. Creeger, Hon. John B. Duncan, Mrs. Joseph A. Egan, James C. Evans, Mark Evans, Mrs. Charles Fahy, John C. Gibbons, Mrs. Rosamond Goodman, Joseph D. Gould, Col. West A. Hamilton, U.S. Army (retired), Dr. Irene C. Hypps, Mrs. Charles L. Jones, Mrs. M. Russell Kelley, Peter J. Kennedy, Harold H. Kramer, Vice Adm. Leland P. Lovette, US. Navy (retired), Col. Waldron E. Leonard, Moe Lerner, Mrs. B. Harrison Lingo, Mrs. Fairfax H. Lomack, Mrs. John J. O'Neill, Mrs. Hampton Percy, Miss Imogene Philibert, William H. Press, Harry Schwartz, R. M. Taylor, Mrs. Frank Trigg, and R. R. Zimmerman.

The staff is composed of Miss Isabel A. Powell, associate director, assigned by NCCS; J. R. Brown, assistant director, assigned by YMCA; Richard E. Evans, director, assigned by YMCA.

The words of retiring Chairman Moe Lerner, following 2 years of excellent leadership, as given at the meeting, I ask to have printed in the appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Man has learned many things in the comparatively short time he has occupied the role of landlord on this earth.

He has mastered fire and atomic energy He has conquered most of the diseases to which he fell heir. And he has altered the course of rivers and flattened mountains and harnessed the energies that lay dormant in the earth. And now he seeks ways to extend his tenure on earth and other means to reach the stars that have entranced him since his time began.

Man is a proud, courageous, intelligent, and ambitious creature who has done much and will do much more.

Yet despite his impressive achievements he remains woefully inadequate in the face of the most important task of all—that of understanding himself and his fellow man.

To help him do this he has created great institutions of learning and staffed them with men of wisdom and vision. He has caused the erection of great edifices to the glory of his God and he has trained skilled men of great intelligence to probe the inner recesses of his mind.

And yet, in this year of our Lord 1960, man still hates his fellow man, still distrusts and fears him, still pridefully maintains the theoretical gulf between himself and other peoples of the world, other peoples of his own land, and even other peoples of his very own community.

And in some ways, despite all that man has learned, in the final analysis he has learned nothing. For with all his vast knowledge of so many things, he is still ignorant of the most important truth of all, that man is the same, basically, everywhere he exists.

Man's inhumanity to man, is one of the oldest and most shameful stories in the history of mankind.

A disease for which there is a cure—but too often, the patient is unwilling to even admit he is sick. Yet he is ill, and desperately so. He needs a large dose of kindness, understanding, human compassion, and sensitivity. He needs a strict regimen of intelligence, thoughtfulness, and erudition. But if he won't believe he is ill, who can force him to the tonics?

One of the things that absolutely confound and frustrate intelligent people, is that prejudiced people cannot see the complete impracticality of prejudice. It is economically unsound and has sometimes even proved nationally suicidal. Put in terms of economics, it is simply bad business—bad even for the richest economy—for a burden of millions of underpaid citizens who must live in substandard housing proves prejudice to be the most expensive luxury any nation might select.

Thomas Mourkas Proves United States Land of Opportunity

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. McINTIRE. Mr. Speaker, the Bible tells us that it was a light of hope that moved the multitude to follow Moses out of Egypt into the barren plains in a grand pursuit of the promised land.

In a like manner, a beckoning beam of liberty has prompted a multitude to make an exodus from foreign lands for the freedom shores of America.

The following article from the January 7 issue of the Bangor Daily News serves to remind us that America is truly a land of promise. It does this by letting the light of recognition fall on one of those who, in coming to our shores, dedicated himself to the principles of freedom and found, in turn, his opportunity in a land of opportunity:

THOMAS MOURKAS PROVES UNITED STATES LAND OF OPPORTUNITY

(By Virginia London)

Forty years spanning 1919 to 1959, in which Thomas D. Mourkas, semiretired local businessman, rose from busboy to restaurant and hotel owner, proves again that the United States is a land of opportunity.

Mr. Mourkas was born in Porti, Greece, and was graduated from Porti High School. He came to the United States at the age of 14 to live with his brother and continue his education. In less than a year his brother was called back to Greece at the outbreak of the Balkan war, and Mr. Mourkas went to live with an uncle in Manchester, N.H. This also ended his years of formal schooling.

WORKED AS BUSBOY

In 1919 Mr. Mourkas made his first contact with the restaurant business when he went to work as a busboy at Nantasket Beach, later going on to work at the old Thorndike Hotel

in Boston. When he was 21 he opened his own restaurant in Waltham, Mass., following this venture with another in Brookline, Mass., 2 years later and added a third restaurant in Boston the next year.

Explaining his move to Maine, Mr. Mourkas said, "I came to Bangor in 1924 to visit a friend and spend 2 weeks vacation and fell in love with the State of Maine and stayed."

After selling his restaurants in Massachusetts, he worked for a while at the former University Restaurant on State Street, before opening a restaurant on Exchange Street in 1927 with his brother, Christopher, and George Petrikas as partners.

OPENS NEW ATLANTIC

In 1929 he opened the New Atlantic Restaurant on Main Street against a general feeling that Main Street was not a good location for that type of enterprise. He felt then, as he does now, that good food, good service, and a clean place is my motto to success in the restaurant business. The new business proved to be successful and in 1933 he exchanged stock with his partners and retained the Main Street restaurant while his partners kept the business on Exchange Street.

Adding to his business interests during the 1920's he opened the Sunset Hotel and Restaurant in Bar Harbor and also a bowling academy. In 1942 in partnership with Ralph C. Masterman he purchased the Belmont Hotel there. The hotel and his summer home were both lost in the Bar Harbor fire of 1947.

IN RACETRACK BUSINESS

The opening of a laundry and linen business was necessary for Mr. Mourkas to obtain supplies for his hotels and restaurants in 1943. In 1950 his interest in the racetrack business also came about as a means to an end when he was urged to buy stock in a new raceway company being formed in the State so that he could be on the ground floor to secure food concessions. This venture in turn forced Mr. Mourkas to enter the racetrack business since the original company, Maine State Raceways, went out of business within 2 months after it opened and, to save his investment, he accepted the office of treasurer of the new Scarboro Downs, Inc.

Mr. Mourkas has managed the Bangor Fair since 1951 when the city manager and city council requested that he take over the operation. In 1951 he also joined a group of businessmen in Bangor to build the Queen City Motel on outer Hammond Street.

SEMIRETIRED

In 1956 he sold his interest in the New Atlantic Restaurant to Nicholas Kesaris. Now semiretired, Mr. Mourkas still has his interests in the Scarboro Downs raceway, the Bangor Fair, and the Queen City Motel, now known as the Queen Charterhouse Motel.

He now spends January through April in Florida at South Palm Beach returning to spend a few months in Bangor, then on to Old Orchard Beach for the summer months, returning to Bangor in the fall.

Of his plans for the future, Mr. Mourkas says, "I am unpredictable—I never know."

Statement by Hon. J. W. Fulbright, of Arkansas, Commenting on Address by Premier Khrushchev to Supreme Soviet

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 19, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a request which I received from the Soviet news agency Tass and the text of my reply.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

New York, N.Y., 14 NFT,
January 14, 1960.

Senator JAMES FULBRIGHT,
Senate Office Building,
Washington, D.C.:

We are asking group of prominent Americans for statements of about 400 words commenting on Khrushchev's address to Supreme Soviet. We would greatly appreciate statement from you. As you undoubtedly know our agency serves entire Soviet press and radio. Please wire reply collect to Tass Agency Associates, Press Building, Rockefeller Plaza, New York, N.Y.

TASS AGENCY.

JANUARY 18, 1960.

TASS AGENCY ASSOCIATES,
Press Building,
Rockefeller Plaza,
New York, N.Y.

In response to your telegram of January 14 requesting my comment on Chairman Khruschchev's address to Supreme Soviet, I submit the following with the understanding that the statement must be used in its entirely and the use of excerpts from it is not authorized:

"It is difficult to understand precisely what thoughts Premier Khrushchev desired to communicate in his speech on January 14. On the one hand he apparently wished to convey the idea that he intended to reduce the military might of his country by a reduction in the number of men under arms, and that this should be construed by us as a slowing down of the pace of the arms race. On the other hand, he clearly states that this reduction does not lessen the power of the armed forces and that his army possesses fighting means such as have never been possessed by any army before.

"The Chairman of the Council of Ministers cannot have it both ways. He cannot by the same action reduce his armed might and increase it. The only conclusion that can reasonably be drawn from this statement is that he is reorganizing his armed forces in such a way as to enhance their firepower and fighting means. This cannot be interpreted as a serious contribution to the reduction of armaments or to the lessening of the tensions in the world which derive from the arms race.

"It should be remembered that even when the reduction he announced takes place, he will still have as many men under arms as the United States. Presently, the Soviet Union has 3,623,000 men under arms, compared to 2,504,000 in the United States.

"Today, the effectiveness of armaments is measured not in numbers of men under arms, but in the possession of new and modern weapons and the means of delivering them. It is particularly disappointing, therefore, that Mr. Khrushchev displayed no willingness in his speech to consider real and verifiable measures of disarmament. Instead of discussing this problem realistically, in terms of the application of control and inspection without which no safeguarded disarmament measures can be undertaken, he brushed it off with generalities. Talk of Soviet rocket prowess and fantastic new weapons leaves the impression that the Soviet Union is more interested in threatening the rest of the world than in joining other nations to reduce existing world tensions.

"It is unfortunate that the Premier again repeats the insulting falsehood that we maintain armed forces equal to his own only because of the desire for profits by the manufacturers of armaments. This is the most flagrant kind of misrepresentation and increases the difficulty we have in taking his offer to negotiate arms reduction seriously. All the world should know that the United States would prefer to devote the wealth now expended on the arms race to the improvement of the economic conditions in the underdeveloped countries and the building of schools at home, and would do so if Premier Khrushchev would accept an arms limitation agreement upon which reasonable men could rely."

J. W. FULBRIGHT.

Hugh L. White

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. SMITH of Mississippi. Mr. Speaker, Hugh L. White has retired from what he says will be his last public office in Mississippi. Governor White, who ranks as one of the greatest Mississippians of our time, has resigned as vice chairman of the Mississippi Agricultural and Industrial Board. The agricultural and industrial board is one of the products of Governor White's chief mission of public service to our State: to encourage the economic development of Mississippi.

Governor White's mission to promote economic growth was not confined to his two terms as governor. He has given unstintingly of his time and energy through the years in his effort to make Mississippi a better place in which to live.

Under unanimous consent I include the Associated Press news story about Governor White's retirement, along with an editorial from the Jackson, Miss., State Times by Oliver Emmerich:

[From the Associated Press, Jan. 15, 1960]

"BIG DADDY" WHITE QUITS PUBLIC LIFE; TO CONTINUE WORK

(By Douglas Starr)

JACKSON, MISS.—Former Gov. Hugh White, self-styled "Big Daddy" of Mississippi's expanding economy, retired from public life with a promise never to quit working for the State.

Stirring applause dimmed his eyes last night when he was acclaimed Mississippi's outstanding citizen.

White, 76, recently retired as vice chairman of the agricultural and industrial board.

State Supreme Court Justice James G. Holmes told an audience of 160 present and former members of the agricultural and industrial board that White is "the outstanding citizen of Mississippi" and the "greatest contributor to an economic welfare and industrial development the State has even been able to claim as its own."

He recounted White's part in founding the State's balance agriculture with industry program during his first term as governor in 1936 and his help in establishing the agricultural and industrial board while White was a Marion County representative in 1944.

Under the program, Mississippi has been able to boost its per capita income from the Nation's lowest because of a one-crop cotton economy to among the Nation's average.

Speaking in his deliberate, quiet manner, White answered the tribute of the men and

women who represented banking, industry, government, and the people:

"It is a happy occasion. * * * tinged with sadness because I recognize the time has come when I must lay down the burdens I have carried so long and let the younger generation pick them up and carry them forward.

"But the time will never come as long as I have breath in my body that you'll ever turn me out where I can't have contact with the people of this State.

"I plan to devote a great deal of the remaining time I have in carrying forward the economic progress of our State."

White expressed the hope that in the next 4 years—under Governor-elect Ross Barnett—"the same thoughts carried since 1936 will prevail in this particular program in Mississippi.

"The 2 million people of Mississippi are dependent upon the economy that is developed through this program. All citizens must join hands and keep this progress going."

Gov. J. P. Coleman, master of ceremonies, said of White that "mighty few men are allowed to live long enough to realize the esteem held for them in their own lifetime."

[From the Jackson (Miss.) State Times]

HIS FRIENDS GREETED HIM

(By Oliver Emmerich)

Members of the Mississippi Agricultural and Industrial Board staged a testimonial meeting for Hugh White last night. It was the occasion of Mr. White's retirement from the field of industrial development. He has held this position of leadership since the beginning of the balance-agriculture-with-industry program which was started during his first administration.

Friends throughout the State of the twice Mississippi Governor will be interested in reading the testimonial which was presented to him in scroll form. It follows: "Expression of gratitude from the people of Mississippi."

In the early years of his career Hugh White saw his native State burdened under the weight of a one-crop cotton economy; his people plagued by malaria, typhoid, and tuberculosis; his generation inhibited by the concepts of backwardness, and the future of Mississippi curtailed by apathy, isolation, provincialism, political prejudice, and lack of vision.

Choosing to help lift his people above these handicaps rather than succumbing to them, he became inquisitive concerning the destiny of his State.

He asked significant questions: "Why these profitless scrub cattle in Mississippi? Why these inadequate schools? Why this preponderance of illiteracy? Why these roads with sandbeds in summer and deep, muddy ruts in winter? Why this lack of farm diversification? Why not industries in Mississippi employing Mississippians, thousands of them?"

Hugh White's inquisitiveness generated deliberation, determination, vision, courage, and the will for progress.

Out of this deliberation, this determination, this will to accept impending challenge, a new Mississippi philosophy was created. With it Hugh White joined with his fellow citizens to push back the horizons of Mississippi.

Hugh White, twice Mississippi's Governor, pioneered in building a modern road system, in creating an equitable tax structure, in advocating a sound farm program, in lifting the dignity and prestige of his State and as the trail blazer in the broad field of balancing Mississippi's agriculture with industry.

This testimonial is an expression of gratitude from the people of Mississippi to Hugh White—a testimonial of appreciation of the transformation in Mississippi to which he has contributed so abundantly.

Because of his devotion and dedication we can today see Mississippi "not in the setting sun of a black night of despair" but in the "red glow of a rising sun," the sunrise of new hope and new opportunity, the red glow of the approaching fulfillment of Mississippi's destiny.

People who know Governor White agree with the testimonial. They also hold to the idea that while Hugh White has officially retired that he will continue to manifest interest in the industrial development of his State. He may lighten up a bit but the influence of his personality and the dedication of his spirit will keep him with the working forces of our State as long as he may live.

America's Farm Problems and Policies—The American Farm Bureau Federation Adapts to Change

---

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 19, 1960

Mr. KEATING. Mr. President, I note with great satisfaction that the January 1960 copy of the Nation's Agriculture, published by the American Farm Bureau Federation, carries excerpts from a speech by Farm Bureau President Charles B. Shuman in which he squarely and forthrightly states his position on America's farm problems and policies.

Briefly stated, Mr. Shuman's thesis is that the farm sector of our economy, just like every other sector, must adapt to changes in the national and international economic environment in which we live. The farm economy must as quickly as possible be integrated and coordinated with our national economy. Mr. Shuman sums up his position very clearly when he says that "Government programs which delay or discourage adjustment to change invariably hurt the very ones whom these programs are intended to help."

Mr. President, I agree fully with Mr. Shuman's position on the need to bring an end to the unrealistic role which the Federal Government plays in supporting the national farm economy. I have said on many occasions that I favor every effort to "get the Government off the farmer's back" and to make our farm economy free and competitive. I am always delighted to see that farmers themselves, as reflected in President Shuman's remarks at the annual convention of the Farm Bureau Federation, agree on this matter. I commend Mr. Shuman for the realistic and forward-looking position which he has taken on our Nation's farm problems.

The article in the Nation's Agriculture on Mr. Shuman's address concludes with a list of five planks for the future. This platform and the general thesis which Mr. Shuman propounds are well worth the attention of the Congress and people of the United States.

Mr. President, I ask that the above referred to article containing excerpts from Mr. Shuman's annual address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ADAPTING TO CHANGE

(By Charles B. Shuman)

As the problems and needs of farm families change, as they must in times like these when the business of farming is experiencing such dynamic change, the nature of the Farm Bureau organization must also change.

The continued growth in Farm Bureau membership during a time when the number of farmers is steadily declining is an indication that the organization is successfully adapting to the changing needs of farm families.

The financial future for farmers would be much brighter if we could be sure that agricultural prosperity would be more closely related to our national economic health. This conclusion is based on the assumption that our national economy will continue to be strong.

Government programs which delay or discourage adjustment to change invariably hurt the very ones whom these programs are intended to help.

The Government price-fixing program which generated a $9 billion crop surplus has caused farmers to delay needed adjustments—it has slowed or prevented important changes in agriculture.

The postwar price-fixing and control programs must bear the principal responsibility for the decline in farm income during a period of national prosperity.

There is little point in trying to eliminate surpluses or speed up their disposal until action has been taken to stop the input into the surplus stockpile. The Agricultural Act of 1958 moved in the direction of eliminating government price fixing for corn, cotton and rice. The greatest unsolved problem is wheat. The next session of Congress should act to eliminate the price-fixing features of the wheat price support program.

The greatest single threat to a sound national economy is inflation. The principal cause of current inflation is Federal Government spending in excess of receipts.

We are beginning to win the fight against inflation; however, we cannot afford to relax our vigilance.

The economic strength and success of the United States is largely due to our free competitive capitalistic system. If we wish to continue to grow in strength, we must be certain that we do not unduly restrict or discourage new capital accumulation.

If farmers are interested in a continuing opportunity to earn a good income in a healthy industry, they will not seek subsidies or monopoly powers from the Government. Rather, they will work for elimination of existing subsidies and special legislative privileges to all groups.

Government regulation of subsidized business—farm and nonfarm—reduces income opportunities.

If we wish to have a healthy, competitive economy, we must resist the temptation of government-granted powers for ourselves and attack with every resource at our command the subsidies and monopoly powers of others. The response of Congress to the public demand for labor legislation should be encouraging to farmers and all others who are interested in the future well-being of this nation.

A healthy two-way foreign trade is another important bulwark for a dynamic and expanding domestic economy.

We should immediately review and drastically reduce our entire foreign assistance

program. In doing so, we will gain respect throughout the world. We have a challenging opportunity to take advantage of the growing prosperity in Western Europe and develop markets for an expanded volume of U.S. farm products.

There are five major planks in a platform for a prosperous agriculture geared into a sound national economy:

1. Discontinue Government price fixing and control programs in agriculture so that farmers can intelligently adjust their operations to changing conditions. Cushion the shock of these adjustments by restricting CCC disposal operations, and by temporarily expanding the soil bank in certain areas.

2. Encourage increased capital accumulation as necessary for an expanding economy and a high level of employment by checking inflation and reducing Federal taxes. Decreased Federal Government expenditures is the key to controlling inflation and reducing taxes.

3. Vigorously attack and eliminate Government subsidies to business, labor, and agriculture and destroy, or effectively regulate, monopoly powers which have been developed or granted to various groups.

4. Expand two-way foreign trade on a nonsubsidized basis. Reduce foreign aid expenditures which tend to perpetuate socialist economies and drain our financial resources.

5. Improve the bargaining ability of farmers in ways that are consistent with a free society and a competitive, capitalistic form of government.

A Salute to Mr. John L. Lewis

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Anthracite Institute Bulletin of December 23, 1959, which comments upon the retirement of Mr. John L. Lewis as president of the United Mine Workers of America and his successor, Mr. Thomas Kennedy, of Hazleton, Pa. This bulletin is published in Wilkes-Barre, Pa.:

A SALUTE TO MR. JOHN L. LEWIS

The announcement last week regarding Mr. Lewis' resignation came as a surprise to most people in the industry. When men retire at 65 or 70, everyone accepts it as a custom of the times. The question can, therefore, be asked why there should be any surprise at Mr. Lewis' resignation, when he will be 80 years old next February.

The answer lies in the man. It is because Mr. Lewis has been so much a part of the mine workers and the coal industry, and so dominant as one of the world's greatest labor leaders, if not the greatest in history. He still looks the picture of health, and his mind is agile and clear. People just took it for granted Mr. Lewis would always be president of the United Mine Workers.

On the other hand, it is typical of Mr. Lewis that while he was in good health he had the vision and took the opportunity to nominate the man he felt was best qualified to succeed him.

Over a period of many years we have heard Mr. John L. Lewis praised and damned by operators in both bituminous and anthracite, but we have never heard a single operator question his integrity.

The newspapers, radio, and television have so featured Mr. Lewis' long career and achievements in the labor field that we shall not attempt to review them further. We will merely amplify what has already been said by adding that he has been a vital and constructive force in the anthracite industry.

We are glad to read the statement of his successor that it is anticipated that Mr. Lewis will continue in some important capacity in the United Mine Workers of America organization.

We extend our sincere congratulations to Mr. Thomas Kennedy, who is one of anthracite's own. We have known and long respected Mr. Kennedy, and the industry will work closely with him in the future, as in the past, when he assumes the important position of president of the United Mine Workers of America.

The Military Decisionmaking Process

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. SALTONSTALL. Mr. President, last week I asked that certain articles from the New York Times be printed in the CONGRESSIONAL RECORD concerning the military decisionmaking process and the new role which the Secretary of Defense, Thomas S. Gates, Jr., has assumed with respect to the Joint Chiefs of Staff. Since I asked that these articles be inserted, a very splendid article on this subject has come to my attention from the Boston Herald and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Herald, Jan. 10, 1960]

DECISION ON DEFENSE

The great military decisions on which the fate of this country depend are made by the Joint Chiefs of Staff, subject to the approval of the Secretary of Defense and the President.

It is an imperfect, perhaps dangerously imperfect, system of decision making.

Inevitably the chiefs of three services plus another representative of one of the services as chairman and a partial participation by the commandant of the Marine Corps will not always agree. In fact on matters like weapons development, roles and missions and national strategy as these may advance one service over the others are certain to bring disagreement.

What does a Secretary of Defense do in case of a disagreement?

Well, he can tell his Joint Chiefs to go back to work and come up with an agreement somewhow.

But such an agreement will be a dodge, an evasion, a least-common-denominator compromise, and usually no decision at all.

Or he can take the conflicting opinions—they are called split papers in the Pentagon—and try to wool out in his lay mind and the background of whatever information he has picked up in his short tenure which way to go.

Practically, he had no place to turn for expert advice in this contingency but to the chairman of the Joint Chiefs, who will usually back the view of his own service—Navy, Army or Air Force.

Gen. Maxwell D. Taylor, the retired Army Chief of Staff, who has just published a sharp criticism of our decision-making machinery, contends that this confers on the chairman the powers of a single Shief of Staff—and the mere mention of a single chief sends shivers down congressional spines.

As it works out, it scares General Taylor, too, when the chairman is Navy or Air Force.

But the new Secretary of Defense, Thomas S. Gates, Jr., has rejected both these methods of dealing with split papers, and has instead directed the Joint Chiefs to inform him whenever a major disagreement impends so that he can sit in on the discussions in their developing stages

This is a policy of great promise. It means that disagreements will neither be swept under the rug nor left to the chairman to settle in private discussions with the Secretary. It means that the Secretary, who represents the civilian control over the military, will hear all sides of the argument, and be equipped to make his decision with the best possible background a lay person can hope to have.

Secretary Gates is letting himself in for a heavy schedule of work by this policy. The Joint Chiefs will have to use some discretion about the importance and degree of differences necessary to summon his presence.

The great need now is to keep good secretaries on the job. What a tragic waste if Mr. Gates has to go just as he gains full civilian professionalism in military science.

The Issue Is Miscegenation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Milton Mayer as it appeared in the Progressive, September 1959 issue:

THE ISSUE IS MISCEGENATION

(By Milton Mayer)

"Judge Douglas is especially horrified at the thought of the mixing of blood by the white and black races. Agreed for once—a thousand times agreed." (Abraham Lincoln, 1858.)

The integrationists say that the issue is equal educational opportunity. The segregationists say that the issue is sexual intercourse of Negroes with whites and the consequent amalgamation of the races. When the Supreme Court ordered public school desegregation in 1954 the Jackson, Miss., Daily News said: "White and Negro children in the same schools will lead to miscegenation." As long as the integrationists go on saying that the issue is nothing but civil rights, they will be talking to themselves.

Miscegenation is the way the segregationists have always defined the issue. This is the way it was defined by Stephen A. Douglas in 1858. Lincoln disagreed; like the present-day integrationists, he insisted that the issue was simply legal equality; and he protested against "the counterfeit logic which concludes that, because I do not want

a black woman for a slave I must necessarily want her for a wife." After the Civil War the Knights of the White Camellia said in their constitution that "social equality would soon be the fruitful source of intermarriage between individuals of the two races; and the result of this miscegenation would be gradual amalgamation and the production of a degenerate offspring."

Social equality leads to miscegenation. What constitutes "social equality"? Anything and everything; in the old days, emancipation from slavery, today desegregated schools and buses, restaurants and housing. Gunnar Myrdal, in his monumental "American Dilemma," found that "the very lack of precision allows the notion of 'no social equality' to rationalize the whole system of color caste in America." In the segregationist's logic, every deprivation of rights (at least where those rights bring Negroes and whites together) is justified as resistance to miscegenation.

The consecrated taboo in America is, of course, intermarriage, and not miscegenation at all (unless the miscegenation involves a white woman against her will). When the segregationist rails against "race pollution," he does not necessarily care how much the race is polluted or how much his ancestors have done to pollute it, as long as their legal wives are white. When he cries "mongrelization" he doesn't ordinarily mean that he objects to the production of mongrels by himself or the males who listen to him, just as long as the producers, good, religious people that they are, are married only in the sight of God.

"WOULD YOU WANT YOUR DAUGHTER * * *?"

"I was addressing a girls' school recently," says Negro Attorney William Kelley, executive secretary of the Milwaukee Urban League. "My subject was the Supreme Court's outlawry of the 'separate but equal treatment' doctrine in public education. In the middle of the question period a girl got up and said:

"'Do you believe in miscegenation?'

"I said the only thing I could think of:

"'Do you mean miscegenation, or do you mean the solemnization of miscegenation and the assumption of the legal, moral, and religious responsibilities that such solemnization entails? If you simply mean miscegenation, you're asking about an accomplished fact, and there's nothing to be said about it. There are several million Americans called Negro whose pigmentation ranges from sepia to pomegranate to ochre, from milk-chocolate brown to daffodil yellow, and they didn't get here by any "separate but equal" treatment.'"

The segregationist's trump question is, of course, "Would you want your daughter to marry a nigger?" Many liberals, having tried (and failed) to avoid answering that question, have tried to answer it. I am one of them. My answer, "Not unless she was in love with him," is no answer. Neither is another I've heard given southerners: "Your daughters have always married Negroes; it's your wives' daughters you're worried about." The only actual answer I've ever heard was the one given by a Jew: "No, I wouldn't. I wouldn't want her to marry any of you gentiles."

There is almost no Negro-white intermarriage in America. The highest rate ever recorded was 1.2 per 100 marriages in Los Angeles 1924–32, and this figure represented the intermarriage of whites with all other races in an area with a comparatively high proportion of Latin Americans, Filipinos, Orientals, and Indians. In 1948 the California statute forbidding interracial marriages was invalidated, and in 1951 there were .56 such marriages per 100 in the State—about one-half of 1 percent. Five years afterward John H. Burma reported in the American Journal of Sociology that "no significant trends as to increases or decreases by months or years were observable."

But miscegenation is something else. Its popularity, especially in the segregated South, is attested by the fact, no longer disputed, that at least 70 percent of all American Negroes have one or more white ancestors. Segregation in the South has always been what proud Negroes bitterly, and proud whites jovially, call "daytime segregation."

Twenty-eight States—including all of the South and some of the West—have laws vividly forbidding intermarriage, but only four penalize interfornication and these four make no enforcement effort. Even before the War (Civil, of course) such statutes were dead letters in the South because a Negro could not testify against a white. Intermarriage, on the other hand, is just as sternly resisted by law today as it was in slavery; more so. Until 1910 it was permitted in Louisiana, where, for a hundred years, French Creoles had married wealthy Negro girls. (Before Emancipation one-fifth of the property of New Orleans was owned by Negroes or part-Negroes, many of whom had Negro slaves.)

Miscegenation has flourished in America as in no other country. Negro and white indentured servants were thrown together in one common depreciated class before the reduction of the Negro to slavery in the 18th century. Intermarriage was legal, and not infrequent. After slavery was established, the slave girl was not only at the mercy of her master; it was to her advantage to be his concubine and to the master's to breed the highly valued mulatto. (Breeding slaves was cheaper than buying them.) And before and since Emancipation (and since the beginning of the world, and until the end) there have been two compulsions to miscegenation. One, particularly strong in America, is the challenge of forbidden fruit; the other is the piquancy of variety or, as the French say in another (but related) connection, "Vive la difference."

NOT AS OTHER MEN ARE

The white man's traditional repugnance toward miscegenation—Lincoln said he felt disgust at the idea—is not Southern. It is American, remarkably similar, Myrdal found, throughout the country. And in a truly miscegenated populace like ours—composed of all the racial stocks of Europe—the Negro is the one distinguishable outsider, the most obvious and ubiquitous other. True, the Northerner does not appear to be thinking about miscegenation; perhaps because he doesn't dare to. But the Southerner isn't thinking about anything else. "They don't build a Federal Government big enough," says school segregationist Ace Carter of Alabama, "to integrate my daughter with niggers."

Is it the white man's fault; or is it his history's? He is preconditioned. He cannot help discriminating the Negro; how can he help discriminating against him? And his country's peculiarly puritanical tradition, sensitizing him to sex, focuses his discrimination on miscegenation. The Northerner's prejudice against actual propinquity seems to be much stronger than the howling Southerner's; many old Southern cities have no residential segregation, and Professor E. Franklin Frazier, an authority on race relations in the post bellum South, found very few Northern soldiers among the white ancestors of part-Negroes. "Northern soldiers," he says, "had an aversion to close intimate contacts with the blacks, an attitude that was lacking among Southern whites." As well as it might have been, among a people who as children had played and eaten and slept with Negro children and, as infants, may even have been suckled by a Negro "mammy."

On the surface the Negro is as firmly opposed to miscegenation as the white—but not for the same reason. White and Negro scholars agree that the Negro's race pride is a defense reaction or response to white prejudice, a secondary attitude. Common as this pride is among Negro chauvinists, it is, says Myrdal, "a white, not a Negro, argument." Negroes know that their race is not pure. They know it by looking at themselves. And for two hundred years they have had a social stratification among themselves based upon their knowledge of their racial impurity; a "good complexion" is a light one, "good hair" straight, a "good nose" thin-nostriled.

Does this mean that the Negro favors miscegenation? In a negative sense he does; he would be inconsistent if he didn't. But what he wants is the repeal of racist marriage laws—not merely because they insult him and deny his civil liberty, but because of their effect in encouraging illegal miscegenation, with its abuse and exploitation of the Negro woman and the legal impunity of the gallivanting white man.

A harder question is whether the Negro actually shares the white man's natural disgust at the idea of miscegenation. The answer—impossible to come by statistically—would seem to be that he doesn't. Repugnance requires a sense of superiority. Equals may hate those who subjugate them, but they do not find them categorically obnoxious; the man who is excluded from the country club because of his race or religion has no primary feeling against intimate association with the members. Similarly, the Negro who considers himself the white man's equal would seem to have no primary attitude toward miscegenation, any more than, say, Pennsylvania boys react to Ohio or Michigan girls. People tend to fall in love with their own kind—nationally, religiously, or racially. Negroes assume they will marry Negroes; and nearly every last one of them does.

THE WHITE MAN'S DREAM WORLD

There are two kinds of reality—the reality of things as they are (or may be) and the reality of things as people see them. The two realities may coincide, but the white man's hostility toward miscegenation and his dread of amalgamation arise strictly from three realities of the second kind.

First, he sees that there are such things as races and there is such a thing as a pure race.

As far as science now knows, there aren't and there isn't. In the middle of the eighteenth century the "father of anthropology," Blumenbach, concluded that "no variety of mankind exists, whether of color, countenance, or stature, etc., so singular as not to be connected with others of the same kind by such an imperceptible transition that it is very clear they are all related or only differ from one another in degrees." Two centuries later the eminent Krogman, in "The Concept of Race," summarizes the present state of our knowledge: "Below the level of the species definition is uncertain, persistence is doubtful, and transmission is variable. In other words, the breakdown of homo sapiens into subgroups is zoologically very risky business * * * We are all far more alike than different * * * [There are] no fundamental differences * * * biogenic potentialities are shared equally."

There are observable and measurable physical differences that enable us, simply for purposes of superficial classification, to distinguish human groups. How did these differences come about? The only possible assumption, says Krogman, is that "the basic sapiens population from which modern races developed was relatively homogenous, and that via mutation, isolation, selection, and recombination diverse gene-populations

emerged." Physical traits, bred into geographically isolated groups, show signs of adaptation to the conditions of environment. Says Huxley: "The dark skin, which characterizes most of the people living near the tropics, is almost certainly the result of elimination by natural selection of the fairer types of pigmentation less fitted to afford protection against the actinic rays of the sun. The greater number of sweat glands in the Negro and the reduction of their number among the yellow-skinned peoples, are probably adaptations to hot and to dry conditions respectively. * * * A white skin is a disadvantage in the Tropics and a wide nostril in the Arctic."

The pure race—if it could be found anywhere on earth—would have been utterly isolated for ages, culturally primitive, technologically backward, and undeveloped in the arts of civilization which the crossing of cultures has produced. We shall never know how impure the first American settlers, black or white, were when they got here; we know that African soldiers invaded Britain with Caesar 2,000 years ago, and, boys being boys, one thing certainly led to another. We know that Europeans, especially Portuguese, were frequent settlers in the West African ancestral areas of most American slaves. And we know that in American free intermarriage between white and Negro indentured servants was not prohibited until 1691, in Virginia, and that prior to the reduction of the Negro to slavery the poor white's hatred of him was unknown. How much Negro-white miscegenation there was between 1619 (when the first Negroes reached Virginia) and the Civil War is suggested by Ray Stannard Baker's calculation in 1908 that 3 million of the country's 10 million Negroes were mulatoes, or half-whites. Wirth and Goldhammer, in "Characteristics of the American Negro," tell us that "contemporary observers, on the whole, tend to leave an impression that no likely looking Negro, or especially mulatto, girl was liable to be left unmolested by the white males (in the ante-bellum South); that few of the young white men grow up virtuously, and that their loss of virtue was scarcely to be attributed to cohabitation with white women.

The rate of miscegenation continued to rise in the South even after the Civil War. (The original Klan required its members to swear only that they would not marry a Negro.) After her emancipation the freed woman could move about, and into the white man's cities; but she was still defenseless against him. "Father Abraham" had made her his equal, but Father Abraham wasn't down in Dixie in the seventies and eighties. Besides, concubinage with a white man was, if anything, more than ever economically better than marriage to a Negro. And the mulatto's high value—as the white man's sex object and the white woman's servant girl—was still an incentive to breeding half-bloods.

The reduction in miscegenation probably set in the '90's or shortly afterward; no one knows. Urbanization would tend to increase it (especially in the North) and so would the sexual laxity of the Twentieth Century. But that same sexual laxity made white women more readily available to white men, and would therefore tend to reduce mixing. The decisive factor in reduction was doubtless the rising status of the Negro and, with it, rising pride and moral dignity.

But there is no unmiscegenation. The white and Negro blood that was mixed at the pleasure of the bygone Southern gentleman is mixed forever. If there is no pure race now—and there isn't— there never will be.

Second, the white man sees the Negro as a race, to which an individual either belongs or doesn't.

As long as the white man defines Negro simply as Negro (as he does in the marriage laws of West Virginia and Colorado), he is safe from contradiction, if not from redundancy. As long as he talks (as he does in the Oklahoma law) about "any person of African descent," he is safe; providing, of course, that he doesn't mind excluding some whites of African descent and some Negroes of non-African descent. As long as he says (as he does in Nevada) "any person of the Ethiopian or black race" or (in South Dakota) "members of the African race," he is all right providing he agrees that a nation or a continent is a race. But the minute he tries to make more sense than any of this, he gets into trouble.

If he prohibits the intermarriage of "persons having one-fourth Negro blood," as he does in Kentucky and Oregon, he seems to have decided that a person with 24.99 percent Negro blood is a white; a very difficult decision, especially when Florida, Indiana, Mississippi, Missouri, Nebraska, South Carolina, and North Dakota have decided that persons having 12.50 percent (or one-eighth) Negro blood may not marry whites; the 24.99 percent man appears to be white in Kentucky and non-white in Mississippi. The Mississippian with 12.49 percent Negro blood is eligible to marry the Natchez Magnolia Queen—but he'd better not let the sun set on him in this town if he has 12.50 percent.

In Alabama we draw the line just a little bit finer than we do in Caroliner. We don't fool around with percentages. We cal'ate in drops. Persons having "one drop of Negro blood" are interdicted; should such person be waylaid en route to his wedding with the local Cotton Queen and, in the ensuing confusion, lose one drop of blood, and that one turn out to be the Negro drop, he could proceed with his now honorable intentions. But not in Georgia or Virginia, where "any ascertainable trace of Negro blood" puts a man beyond the palefaces. Now everybody knows that a trace is less than a drop; thus Georgia and Virginia must look upon Alabama (not to say Mississippi and Carolina) as a hotbed of "mixing."

There is, of course, no such thing as "Negro blood," in any quantity. Human blood can be differentiated only in one way—by the four common groups found indiscriminately in all human stocks. During World War II the American Red Cross (then a semi-official agency of the Government) first refused Negro blood donors. A howl went up, and the Red Cross thereafter accepted "Negro blood" but segregated it for transfusion to Negro soldiers only.

Third, the white man sees not only that there are Negro and white races, but that the white is superior.

Because the mulatto's white father prized him for his "white blood"—even educating and occasionally freeing him—the full Negro of slave times accepted the mulatto as a superior kind of creature, a sort of tertium quid, below the white, but above himself. This acceptance by the Negro of the white man's theory of racial superiority has descended in the Negro social mythos to the present day. But there are signs of a change, although the successful or attractive Negro still tends to "marry light" and is more readily hired by Negro employers. The mulatto myth always involved envy and resentment among full blacks anyway, and it is now beginning to lose its status with them. They know that, belatedly given opportunity, they are as capable as mixed-bloods.

With the abolition of slavery, the white man's new race hatred of his newly legalized equals compelled him to relinquish one of his favorite arguments for white superiority, namely, the obvious superiority of the mulatto over the "pure" Negro. (The argument, of course, ignored the fact that the mulatto had always enjoyed superior advantages.) Today the prejudiced white sees Negroes, dark or light, as indiscriminately inferior. And they are inferior, on the average, in their occupations, their housing, their education, their achievement in almost every field.

"The American," said Bernard Shaw, "compels the Negro to black his boots and then says, 'He's fit for nothing but blacking my boots'." To say that all, or most, or many, or some Negroes are found among lowly placed, or unskilled, or uncouth people is simply to say that whatever it is that makes people that way also makes all, or most, or many, or some Negroes that way. But to say that the Negro race is an inferior race is to say that every Negro is born that way and will die that way, no matter what his opportunity. It is to say that he is in an inferior situation.

Myrdal, though he found the northerner more polite, more "tolerant," could find no substantial difference among whites of different regions or classes on this one fundamental belief—that the Negro is somehow racially inferior. The white man's aversion to miscegenation requires that he believe the Negro inherently subhuman. Even a Lincoln, seeing nothing but the then condition of Negroes, recorded his conviction that "in some respects he certainly is not my equal." In what respects he doesn't say—few whites do. And if a Lincoln, why not you and I? If the "nigger" were your equal, you would want your daughter to marry him.

The Negro's racial inferiority is something the white man knows in his bones, or in his viscera; in other words, a prejudice, which, like all prejudices, may with equal likelihood be true or untrue. When, under some duress, the locus of the inferiority is specified, it is invariably in one or more of three areas—biological, intellectual or cultural.

1. The Negro's racial inferiority is proved anatomically and physiologically—that is, he is constructed differently and, as an organism, functions differently from the white; and the differences are hierarchical, lower-higher, like those of the ape and man.

Scientifically this supposition is wholly discredited. Of the four characteristic features of the "typical" Negro—dark skin, broad nose, woolly hair, thick lips—the first two are a little closer to the ape man than the white man's while the white's hair and lips are much closer to the ape than the Negro's. As for "primitive" and "advanced" stages of evolution, all morphological evidence indicates that man evolved only once. We have already seen that there is no such thing as "Negro" blood. It is equally impossible to determine by examination of the human brain whether its owner was black, white, or pimiento. True, the ideal Negro type tends to dolichocephaly—long-headedness, to you and me—and to a degree matched by only one other human type: the ideal Nordic type. By all other standard indices, such as fertility of mixed mating (even the fox and the wolf cannot mate fruitfully) and comparative harmony-disharmony of parts, there is no evidence of hierarchy.

In the late 19th and early 20th centuries the facts of biology and psychology proved that Negroes were different from whites, not just in visible and measurable bodily features but in higher susceptibility to disease, in lower mental ability, in greater personality disorder. The rise of social research in the 1920's began to complicate the picture. And if there is anything that people who have simple scientific facts to sustain their prejudices do not like, it is complications. The findings of social research were facts, too, but they had the disadvantage (in the layman's view) of being come by without microscope or stethoscope. They were facts

about environment—housing, diet, climate, clothing, medical care, and educational and occupational opportunity.

But the new facts coincided with new medical knowledge. Pellagra, syphilis, and nephritis were now known to be environmental, not constitutional. The Negro's notorious susceptibility to tuberculosis declined as his living conditions improved. A study which showed that Illinois Negroes had a dementia praecox rate three times as high as whites had to be reinterpreted—or, rather, interpreted for the first time—in light of the facts that Illinois Negroes were concentrated in cities (where the overall rate is twice as high as in rural areas), that Illinois Negroes were concentrated in those age and income groups with the highest rate of d.p., and that most Illinois Negroes were recent migrants, whose mental disease incidence, regardless of color, is much higher than that of natives. In every area where social research was correlated with the biological facts, the inference of racial superiority has been undermined or exploded.

2. The Negro's racial inferiority is proved intellectually—that is, he is unable to think as well or learn as much as a white man.

Less than 20 years ago a Fortune survey found that a majority of whites, ranging from 60 percent in the North to 76.9 percent in the South thought that "Negroes now generally have lower intelligence than white people." The percentage of those who regarded the difference as due at least in part to heredity ranged from 55.25 to 79.2. The Negro's actual inferiority was obvious and, besides, the new intelligence tests showed that the average Negro IQ was 20 to 25 percent lower than the white.

But was it—again—because he was a Negro?

Intelligence tests tried to measure the innate capacity of the subject to learn. But nobody knew then (or knows now) if mental capacity is an innately determined quantum, or if the test we have yet been able to devise operate prejudicially in connection with the subject's environment. Complications again—and the IQ figures were so nice and simple. As a matter of fact, the rug had already been pulled out from under the superior intelligence superstitution (a superstition confirmed by scientific facts!) in 1921, with Yerkes' classic monograph, "Psychological Examining in the U.S. Army," published quietly in the Memoirs of the National Academy of Science. In the Army Alpha test of 1917, a language-based test given only to literate recruits, Negroes as a whole had scored much lower than whites, but Northern Negroes had scored much higher than Southern whites, and the same thing was true of the non-language Beta test. The median scores for Negroes from New York, Illinois, and Ohio were 45.02, 47.35, and 49.50 respectively; of whites from Mississippi, Kentucky, and Arkansas, 41.25, 41.50, and 41.55.

Either northern Negroes were innately more intelligent than Southern whites, or the education of Southerners was so poor that Northerners, white or Negro, appeared to be innately more intelligent than white or Negro southerners. Which was it? The answer was obvious: Environmental conditions made Southern whites look as if they had been born less intelligent than Northern Negroes.

Before the IQ fad subsided at the end of the '30's, it was found that one group of underprivileged Negro children in Tennessee had a score of 58; another group of privileged Negro children in California had a score of 105. The Los Angeles Public Schools tested 500 Negro children with the whites in 15 elementary schools and found the median IQ slightly higher for the Negro group. Successive types of testing have all demonstrated that group biological differences, however real, do not account for group intellectual differences.

3. The Negro's racial inferiority is proved culturally—that is, by his inability to develop an "advanced" society or keep pace with the one he is in.

Of the three race dogmas this is the hardest to investigate. It requires the impossible—an objective definition of culture. People who cut off their enemies' heads with machetes and people who cut off their friends' heads with two-toned convertibles both regard their cultures as advanced. Still the fact (at least a fact) remains. The American Negro, as a whole, is backward in terms of American cultural standards in science, art, morals, and manners. This anyone can see, and what anyone can see must be true. But is it because he is a Negro? Even before the development of social research this particular dogma was shaky. True, the racist saw the shiftless, worthless Negro all around him; but he also saw the Frederick Douglass, the George Washington Carver, the Booker T. Washington, indubitable Negroes of indubitable genius. Carver could not be a Negro and still save the "goober" economy by his plant research—but he was and he did.

There was something else, something that the southern racist did not see. That was his own culture. The behavior he ridiculed or condemned in the Negro was his own. The Negro was a southerner. The lazy, good-natured, romantic, immoral, profligate, shabby, violent Negro reflected traits that are so common in the South that the foreign visitor (not to say the northerner) calls them all southern traits. What produced them in many or most southern whites produced them still more prevalently in the most depressed southerner, the Negro. Climate, soil, boll weevil, poverty, defeat—in a word, environment.

Still the fact remains: Negro culture is inconsequential. The Negro's sole contribution to American culture is American music, which is tom-tom primitive. But we don't ask what the Swede's contribution is, or the Pole's, or the Irishman's, or even what American culture is, or how much there is of it. If there were only one pure Negro who was a genius or a saint (instead of hundreds or thousands), the white man could not say truthfully that the Negro is culturally incapable, or that only white men develop a culture. In deference to the exceptions, the white modifies his generalization, then, and says that most or many Negroes are backward; and the next thing he knows (or doesn't), he has forgotten the qualification and talks about the Negro.

However "culture" is defined, cultures rise and fall; we have only to think of ancient and modern Greece. The Negro slave's ancestral culture may well have been much higher than his first American master's; several pre-medieval African cultures (notably Ethiopia's) were more advanced, even by present Western standards, than any of contemporaneous Europe's. But the black man's culture was beaten out of him with the lash. He was separated from his kinsmen and countrymen so that he could more easily be brainwashed. And for two hundred years he was fixed in his degradation. Literacy, property, and human rights were forbidden him by law until 1863 and for another half century denied him in fact. He is just now emerging from all the indignities that can be visited upon a man. And unlike the Japanese- or Chinese-descended Americans, he has no culture other than America's to call his own, no other basis for group pride; no memory (so immutably tied to language) of another civilization. If he has got to be a second-class American, then he has got to be a second-class man, because an American is all he is.

Like "Negro intelligence," "Negro personality" and "Negro character" appear to be the product of environment; at least, other persons and groups of people in the same condition act, never uniformly, but, like the Negro, on the average, in the same way. Summarizing the vast Carnegie Study in Characteristics of the American Negro, Klineberg writes: "What differences there are appear to depend on existing discrepancies in the opportunities afforded to the two groups." The popular concept of the "marginal" man originally described the individual of one culture who had to live in another, the "cultural hybrid." When the individual is racially, as well as culturally, marginal; when, in a word, he can be distinguished not only by background but by appearance, his maladjustment is, axiomatically, intensified. That a culturally and racially "marginal" man should ever achieve "normal" behavior might well be viewed as something of a superhuman achievement, a sign of individual, if not racial, superiority.

"BUT WE ALWAYS KNEW THAT"

When we submit the arguments against white superiority to our enlightened neighbor, he says, "Of course, of course. I've known that for years. There's nothing really inferior about Negroes. Why, I know a Negro college professor who. . . ." We must interrupt him at this point and say, "Would you want your daughter to marry a nigger?" He rocks on his heels, and, while he is still rocking, we ask him, "Would you want niggers"—we are very careful here to say "nigger," not "Negro"—in your golf club?" As soon as he recovers sufficiently to begin sputtering, "Why—why—why—," we must interrupt him again and say, "Why not?" It is only then that we come to the heart of the issue.

It doesn't matter whether Negroes are innately inferior, equal, or superior, temporarily or permanently. What matters is something so profound that no argument touches it, no evidence speaks to it. Our enlightened neighbor, who is long since convinced that there is no such thing as racial superiority, is ourselves. And like ourselves he is moved by a mechanism hidden in the deepest recess of the heart. He has rejected every argument against segregation—which means every argument against miscegenation. But the hidden mechanism still functions. He is a racist. You are a racist. I am a racist. Why?

The Christian has the easy answer: The Devil. The Devil has planted in all of us the love of unearned increment, of something for nothing. If, without lifting a finger, I can be superior—well, why not? If, however worthless I may be, I can be worth something by having been born white, or American, or the eldest son of the Duke of Marlborough, I will cherish the worth all the more mightily. It is my one absolutely inalienable possession. I may forfeit my good name; my purse, my home, my family, my job, my health, my liberty, and my life may all be taken from me. But nobody can take my whiteness away from me I am in.

When a few members of what the sociologist calls the out-group come—unwillingly, in the Negro's case—to live among the in-group, they are depreciated, the depreciation ranging from the city man's ridicule of the yokel to the native white's dislike of the foreigner or the Negro. As long as the out-group are few (or are held in subjection as they increase), they are not thought of as dangerous. But when they increase and are no longer legally subjugated, they are no longer merely comical or obnoxious, but dangerous, and the in-group's sense of security requires their segregation.

The white man who himself has directly injured a Negro may nevertheless bear the unconscious guilt of chattel slavery and hate

the cause of his vicarious wrongdoing; while the white who has directly injured a Negro (merely, for example, for living in a restricted neighborhood) may have a still heavier guilt to justify by hatred. Deeper buried still: Man, the impure, wants to be freed from his impurity—from impure flesh and blood and bone, from impure occupations and associations, from impure thoughts and desires. He wants to be "washed," "cleansed," "white as snow." And the Negro is black—the color of evil and dirt and the dread unknown.

Acceptance of this racist mystique, below the level of rationality, is not confined to yahoos and legislators. Learned men of the greatest consequence, judges, South and North, low and high, have generally upheld the racist marriage statutes of the States, and their opinions ring repetitiously with the characterization of mixed marriages as "unnatural," "productive of deplorable results," "conducive to a degeneration of the public morals," and detrimental to the "moral and physical development of both races and the highest advancement of civilization." The documentation of such assertions from the bench is invariably missing; white judges turn out to be white men. Four years ago the "liberal" Virginia Supreme Court, upholding that State's statute, found that "there is no requirement that the State * * * must permit the corruption of blood [which would] weaken or destroy the quality of its citizenship."

IN THE EVENING, BY THE MOONLIGHT

Does the "social equality" which the segregationist says leads to miscegenation actually lead to it? It was the social inequality of slavery and the segregationist South, reinforced by laws which forbade interracial marriage and even interracial fornication, that led to miscegenation on a colossal scale, while the relative social equality of the North led to intermarriage on a miniscule scale. The racist's ready invocation of white southern womanhood and its protection suggests that he is preoccupied with rape; but it would not seem to be rape that he has on his mind when he asks, "Would you want your daughter to marry a nigger?" And rape accounts for almost no miscegenation; voluntariness is of the essence of the evil (if it is an evil). The question has often been asked of the whites who enact laws against intermarriage: If their white women do not want to marry Negroes, why is it necessary for them to pass laws forbidding them to do so? The question is a mean one.

It would be a little more decorous to discuss miscegenation without reference to sex, but it would also be a little more difficult. To begin with, the fascination of the repugnant, in any area of life, is a commonplace: "I simply couldn't take my eyes off it," whether the "it" is a murder on television or a monster in a sideshow. It not only rivets the eyes, it unrivets responses we normally try to keep cribb'd, cabin'd, and confined. And the fascination and the repugnance both seem to spring from the same aspect of the object: its difference from ourselves and what we know. Deep stuff, perhaps; but the soul is not a shallow saucer, and sex is an emanation of the soul.

Whether white women are more attracted to Negro men than white men to Negro women is undetermined and, probably, undeterminable. The few (and necessarily inadequate) studies of intermarriages, in Boston, Philadelphia, Chicago, and Los Angeles County, reveal a great preponderance of Negro husbands and white wives. But this fact, even if it is universal, is not conclusive alone. The human male is the aggressor; it is he who does the courting and proposing. And most intermarriage is in Northern cities, where the proportion of unattached Negro males to females is high. In addition, intermarriage in America nearly always involves "emancipated" individuals, among whom there are many white and few Negro women. A considerable percentage of white female-Negro male marriages certainly involves a degree of "protest" on the part of the white females—protest against the sexless preoccupation of the modern white American male with "getting ahead," or against their own fathers.

But sex rears its beautiful head in the midst of these pedestrian speculations. Both classic and modern historians, confirm James Baldwin's assertion in Notes of a Native Son, that "darker races always seem to have for lighter races an aura of sexuality." The rapist of the Southerner's nightmare—or dream—is the "buck nigger," big and black. The Nubian slave of high romance was a Negro. And the chronicles of explorers abound in their coming to rest (at lest temporarily) by the side of a dark-skinned girl. Whether tropical peoples are more interesting sexually than non-tropical peoples may be debatable; but it is generally observed that they are more languid and more excitable—qualities that in combination are not unpraised by the poets.

There is no doubt, however, that the southern white preferred the mulatto slave girl to her full-blooded Negro sister as the object of his passion. The storied "quadroon ball" of early New Orleans, the commonplace marriage of French Creoles to mulatto girls in the same city, and the well developed placage system there, in which white men established a permanent contractual relationship with mixed-blood girls, whom they courted and whose parents' permission they asked, all suggest that the nearer to white a "Negro" girl was, the more desirable she was to white men. Why? She was more "white" than her black sister but, above all, rarer, and rarity, like variety, is said to be spicy.

Sex is the opposite of the weather; everybody talks about the weather and nobody does anything about it. The role of sex in miscegenation is more obvious than the way in which the role is played. There are some things that Professor Kinsey despaired of learning, and should. But Myrdal was willing to say that "the South has an obsession with sex which helps to make this region quite irrational in dealing with Negroes generally. * * * The sadistic element in most lynchings"—often involving emasculation of the victim—"also points to a close relation between lynching and thwarted sexual urges."

It was out of this unpenetrated and perhaps forever inpenetrable complex of nonrational drives that the South's "third sex" was born—the "flower of southern womanhood." The origin of this "woman on a pedestal" may in part (but only in part) be explained by the Puritan strain in American culture, South and North; the Negro slave girl, defenseless in any case, was uninhibited by the blessing of a puritanical upbringing. The white wife was absolutely unable to avoid knowing of the carryings-on of her husband—and of her father and her son. And the northern abolitionists were loud against it. The southern's answer to both his wife and the Yankee was the construction of a beautiful fiction. "On the one hand," says Wilbur Cash in The Mind of the South, "the convention must be set up that the thing simply did not exist * * * and on the other the woman must be compensated, the revolting suspicion in the male that he might be slipping into bestiality got rid of, by glorifying her." The southern gentleman was able to convince himself, as he found his way down to the cabins by moonlight, that his wife was a paragon. She may have had little occasion to be anything else.

THE MONGREL AND THE HYBRID

Miscegenation certainly can't impurify the race unless it produces offspring. And even then, unless the offspring miscegenates, the impurity, if any, dies with him. But the inferiority of the Negro and the superiority of the white ought both to be apparent in the half-breed. He ought to be superior to his Negro parent and inferior to his white. The proof of the mixing is in the mulatto. Unless the mulatto is inferior to the white—and not because of environment—the Negro is not inferior to the white and miscegenation can not be condemned on the ground of racial corruption.

We know a little about the mulatto. We know that, at least until recently, he was generally the intellectual and cultural superior of the unmixed Negro. But was it because he had "white" blood? Social research does not say no; it simply says that the mulatto has always enjoyed (until very recently) an immense superiority of opportunity over the "pure" Negro. But the rate of anti-social behavior among mulattoes was also high. It has declined radically, as the mulatto has shared the increased opportunity for Negroes generally and as his once intense resentment of being peculiarly déclassé has faded with time and color; with greatly decreased miscegenation in the past half century, the mulatto has been disappearing. (Of course, the white racist who cited mulatto criminality or immorality was arguing against himself; if mixed-blood Negroes are inferior to pure-blood Negroes their inferiority must be the consequence of their "white" blood.)

You would rather be a hybrid than what the Kluxers call mongrel—but there isn't any difference. Cross-fertilization has produced "mongrel" agricultural stocks of such superiority that the pure strain has in many instances been abandoned altogether. But the superior plant or animal hybrid is produced by controlled experimentation, while the consequences of random cross-fertilization in humans can only be observed. The studies of miscegenated groups—the Rehobother Bastards (a cross between South African Boers and Hottentots, as divergent a pair of "races" as can be imagined); the Polynesian-white descendants of the mutineers of the *Bounty* on Pitcairn Island; the Chinese-Hawaiians in Honolulu; white-Negroes in Brazil; and Indonesian-whites on the Timor Archipelago—all support the theory of heterosis, or hybrid vigor: the offspring of the cross tend to be larger in size, more active, more fertile, and with improved vitality and longevity. Scholars generally agree with Benedict, in The Races of Mankind, that "as far as we know, there are no immutable laws of nature that make racial intermixture harmful."

Of course the human hybrid will usually resemble each of his parents in some physical respects, but Hooten in the Harvard African Studies discovered that "Negroid features seem to be attenuated, rather than intensified, by successive generations of inbreeding of mixed types." While two parties with Negro blood may very occasionally have an offspring with somewhat more Negroid features than themselves," say Wirth and Goldhammer in the Carnegie Study, "it is not possible for a white person and a person with some Negro ancestry to have an offspring more Negroid than the partner with Negro blood." The "black baby" of melodrama—the spawn of the young aristocrat and the beautiful brunette whose telltale shadows on her fingernails nobody ever noticed—is a complete fiction.

WHO'S NEGRO? WHO'S WHITE?

If there is no other reliable basis for determining race, the only thing left is appearance. And here, as elsewhere in this life, appearance is deceitful. It is estimated

that 30,000 part-Negroes a year pass into white society permanently, and that many times 30,000 might, but refuse to because of pride or family ties. And many pass without ever knowing they have done so. Unlike the black baby of fiction, the white baby of real life is often part Negro. Occasional instances reach publication; a few years ago a good white farmer in Mississippi named Davis Knight was convicted of miscegenation when a family feud disclosed (to him, as well as to his wife) that his great-grandmother had been a slave girl.

In "A Study of Some Negro-White Families," Day of Harvard found that "dominant mulattoes and five-eighths (white) individuals are frequently mistaken for foreigners of various nationalities, or for white Americans. * * * I know of no case of a quadroon (one-fourth Negro) who could not easily pass for white. * * * In the few cases of octoroons (one-eighth Negro) which I have studied, I have been able so far to see no traces whatever of Negro admixture." Of 35 intermarried Negroes who passed for white, Day found 16 quadroons, 15 three-eighths Negroes, and 4 mulattoes. On the Von Luschen skin-color scale a study of mulattoes showed absolutely white pigmentation in 12.55 percent of the males and 20.6 percent of the females.

Nearly all of us know nothing of our ancestors beyond our great-grandparents. The shadow sinister may be just beyond the far side of our limited acquaintance with our forebears. And although most race marriage laws stigmatize Indians as well as Negroes, it should be observed that in Virginia, where a trace of Negro blood pollutes, a trace of Indian makes a first family; intermarriage of white with persons of one-sixteenth or less "Indian blood" is permitted in the Old Dominion, in deference to the proud racist descendants of the one good Indian who wasn't a dead Indian—Pocahontas. Will Rogers and Vice President Charles Curtis were proud of their Indian ancestry; it is only the Negro who is irredeemably inferior.

Once appearances have been shown to be deceitful of race, the ground begins to give way under the marriage statutes and the Red Cross "white blood" bank, and all the processes, legal, nonlegal, and illegal, of racial discrimination totter on their single foundation. You may think you wouldn't eat with a Negro—or your daughter marry one—but for all you know you do and she has. You may cry up the protection of the white race without knowing that you don't belong to it. You may lynch your own half-brother on the charge that he plucked the flower of southern womanhood—and the flower may have been a black one.

And if the preservation of the supremacy of the white race depends on the preservation of its looking white, the supremacists should turn their attention immediately from the "nigger lovers" to the biochemists. The doom of white civilization may be foretold in the following words of Prof. John A. Kenney in the Journal of the National Medical Association:

"Lerner has shown [in the Archives of Biochemistry and Biophysics, 1952] that mercury will compete with copper ions in tyrosinase which in turn inactivates the enzyme which catalyzes melanin formation. Once this has occurred, the reaction is only slowly reversible."

It should be added that melanin is the black pigment present in the skin of all human beings except albinos. Almost any Negro—whose skin is not allergic and whose spirit is willing—can use a variety of standard formulas to whiten himself. The Citizens Councils should smash the pharmacist's jars of monobenzyl ether of hydroquinone and p-hydroxypropiophenone, the most effective devices against melanin formation.

WHO INTERMARRIES AND WHY

Most Negro-White marriages (and courtships), if not secret, are at least furtive. Unless the two partners have already cut themselves off from their backgrounds, their marriage will ordinarily do it for them. The relatives, friends, and business associates of the white partner will be the more hostile; the white is "marrying down," the Negro "up." Not that the Negro's circle will approve of the marriage—it won't—but it will be readier to forgive and to accept the white partner on the basis of merit. Negroes may be inferior, but they seem to be a little more human.

Thus the newlyweds move immediately into isolation—or into the Negro world. But there they are also uneasy. Negroes generally look upon the white bride or groom much as the whites do: There must be something wrong with a white who marries a Negro (or a Negro who marries a white). An occasional Negro—and a rare white—will marvel that two people could be so much in love as to have been willing to make the desperate sacrifices that intermarriage entails. Either partner, but particularly the white, is liable to lose his job if the marriage becomes known. So the tendency to keep it secret or, at least, "close" abides. Their friends are other intermarrieds (if there are any); in New York and Chicago there have been informal clubs of such couples. The intermarried pair ordinarily lives just inside the boundaries of a Negro neighborhood in a large city.

Something like half of the estimated 10,000 to 20,000 Negro-white couples in America are politically or artistically "advanced" individuals, people whose social and economic sanction does not depend on the church, the P.T.A., the Legion post, and the luncheon club. Among the other half of the intermarrieds, white immigrant males of low social status (and low native race prejudice) are common, especially since there is ordinarily a shortage of their countrywomen among them. (With immigration almost cut off, this source of intermarriage is disappearing). Then there are native white males of low status, often personally unattractive to white girls.

Probably because of the immigrant and the unattractive male, the marrying age of interracial couples is very high; in the Los Angeles study, for instance, it was 39 for the white grooms. The proportion of divorced persons intermarrying is also very high, especially among the white involved; in Philadelphia 34 out of 80 intermarried persons had previously been married to coracialists; it would appear an unsuccessful marriage is broadening.

Attractive white girls marrying Negroes are usually college graduates and daughters of prominent parents, apparently from the "protest" category. Like white males of such standing, Negro girls with high status almost never intermarry, partly, no doubt, because of pride, partly because it's polite for a girl to wait until she's asked, and partly because they can "marry up" to a light-skinned Negro of position. Three times as many white women marry Negro men as Negro women marry white men.

The intermarriages that make news usually involve a Negro artist—Lena Horne and MGM Musical Director Lennie Hayton, Sugar Billy Daniels and Martha Braun, Sidney Bechet, and Elizabeth Taylor. When Stuart Outerbridge of the Bermuda Outerbridges married Royce Wallace, a singer at his night club, he was thrown out of the Royal Bermuda Yacht Club and, he said, completely ostracized. Only once in a great while does a Negro leader "cross the line"; diplomat Frederick Douglass did, and so did NAACP Secretary Walter White.

The wars of 1941–45 and 1950–53 added something new to American miscegenation—the white war bride, German, French, or English, brought back to America by the Negro soldier, and, more significantly, the Japanese or Korean war bride. Asians, especially Japanese, have a strong aversion to intermarriage (with whites or Negroes. Prior to the Second World War there was almost no intermarriage among Japanese-Americans with any "out group." It is very slowly increasing now, with whites, but almost no Mongoloid in America ever marries a Negro; yellow plus white racism. Europe has a fine new crop of mulattoes, Germany in particular; the French and American occupation commands were more than benign in their attitude toward the Moroccan and Negro "debasement" of Hitler's Aryans.

Half of the Negro-white marriages in America are barren, and the other half produce remarkably small families, often one child, rarely more than two. The late age of the marriage combines with the unwillingness of the couple to subject children to the fearful strains of their position. More important, as regards amalgamation: interracial mating is almost always limited to a single generation, the reason, of course, being that the American mulatto is accepted only in the Negro world. The worst sufferer is the child whose white parent wants him accepted by whites.

If the American Negro is marginal, the mulatto child is submarginal. In his early teens he is likely to be called "bastard" or "miskeg" by Negroes, and in his childhood he may be taunted by his Negro playmates for the same reason that Negroes are taunted by whites: for being different. I knew a 10-year-old Negro boy during the second World War with very light skin but no sign of the epicanthic eye-fold common to Orientals; his black schoolfellows called him "Jap-eyes." The last stanza of Langston Hughes' poem, "Cross," though its setting is the old South, portrays the mulatto adolescent everywhere:

"My old man died in a fine big house
My ma died in a shack.
I wonder where I'm gonna die,
Being neither white nor black."

Wherever he dies, the chances that he (or she) will die married to a white are almost nil. The world (the American white world) says he's a Negro. He may hate being a Negro; but, if he does, he hates the world that made him a Negro still more. Marrying Negro, he will introduce a little more white blood into the next generation of blacks, but no more Negro blood into the white. If he marries. The tensions of his childhood may make a criminal (even a suicide, rare among Negroes) of him. Or a genius; the well known Negro journalist, George Schuyler, married the daughter of a white Texas banker, and their 13-year-old daughter's "Manhattan Nocturne" was premiered by the New York Philharmonic.

WHO'S CHRISTIAN? WHO'S AMERICAN?

Racial equality has come about—like miscegenation—without benefit of clergy. It is said that in America there is more racial segregation between 11 a.m. and noon on Sunday than at any other hour of the week. The church has been moving since the 1954 school segregation decision; the Roman Catholic church rapidly, the Protestant (with spectacular exceptions) slowly. But on the segregation of would-be wives from would-be husbands it is a silent as it is on war. It no longer quotes Scripture, as the "Bible bangers" of the old South misquoted it on the inevitable slavery of the "descendants of Ham, accursed of God." (It was Canaan, not Ham, who was cursed, and it was Noah, not God, who cursed him.) On the ultimate, last-ditch issue of racism—miscegenation—the church today says nothing. A very rare clergyman speaks, at his peril, like the

Rev. Kelly Barnett of the Episcopal Seminary of the Southwest, who, testifying against school segregation before a Texas legislative committee, was (of course) asked by State Senator Wardlow Lane if he believed in intermarriage. Barnett said that, while he thought it "sociologically inadvisable," he believed that "the right of marriage is a personal right." A few days later Lane leaped to his feet on the senate floor and shouted: "Why, these preachers want to mix colored and white. That's what Dr. Barnett said. He said it's all right for nigger and white to intermarry, but if one of my East Texas niggers married Barnett, I would feel sorry for the nigger. I want that clear: For the nigger."

The Lanes will not let the church remain silent indefinitely. And the church is the church that preaches the brotherhood of man under the fatherhood of God; that preaches the parable of the black Samaritan in answer to the Pharisee's question, "Who is my neighbor?" that preaches the Ten Commandments received from the hand of God by the man who married an Ethiopian woman; that preaches the Disciple who said, "Goth hath made of one blood all nations of men," and the Apostle who said, "He who does not love his brother, whom he has seen, how can he love God, whom he hath not seen?" The church is the church that preaches Christ crucified that "they may be as one * * * one flock, one shepherd."

One of the strongest statements made in support of the Court's school decision—a statement the Christian Century called "a model of clear-thinking insight"—was made by 74 Atlanta ministers. They quoted the Golden Rule, and went on, after saying that Negroes have the full privileges of first-class citizenship, to suggest that they should have all the privileges but one: "We do not believe in the amalgamation of the races." They did not say whether God does.

It is not just the church that trusts in God; the national motto commits every American to that trust, and the national creed proclaims that all men—not all white men, or all Negroes, but all men—are created equal. But nowhere in the Western world today is a caste system of rigid inequality so vigorously expressed in law as in America. (Even the Nazi Aryan marriage laws were more liberal than Virginia's.) Perhaps the belief in the inferiority of the Negro race alone enables us to square our racism with our American creed of equality: American Negroes must be inferior creatures—otherwise American whites are inferior Americans.

Nor is it our creed alone that confronts us; the fact that our country is the great melting pot confronts us too. We are proud of creating an "American tribe" out of the most diversified of the world's populations except Russia's. We are fanatical, not only about American equality, but about Americanism. We mistrust things foreign and alien; everything and everybody that comes to America has got to be Americanized. The American dream is the dream of complete assimilation—except for the Negro.

When novelist Erskine Caldwell says, "Eventually you'll have an amalgamation of the two races in the South," he would seem to be trying his hand at science fiction. What the sociologist calls assortative mating—like marrying like—tends to keep intermarriage from spreading. There will, of course, be more white blood in the Negro population, as part-whites marry nonwhites; but the 6 million part-white Negroes will, the present pattern indicates, continue to marry nonwhites. The Negro population as a whole will become a little lighter and more homogeneous in color; but that is all.

The racist marriage statutes have become more numerous and more rigidly enforced against Negroes in the past 50 years. They stand court tests because marriage has been held to be within the power of the separate States. But so is education. The 1954 decision in *Brown et al. v. Topeka Board of Education* did not place education within the power of the Federal Government; it simply forbade unequal protection of the State's public school laws, under the 14th amendment. That decision overturned *Plessy v. Ferguson*, the famous case in which the Court upheld equal but separate railway accommodations in Louisiana. In 1896 the Louisiana statute was upheld on the ground that it enjoined members of both races from sitting together in railroad cars; it was therefore equal treatment. The State laws against intermarriage likewise forbid Negroes and whites to intermarry. But Justice Harlan said, in his historic dissent in Plessy: "If a white man and a black man choose to occupy the same public conveyance on a public highway, it is their right to do so, and no government, proceeding alone on grounds of race, can prevent it without infringing the personal liberty of each." What if two persons, one white and one black, choose to marry? Can a government prevent it, proceeding alone on grounds of race?

The California Supreme Court said "No" in 1948. The case at bar involved a Catholic couple, one white, the other Negro, who sued on the ground that the California marriage statute forbade them the sacrament of marriage in violation of the religious freedom clauses of the State and National constitutions. This argument, together with the equal-protection finding in *Brown v. Topeka*, indicates that the statutes of all 28 States forbidding intermarriage will be swept away in one U.S. Supreme Court decision, and the present attack on the Court has been said to involve that consideration. A couple of months ago, after Harry Bridges, who is always up to something, discovered that he could not marry a non-Caucasian in Idaho, that State quietly erased its intermarriage statute.

But it is doubtful, in view of the California experience since 1948, that such changes will affect miscegenation or intermarriage except in principle. The big change is already taking place—a bigger change than any law will ever induce: The Negro is at last rejecting the white man's doctrine of white supremacy. Not resenting it, or complaining of it, or defying it; rejecting it. It was his acceptance of this doctrine that spread miscegenation; his rejection of it will speed the rate at which miscegenation is declining. The Negro is completing the half of his emancipation that he has had to achieve himself. His hands and feet unshackled, he is climbing Jacob's ladder. He is deserting the white man's racism as he climbs from a sense of inferiority to a sense of equality. From there to a sense of unconsciousness of race is a long step—a step that will take a century or two for the Negro and at least that long for the white man. Along about then, or another century or two thereafter, amalgamation of the races will be a conceivable possibility. But along about then nobody will care.

More Young People in Politics Essential for Effective Democratic Government

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. NEUBERGER. Mr. President, if democratic government is to fulfill its most fruitful role, more people must be encouraged and attracted to participate actively in its functions. Elihu Root—famous Secretary of State under President Theodore Roosevelt, and later a Senator from New York—once said, "Politics is the practical exercise of self-government, and somebody must attend to it if we are to have self-government. The principal ground of reproach against any American citizen should be that he is not a politician."

Like all other things in life, politics can be both encouraging and, at times, extremely discouraging. When one decides to place his name on the ballot, he must recognize that politics is often a rough pastime. A candidate may be exposed to abuse, criticism, and ridicule. But there are rich rewards in terms of service.

POLITICIAN FACES MANY PROBLEMS

A politician is faced with many obligations and problems which seem to be trifling in the great scheme of human experience. But his actions are of paramount importance in the daily lives of many persons in all walks of life. As long as Government directly affects so many individuals, it is imperative that people of good will contribute their talents and skills to its operation. Because so many of the major problems of today concern young men and women, and because tomorrow's statesmen will come from today's youth, it is important that more young men and women take a leading role in active politics.

Mr. President, for many years I have been very concerned about the need for encouraging young people to take a more active interest in politics. As both an Oregon State and a U.S. Senator, I have considered the opportunity to awaken an active political interest in young people one of the more coveted privileges of my position.

LEARNING POLITICS FIRSTHAND

Since coming to the Senate I have tried to further interest in government among young people through a student intern program in my office. The position is designed to encourage superior students to enter the field of government and public life, as it will offer an outstanding Oregon graduate who has demonstrated a sincere interest and ability in the study of problems of our society and government the opportunity to examine at first hand all facets of the Federal Government.

Mr. President, my intern for the 1959–60 congressional year is Dean DeChaine, a 1959 graduate of Portland State College, where he served his college as student body president. Mr. DeChaine was chosen for the position by a selection committee consisting of leading Oregon educators. This notable group consists of Dr. John M. Swarthout, dean of faculty at Portland State College, as chairman; Miss May Darling, member of the State board of education; Father David H. Fosselman, of the faculty of the University of Portland; and Mr. J. W. Forrester, editor of the Pendleton East-Oregonian and a member of the Oregon State Board of Higher Education. Miss Elizabeth C. Ducey, a Portland women's group leader, serves as

secretary to the intern selection committee. I do not interfere in any way with the choice made by the selection committee, nor have I imposed any restriction as to the religion, color, sex, or political affiliation of the student selected each year to work in my office.

PERSONAL QUALITIES NEEDED

Recently, Mr. Forrester wrote a very thought-provoking article in the Pendleton East-Oregonian about the process of selecting my student intern. He discusses what the committee should be looking for in the college graduate who will receive the 1-year appointment. The article refers to a study completed by the Western College Placement Association to determine what employers look for in the bachelor-level college graduate entering the labor market in his or her specialty for the first time. The study showed that the most important trend today was toward the high ranking of personal qualities: integrity, ability to think logically, ability to communicate, initiative, and drive.

Mr. President, I ask unanimous consent that Mr. Forrester's column, "Of Cabbages and Kings," which appeared in the Pendleton East-Oregonian November 11, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OF CABBAGES AND KINGS

(By J. W. F.)

"The time has come," the Walrus said, "To talk of many things: Of shoes—and ships—and sealing wax—of cabbages—and kings."

One of the more pleasant assignments we have is to serve with three others on a committee that selects each year a graduate of an Oregon college or university to serve as a research intern on the staff of Senator RICHARD NEUBERGER. Because the internship provides a good salary plus the opportunity to study all facets of the Federal Government, outstanding young men and women apply for it. It is quite a plum. The decision always is difficult for the committee. There have been years when we'd like to have sent more than one to Washington.

Each applicant provides the committee with considerable information about himself in advance of personal interviews. With his written application is a transcript of his college grades and letters from professors who know intimately his college work and him.

The committee expects an applicant's grades to have been at least average. It isn't loking for the superlative student, the straight-A student. It has learned that the straight-A student frequently is a stuffy young man who probably would have problems in his associations with others.

It is important that grades be average or a little above average. Unless they are one has to conclude that the student lacks a desire to learn.

What should the committee be looking for in the college graduate? What do prospective employers look for?

We recently heard a talk by Dr. Eugene W. Dils, director of the placement service at University of Oregon. Dr. Dils directed the placement in employment of graduates of Stanford University before coming to University of Oregon a year ago.

He spoke at length of the tremendous demand colleges and universities have from business and industry for their graduates. Many of us have thought that the overwhelming demand was for the engineering graduates. Not so, said Dr. Dils. They are no more in demand than the business administration graduates.

Recently, Dr. Dils said, the Western College Placement Association completed a study to determine exactly what employers look for in the bachelor-level college graduate entering the labor market in his or her specialty for the first time.

Of the 800 questionnaires sent out, 552 were returned, a better than 70 percent sampling. Not only was the number of answers high enough to insure validity, but 75 percent of the returns were signed, and about half included remarks that ranged from a single sentence to three pages.

Primarily directed toward employers, questionnaires were also sent to placement directors for comparison. On the whole, business looks for qualities in about the same order of importance as do the placement directors, and their general agreement on which qualities rank above and below 10 should be a meaningful guide to a graduate seeking employment, Dr. Dils pointed out.

The most important trend was toward the high ranking of personal qualities * * * integrity, ability to think logically, ability to communicate, initiative and drive.

In the order the employers placed them, here are the qualities they look for (please note the ranking of grades):

Integrity, ability to think logically, enthusiasm, initiative, drive, dependability, ability to communicate orally and in writing, emotional stability, ability to get along wth others, evidence of good judgment, ability to make decisions, interest in career as opposed to "job" or salary, capacity for leadership, willingness to contribute to job development, maturity, adjustability, general interest in type of work and kind of company, bearing, poise, self-confidence, good health, good manners, recognition of obligations to community, family and employer, physical appearance, scholastic standing, sense of humor, normal family life, reasonable freedom from limitations imposed by personal and family restrictions, extra-curricular activities, military status, marital status.

There you have it, you young men and women who are preparing to go to college where you will prepare yourselves to get good jobs.

Conlon Associates' Report on Communist China and Taiwan

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. PORTER. Mr. Speaker, on November 1, 1959, the Senate Foreign Relations Committee published a report entitled "U.S. Policy—Asia." This report was written by three professors of the University of California who are well known as specialists in their respective areas. Each has spent a considerable period in Asia, knows some of the languages of the area, and has written extensively upon Asian topics and American foreign policy for both learned and popular journals.

Prof. Richard Park wrote the section on south Asia, Prof. Guy Pauker contributed the section on southeast Asia, and Prof. Robert Scalapino authored the section on northeast Asia. In the course of preparing this report, moreover, the authors consulted a large number of American scholars, officials, and citizens with experience in Asia. Many of these individuals read and commented upon earlier drafts of the report. The authors also had the opportunity to interview hundreds of Asians from every walk of life, discussing all facets of domestic and foreign policy with them.

The result, in my opinion and that of many others, is an admirably objective and scholarly appraisal of current trends in Asia and alternative American policies for that area. It contains both data and suggestions that should concern every American. It is interesting to note that the Asians themselves have given this report tremendous attention. It has already been translated and published in Japanese as a full-length book. A leading Japanese intellectual journal, Chuo Koron, has published the entire northeast Asia section in its January 1960 issue; the Japanese and Okinawan sections have been published by several additional Japanese and Okinawan journals, some with mass circulation. Relevant sections of the report have also been published in Chinese and Korean organs. Articles and editorials in Asian publications based upon this report have poured forth in the past several months. Naturally, opinions have differed. The main lines of the recommendations have not pleased supporters of the Rhee and Chiang governments. However, impartial Asian observers have generally praised the report for its insights and objectivity.

Perhaps a typical comment is that of the Yomiuri Shimbun, one of the most influential and moderate of Japan's great newspapers.

It is amazing—

Said Yomiuri—

that American scholars could so well discern the thinking and attitudes of our people, and set forth in such an objective fashion the needs of this area.

Similar praise has come from many Asian sources, and even the political opponents of the report have frequently admitted that it contains accurate data and challenging recommendations.

In a period which cries out for new ideas and dynamic action, it behooves all of us to read this report and consider its points seriously. This is a possible blueprint for our future Asian policy, one that would make a great deal of sense from the standpoint of our national interests.

Under unanimous consent, I am including here the section of the report on Communist China and Taiwan, written by Professor Scalapino:

COMMUNIST CHINA AND TAIWAN

1. COMMUNIST CHINA

Communist China presents the most complicated and serious problem faced by the United States in Asia. It is also a problem more likely to grow than to diminish, and one for which there are no easy answers. In the first decade since their advent to full power on the mainland, Chinese Communist leaders have concentrated upon two basic internal objectives: first, the creation of a powerful, centralized state in which Com-

munist authority could proceed to carry out its policies boldly and with minimal opposition; and, second, the launching of a massive economic revolution intended to bring China abreast of the West in the shortest possible time. These two objectives have an interrelation. If an economically "backward" society is dedicated to a very rapid program of modernization, especially one emphasizing heavy industry and internal capital accumulation, it will require extensive sacrifices from its people. The more extensive the sacrifices, the greater the necessity of an "educative," totalitarian state to rationalize and enforce them.

(a) *Chinese Communist domestic policies*

Current trends in Communist China are not easily measured or projected. Some of the most essential data is subject to serious question and the very rapidity with which changes are taking place makes assessment difficult. In the totally "planned" societies of our time it is still the unplanned events that sometimes make substantial differences. Nevertheless, the evidence on Communist China at this point is sufficient to permit some fairly firm generalizations.

1. The Chinese Communists have achieved impressive results in the opening stages of their campaign for economic development, even if some claims have been greatly inflated. According to official statistics, the gross national product of Communist China averaged an annual increase of 9 percent between 1952 and 1957. Some experts in the West believe that the true increase during this period was 6 to 7 percent annually. The more seriously disputed figures, however, were those published in early 1959, figures that the Communists themselves have now revised.

When the production plans for 1958–62 were first announced in September 1956, they called for an annual 9 percent gain. But by 1958, many goals had been raised beyond recognition. Communist authorities initially claimed that output of key agricultural and industrial products during 1958 was double that of 1957. In late August 1959, however, they revised the earlier statistics sharply downward. The revised figures, if accurate, still represent a spectacular achievement in those areas such as grain, steel, and coal production where primary emphasis has been given.

The Communists now claim that the "great leap forward" has produced the following results: In 1958, grain production (including potatoes and yams) went from 185 to 250 million metric tons (instead of the 375 million tons originally claimed). The 1959 production goal of 525 million tons projected on the basis of the earlier report has been reduced to 275 million tons. Steel production rose from 5.35 to approximately 8 million tons "suitable for industrial purposes." Earlier, the Communists claimed 11 million tons, but now they assert that 3 million tons of "backyard furnace" metal was inferior. The 1959 goal was reduced from 18 to 12 million tons. Coal production figures were unchanged, with an announced increase going from 128 to 270 million tons, but the 1959 goal was reduced from 300 to 335 million tons, still a 24 percent increase. Cotton output went from 1.64 to 2.1 million tons instead of 3.35 million tons as first announced; the 1959 target has been reduced from 5 to 2.31 million tons.

The Communists have certainly admitted gross overestimates. Undoubtedly this was due in major part to the inflated reports that came from local cadres, always anxious to please. The revised statistics may still be in error. But if they are reasonably accurate, the results have been impressive. And there is general agreement by trained observers that economic growth in Communist China is proceeding at an exceedingly rapid pace. That this has produced economic dislocations, the Communists themselves admit, and there is reason to suspect that the problems are far graver than the admission. Transport and raw material bottlenecks are apparently quite serious. Currently, food supplies are very short in some areas. 1959, unlike 1958, has been a poor crop year. And, of course, these troubles do not measure adequately the enormous human problems of the "great leap forward." This has been a period of trial and error, of some striking successes and some complete failures. On balance, however, the evidence would suggest remarkable achievement. Whether it is remarkable enough to give promise of meeting the extraordinary problems of this society is the great, unanswerable question.

The following factors have figured prominently in economic development under the Chinese Communists:

(a) The attempt to commit the massive manpower of China as fully as possible to the task of technological change. The Chinese working force has been mobilized to an unprecedented extent, and directed into those forms of labor considered most necessary to meet the major goals. An effort has been made to cause every element of the society to participate to the degree physically possible, given factors of age, occupation, and capacity. The attempted "full utilization" of labor includes such techniques as the "liberation" of women and their use in all occupations; the insistence that white-collar and student-intellectual groups engage in part-time manual or farm labor; and most importantly, the involvement of the peasant in diversified labor including public works projects, and handicraft and industrial labor in addition to agriculture, thereby seeking to eliminate the historic waste of agrarian underemployment. Perhaps the Chinese Communists have overemphasized what can be done wth manpower alone, and how hard men can profitably be worked. Recent Russian criticisms and Chinese admissions suggest some retrenchment, both in theory and practice. There is little doubt, however, that the Chinese Communists still consider manpower a vital resource, and will rely upon it heavily.

(b) The attempt to extend industrialization in sufficiently varied forms and levels to maximize the use of all available skills and resources. Initially, the Communist emphasis was strongly upon centrally controlled, large-scale industry. The premium, however, was not merely upon enlarging the industrial bases inherited from Japan and the West in Manchuria and Shanghai. It was also upon expanding and intensibly utilizing the transport network so that new industrial units could be constructed close to sources of raw materials. An effort at industrial dispersal was made, with strategic as well as economic factors clearly involved. Where necessary, labor was moved to the new areas as required. Thus the prewar pattern of Chinese industrial concentration wholly in Manchuria and a few major coastal cities is undergoing substantial alteration. The Communists look toward increased regional planning, with the country divided into seven economic regions, and with developmental programs natural to each region being handled in a more decentralized fashion. These plans suggest strong Russian influence.

In recent years, moreover, Chinese authorities have stressed the importance of small and medium enterprise in Chinese economic growth. The advantages that have been cited are lower investment costs, less need for transportation, fewer complicated techniques and equipment—thus, greater ease of development. These are advantages relating to the mobilization of local capital and the immediate use of built-in skills and resources. The function of small enterprise as envisaged by the Communists is perhaps most clearly seen in the commune system.

The primary function of the communes has been that of labor mobilization. The plan has been to utilize this labor as fully as possible through the development of handicraft and small industrial units within the communes. Thus the peasant is being thrust into the industrial process at various levels in the hope that he can provide a major portion of his own producer and consumer goods. Once again, there have been failures, such as the primitive blast furnaces, but in the general concept, there is validity. The communes can also be considered instruments of consumption control, and to a lesser extent, military units. One might suspect that in some measure, the commune system derives from the historic experiences of the Chinese Communists when they were surrounding the cities, building their rural, peasant-centered Communist movement.

(c) The attempt to raise agricultural productivity in spectacular fashion by concentrating upon expanded irrigation and intensive, scientific farming. To raise their agrarian output, the Communists are stressing the following factors: expanded and improved irrigation systems, and the use of marginal land (land under cultivation has also been increased by removing old private boundary paths, buildings, and cemeteries); extensive use of organic and inorganic fertilizer; improved seeds, multiple cropping, denser planting, and deeper plowing. The grave deficiency up to date has been that of fertilizer. The production of chemical fertilizer is still negligible, and if the soil is to be pushed to its limit through heavy cropping, it must have nutrients. The broad program outlined above, however, seems generally valid, and undoubtedly has produced substantial increases.

(d) The attempt to use State power so as to limit consumption and raise investment. By means of total controls, the Communists have sought to prevent serious inflation and channel a major portion of productivity directly or indirectly into capital investment for industrial expansion. Private ownership has been practically eliminated and private capital largely absorbed; the profits of State and State-private joint-enterprise are a form of taxation. Wage and price controls, together with the rationing of essential goods, have been strictly applied. At this stage of the Chinese industrial revolution, the people are expected to sacrifice "for the future"; these have been years of survival, not famine, but for the overwhelming proportion of the Chinese, they have also been years of extremely hard labor, meager compensation, and "bare essential" type living.

(e) The attempt to benefit from the historic experience of the Soviet Union as well as to utilize its economic and technical assistance. In addition to the internal factors influencing economic development in Communist China, one vital external factor is obvious, namely, Russian aid. It is impossible to measure that aid in any full sense, because the Chinese Communists have used the Soviet Union in a variety of ways as their basic model. The experience of the Russian revolution has been an asset of incalculable advantage; the errors of the U.S.S.R. as well as its successes have been made available for study. Thousands of Chinese students are now attending schools in Russia and between 7,000 and 10,000 Russian scientists, engineers, and technicians have been on temporary assignment to China.

Between 1949 and 1958, the U.S.S.R. probably furnished Communist China with $2.24 billion in loans, but the great bulk of this was in the form of military assistance. The amount clearly specified for economic de-

velopment was only $430 million. Soviet credit appears to have financed about 30 to 40 percent of the machinery and equipment necessary for some 156 core projects. The latest economic agreement between Russia and Communist China, signed in February 1959, provides for supply to the extent of $1.25 billion over 8 years.

Clearly, Soviet economic assistance up to date has represented only a small fraction of the total capital involved in the modernization campaign, probably about 3 percent of the total net investment. And this aid has required Chinese repayment in exports, repayment which is now underway on an increasing scale. The Chinese industrial revolution is being paid for by the Chinese people; it is not a gift of the Soviet Union. This does not alter the fact, however, that Soviet aid has been extremely important. Without the various forms of assistance noted above, the Chinese industrial revolution could not possibly have reached its present stage so quickly. But Soviet aid has not been a panacea; it has had definite limits, and it has created certain pressures and problems.

The foreign trade of Communist China illustrates the vital role played by the Communist bloc in Chinese economic development and also some of the problems produced by this fact. Between 1950 and 1955, total Chinese trade increased approximately two and one-half times to some $4.6 billion. By 1955, over 80 percent of the total trade was with the Communist states as contrasted with only 33 percent in 1950, and less than 1 percent in the pre-Communist era. Naturally, this trade was mainly the exchange of Chinese agricultural produce for machinery and industrial goods. Despite agrarian scarcities, China had no other commodities to export in quantity, and thus agrarian, together with mining productivity determined in considerable measure the amount of industrial development possible. Basically, this remains true.

Through 1955, Communist China had a large trade deficit, the import surplus being counterbalanced partly by Soviet loans. However, these loans were limited, as has been noted, and repayment was scheduled for a sharp increase in 1955. This fact, together with Chinese economic grants to other countries, threatened a serious imbalance in Peiping's international accounts. At the same time, production of light industrial products marketable in some foreign areas was increasing. These facts help to account for the Chinese Communist trade overtures to non-Communist countries, especially those in the Asian-African area, beginning in 1956. The need for foreign exchange and diversified markets was probably at least as important as the political gains envisaged. Recently, however, there have been setbacks in Chinese Communist trade with the free world, due apparently to transport difficulties and internal economic dislocations caused by rapid expansion and the new commune system. Political factors were also involved in the case of Japan.

The objective of Communist China has been summarized in their much-heralded slogan, "Catch up with Great Britain within 15 years." This refers, of course, to output of key products, particularly in heavy industry, not to overall nor to per capita production; but in these limited terms the slogan seems obsolete if Communist statistics are acurate. Any assessment of the economic future of China, however, must seek to weigh such crucial factors as population trends, agricultural production, and foreign trade.

(a) Unless the government launches a very strong birth control program Chinese population increases are likely to keep living standards low and be a brake upon the industrialization process. If the 1953 census was accurate, the population of the mainland in 1959 is probably in excess of 660 million, and currently increasing at a rate of between 2.2 and 2.4 percent, or at least 14 million annually. With these figures as a base, it is entirely possible that by 1970, the Chinese mainland population will exceed 800 million, even assuming birth control enjoys some success. The government has recently backed away from its earlier birth control campaign, but it is probably concerned about the problem. Conceivably, it might launch a "crash program" that would produce greater results than are estimated here. It is more likely that there will merely be a gradual decline in the rate of increase. In this event, mass living standards are destined to remain low in spite of substantial productive increases.

The commune system may enable needs to be met with maximum "efficiency," measured in cost of service terms. This system may also represent some degree of rural urbanization with the special kinds of livelihood advantages that this could produce. Whatever the gain on these counts, however, a significant gap in living standards between Chinese urbanites and peasants will probably continue. And the population will remain overwhelmingly rural for the forseeable future. The rate of growth of the cities will be more rapid than that of the rural population, but the urban-rural population ratio is not likely to change greatly due to the great absolute predominance of the rural sector.

(b) Agricultural production will remain a critical factor not merely in determining consumption possibilities, but in determining capital formation for the ambitious industrialization program; the Communist claim of a spectacular breakthrough in agrarian production may be sufficiently true to support rapid industrial development. The peasant pays a major share of the cost of rapid industrialization in China as elsewhere. The economic future of Communist China depends partly upon the ability of the government to keep him harnessed to this task. He must produce as much as possible while consuming as little as possible, if the most ambitious goals are to be met.

Nneteen hundred and fifty-eight was a year of very good climatic conditions for China, abetting bumper crops. Even if gains over 1957 were great, the 1958 combination of favorable crop conditions and the achievement of a great leap forward in techniques suggests that further increases are likely to be of smaller magnitude and perhaps more painfully achieved. On the other hand, 1959 appears to be a very unfavorable year for crops, as were 1954 and 1957. The chances are strong that Government investment will continue to flow mainly into industry, with transport also getting attention in view of the serious deficiencies here, at the expense of the agrarian sector. Despite all the economic and sociopolitical uncertainties, however, the Communist record to date would seem to indicate that agrarian productivity can underwrite a speedy industrial revolution, particularly if consumption is kept fairly low.

(c) Export will remain one very important factor in capital formation for Communist China, and every effort will be made toward trade expansion, with increasing attention probably given to the Asian-African area for both economic and political reasons. The economic impact of Communist China upon the Asian-African world seems destined to grow. Overall Chinese trade expansion will probably take place at a slower rate of increase than during the early period of the first 5-year plan, and most trade will continue to be with the Communist bloc. However, as Chinese industrialization progresses, Communist China will seek a more diversified market. She can be expected to compete for foreign exchange and political influence in such areas as southeast Asia with her light industrial products.

The entry of Communist China into the southeast Asian market has already produced anxiety in Japan; Communist Chinese textiles, ceramics, cement, machinery, and metallic products have begun to make inroads into traditional Japanese markets. Meanwhile, Sino-Japanese trade has virtually ceased because of a political impasse, adding to Japanese unhappiness. On the other hand, trade between Communist China and some Western countries, notably Great Britain and West Germany, has shown some progress.

The general situation renders current American policy on Communist China trade very vulnerable. Our position has been one of maintaining a strict trade embargo on Communist China ourselves, striving to uphold the Chinese Communists restrictions, and depreciating the probable value of trade with the Communists. Already pressures from Great Britain and Japan have caused us to acquiesce in modifications of the original Chinese Communists trade restrictions. But further pressures are probable. If Communist China is interested in, and capable of expanding her trade with the non-Communist world, current American policy runs the increasing risk of being regarded as negative and obstructionist, and is likely to be overriden. Even if Chinese capacities for such trade remain weak, there will be the strong temptation to use commercial feints and overtures toward a country like Japan as long as these cannot be thoroughly tested.

If economic trends are to be summarized briefly, the emphasis must be upon the intensive economic change and growth that is taking place in Communist China today. Whether this tremendous drive toward modernization can be successful will depend partly upon technical and economic factors and partly upon the ability of the government to mobilize and hold public support in the face of heavy sacrifices for the foreseeable future This requires some appraisal of socio-political trends in Communist China and their implications.

2. The Chinese Communists have created a powerful state in which major policies and critical decisions determined at the top can be transmitted and applied effectively and quickly at the grassroot levels of Chinese society . The following factors have been important in the political-social organization of Chinese Communist society:

(a) The authority of the Communist Party has been supreme and unchallengeable, operating under the customary rule of "democratic centralism" which allows basic decisions to be made by a small elite in private. Despite the fiction of a multiparty-multiclass government, Communist China is ruled by the Communist Party elite. This elite are generally middle-aged men, have had better than average education, are party veterans, come mainly from the interior provinces, and are mostly products of indigenous training, although one-fourth of the current Central Committee members have had some training in the Soviet Union. There have been very few purges of top-ranking leaders during the first decade of Communist rule, perhaps because the power struggle within the Communist movement had been settled earlier and an acceptable division of labor established among the victors The "old Bolsheviks" in charge of the party today have had a lengthy history of working together. Also, under Mao's leadership, the party has guided and controlled the army, making it only an instrument of party purposes. There have been no indica-

tions thus far of any serious military challenge to party authority.

Nothing is more difficult than to assess the precise nature of relations within the Communist Party elite, since information is based largely upon rumors that cannot be substantiated. There have been recurrent stories of friction within high party circles, sometimes involving Mao Tse-tung himself. Concrete evidence, however, is almost totally lacking. Mao's position has some very great strengths; he is "father of the revolution," charismatic leader, and "philosopher king." To seek his overthrow would not only be to fly in the face of an entrenched power position but also to risk enormous damage to the imagery of Chinese communism, which has been built around the symbol of the benevolent and omniscient Mao. It would probably wrench communism in China more severely than the de-Stalinization campaign did in the Soviet Union, and it is very unlikely.

It is quite probable, however, that vigorous policy debates take place in inner party circles, and basic policies may well be shaped by such debates. In some instances, personal rivalries probably blend with policy differences. It would not be surprising to find definable factions within the Chinese Communist Party. There is some evidence, for example, to suggest that Liu Shao-ch'i, Mao's presumed successor, and Chou En-lai, Premier and leading "diplomat," have led opposing policy lines.

On the basis of the scanty evidence available, however, Communist China does not appear to be wracked by party disunity at present. If this is true, one important reason is Mao Tse-tung. At this stage of the revolution, his role is unique and probably unassailable, at least in terms of frontal attack. His death might produce or lead to a political crisis. A totalitarian society generally faces instability when its top leadership undergoes change. But upon all of these points, prediction is very hazardous.

A new military class is beginning to emerge in Communist China, a second-generation group who are essentially professional soldiers rather than the old revolutionary, party-centered type. It is possible that, in time, this new class will constitute a threat to the party, or at least produce individuals who must be closely watched. A more immediate problem confronting the Communists, however, is that of absorbing a vast number of new party recruits. Membership between 1950 and 1957 increased from 4½ to nearly 13 million. Many within this new elite are relatively raw and untested. Yet they must be given increasing responsibility. Some decentralization is now considered both possible and desirable; thus, the importance of local leaders will probably grow. In view of their recent arrival in the party and to power, however, this provincial bureaucracy may undergo numerous changes as pressures develop. But under democratic centralism, the basic decisions will continue to be made at the top, and some instability at local levels should not disrupt the regime.

In brief, there are certain tests of strength which the Chinese Communist Party must meet, now and in the future; there is always the possibility of a political upheaval within top ruling circles. However, the chances of an elitist disunity sufficient to jeopardize party control seem extremely remote. On the contrary, most indications are that this is the strongest, most unified government that modern China has ever had, and that the Communist Party is able to enforce its authority effectively at all levels.

(b) Party control over the Chinese people is exercised mainly through special organizations that link the individual directly with national policies and commit him to them. Historically, the Chinese state was greatly served by localized or private groups like the family, but it was also forced to compete with them for the individual's first loyalty, a competition which it generally lost. The old system was thus the despair of the modern nationalists, those who would build a powerful, centralized state. The Communists have made use of the great organizational tradition of China, but they have sought to fashion units that will serve without competing. The old competitive elements are rapidly being undermined or destroyed.

Communist China has many types of organizations, but none is more important than the neighborhood cell-type association through which most citizens function. With the cadres as leaders, these small groups serve as ideological watchdogs, mutual exhortation societies, and transmitters of basic policy. Through them, the citizen engages in study, self-criticism, and reform. Through them also, he demonstrates against imperialism, overfulfills quotas, and kills flies. The Chinese is more than ever an organizational man, but every organization exists to fulfill state purposes and extend state power.

(c) The Communists regime at present relies upon many psychological-emotional appeals in its approach to the Chinese people. One of the foremost appeals has been that of nationalism. To win support and attain acceptance of their policies, the Communists have used a wide variety of techniques, both coercive and persuasive. In the initial stages, coercion was important to the regime. Especially during the land reform era, a sizable number of "Kuomintang bandits" and "reactionary landlords" were liquidated. The purpose was not only to employ terrorism to break the back of the old elites, but also, through public accusation meetings, to produce mass denunciations of landlords and other traditionally elitist elements that would cut old ties irrevocably, thereby facilitating a transfer of loyalty and affiliation. These meetings served a second major purpose: they produced a sense of active participation in the new order.

The basic decisionmaking powers must be held firmly by the party elite, yet mass participation is of great value to Chinese Communist "democracy," providing it supports rather than challenges centralized decisions. Thus participation in Chinese politics at the mass level today is based essentially upon ratification, not decisionmaking; it is more ritualistic, induced, and collective than free flowing, self-interested, and independently derived. Its particular attributes, however, do not negate its significance.

For the overwhelming majority of Chinese, participation in public politics is an unique experience. Now that it is compulsory, it must be measured against the aloofness, indifference, and freedom allowable in the past. It cannot be compared in the mind of the average Chinese with a type of participation which he has not known, that type characteristic of the democratic Western societies. His participation does represent in some measure a tremendous projection and regularization of the sporadic mass demonstrations that emerged so dramatically at various junctures of the modern revolutionary movement. But the difference in degree—in scope, intensity, and continuity—amounts to a difference in kind.

The Chinese Communist system may also represent an alternative to Western-style democratic participation that can produce psychological satisfactions and emotional releases. It is undoubtedly a burden to many. Indeed, it appears that boredom and above all, weariness, much more than previously held convictions, serve as the main source of discontent. Nonetheless, group discussions and actions at the local level have conveyed some sense of spontaneity and dynamism, and certainly they have been effective in forwarding national policy. The precise attitudes of the Chinese people toward their new involvement cannot be determined with any accuracy. There is reason to believe, however, that the Communist government has been able to permit many, especially among the younger age groups, to strong support for the new order.

To this end, nationalism has been of great assistance. It is ironic that nationalism should have reached its zenith in China under Marxism. Yet in many respects, the Chinese Communists have forged the strongest, most tightly knit nation-state that has ever existed in this area Among the Asian-African societies, only Japan has achieved comparable integration. In considerable part, this may be attributed to power or the threat of power: to the progressive elimination or tightening control of all antinational elements including minority peoples, and the extension of centralized power to the remotest areas of China. For many of the Chinese people themselves, however, the nationalist appeal has undoubtedly fallen upon willing ears. The call to make China a first-class power, to show the world the true capacities of the Chinese people, must be understood against a recent history of Chinese weakness, foreign invasion, and humiliation. This is a history made more painful by virtue of the vigorous sense of cultural superiority and the xenophobia in China that survived in some measure the chaotic events of the last 150 years.

The effect of combining nationalism and communism is to make China a spartan state at present in which the themes of abstinence and sacrifice, love and hate are strong. Physical exercise, mass demonstrations, and militia training are symbols of the new China, as "the white-faced scholar," contemplative tea-sipping, and mah-jong were symbols of the old. Modernization—and all the sacrifices that must accompany it—is an act of patriotism, as it was in Japan 50 years ago. To overfulfill one's quota is to protect one's country against "American imperialism." A major effort has been made to represent the United States as the great threat to peace and prosperity for China.

The ears and eyes of the Chinese people are scarcely ever beyond range of propaganda to this effect. Billboards, publications, and broadcasts reiterate two themes: American imperialism is a serious menace and it will be defeated by the concerted efforts of the people. As evidence of the first point: "American military occupation of Chinese territory" (the offshore islands and Taiwan) is alleged and the extensive network of American Far Eastern bases is cited. The second point is stressed by hailing Communist successes in the Korean war and also by emphasizing the tremendous potential for future power implicit in the current revolution. Chinese official pronouncements are couched in tones of great optimism, indeed, cockiness. Having come to power contrary to most expectations (including those of the Russians), and having won on almost all their major gambles of the last decade, the Communist leaders do not appear to be overly worried about the future. There is rather a belief that "the east wind will prevail over the west wind," that China is again approaching an era of glories. To the extent that this concept can be communicated effectively to the Chinese common man, it represents a powerful nationalist stimulus. The harshness of sacrifice can be mitigated by the assurance that it is not in vain; that betterment will be the fruit of labor.

(d) Opposition within China to the Communist Party and to communism certainly

exists, and possibly in considerable amount. It is extremely unlikely, however, that the present regime will be seriously challenged by internal dissidence in the near future. Basic changes in the traditional social structure of China have been underway for many decades. Communism has naturally accelerated those changes along with providing redirection. A tremendous leveling process has taken place within the agrarian classes. The rural gentry have disappeared, their properties have been communalized, their sociopolitical influence has been destroyed, and in many cases, they have been liquidated physically. The poorest peasants, on the other hand, have been raised in status, in opportunity, and probably in livelihood.

The urban commercial-industrial classes have been put under a variety of pressures. Their growing political influence during the nationalist era has been abruptly ended. Their increasing economic position as private entrepreneurs was destroyed with the nationalization of almost all firms and factories. Yet it would appear that relatively few members of these classes have been liquidated. A large number have made reasonably successful transitions to the role of state managers. This may not be a basically different function in economic terms, but it holds very different sociopolitical implications. There can be little doubt, moreover, that a new managerial group is being trained as quickly as possible who will bear scant relation to this older generation. Economically, the urban working classes appear generally to have benefited from the revolution. Social security has been introduced; food is meager but adequate, and necessities are available. Their prestige, moreover, is vastly higher; to them, all must pay lipservice at least, and engage in some emulation. Bitterness toward both the party and the system is probably extensive among the old commercial-industrial groups, but a considerable measure of support for the new era may exist among the urban workers.

For the mature intellectuals, recent years have undoubtedly represented a series of traumatic experiences. Many traditional ways and attitudes have been vigorously assaulted: individualism, the prestige of pure (apolitical) scholarship, and disdain for physical labor. The new premium is upon conformity and participation, and both must be active. Positive dedication to the regime can be shown by public denouncements of past bourgeois influence, collective action via study groups and committee sessions, and some quota of manual labor as service to the state and method of acquiring respect for the vanguard class.

The intellectuals function not only in academic life, but also in journalism, the civil service, and industry. Communist China desperately needs their services in the thrust toward modernization, especially those in scientific and technical fields, or those who have special administrative skills. Relatively few intellectuals have been liquidated, although a large number have participated in corrective study and almost all have had to undergo a series of rigorous self-criticism sessions. Intellectuals who adjust to the new order are often accorded substantial privileges and opportunities. Funds are available for laboratories, official histories, and a wide variety of cultural activities in which the state has reason to invest.

Yet as a group, the older intellectuals must remain suspect, and some of the younger ones as well. During the 1957 "liberalization" period when the Government briefly encouraged or at least allowed fairly fundamental criticism, a number of student and intellectual elements registered their protests in vigorous terms. Subsequently, many of these elements were forced to admit their "rightist" errors as the Communist regime withdrew in some alarm from the "let 100 flowers bloom" experiment. There have also been other indications that opposition within intellectual ranks may be fairly substantial.

Intellectuals in any culture, however, interlace timidity with tenacity, and if left to their instincts, find their greatest solace in a very personal creed. They have all the weaknesses of unorganized men whose individual positions are likely to cover the entire political spectrum and whose personal rivalries are legion. These weaknesses are not necessarily fatal in a liberal milieu, and indeed, under circumstances of liberalism or "inefficient" authoritarianism, intellectual dissidence may become a political force of consequence. Certainly this force in China ultimately aided the rise of Chinese communism. As a class, however, the intellectuals are particularly ill equipped to do battle successfully with totalitarianism, especially in its early stages. The Government may have good reason to distrust a substantial number of individuals within the intellectual camp, but given its present "stick and carrot" policy, it probably does not need to fear them. And it is trying to train a new group, both in the U.S.S.R. and China, that will not be influenced by the "bourgeois" or "Confucian" training of the older generation.

The military class, as has been noted, presents a picture of growth and change. The old Red army has a long history of party leadership and control. There is no indication that this general relationship has been altered. Communist Party leaders seem to take confidence in the strength and mobility of their armed forces, and have had no discernible difficulties with them. Currently, Chinese Communist military forces probably total about 2½ million men. In addition, there is the program of training commune militia. Huge numbers of citizens have been involved in this training, but it appears to have been crude and of dubious military value. It has probably been more important as a part of the general campaign for labor mobilization and discipline. The reliance of the regime must be upon the regular military services. The men in these units are becoming increasingly specialized and professional, more technically oriented, and perhaps somewhat less the revolutionaries. From the party standpoint, there are dangers implicit in any such trends, but at present, no signs of party anxiety can be noted. The military forces are considered trustworthy by the regime, and appear to be so.

Peasant grumbling and discontent have probably caused the regime much concern. In their overwhelming numbers, the peasants are still the people of China. It is obviously desirable to make them as satisfied and cooperative as possible, although the history of the U.S.S.R. strongly indicates that under communism, rural unrest can be widespread and still be kept under resolute control. No sweeping generalization about the present conditions and morale of the Chinese rural population is very safe. Conditions are not uniform; they are changing rapidly; and there is no way to measure accurately all the pertinent factors, especially the psychological ones. It is probably safe to say that most of the old rural elite harbor deep resentments while some of the poorest elements regard their lot as generally improved. But attitudes are undoubtedly mercurial, depending upon the relative satisfaction or distress of the moment.

How the peasant en masse will react to communism and the communal life over the coming years cannot be predicted now. With respect to the communes, a long period of trial and error is probable, during which various adjustments will be made as pressures arise. Already some liberalization has been allowed as a result of strong complaints voiced during the opening stages of commune operations. Refugees coming over the southern borders of China have emphasized the extremely heavy work schedule and the meager rewards. There seems little doubt that life in rural China has been and will continue to be very harsh. But it must be remembered that this has always been true. The average Chinese peasant had an infinitely lower level of technology and standard of living when he was confronted with collectivization than was true of his counterpart in East Europe, for example. The Communist government remains vitally concerned over agrarian productivity. It can be expected to keep the pressure on the peasant up to those limits considered profitable and safe. It will continue to rely upon coercion when necessary, confident in its organizational apparatus and military strength. But it will also listen to the voice of the people, making tactical concessions when the situation requires them. Under all of these circumstances, the likelihood of a widespread peasant revolt seems slight.

The strongest and most organized opposition to the Chinese Communist Government has undoubtedly come from the Tibetans. Other minority peoples have also shown hostility, including the Uighurs, the Moslems, the Mongols, and some of the tribal peoples of south Yunnan. This opposition has been traditional and is culture based; in short, it is anti-Chinese at least as much as anti-Communist. In some areas, it appears that the Communists have made headway with the minority peoples by adopting a "go slow" policy, one calculated to make progress by stages. In other regions like Tibet, Communist troubles are obvious. These difficulties are likely to be expensive and annoying to the Chinese Communists, and may seriously affect their relations with neighboring Asian states, but they do not in themselves pose any basic threat to the regime. All minority peoples added together constitute no more than 6 percent of the total population of China.

Thus, the available evidence indicates the strong probability that barring a war with the United States, the Chinese Communist Government will have a lengthy tenure. American policy, whatever its precise forms, should operate under this assumption.

3. Communist China is very likely to emerge as one of the major world powers of the late 20th century. The future of China hinges upon many imponderables, of course, but almost all signs point to the rapid increase of state power—economic, military, and political—under the Comunists. The vast manpower and resources of China are being mobilized as fully as possible for this purpose. Primary targets include such fields as iron and steel, and heavy industry in general. In view of their accomplishments to date, there is good reason to believe that in their priority areas, the Communists will obtain notable results. The Chinese industrial revolution will certainly be uneven, but it may be one of the most rapid the world has seen.

A portion of this rising economic power will be channeled into military uses. In some respects, the Chinese Communists have been primitive in military tactics and weapons; Mao's greatest "Marxist" innovation, that of surround the cities was itself a sign of that primitivism, a peasant army supplied in part with homemade small arms. Yet in this field, as in others, the Communists are likely to skip many stages of military evolution. The atomic age for Communist China is probably not far distant. Meanwhile, Communist forces may already have obtained their first missiles from the Soviet Union. Communist China has a long way to go before it can be considered a first-class military power; although its army is the largest in

the Asian-African world, its air and naval power is relatively weak, and its modernization campaign has just begun. This is a field, however, where the leaders will certainly be dedicated to advancement, and where even a few years may make a substantial difference.

While it may be en route to major power status, Communist China will continue to be dependent upon the Soviet Union. At this stage, both Soviet economic aid and the Soviet military shield are essential. And this dependence, while gradually lessening, will probably exist for a very considerable time. It is very probable, however, that Chinese insistence upon equality in their alliance with Russia will come well in advance of their real attainment of that status. The shifting power balance between these two states and its effect upon their relations are clearly of crucial importance to the entire world.

The growth of state power in Communist China is not likely to be accompanied by an equal growth in living standards. The common man will live, but he will not live well. Priorities will remain with producer, not consumer goods. And unless the Government undertakes a crash program of birth control, populational increases will eat deeply into productive gains. The odds are strongly that the coming decade for the average Chinese will be one of unremitting toil and sacrifice for the glory of China and the hope of better things to come.

This could be a serious weakness for the Communist state. Certainly, it will put a premium upon the augmenting and skillful manipulation of political power. Perhaps Communist man lives less by bread than other man. He lives also by pageantry, propaganda, and persuasion, all encased in the coercive armor of Communist power. In China, moreover, these energy-producing substances are given in the form of heavy nationalist injections. Patriotism and socialism have been blended. Three revolutions, the nationalist, the industrial, and the Communist, have been mixed together. In the years ahead, the Chinese Communists seem likely to wield their persuasive-coercive techniques so as to keep mass material needs and demands at the minimum required for productivity and social order. In no other manner can they produce industrialization of the type and on the time schedule they demand.

Consequently, the chances are remote that any basic political "liberalism" will evolve in Communist China in the near future. Yet Chinese totalitarianism will have its own unique forms, and a certain dynamism that cannot be ignored. The bloody era is over, at least temporarily, and now heads are being shaped, not chopped. The effort at present and in the future will be to create so perfect an organizational man that coercion in its crude forms will be outmoded, except for "bandits" and "backward people misguided by reactionaries" like the Tibetans.

The implications of these developments to the world cannot be overemphasized. To some extent, Communist China may have an appeal to certain countries and individuals as a model, a nation moving from the depths of backwardness toward modernity in giant strides. Its programs and techniques are likely to receive attention similar to that long given the methods of Japan and the Soviet Union. But the influence of China as a model will be strictly limited. This country cannot really become an ideal to most of the late-developing peoples of the world. The harshness of life and the continuing poverty of its people will prevent that. Moreover, admiration, even when present, will be increasingly mixed with apprehension, especially among those societies that border China. Progress and poverty, the rapid growth of state power in Communist China, coupled with low mass living standards, present dangers to Asia and the world. The power of Communist China will increasingly demand recognition. And the dangers that this power poses to the non-Communist world will increasingly demand the closer cooperation of free nations if the threat is to be met effectively.

(b) Chinese Communist foreign policy

The foreign policy of Communist China contains elements of both the past and the present. In it can be discerned echoes of the old tributary system (now there are cultural and economic missions to and from surrounding peoples) and the old antiforeignism, exhibited most strongly toward the West. Yet there is much that is new. Indeed, a certain parallelism exists between Chinese Communist domestic and foreign policy as to tactics. The formula for Communist success in China was based upon the theme of multiclass cooperation under "proletarian" leadership against "the enemies of the people." Each class and subclass from peasant to "big bourgeoisie" was analyzed and defined as "people" or "enemy," with separate treatments prescribed. The world has been subjected to similar treatment by the Chinese Communists in the last decade.

1. The international proletariat is naturally represented for the Chinese Communists by "the socialist camp" headed by the U.S.S.R. The Sino-Soviet alliance is currently based upon vital mutual interests outweighing such negative factors as may exist. It will not be ruptured over trivial issues, and it will probably endure for a considerable period. However, Sino-Soviet mutual interests are likely to be reduced with the passage of time, and strains in this alliance be increased.

Chinese Communist leaders have repeatedly acknowledged a great ideological and material debt to the Soviet Union, and that debt is very real. An assessment of the Sino-Soviet alliance, therefore, should first pay homage to its strengths, in terms of the advantages accruing to the major parties. With respect to Communist China, the following advantages must be noted:

(a) Soviet economic experience, blueprints, experts, and materials have been essential during the initial thrust of the Chinese industrial revolution.

(b) Soviet military assistance and the broad protection of a Russian military shield have contributed mightily to Chinese Communist power at home and abroad.

(c) The Soviet Union has been of inestimable help to the Chinese Communists in marking out the broad ideological guideposts. Russia pioneered in applying Marxism-Leninism to the problems of gaining and holding power, and to the tasks of rapid modernization. While not without its annoying aspects, Russian ideological assistance continues to be extremely useful to the Communist leaders of China.

(d) In addition to borrowing extensively from advanced Soviet science, the Chinese Communists have also used symbols like sputnik as major propaganda weapons toward their own people, giving them a sense of affiliation with irresistible strength, the wave of the future.

(e) Through this alliance, the Chinese Communists have avoided a sense of isolation on the one hand and the dangers of widely variant external influences on the other. And in addition, Communist China has increased her world prestige within as well as without the Communist orbit. She has played a considerable role as mediator and source of influence in Communist circles.

From the Russian standpoint, there are also significant advantages:

(a) Communist China adds new dimensions to Soviet military and political strength. If the Sino-Soviet alliance remains intact, the Eurasian Continent will be spanned with an unparalleled combination of technology, resources, and of manpower. The victory of communism in China has represented a tremendous gain in prestige and strength for world communism, of which the Soviet Union is the leader.

(b) While the development of China may prove a drain on Soviet resources, Communist China has begun to share in the costs of international Communist assistance, and in the planning and execution of its strategies. It has helped to lengthen the reach of the Communist movement.

(c) Economic interaction between Communist China and the Soviet Union has some advantages to the latter, and these may increase as Chinese economic development continues.

(d) The successes of Chinese communism enhance Russian propaganda to their own people, enabling it to play upon themes of growing Communist strength and emulation of the Soviet experience abroad.

(e) Communist China can be of valuable assistance in supporting the Russian position within the Communist world, as has now been well demonstrated.

Yet the long-term solidarity between the U.S.S.R. and Communist China is by no means assured. Their relationship is becoming increasingly complex. Even at this point, there have been suggestions of hard bargaining, uneasiness, and disappointments. Whatever the precise nature of current relations, the Sino-Soviet alliance faces the following hazards:

(a) Increasing competition between two expanding societies, dynamic, nationalist, and with marked cultural differences despite some common ideological bond. Notwithstanding their gratitude (and this may be mainly at the elitist level), the Chinese regard the Russians as foreigners. From most indications, relations have been more businesslike than fraternal. Chinese nationalism everywhere is ascendant. Enormous pride is shown in the capacity to move from dependence upon Russian aid to independence from it. The symbols used to identify Chinese communism and progress are increasingly indigenous ones. Even the venerable dragon has found a respectable place in the new China. And Mao Tse-tung is proudly heralded as foremost among modern expounders of Marxist theory and champion of Communist practice.

Meanwhile, for the first time in history, a true boundary is being established along the vast Sino-Soviet frontier. Chinese and Russian power will soon confront each other on a greatly expanded basis. Men and machines are moving into areas that were once arid, empty expanses or cold, hostile forests. Can the old Sino-Russian border disputes and rivalries for spheres of influence be permanently set aside in the face of these developments?

(b) Differences in practice lead to differences in theory, a thorny problem to rationalize in an ideological empire that appeals to supreme authority and aspires to "supreme truth." For communism, this is an age of pragmatism, yet the inner compulsion for ideological conformity remains. There can be different routes to communism, accommodations to diverse cultures, and different timings of development, but there can be no national communism, say the leaders. However, do not differences in culture, in problems, in experience and revolutionary stages produce important differences in the practices from which theory must flow? In certain respects, Chinese communism differs significantly (and consciously) from the Russian model. This creates a problem similar to that of the Western medieval church—how to prevent

doctrinal heresy and schism in a period of practical diversity and flux.

(c) Given the enormous interaction between Russian and Chinese societies at every level, mutual influence upon the internal politics of the other party is probably unavoidable. Sino-Soviet relations may be sufficiently important to create key internal issues around which policies, factions, and even national leadership could conceivably revolve. That such issues would always be resolved in favor of a strengthened alliance seems dubious.

(d) The coordination of policy toward the non-Communist world, particularly the United States, must also pose a problem to the Sino-Soviet alliance, a problem that will not become lighter as Chinese power grows.

Some of the factors discussed above may materialize slowly or not at all. It is possible that they can be handled without a disruption of the alliance. Western allies have worked out many complex problems. Yet, increased strain upon Sino-Soviet relations due to some combination of these factors is very possible, particularly if general world conditions encourage it.

Toward the minor Communist states, the Chinese Communists have played a varied role. Considering their own serious internal problems, they have been astonishingly generous to the three Communist states of Asia: North Vietnam, North Korea, and Outer Mongolia. Grants and loans allocated by the Chinese to these governments totaled at least $600 million through early 1959. This appears to exceed the amount loaned China for economic development by the Soviet Union through 1958. Moreover, more than one-half of the Chinese assistance was in the form of grants-in-aid and gifts. The largest support is going to North Vietnam, where Chinese influence also appears strongest. In North Korea, the Chinese position seems to have slipped and Soviet influence appears predominant. Between 1956 and 1958, major purges took place in North Korea, and many of the old Chinese-influenced "Yenan" factions were ousted. This situation may be a very delicate one for the Communist world. Chinese influence in Outer Mongolia is still quite limited, but is likely to increase.

With respect to East Europe, Communist China has played an important ideological-political role, helping to shore up the Russian position but at the same time, no doubt, helping to define it, assisting in the formulation of permissible political stands. And there is some suggestion that Eastern Europeans, apprehensive lest Asians stand once more at the gates of Vienna (this time, ideologically), may look increasingly to the Russians as a counterweight. Thus current relations within the Communist world appear far more complex and uncertain than such slogans as "proletarian solidarity" would suggest.

2. In the past, Chinese Communist policy toward the Asian-African world has had its objective in gaining the friendship, respect, and confidence of the independent camp; but this policy has faced an increasing challenge due to its internal contradictions and the rapid rise of Chinese power. The Chinese Communists see in the Asian-African world the symbolism of the peasantry. The peoples of this area represent the great mass to be won by indirection, to be neutralized, utilized, and ultimately led. On balance, Chinese Communist policy toward the uncommitted peoples has been an attempt to win their sympathy, respect, and trust. This attempt to make Communist China lovable was most broadly displayed at Banddung and in the widely heralded five principles of coexistence.

In line with these principles, Communist China has made certain important concessions, offered economic aid to a number of non-Communist countries, and ardently pursued a program of cultural relations with her Asian neighbors. Some successes have been scored. Yet this attempt to woo the Asians now faces difficulties, and the problems reveal the complex choices which Communist China must make in her foreign policy toward such areas as south and southeast Asia.

(a) How strong can China become, and how far can she advance her national interests without worrying or antagonizing the other Asian societies? Despite her various commitments to internationalism, Communist China is not only a rising nation-state today, but one that is militantly nationalist in some respects, as if to compensate for centuries of weakness. Ideology affects both the tactics and objectives of Chinese Communist foreign policy, to be sure, but that policy can be defined partly in national interest terms: to unify China and to provide it with as much border security as possible. Specifically, this means that the Chinese Communists are dedicated to the complete control of historic China, from Tibet to Taiwan; and secondly, while they would prefer friendly states on the borders, they will accept neutral ones, but states allied with American power will be regarded as hostile and probably treated accordingly when Chinese capacities and the opportunities permit.

Both of these basic national policy objectives of Communist China affect Asia directly. The unification movement brings Chinese power into areas which were formerly buffer zones, power vacuums inhabited sparsely by primitive folk. Thus to the south of China as to the north, more direct confrontations of Chinese and foreign authority are developing, raising new problems and apprehensions. The Sino-Indian border problem is an especially significant example. Now the Chinese Communist Government wants the buffer zones pushed out, as it were, to encompass non-Chinese Asia. It will struggle against the imposition of any "hard line" involving American power around its borders. In this struggle, the Communists may choose from a variety of tactics; but, in fact, they will probably select some combination from the carrot-and-stick alternatives, varying the combination or balance in accordance with the area and circumstances. The "stick" policy, however, is not likely to take the form of a war in which Communist China herself is fully and openly committed. The risks of such an approach, both military and political, are so high as to make it primarily a course of last resort. It is safer and cheaper to launch and support indigenous movements, than to apply other forms of economic and political pressures.

(b) Thus the interrelated question becomes the extent to which Communist China will apply the Chou formula and the extent to which it will apply the formula of Lenin. The Chou formula rests upon noninterference in the internal affairs of another state, respect for the territorial integrity and sovereignty of all states, and support for coexistence. The Lenin formula is to promote subversion and revolution. It must be noted that major elements within the Communist world such as the Soviet Union and Communist China often face a troublesome problem in balancing their position and interests as nation-states with their position and interests as members of the international Communist movement. Sometimes there is a conflict, or at least minimal compatibility. In such cases, priority has usually been given to the national interest. There is considerable evidence to indicate that indigenous Communist movements in south and southeast Asia got little Chinese assistance in periods when it was considered against the national interest of Communist China to be heavily involved in such activities.

Thus, it is not wise to apply the Leninist formula mechanically to Communist foreign policies. Neither is it wise to ignore it. In reality, the foreign policy of a state like Communist China is always a blend or mixture. But the critical question is that of the proportions of "Chouism" to "Leninism," and that will vary with the circumstances and the tactical decisions of Chinese leaders. These circumstances and decisions in turn will be strongly influenced by the policies and attitudes of their major opponent, the United States, and their major ally, the Soviet Union.

Within certain limits (Russian influence is probably important), Communist China has room to maneuver in her policy toward the states of Asia and Africa. It is likely that her broad approach to the uncommitted peoples, Communist China will continue to advance offers of aid, cultural exchange, and essentially "correct" policies. Any basic shift from this program makes no political sense. It would further jeopardize the very considerable gains that Communist China has made in some areas and would likely conflict with her first priority of the next decade, the domestic revolution.

Nevertheless, Communist China will take considerable political and even military risks to defend what she believes to be her national interests. And Chinese nationalism is presently both adamant and arrogant, as is illustrated by Tibet and also by the border controversies with India and Burma. Undoubtedly, Communist China is unhappy about the firmer policies being applied against internal communism throughout most of the south and southeast Asia today. Its gravest concern, however, appears when there is any threat of a movement from nonalinement to alinement with the Western camp, particularly the United States. It is likely to struggle against this by changing the proportions in its Chou-Lenin mixture so as to favor the latter.

(c) An additional complexity involved in Chinese Communist foreign policy toward Asia is the presence of some 12 million overseas Chinese in the southeast Asian region. What attitude should be taken toward this minority group? The overseas Chinese are generally apolitical, but loyal to the cultural traditions of China. They are the victims of discrimination and distrust in many areas. In this sense, they are a liability rather than an asset to good relations between Communist China and southeast Asia. Many of them had hoped that a strong homeland government would arise to protect their minority rights, but they have been disappointed. The Chinese Communists have sought to retain some ties and influence with the overseas Chinese but their general policy has been not to alienate the southeast Asian governments through support for the Chinese minority. Still, they cannot completely escape identification with this minority.

Despite some of its policies and because of others, Communist China is viewed with increasing apprehension in many parts of southern Asia today. This trend is almost certain to continue as the power of the Chinese Communists grows. It would be a mistake to assume, however, that such apprehension will result in a general flight from nonalinement or toward the ostracism of Communist China. Many Asian states will continue to believe that the problem of China must be met in other ways. There will be, however, a greater degree of receptivity to cooperation with the West, especially when Western policy is projected in positive, developmental terms.

3. Communist China has correct, if limited, relations with a number of Western countries. The Communists view the "bourgeois" powers with varying degrees of hope or hostility. In some sense, the traditional Chi-

nese Communist categories of petty bourgeois, liberal bourgeois, and big bourgeois seem to have applicability in the international scene. To be sure, the Chinese Communist attitude toward the west is characterized by considerable indifference. Traces of xenophobia are also present. However, definite gradations of treatment exist. Relations with the Scandinavian countries, for example, are quite correct, although not extensive. Even with some American allies such as Great Britain, a modus vivendi has been established and certain overtures have been made from time to time. With such countries, however, official cordiality is at a minimum, and the Chinese Communists sometimes resort to a "get tough" policy or a direct public appeal. Both tactics are currently being applied to Japan. Of course, Communist China welcomes increased recognition from some within the "bourgeois" camp. Her inducements will include trade, technical, and cultural overtures, but they will not involve the abandonment of any major policy stands.

4. Communist China regards the United States as her major opponent, and naturally she desires the reduction of American influence in Asia. There is virtually no chance that Communist China would consider any basic concessions on current issues to secure a shift in American policy. At the same time, the Chinese Communists do not want war with the United States for obvious reasons. There are also some issues, both now and in the future, that might be negotiable.

For Communist China, the United States stands today in the position of the leader of the "imperialist camp." America, or rather the American Government, has been designated as the foremost enemy of the Chinese people, encircling them with bases, holding part of their territory, and dedicated to military aggression. Slogans to stop American imperialism have been widely used in labor speedup campaigns. A genuine fear of American aggression may have been induced among some of the Chinese people. Certainly the United States has served as the enemy in patriotic drives.

The Chinese Communists are certainly not interested in bidding for recognition by accepting the U.N. policy on Korea, or the "two Chinas" solution. Indeed, it might be said on the latter issue that the Communists prefer the present American policy because it does not alter a basic situation which they hope eventually to manipulate—namely, the identification of Taiwan as a part of China. Communist China is confident that within a decade her power and influence will demand acknowledgement, and that the basic issues involving China can then be settled on her terms, probably without war. Consequently, she sees no reason to make any basic concessions involving her national interests at this time.

Yet, there is another side to this picture. Communist China is not prepared to challenge the United States militarily, now or in the foreseeable future, except for such very vulnerable areas as Quemoy and Matsu. Consequently, she like the non-Communists, must live indefinitely with some situations not to her liking. In the meantime, new issues are emerging which along with certain old ones probably are negotiable if the United States is interested in negotiating. These include trade, journalist, and scholar exchanges, unofficial missions, and perhaps before long, the more serious business of nuclear weapons.

2. TAIWAN

Prior to a discussion of our China policy, it would be well to examine current trends in Taiwan, which is under the control of the National Government.

(a) Taiwan remains heavily dependent upon American aid. The huge sums given in the last decade have helped to produce substantial improvements in the Taiwan economy as in its military defenses. Certain difficult economic problems, however, remain and cannot be solved under present conditions. Since 1948, the United States has extended over $1 billion to the National Government. On a per capita basis, few countries in the world have received so much American aid.

Taiwan did not enter the postwar era without advantages. Progress under Japan had been extensive. Prior to World War II, the Taiwanese had a standard of living second only to that of Japan itself in Asia. The people had acquired many industrial and agrarian skills. The years immediately after 1945, however, were years of chaos. Wartime damage and disorganization produced near-collapse. The early Nationalist era complicated rather than solved economic and political problems. Not until the end of 1952 did Taiwan reach prewar levels of production in industry.

Both industrial and agrarian gains have been substantial in the last 7 years. Industrial production has risen about 80 percent since 1952. The emphasis has been chiefly upon those light industries suitable to island resources such as processing industries and textiles. Major increases have also been registered in electric power, chemicals, and metal products. This stress upon mining and industrial production must continue in Taiwan. There is no other feasible approach to the economic problems of the island. Unless remedial measures are taken, the population density of Taiwan may become one of the highest in the world; it is already greater than that of Japan. Ten and one-half million people live on less than 14,000 square miles, with more than two-thirds of the island being mountainous and unsuited for cultivation. All available land is being used intensively. And the population is increasing at a rate of 3.5 percent annually—one of the highest rates in Asia. The growing labor force must be accommodated through industrialization.

The gross national product of Taiwan increased substantially between 1950 and 1956, and is probably rising at a rate of at least 4 to 5 percent annually at present. While industrial gains account for much of this expansion, agrarian output still contributes over 1½ times as much as industry to the national product. Production in agriculture has also improved as a result of better seeds, more effective irrigation, extensive use of fertilizer, and new cultivation methods. Some rural mechanization is beginning. Socioeconomic conditions in the rural areas have greatly improved, aided by the 1953 land reform program and the excellent work of the Sino-American Joint Commission on Rural Reconstruction. Taiwan and Japan are notable examples of what can be accomplished by land reform in non-Communist Asia. Nearly 75 percent of the Taiwanese rural families were affected by land redistribution or rental reduction. Tenant-cultivated land was reduced from 41 to 16 percent of the total land under cultivation. Today approximately 80 percent of rural families own all or part of their land, while 20 percent are tenants or hired hands. The Joint Commission has supplemented this basic change through an effective program of technical assistance and social services in the rural areas.

Rural living standards in Taiwan are undoubtedly high and in the cities also economic conditions for the common man are generally improved over earlier periods. However, this should not obscure certain basic problems that have social and political as well as economic implications:

1. Taiwan supports a huge army in proportion to the size of its population. Despite the fact that military pay is extremely low, the total costs constitute a heavy drain, and will continue to do so unless and until the military force is reduced in size.

2. In addition to its military forces, the National Government maintains a sizable bureaucracy. This is partly to take care of the mainland refugees. Most of the 2 million refugees presently in Taiwan must be supported directly or indirectly by the Government. The heads of family are either attached to the civil government, to the military services, or to such occupations as university teaching. Some hold straight sinecures or pensions. The socioeconomic problems herein contained are grave. On the one hand, most of the refugees are deeply unhappy with their present economic lot. Official salaries and wages in all of the above fields are woefully inadequate. Indeed, Taiwan has witnessed a great leveling process, whereby the common man, particularly the farmer, has been brought up in standards while most of the elite, transplanted from the mainland, have come down. One can hear bitter complaints from the latter that they have lost everything and that most of the wealth belongs to the Taiwanese. This has affected morale, efficiency, and even honesty in government circles. Many of the children from these groups, moreover, seeing few opportunities ahead, are desperately anxious to emigrate to the West. On the other hand, not a few Taiwanese feel that they have to support a large number of "unproductive" people, and at the same time are denied access to official positions, and thus to the social and political status some of them desire.

3. Under these general conditions, serious inflation is always a threat, and the Government, remembering the economic debacle on the mainland, does worry about this problem. The price index continues to rise rather steadily, however, and it is difficult under the circumstances to keep inflation moderate.

4. For political and cultural reasons, the Government is quite unwilling to support any program of birth control, and thus this problem is becoming ever more critical. Unless economic development can move much more rapidly than in the past, underemployment and unemployment will advance. There is a special problem with respect to the intellectual elite. High-school and college graduates are not finding sufficient outlet at present for their training and talents. A dissatisfied, displaced young intellectual class is developing.

5. Foreign investment has increased and can be of assistance. However, overbureaucratization, limited markets, and political uncertainties combine to discourage it. Changes have been proposed which may ameliorate the former difficulty, but the latter one will remain.

Most of the serious economic problems of Taiwan have a close connection with politics. This rich island would have a fairly bright economic future if it did not face a population explosion on the one hand, and unrealistic military-political ambitions on the other. If the population problem were tackled seriously, and if the military forces were reduced to dimensions fitting the defense needs of Taiwan, there could be optimism concerning the economic prospects. Otherwise, the future is cloudy notwithstanding the impressive gains of the recent past and the prospects of continuing American aid.

(b) The political situation in Taiwan has mixed elements of stability and instability. The elements of instability are sufficient to make a serious crisis at some unexpected point conceivable. On balance, however, the elements of stability seem to predominate, and politics on Taiwan will probably undergo an evolutionary development, barring in-

ternational conflict. The following factors deserve close attention:

1. The Kuomintang remains an elitist party with limited public appeal and with serious factional problems. After its mainland defeat, the Kuomintang conducted its own "self-criticism" and "rectification" campaigns. Grave shortcomings were admitted and a call to Spartanism was issued. The experience of total defeat was not without some benefits to the party; many opportunists and unsavory elements disappeared along with good men. Among the leaders remaining, a sizable number are dedicated, sincere, and able. In the last decade, they have lived modestly, worked to the extent possible, and sought to vindicate a movement that once burned brightly.

While their efforts have borne some fruit, various problems remain. The party still tends to fall between two stools. It does not allow the range of political freedom and competition associated with political democracy on the one hand, and it does not possess the ruthlessness, dynamism, and efficiency of Communist totalitarianism on the other. Power seems held at the moment by rather tired hands.

Essentially, the Kuomintang continues to follow the Communist organizational model which it acquired shortly after World War I. It has made some progress in establishing cell organizations throughout the island and channeling political action through them. There is little indication, however, that the party has really appealed to the Taiwanese, or that it has genuine mass support. Meanwhile, factionalism within the party continues to be very strong. The internal struggle for position and power can probably be contained as long as Chiang Kai-shek remains active, but the question of succession looms increasingly large.

A deepening power struggle within the Kuomintang could produce various possibilities: further flights to the West by unhappy or discouraged elements; defections to the Communists; the use of the army for internal political purposes; a broader appeal on the part of some faction or factions to the Taiwanese people for support. These possibilities are not mutually exclusive. Flights to the West by prominent party men have taken place in the past and, indeed, irrespective of political conditions, a growing number of mainland refugees will seek opportunities for emigration as hope of returning home recedes.

The Communists have made a definite bid for a bloodless victory on Taiwan. Their message has been "Come home and all will be forgiven." Lavish promises of pardons and positions have been made to any who will forsake American imperialism and return to the motherland. The strategy is obvious: to exploit party cleavages, refugee fears of being absorbed by the Taiwanese, and the declining morale of people who must face the increasing probability that they cannot go back to China under Nationalist banners. It is also a clever method of trying to undercut any possible change in American policy. But there is no evidence that it is likely to achieve its objectives. Some defection to the Communists is conceivable, but only a few refugees will ever become so desperate or so angry as to take this kind of chance.

It is much more probable that a party struggle at some point will involve the greater utilization of the Taiwanese. Even the use of the army internally, or the use of such groups as the Youth Corps would represent a trend in this direction. But there may also be an appeal issued in broader political terms, a turning outward on the part of some party elements to the public, in the hope of getting the support necessary to sustain their position. Thus increasing democratization could occur under the Kuomintang, but if it does, it is likely to produce new political crises. Some of these will almost certainly reflect the unresolved differences between the Taiwanese and the mainlanders.

2. Personal relations between the mainland refugees and Taiwanese have probably improved in recent years. Various channels of communication have been established, and cultural links have been forged. Strong elements of difference and distrust still exist, however, and the largest gap between these two groups can be spelled out in one word: commitment. The Taiwanese are committed to Taiwan; the great majority of the refugees are still committed to returning home, or this failing, to emigrating elsewhere.

Refugee-Taiwanese relations constitute a troubled and complex aspect of politics in Taiwan. There are 2 million mainland refugees and 8½ million Taiwanese. Of the same race and general culture, these two groups have differences not easy to bridge. In the last 15 years, their relations have been marked by both revolution and evolution; which will prevail in the future? Today, Taiwanese revolutionary activities are mainly centered abroad, in Peiping, Tokyo, and the United States. The Peiping operation is naturally Communist and seems to have little, if any, support. The organizations in Japan and the United States are devoted to Taiwanese independence. They are manned by a small band of intellectuals, mainly overseas students very reminiscent of the Chinese nationalist movement itself 50 years ago. These groups claim wide underground support in Taiwan an assertion difficult to prove under present conditions.

In all probability most Taiwanese would regard "independence" in some form as their ideal. Pro-Communist sentiment at present is negligible; nationalist support fairly limited; and nostalgia for the Japanese era rather more widespread but perhaps strongest among the older groups, and fading. As has been noted, the issue of commitment is a prominent one separating Taiwanese from refugees. For example, are "the local people" really interested in fighting to "return" to a place where they have never been? Then there are the deeply felt grievances held by upper class Taiwanese over their lack of social and political recognition. The refugees are a dispossessed elite, and they cannot avoid thinking of themselves as an elite; moreover, they must have some means of sustenance, and their profession has generally been officeholding.

Still, there are fairly good chances that that this general problem will be solved by evolution. As long as economic conditions remain reasonably firm and some social mobility is possible, there will be no mass revolt. Meanwhile, a dual process of acculturation and assimilation is taking place. The acculturation affects mainly the Taiwanese. In place of the Japanese past, a modernized Chinese culture is being implanted via the new educational system and other forms of cultural interaction. The refugees are not unaffected by this process, however, for the borrowings both from Japan and the West are substantial. And at the same time, assimilation is beginning, a process whereby the dominant Taiwanese population is starting to absorb the refugee minority through intermarriage and a variety of other ways.

These developments provide the socioeconomic basis for an evolutionary change in politics on Taiwan. In the case of serious economic reversals, military overcommitment, or continued political rigidity, the Kuomintang will suffer further slippage, and Taiwanese resistance might take revolutionary forms. Under present trends, however, gradualism will prevail, with increased pressures for local autonomy and expanded social and political rights. One prediction is fairly safe: either Taiwan will be joined with mainland China or the process of Taiwanization will continue. In the concrete terms of the present, if Taiwan does not go to the Communists, it will go increasingly to the Taiwanese.

(c) The Nationalist military force today remains largely an unknown quantity. Increasingly, it is manned by Taiwanese personnel. It has not been tested in large-scale combat and opinions on its capacities and morale differ. It is safe to say, however, that it is much more than adequate to defend Taiwan at present, and much less than adequate to engage the Communists on the continent. Already, Taiwanese recruits constitute a substantial bloc in the Nationalist army. Their numbers can only rise. There is a small, well-trained air force, and it is possibly the most effective of the three services. All units are equipped with modern American weapons.

Taiwan could be defended adequately at present with a substantially smaller force. Until recently, however, the Nationalists had nearly one-third of their active forces on the islands of Quemoy-Matsu where they are much more vulnerable. Over the next decade, it must be assumed that the military balance with respect to Taiwan will shift. The Chinese Communists will certainly seek weapons and strength attuned to their ambitions. If Taiwan has to be defended militarily, the ultimate burden will surely fall upon the United States in company with the Taiwanese.

3. U.S. POLICY TOWARD CHINA

(a) *Introduction*

No decision is more critical to our future position in Asia and in the world than that which determines American policy toward China. Every policy decision involves a choice between alternative risks, but in this case the risks of each approach seem extraordinarily high. Indeed, there is no "good policy" in the sense of a policy that will produce results completely beneficial to the interests of the United States and the non-Communist world. This does not reduce the need, however, to consider the various alternatives that are available to us.

The first step in such a consideration is to survey the major facts or probabilities that pertain to our China policy, and note their implications. Three key points are worthy of special emphasis:

1. In all probability, the major issue confronting us is not whether Communist China will survive, but whether a dynamic, powerful China under Communist rule can in the long run be restrained from various forms of expansion or undue pressure upon Asia and the world. This challenge places a premium upon a policy that combines two central qualities. First, our policy must face this problem with realism, and with sufficient flexibility in tactics to adjust to changing opportunities and permit multifaceted approaches. Yet, also, it should be a policy that is sufficiently explicit and firm in its essentials to hold non-Communist confidence and prevent Communist misconception.

2. Apprehension or at least alertness increasingly characterizes Asian reactions to the strength and movements of Communist China. For various reasons, both practical and ideological, the preference of many non-Communist Asians for neutralism or nonalinement will continue to be substantial. But the consciousness of a new and possibly dangerous power within Asia is beginning to take precedence over the earlier fears of Western imperialism.

In the long run, if a policy aimed at meeting the threat of Chinese Communist

expansion is to be effective, it must have the understanding and support of the major Asian nations that border China. As a result of the growing awareness of the China problem among Asians, new opportunities now exist to obtain this support. But to move from a policy that is essentially unilateral toward one that is based upon joint responsibility requires that serious attention be paid to the realities of Asia and the total needs of its non-Communist societies. It must be a policy that stresses positive measures strongly and that seeks always the greatest common denominator between the national interests of the United States and those of the free Asian world.

3. The involvement of Communist China in international affairs is almost certain to grow. Already it participates actively in such international fields as trade, economic assistance, cultural exchange, and propaganda. At some point, probably in the not distant future, it will have atomic power for both peaceful and martial uses, connecting it with the most vital issue that confronts the world.

This increasing involvement cannot be ignored, and any tactic of trying to commit the Chinese by negotiating through the Russians is dubious. The situation demands a policy based upon realism. On the one hand, we must accept the fact that basic agreement between the United States and Communist China on such issues as Taiwan and Korea is inconceivable under any conditions at present. Thus we must maintain an effective military force that can underwrite our position and defend it if necessary. On the other hand, we must also accept the fact that Communist China is inextricably connected with many of the major problems which we face in Asia. The question is not whether Communist China should be allowed to participate in the world scene, but rather whether it can be persuaded or forced to bear any responsibility for its participation, which is steadily increasing. Our policy must accept the full implications of this point.

(b) *U.S. policy toward China*

Perhaps there are three general lines of approach to an American China policy, although there are interconnections among these lines and innumerable variations within them.

1. Containment through isolation—one approach to Communist China.

At present, U.S. policy is strongly committed to the maximum isolation of Communist China, and the full recognition of the National Government on Taiwan as the Government of China. Toward the Communists, our policy is composed of political nonrecognition, economic embargo, and opposition to almost all forms of interaction between the free world and mainland China.

This policy is defended upon numerous grounds and the following major themes can be set forth:

(a) The recognition of Communist China in any degree or form is not in the national interest of the United States because that Government has shown implacable hostility to us, is guilty of grossly immoral actions, is dedicated to the establishment of world communism, and has given no indication of being willing to fulfill its international obligations.

(b) Communist China stands condemned as an aggressor by the United Nations, and any recognition or admission to the United Nations would seriously damage the meaning and effectiveness of that body. Moreover, it would result in the weakening or destruction of the Republic of China to which we are committed.

(c) We cannot see clearly into the future at this time. It is always possible that Communist China will collapse or that some colossal upheaval will take place. We can afford to wait.

(d) If we were to shift our China policy, it would be taken as a sign of weakness or capitulation by many of the free peoples of the world, and particularly the weak nations of Asia, which look to our firmness for support. By our unyielding stand, we have bolstered the Asian will to resist.

(e) There is some basis for treating the Soviet Union differently from Communist China. There are signs indicating that the Soviet Union for various reasons may be interested in an accommodation with the United States, but Communist China is in an entirely different era and mood.

Collectively, this is a formidable argument. The validity or partial validity of some of these points can scarcely be challenged. Yet there remain a number of questions concerning a policy of containment through isolation that must be raised.

(a) The moral issue has its well-known complexities. If our decisions respecting relations with foreign governments were to be based upon moral judgments rather than the world as it is, we could not possibly conduct meaningful foreign policy, let alone attempt to lead the free world (which contains some peoples unfree and some governments immoral). We have long since discovered that we cannot impose our standards and values upon the world. We do believe that the success of our foreign policy is in the general interests of morality, but success depends upon proper tactics. And these tactics might involve trying to bring a government that we consider immoral into some framework of negotiations, agreements, or international organization where more varied pressures could be exerted upon it.

No one can doubt that Communist China has regarded the United States as its greatest enemy and acted accordingly. We have reciprocated. Both parties, however, have insisted that their hostility applied merely to the government in power and not to the people. For example, we have proclaimed that our respect for the Chinese people remains undiminished. But we have little means of communicating effectively with them. This suggests one of the problems with any policy that seeks containment through isolation. How does one reach the besieged people and with what kind of message? Does this policy have to rest upon the premise that a great majority of those people are so violently opposed to their government that they wish its downfall even at great cost to themselves? For those not in this category, there is a real danger that this policy will merely supplement the tensions and fears concerning us that their government is seeking to establish. Our capacity to present a well-rounded and favorable image of the United States is seriously affected, even assuming we can have some kind of access to the people.

The questions of international obligations and the drive for world communism are of course legitimate, but they are not to be answered fully by citing Lenin, Mao, or Khrushchev. Non-Communist states may be pardoned for having doubts as to whether the Communists will now rely upon peaceful competition, as Mr. Khrushchev avers, although the Communists seem to have increasing confidence that this will suffice. Our defenses must be strong to help them hold to that viewpoint but we should offer better incentives as well. In the final analysis, communism will choose its tactics in accordance with the circumstances. Mao and the Chinese Communists in particular are past masters at the practice of pragmatic communism. We should be aware that U.S. policy does influence and affect Communist tactics, just as their policies influence ours. And it is the short-range tactics of communism rather than its long-range goal that must concern us most. Like every messianic movement the world has ever known, this one is likely to fall short of its goal and be changed many times in the course of pursuing it.

(b) The arguments against the admission of Communist China in the United Nations are familiar and have some merit, especially for the United States. Communist China was labeled an aggressor by a majority of the nations in the United Nations, and no treaty settling the Korean war has ever been signed, although Chinese troops, it should be noted, have been withdrawn from North Korea. There are further questions concerning the increased prestige that would go to Communist China, what would happen to Taiwan, and whether Communist China in the United Nations would not act as a disruptive force.

These issues can only be weighed and assessed against the realities of the current world scene. Irrespective of the noble sentiments expressed in the charter, the United Nations cannot in fact be considered a league of the pure. It is in practice a prominent international forum in which cases are put before the world, an area of contact for the purposes both of talking and negotiating over vital issues, and a valuable instrument for advancing technical, nonpolitical causes relating to world health and well-being. These are all considerations suggesting the importance of universal membership.

The United Nations already contains members that the United States considers guilty of past acts of aggression, including some of our allies. The difference, it may be argued, lies in the fact that they had already been admitted to the United Nations before the act occurred, were not legally charged with aggression by the United Nations, or, in some cases, were willing to abide by the United Nations decision concerning the act. These various distinctions may be legally correct, but are they all meaningful in fact? There is no practical reason to treat the U.S.S.R. and Communist China differently because of legal technicalities. If the U.S.S.R. had not been absent from the United Nations in the summer of 1950, at the outset of the Korean war, legal action via the United Nations against Communist China would probably not have been possible. Presumably, then, the issue of "aggression" as it is now posed would not exist, although Communist China would have been no less an aggressor.

Speaking in practical terms, moreover, it must be realized that some non-Communist countries regard Chinese aggression in Korea as more complicated than Russian aggression in Hungary. This is due to the prior U.S. decision to cross the 38th parallel despite threatened Chinese intervention, a decision which is felt by many to have expanded the original purposes of the United Nations in Korea.

The prestige of Communist China would be enhanced if it were admitted to the United Nations and granted a permanent Security Council seat. In fact, however, its prestige and power are not essentially dependent upon United Nations admission. If its power has steadily grown, it is the product of developments within China and the Moscow-Peiping alliance, developments that seem very likely to continue. United Nations membership in the final analysis neither adds nor detracts much from a prestige or power that must be indigenously developed, as the case of Nationalist China well illustrates.

Certainly the admission of Communist China would be a heavy blow at the National Government, or should one say the confirmation of a blow that has long since been struck? The main question is how long the fiction can be maintained that the National Government is the Government of China. Perhaps this situation can continue for some time, particularly if the United States exerts its full influence

and if Communist China misbehaves. As the last few years have shown, however, there is a very clear danger of loss by steady attrition on this issue. A government having effective control over only 10 million people cannot indefinitely hold a "major power" position in the name of the 660 million Chinese.

(c) Communist China may collapse, but this is in the category of extremely remote possibilities that cannot weigh heavily in American thinking or policy on Asia. It is much more logical to make out a general case for a "let the dust settle" policy: to argue that both Chinese Communist domestic and foreign affairs are in flux, especially her relations with the rest of Asia, and that in this respect the trends are currently favorable to us; furthermore, that time is needed for Taiwan to adjust to its future, and premature action would be unwise.

There is considerable merit in this argument and also considerable danger. Events are moving rapidly in Asia and this is likely to be true for the indefinite future. The dust will not settle in our lifetime. We cannot continue indefinitely with policies that are not in tune with developing realities, and it will be extremely difficult under the circumstances to time policy adjustments in Asia accurately from the standpoint of our maximum advantage. Some changes now taking place are generally favorable to us; others are not. In the latter category is the rapidly developing state power of Communist China, and the general strength of the Sino-Soviet bloc. It is very questionable as to how long we can hold this power in check with a policy of containment through isolation.

(d) One of the most complex and difficult factors to assess in contemplating alternative China policies is that of the probable Asian responses. How tenaciously must we hold to our present policy lest we be considered a shifting, unreliable ally? Is it correct that the uncommitted nations of Asia are moving to our side, and approve, at least privately, of our current position on Communist China?

As is well known, non-Communist Asia is deeply divided on the China issue, as on most other matters. Thus attitudes and policies depend upon the particular category to which the Asian state belongs. First, there are our small Asian allies. These can be placed in two categories: the Republics of China, Korea, and Vietnam; and the Philippines and Thailand. The first three governments, drawing upon their own experience, believe that coexistence is impossible, consider that this is an era of war to the death, and argue that all policies should be fashioned accordingly. Indeed, the governments of South Korea and Taiwan have long advocated military action against the Communists, and despite American urging for moderation, continue to do so. These governments are not thoroughly satisfied with our present policies, and any trend toward relaxation would meet with their strenuous opposition. Changes in our China policy might have adverse effects upon these states, or at least upon their present governments. Much would depend, however, on the timing and the methods. For example, if changes were made, they might be coupled with renewed or even expanded guarantees of military and economic support to underwrite the security and progress of these people. It must be remembered that these are governments totally dependent upon our aid; they have adjusted before to U.S. decisions of which they violently disapproved and they probably would do so again. And the attraction of communism for their people is to be equated far more with internal developments than with American policy toward China. The greatest problem of adjustment, of course, confronts the National Government on Taiwan; and this is likely to be true, irrespective of trends in American China policy. Our other small allies, the Philippines and Thailand, would be less affected, but the governments in these countries favor an isolation policy toward Communist China.

The second category of Asian states is the "neutral" or nonalined states. This category includes India, Indonesia, Burma, Ceylon, Cambodia, Singapore, and in much lesser degree, pro-Western Malaya. Laos is presently in flux and contested. In population, resources, and strategic significance, this group together with Pakistan and Japan constitute the overwhelming strength of non-Communist Asia. Their position is vital. As has been emphasized, there are many signs within southern Asia that apprehension concerning Communist China has risen sharply in the past year or more. Clearly, the Indian border issue is likely to have long-range repercussions. It has been suggested that as a result of such events, there exists a growing "underground support" for current U.S. policy toward Communist China. It is asserted that in spite of a public stand in favor of Communist China trade, cultural relations, recognition, or United Nations membership, some of these governments are secretly happy with the current American position.

This "underground support" thesis is based upon some solid facts, but it can be inflated. Growing concern over Communist China has been communicated in a variety of ways to American officials in some of the nonalined countries. Support for a firm U.S. stand has been voiced privately by some who would not speak in public. But there is no indication that any of the leading "neutralist" Asian states will reverse their China policies and support the present position of the United States. Indeed, many of these most deeply concerned over the China problem continue to argue that the importance of Communist China and its involvement in almost all Asian issues must be accepted as the first principle of contemporary Asian politics. They do not believe that any policy of containment by isolation will work, nor do they believe that it will last. One of the most widespread questions in Asia today (and it goes far beyond "neutralist" states) is not whether U.S. policy toward China will change, but when and how.

It is always possible that future Chinese Communist actions and words might produce a serious deterioration in their relations with southern Asia as to alter the policies of this region. It is more likely, however, that most of these states will continue to stay aloof from any policy of containment through isolation. Japan and Pakistan are countries in separate categories. The Japanese position has been discussed in the Japan section of this report; it is based upon the hope for normalized relations with China. Pakistan, while a member of SEATO, has recognized Communist China; at the moment, it appears to have no strong feelings on the issue in either direction.

There are also the oversea Chinese, a special and important group. Probably the influence of U.S. policy upon this group has been exaggerated. They have been mainly pro-Chinese culturally and apolitical, although some changes have occurred in the younger generation. In the long run, it seems probable that the southeast Asian Chinese will either acquire a deeper loyalty to the country in which they reside or pay some degree of homage to mainland China. Taiwan can never really be a satisfactory symbol for the Chinese mainland, and less so when familiar mainland faces disappear.

In sum, the Asian attitude is a very mixed one. But the non-Communist "big three" in Asia—India, Indonesia, and Japan—all have reservations about current American policy, and all prefer to follow different lines of approach. Thus the statement that "Asia expects firmness and will regard change as capitulation" must be questioned.

(e) One of the basic issues confronting U.S. policy is what should be the relation between our policies toward the U.S.S.R. and Communist China. Two interesting theses have been advanced in recent years.

(i) To isolate Communist China as completely as possible and to press it into the arms of the U.S.S.R. are the best ways to heighten internal tensions and produce friction in the Sino-Soviet alliance. This thesis seems doubtful. Aid to China has not been an enormous strain upon the Soviet Union, and it has paid rich dividends. The Chinese Communists may well have felt that the terms were too stiff, but it was the United States that sought to prevent them from bidding elsewhere. And may not Russia find it an advantage to serve as Communist China's spokesman in the international scene? It would seem logical to argue that the more independent Communist China becomes from Russia, the greater the possibility of competition and rivalry.

Greater international involvement for Communist China might provide new sources of influence both upon the people and the regime. Out of a variety of contacts, flow a variety of ideas and stimuli, and Chinese Communist propaganda to their own people might have to adjust to this type of competition in a manner not now necessary. Isolation always serves totalitarianism. At the governmental level, moreover, heavier world involvement would naturally provide the need for more varied and complex decisions, more careful adjustment to national interests held by foreign states. It would increase opportunities for policy diffusion from and difference with the Soviet Union; almost certainly the decisionmaking process of the Sino-Soviet alliance would become more complicated and be subject to greater strains. That alliance might even be affected by any increased world attention given Communist China and its national decisions; outlets for Chinese nationalism of this type could increase Soviet anxieties.

(ii) The U.S.S.R. may be in a position and mood to make serious negotiations feasible, but Communist China is in a Stalinist phase, rigid and implacable, and negotiations are pointless. This thesis may have validity. But there are certain arguments to be advanced against it. The Soviet Union appears to be in a more negotiable mood with respect to the United States than Communist China, but this has not been thoroughly tested with respect to either Communist state. It is possible that both ends of the Sino-Soviet alliance, despite their substantial differences in stage of development and power, are in approximately the same position with respect to negotiating: a desire for peace but an unwillingness to make any basic concessions that are considered to affect their national interests. Further, it is possible that this rough equality of position is due to the fact that Communist China has a Russian military shield behind it, and extensive treaty guarantees from the Soviet Union. This appears to be an era when the Communist world, like its non-Communist counterpart, coordinates foreign policy more closely than domestic policy, at least insofar as the Sino-Soviet section is concerned. There is definite evidence that the Russians clear international issues, especially those affecting Asia, with Communist China. Thus, in one sense, Communist China is already involved in major power negotiations, without bearing any direct responsibility for such secret positions as it may take.

It is questionable whether the Soviet Union is prepared to take any position in opposition to the interests or wishes of Communist China. There is, moreover, another troublesome problem in connection with the thesis that we cannot and should not negoti-

ate with Chinese, but only with Russian Communists. If there is an element of independence between these two in the field of foreign policy, do we not court miscalculation on the part of the Chinese Communists? And is it not miscalculation that provides the gravest chance of conflict in this atomic age? Despite the services of the Indians, this problem was apparent at the time of Chinese Communist entry into the Korean war; the channels of communication between the United States and Communist China were not adequate.

The major issues relating to China policy having now been set forth, two possible alternatives to our current position can be presented in more succinct fashion.

2. Normalization of relations—a second approach to Communist China.

This policy would encompass the recognition of Communist China by the United States, support for its seating in the United Nations, and general treatment equal to that which the United States accords to the Soviet Union.

This policy is supported upon the following grounds:

(a) In accordance with established international practice to which U.S. policy has usually adhered, the recognition of Communist China would not signify approval of the regime, but rather its existence as a de facto government, having control over some 660 million people. To accept these facts of life is in the national interests of the United States because it is essential that we establish a realistic policy toward Asia as the first step in a long-range economic and political competition with communism. Nonrecognition has not prevented the rise of Communist China. It has isolated us as much as the Communists, giving our policy an essentially unilateral character, making it defensive, and negative.

(b) Normalization of relations, if successful, would give us greater access to the Chinese people, from whom we are now almost completely cut off. It would thus make possible some kind of informational and cultural relations program in which we could not possibly lose, and which might provide certain pressures upon the Communist leaders to deemphasize hate and fear of the United States. Moreover, it would provide us with direct communications in terms of official channels, thereby reducing the threat of miscalculation on both sides.

(c) The primary function of the United Nations today is as an international forum whereby issues can be debated and nations called to account before the world; as an instrumentality for the mediation of disputes through its technical staff; and as a valuable organization for a multitude of nonpolitical purposes of a social, educational, or research nature. As long as the government controlling one-half of the people of Asia is outside the United Nations, that organization will be seriously handicapped in terms of the above functions.

And Communist China outside the United Nations may be more of a disruption than Communist China in the United Nations in a variety of ways. There are advantages in being an international outlaw, not being legally bound to international agreements, having to take only such stands as one wishes, and thereby being able to compartmentalize one's policies. Moreover, the U.S. policy of supporting the Government of Taiwan as the only legitimate government of China in the U.N. is in serious danger of losing by attrition. Despite our pressure, this position is becoming more difficult to sustain in the international scene, and is being sliced away, a sliver at a time.

(d) If we are to have a strong policy in Asia, it must be one attuned to the realities of that area and one that interacts with the national interests of the major non-Communist Asian nations. These nations are neighbors of China, share common borders with it, and also see many of their problems as closely intermeshed with its future policies and attitudes. They can be expected in general to continue to search for some modus vivendi whatever the difficulties. American influence and help in this part of the free world will be much stronger in the final analysis if it is geared to these facts. And from this approach will come a greater capacity to deter any possible Communist aggression through strength in depth.

Taken together, these points constitute an extremely impressive challenge to the policy of containment through isolation. There are two ways in which this policy might be questioned, of course: first, in terms of some of its premises or facts; second, in terms of its sense of timing and procedure. Arguments of the first type have already been raised earlier in this report. The leading ones may be summarized here:

(i) Recognition of Communist China or its admission to the United Nations would greatly enhance the prestige and power of that state, harm many of our Asian allies, damage the United Nations, and thus not serve the national interests of the United States.

(ii) The great majority of the Chinese people themselves are opposed to the Communist regime, and do not want to see it strengthened.

(iii) The non-Communist Asians are fearful of Communist China and are increasingly grateful for the firmness of U.S. policy. They do not want any change.

The second set of questions regarding this approach relates basically to matters of technique. Even if one accepts many of its premises as valid, this policy as stated may be deficient in its sense of staging, timing, and development, thereby lacking sufficient leverage or bargaining opportunities for our position and facing many political hazards. In these respects, the second approach may have some of the weaknesses of inflexibility and unrealism for which it criticizes the present policy.

The third alternative represents the basic recommendation of this report, and is supported, in our opinion, by its findings.

3. Exploration and negotiation—a third approach to Communist China.

This policy would be multifaceted and would have three basic objectives:

(a) To test the willingness of Communist China to coexist with us.

(b) To seek an expanded policy that would retain certain firm commitments, but also present a more dynamic, flexible, and positive tone.

(c) Through the actions, to make possible a greater degree of collective agreement on the China issue among the major nations of the free world, and hence provide a firmer basis for collective action if and when necessary. This policy contains the following proposals, based upon a sequence of stages:

(1) Stage 1:

(a) An offer for the mutual exchange of journalists with Communist China; if this program is successfully inaugurated, to be followed by proposals for the exchange of scholars and commercial representatives.

(b) Permission for some prominent individual or group not in the national executive branch of the Government to go to Communist China and conduct such informal discussions with the leaders as are possible.

(c) The launching of informal, private discussions between the United States and our European allies, Japan, and some of the leading neutrals, particularly India, Burma, and Indonesia, to solicit ideas and some cooperative thinking about the problem of China.

This first stage would seek to test the position of Communist China and its interest in improving relations with the United States. It would also test the position of our allies and some of the neutrals, indicating our possible interest in a more positive, flexible policy, and one in which they might assume some joint responsibility. If the results of these actions showed some promise, the next stage should be undertaken.

(2) Stage 2:

(a) Abandonment of Chinese Communist restrictions and permission for trade on the same basis as that with the U.S.S.R.

(b) Informal discussion with our allies and "neutrals" on the following four-point program: Admission of Communist China to the United Nations; recognition of the Republic of Taiwan; the seating of this Republic in the Assembly; the enlargement of the Security Council to include India and Japan as permanent members, as well as China.

(c) Simultaneous discussions with our small allies pledging full and continued support to all of our treaty obligations.

(d) Simultaneous special discussions with the National Government of Taiwan, looking toward the following agreement:

1. The United States would continue to honor its existing obligations to Taiwan and the Pescadores. It would underwrite the defense of the Republic of Taiwan, and would support an expanded economic-technical assistance program.

2. The military forces of Taiwan would be withdrawn from the offshore islands, together with those civilians desiring to leave.

3. The United States would endeavor to help in the resettlement of any mainland refugees who wished to leave Taiwan following the establishment of the Republic of Taiwan.

(e) If feasible, the United States would negotiate a treaty of commerce with Communist China, and if successful, this would be followed by de facto recognition.

Under any conditions, this would be a complex and difficult stage. It is obviously unrealistic to consider the above proposals as more than general suggestions of the directions in which we should move and the positions that we should hold. Both improvisation and basic changes might be required. Moreover, the precise timing of this policy in each of its phases would have to be determined with respect to the international scene.

The offshore island issue is extremely serious. It might become critical again at any point. Thus it is possible to argue that irrespective of this program, we should extricate the Nationalists and ourselves from this area. These islands bear no relation to the defense of Taiwan, and can only be considered steppingstones to the mainland. They are an integral part of the mainland. Militarily they are very vulnerable. Politically they are a liability, both in terms of world opinion and in terms of the unhealthy psychology they foster in Taiwan. In the event of full military action over them, the American people themselves would be of divided opinion.

The four-point program raises a number of difficulties which should be admitted. It would be acceptable at present neither to the Communists nor to the Nationalists. Either might refuse to sit in the United Nations if the other were present under any designation. Communist China is likely to hold to its claim on Taiwan tenaciously. It might also be impossible to get Taiwan into the United Nations, even if the government of that time were willing to sit, due to a Russian veto. Various techniques should be explored, including that of treating Taiwan membership in the Assembly as a matter of the continuing membership of a government already recognized but given a changed designation.

What are the alternatives? Continued recognition of the Nationalist Government

as that of China seems most unpromising unless we are forced into this by Communist intransigency. The acceptance of Taiwan as a part of mainland China? This alone would satisfy the Chinese Communists at present, and therefore remove what is otherwise likely to be a continuing source of trouble. Indeed, it has been argued that Taiwan is not so important from a military or political viewpoint as to warrant ipso facto the enormous cost and risk of a long-term U.S. commitment for its defense. It has even been suggested that a general settlement in Asia might be attempted whereby Taiwan would be united with the mainland in exchange for a Communist agreement to accept free elections under U.N. auspices throughout Korea, leading to the unification of that country.

To adopt this policy, however, would be to jeopardize the American position with respect to other small nations dependent upon our protection and aid. It would seriously affect morale in South Korea, South Vietnam, the Philippines, and other areas. In addition, if it were done without the consent of the people on Taiwan, it would represent an immoral action. In the event of a bargain between some political leaders on Taiwan and the Communists, to be sure, the United States might be placed in an extremely awkward position whereby it would have to decide hastily whether it should intervene in an attempt to protect the Taiwanese right of self-determination. Such a development is possible, but it does not appear likely.

The program suggested above forms the only basis for any possible agreement among major elements within the free world. It also accords with the existing facts. There is a separation between mainland China and Taiwan at present and two separate governments are operating. The United States, moreover, takes cognizance of these facts, having tried to persuade the Nationalists to abandon any idea of returning to the mainland by force, and having guaranteed the military defense of Taiwan. There are no legal obstacles; the status of Taiwan has not been fixed by international pact, although admittedly we did promise during World War II that it should belong to China. The Taiwanese people themselves have given considerable indication of wishing to remain separate from the mainland, and could be tested by plebiscite if this were agreed.

The broad program suggested above does not contemplate a world without problems or without fear. It assumes that our military defenses will have to be strong, and that we will need a bold, dynamic program of international economic cooperation with non-Communist nations, especially in the Asian-African world. And, clearly, this program is not without its risks and difficulties of execution. But among the alternatives that confront us, it deserves serious consideration as the best long-range policy to serve American national interests.

A Letter to the Air Force

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. CARLSON. All of us who have Air Force bases in our States have from time to time received considerable complaint from those whose homes lie within the flight pattern of the planes as they take off and land.

The military has in most instances done an outstanding job of public relations as well as efforts toward lessening the problem. However, it remained to one of my constituents, Mr. Ed Skidmore, of Topeka, Kans., where we have a large SAC base, to give just the right analysis, with what I would call the light touch. He wrote to Gen. Thomas S. Power, commander in chief, Headquarters, Strategic Air Command, Offutt Air Force Base, Nebr. This letter was given nationwide publicity, and as a result Ed Skidmore received accolades from the entire United States with a hearty amen.

I believe this story should be read by everyone interested in our freedoms. I ask unanimous consent that the article appearing in the Topeka Daily Capital be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AIR FORCE LIKES TO GET LETTERS LIKE HIS

(By Peggy Greene)

On September 29 Ed Skidmore wrote a letter. Ed owns a cafe at 949 Wabash, in Oakland, near the municipal airport where the big bombers dip down close to the ground, making considerable noise.

That day Ed sat down and wrote a letter to Gen. Thomas A. Power, Commander in Chief of the Strategic Air Command at Offutt Air Force Base, Nebr. He laid it out to the General in plain language and what he said in part was:

"Dear General—I am a cafe owner, a newspaper reporter, author, and a taxpayer. However, regardless of what I am or have been, I want you personally to know that every time I hear your damn planes roaring over Topeka, Kans., aggravating the mothers of sleeping babies, annoying my customers, and property owners in general, when they make low-altitude simulated landings at Topeka's Municipal Airport, a short distance from my place of business, it worries me.

"Yes, sir, General, it worries me. It worries me when I get to thinking that if it were not for those planes of yours flying over us here in a typical section of America, there would be a different type roaring overhead, and instead of those big letters 'U.S.' on the blue star, they would be emblazoned with the red star and the hammer and sickle.

"It worries me, General, when planes under your command en route to Forbes Air Force Base, in bad weather fly so low over my cafe that we can't hear the customers' orders.

"The thing that worries me, General, is that, if it were not for those noisy planes of yours, I wouldn't own my cafe and furthermore I probably would be shot for writing the comrade commander this kind of a complaining letter.

"It worries me also because it has been difficult to get a loan on property close to the municipal airport and under your approaches to Forbes. It worries me because I know if it weren't for those big silver birds of yours, the people who have some difficulty financing their homes would be jammed like sardines in state-owned apartments without an inch of ground to call their own.

"The other day a woman customer told me something should be done about those big jet bombers awakening her baby from its nap almost every afternoon. I told her, 'Look up and see that big U.S. on their sides. Lady, that means us. Those planes belong to us.'

"I look up at them and I think, 'There goes a chunk of my income tax money. I own a fraction of an inch of aluminum in that wing, a drop of gasoline, a fleck of paint, nut or bolt, a switch or panel light.' The more of them I see the more I know I'm getting my money's worth.

"So keep 'em coming, General. The roar of those bombers, the drone of the tankers, and the prolonged blast of the fighters is the sweetest music this side of the Iron Curtain."

Some days later he had a warm and appreciative answer from General Power, and Ed considered the file closed. But a couple of weeks ago he had a letter from Col. Donald C. Foster, director of information at Offutt, saying Columnist Bob Considine had been in for a visit and had seen Skidmore's letter and wanted to use it in his syndicated column. Permission was given.

Considine said, "Old Ed Skidmore, of 946 Chester Street, Topeka, Kans., has replaced B. Bardot as the favorite pinup around SAC headquarters at Offutt Air Force Base, Nebr."

He said Skidmore's letter to General Thomas "touches a problem which is of often acute concern to the Air Force. But 10,000 Air Force public relations officers combined have never been able to simplify and dignify it as well as Skidmore."

Soon letters began coming in from readers of the column in various papers, and each writer expressed appreciation of and agreement with its sentiments.

One letter was from Cyril N. Skidmore, president of a public relations institute with its main offices at Lakeside, Conn. He hoped they were "anyway shirt-tail cousins," and said he intended to stop and eat with him the next time he was in Topeka.

Ed wrote Cyril some family history—that he was descended from Thomas Skidmore who came to Cambridge in 1635, and Thomas was in the line of Sir Thomas Scudamore of Herefordshire, the family going back to the time of William the Conqueror, 1066.

Ed Skidmore grew up in Cherokee County and after he graduated from high school at Columbus, got a job as reporter on the Columbus Daily Advocate. Two weeks later the city editor quit and Ed applied for his job and got it. Four months later he applied for and got a job as reporter on the old St. Louis Times.

It was in 1917 and young men were going off to war. Ed moved up fast on the paper until he was getting out the 5 o'clock edition. He had a police badge as big as a plate which got him almost trapped in a burning building and got rocks thrown at him in a race riot.

He joined the tank corps under the strength of the slogan, "Why walk to Berlin when you can ride?" But the closest he got was Camp Polk, N.C.

The war over, he worked for the Associated Press and the United Press and became acquainted with many well-known editors, including the late Harold Ross, editor of the New Yorker. Ross' parents once lived in Cherokee County. Ben Hibbs married a girl from Columbus who was a friend of Ed's. Skidmore collaborated on a series of G-man articles in the old Liberty magazine.

In 1953 Skidmore spent some time on the copy desk of the Daily Capital, until he decided to get a business of his own, because, he said, he wanted to be his own boss. He bought the cafe, and discovered that everybody who came in for a cup of coffee was his boss.

But he never stopped writing, turned out articles now and then, wrote some plays for civil defense, and has written a book.

He has noticed one thing, that there's nothing like food to warm a person up.

Customers may come in, silent and a bit withdrawn, but once they get some food inside them they thaw out and blossom.

Last spring Ed began writing a book. With his typewriter on a table in a corner of the kitchen, he could rattle off a few paragraphs in between hamburgers. And that's what he calls it, "In Between Hamburgers." It has been sent to an agent.

The Skidmores' home is a block away from the cafe, with an intercom connecting the two. Both Ed and his wife work at the cafe in addition to two employees. They have two sons who were both in World War II. Charles E., Jr., a graduate of Kansas University, a glider pilot, flew into Normandy on D-Day and landed 18 assault troops. After the war he reenlisted and asked for nonflying duty. He is now stationed near Tokyo and his wife and their four children are with him.

The other son, W. D. Skidmore, was a combat pilot. He is now in business in Topeka, one of his interests being the Jack and Jill ice cream jeeps.

Ed Skidmore believes that the sound of the SAC bombers, though "disconcerting at times to those who live under the approaches to our bases, is a small payment to make for our protection."

"I am satisfied," he said, "that the great majority of Topekans do not complain about the low approach of the planes nor the noise they make. It is my opinion that Topeka people appreciate having the base here and are fully cognizant of the sacrifice being made by our airmen for our support."

Cooperative Future Farmers of America Forestry Program

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. BOYKIN. Mr. Speaker, any activity or organization that helps to make responsible citizens for tomorrow from the youth of today, merits the attention of my colleagues in the Congress. For 15 years the Seaboard Air Line Railroad Co. has sponsored a cooperative Future Farmers of America forestry program through which thousands of farm youth actually have become better farmers, better students and better citizens.

In October of 1959, the Seaboard gave the top forestry winners from the six southeastern States a trip to the National Future Farmers Convention in Kansas City, then to Chicago, Pittsburgh, and Richmond.

In each of these key cities the six boys told the story of their forestry and farming accomplishments to large groups of leading businessmen, industrialists, civic, and community leaders. The response to the down-to-earth sincere talks given by these boys was so overwhelming that I am submitting for the RECORD the remarks made by Mr. Robert N. Hoskins, general forestry agent of the Seaboard, in his introduction of the forestry winners and the speech of our fine farm boy, Crawford Welch, who was the winner from Alabama:

REMARKS BY ROBERT N. HOSKINS, GENERAL FORESTRY AGENT, SEABOARD AIR LINE RAILROAD, IN CONNECTION WITH TRIP TO BE MADE BY SIX SOUTHEASTERN STATE FFA FORESTRY WINNERS

The cooperative Future Farmers of America forestry program sponsored by our company through the State supervisors of agricultural education is now in its 15th year. It is the oldest regional farm youth forestry program in the Nation today. Our jointly sponsored programs enable us to reach more than 90,000 all-day students and thousands of other young farmers and adult farmers attending night classes—all of which is directed by the teacher of vocational agriculture.

The Southeast holds forth in an enviable position nationally in terms of timber resources for America's future. Almost one-fourth of the Nation's commercial forest land is in this section. Our problems are somewhat similar to those nationally in terms of the pattern for ownerships, in that farm ownerships make up the majority of forest acreage ownerships. Actually, farm woodlands total about 57 percent of the commercial private holdings. These farm woodland owners total more than 800,000.

To meet the needs of our increasing population, obviously greater emphasis must be placed on the proper management of these small woodlands. During the past year, the U.S. Forest Service held many meetings in our section, as it did nationally, in an attempt to reach the small woodland owner. For it is recognized that herein lies the opportunity for some real improvement.

We in our organization have worked closely down through the years with the U.S. Forest Service, the State forest services, the various forestry associations, and particularly with all wood-using industries in an effort to help the small woodland owner do a better job in management and in marketing his wood products. Progress in forestry is very much in evidence in our section. The fact that more trees were planted in the six States served by our line than in all the other 44 States combined is quite significant. While three of our States have all forest lands under organized fire protection, others are placing new acreage under protection, building toward statewide protection. More and more, small woodland owners are receiving technical assistance from State, Federal, and industrial foresters.

It was my pleasure to again join various groups in Virginia, North and South Carolina, Georgia, Florida, and Alabama for the purpose of inspecting on-the-ground some 36 FFA forestry projects. We were tremendously impressed with these farm boys' accomplishments. The 24 boys singled out for recognition in our program have planted a total of 782,000 seedlings. They thinned a total of 651.5 acres and harvested 2,543 cords of pulpwood. Through owner management programs, they participated in the harvest of 364,418 board feet of sawlogs and 563 poles. These are just a few of the combined accomplishedments. I am pleased at this time to present to you the first of our State forestry winners: John D. Gilman, Ashland, Va.; Harold Howard, Morrisville, N.C.; Edward Coble, Simpsonville, S.C.; Boyd McLocklin, Statham, Ga.; Kenneth Tanner, Callahan, Fla.; and Crawford Welch, Grove Hill, Ala.

MY FORESTRY PROGRAM

(By Crawford Welch, State FFA forestry winner from Alabama)

Mr. Chairman, members of the Traffic Club, and guests, I am a member of the Grove Hill FFA Chapter of the Alabama Future Farmers of America and reside in Clarke County, Ala. I am 18 years old and my home is located 85 miles north of the shore line of the Gulf of Mexico and the great port of Mobile, Ala. The soil is of the clay hills type of the Coastal Plains bordering the great cattle-producing area of Alabama, the Black Belt, so-called because of the color of the soil. I am happy to say that I live in one of the great timber-producing areas of the region.

I live on a small general farm consisting of 220 acres, on which we produce cattle, hogs, and timber. Since my father is otherwise employed, most of the farmwork is left up to my smaller brother and me. My father has been very cooperative and helped me to get started in forestry and farming. A great portion of the returns from our farm is used for expansion and improvement.

I am truly grateful to the Seaboard Airline Railroad Co. for making this trip possible and its general forestry agent for the advice given during the State award annual inspections. I was very fortunate in placing second in the program last year and winning first this year.

My forestry project totals 130 acres. On this land I have planted 58,100 pine seedlings and prepared 28 additional acres where seed was broadcast. Over much of this area I controlled my undesirable hardwood on 60 acres by girdling and poisoning. I controlburned 5 acres, did some improvement, cutting and thinning on 50 acres, which I feel contributed to a maximum return on these woodlands.

From this harvest, I cut 47,518 board feet of saw logs, with most of the lumber being used on the farm for repair and the building of a new hay barn. I cut and sold 190 cords of pulpwood, 55 building poles, which were pealed and treated on the farm, for our new barn, and 455 fence posts which were also treated. I also cut 58 cords of fuelwood. The harvesting of timber products was accomplished by use of my chain saw and I built my own vat for the treating of the poles and fence posts.

I have served as president of the local FFA chapter, president of the student council, am a member of the Beta Club and lettered in football, basketball, and baseball. This year I also took second place in the State FFA safe tractor driving contest.

I plan to further my career in forestry and am now a freshman at Alabama Polytechnic Institute at Auburn, Ala.

It has been a real pleasure to meet and talk with you and I have enjoyed this occasion very much. I look forward to the long trip which we are getting to Chicago, Pittsburgh, and Richmond before returning home.

The Real Cost of Milk

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. WILEY. Mr. President, we in Wisconsin, who produce so much milk, have at times discussions between the city folks and the farmers, because the city folks feel that the farmers are getting a great deal for their milk, and the farmers try to tell them they are mistaken. For instance, the farmer gets about 7 cents a quart for milk, or perhaps $3.25 a hundredweight. The same

day, if he is a consumer, he pays anywhere from 20 to 25 cents a quart for milk.

The point I am making is that the farmer who sells the milk is not getting a big profit from the milk because in between the producer and consumer there is the cost of getting the milk to the factory. To get it there, high wages have to be paid. Then the milk probably goes to the distrbuting station. Again wages have to be paid. The result is that no one is getting a great perecntage of profit out of the milk.

But the point is that the farmer does the milking, he owns the cows, he has to feed them, he has to have a farm on which to raise feed for the cows to consume, he has all the work to do, and practically none of the pay. The point is he is not getting his equitable share of the price the milk sells for. That point should be stressed and restressed, because there are those who want to create dissension between the farmers and the city folks.

Mr. President, today the Nation is striving for a solution of the problems in agriculture.

Over the years, the Nation has experienced a strange anomaly in the pricing of agricultural commodities. The prices for products have risen in dollars and cents value.

However, by the yardstick of how many hours of work are required to pay for a quart of milk, for example, the costs have actually shown a steady decline since 1890.

According to a study by the Milk Industry Foundation, the purchase of a quart of milk required 25.5 minutes of labor in 1890. In 1959, the wage earner needed to work 6.8 minutes for a quart of milk.

In the days when the farmer—because of the high cost of the farm program—is increasingly becoming the target of criticism, I believe it is important to point out such factors. The decline in real costs of such commodities—for the most part, at the expense of the farmer—has contributed greatly to holding down the costs of living.

I wish to stress, also, that the farmer often receives too little of the dollars and cents value of his product.

Currently, for example, a dairy farmer in Wisconsin may sell his milk for 6 cents a quart. Within 24 hours, the same milk may be sold at a retail price of about 24 cents a quart. Now, is the farmer getting a fair share of the retail price? Definitely not.

The 6 or 7 cents a quart received for milk is not only too small a share of the retail price, but it is also inadequate in terms of meeting the costs of equipment, labor, taxes, and other skyrocketing expenses of farm operations.

Now, who is getting the money? From time to time investigations have been made into this problem, including hearings by congressional committees. Unfortunately, the big price spread between what the farmer receives for a product and what it sells for retail continues to account for an increasingly large portion of the higher price to the consumer.

Recently, the Dairy Record, an authoriatative voice in dairying, published an editorial entitled "The Real Cost of Milk." I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REAL COST OF MILK

It would require a very aggressive job of public relations to convince the consumer that the real price of a quart of milk has shown a steady decline since 1890, but such actually has been the case.

The Milk Industry Foundation points out that the real price of milk is represented not by the number of cents required to pay for it but by the amount of work that the consumer has to do to earn enough money to buy it.

The U.S. Bureau of Labor Statistics has collected data for 70 years on milk prices and the number of minutes of factory work required to earn the price of a home-delivered quart, using the factory worker's average hourly earnings as a basis.

In 1890 the average price for quart of home-delivered milk was 6.8 cents and it required 25.5 minutes for a wage earner to earn enough to buy the quart for in those halcyon days of low wages the average hourly factory wage was 16 cents.

In 1914 the average price of milk was 6.9 cents; it required 22.9 minutes to earn the price of a quart of milk and the average hourly factory wage was 23.3 cents per hour. In the booming year of 1929 the price of milk had advanced to 14.4 cents per quart; the average hourly wage was 56.6 cents and it required 15.3 minutes to earn enough to buy the quart of milk.

In the postwar days of 1947 the average price per quart was 19.6 cents; the average hourly factory wage was $1.237 and it only required 9.5 minutes to earn that quart bottle of milk. In 1959 the January-October average price of milk was 25.2 cents; the average hourly factory wage was $2.216 and it required only 6.8 minutes to earn the price of the quart.

Consumers seldom, if ever, give any thought to the relative stability of milk prices or that it takes less out of the family budget in relation to income than is the case with most other products which they buy.

Milk distributors continue to operate on a margin of slightly more than 2 cents of each sales dollar for a net profit of about one-half cent a quart. There may be many individual companies which are operating on a 2 percent margin, but we doubt very much that there are any great number of industries which in the overall are operating on such a slim percentage margin.

And this is the industry that political demagogs from time to time raise their quavering voices to demand that the fluid milk industry be made a public utility.

The Hawaiian Constitution: A Structure for Good Government

EXTENSION OF REMARKS

OF

HON. DANIEL K. INOUYE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. INOUYE. Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the CONGRESSIONAL RECORD an article written by Dr. Paul C. Bartholomew and Dr. Robert M. Kamins entitled "The Hawaiian Constitution: A Structure for Good Government."

I feel certain that the information contained in this article will be of great interest to the Members of this Congress.

The article follows:

THE HAWAIIAN CONSTITUTION—A STRUCTURE FOR GOOD GOVERNMENT

(By Paul C. Bartholomew, professor of political science at the University of Notre Dame, and Robert M. Kamins, professor of law at the University of Hawaii)

Although Hawaii is our newest State, her constitution is nearly 10 years old, having been in existence since 1950. Professor Bartholomew and Professor Kamins discuss the features of the 50th State's basic law in this article. Lawyers will doubtless be particularly interested in the fact that Hawaii, unlike Alaska, did not choose to adopt the American Bar Association's plan for judicial selection, preferring instead appointed judges. Like Alaska, Hawaii's only elected executive officers are the Governor and the Lieutenant Governor. This article discusses these and a number of other interesting features of the new State's constitution.

The admission of a State to the Union is a matter of such rarity that the occasion always arouses real interest as to the nature and provisions of the constitution of the new arrival. The addition of Hawaii to round out our half hundred States is no exception, even though the constitution has actually been in existence since 1950.

Hawaii became American Territory by act of Congress in 1898. Prior to this, in 1854, a treaty with Hawaii had been drafted at the request of President Pierce. The subsequent death of the King of Hawaii prevented ratification of the treaty. A revolution in the islands later resulted in the establishment of a republic in Hawaii. A treaty of annexation was again negotiated. This was later withdrawn by President Cleveland. With the accession of President McKinley another treaty was signed in June of 1897. This was ratified by the Hawaiian senate but was rejected by the Senate of the United States. However, the following year, a joint resolution of annexation passed Congress and was signed by McKinley.

Two years later, on April 30, 1900, the organic act for Hawaii became law. This granted U.S. citizenship to the citizens of Hawaii and, in effect, incorporated the territory as an integral part of the United States. Only 3 years later, in 1903, the Hawaiian legislature, for the first of at least 17 times, petitioned Congress for statehood. Legislation to grant statehood was introduced in Congress on fewer than 66 occasions after 1920, but no action was taken by either House of Congress until 1947 when the House of Representatives passed a statehood act. The House repeated this action in 1950 and in 1953 without concurring Senate action. In 1954 a joint Hawaii-Alaska Enabling Act passed the Senate but not the House. Thus the final passage of S. 50 by both the Senate and the House in the 1st session of the 86th Congress in March of 1959 and its subsequent approval by President Eisenhower marked the end of a long battle for admission to statehood. The victory came exactly just 3 months less than 61 years after annexation, and only a little over 1 month less than 59 years after the passage of the organic act.

However, the people of Hawaii had not waited for Congress to pass an enabling act before proceeding to the framing of a constitution for the proposed State. In 1950 a convention of elected delegates met in Honolulu

and proceeded to draw up a constitution which was signed at Iolani Palace on July 22. This was submitted to the voters of Hawaii and approved by a 3 to 1 majority on November 7, 1950. The action of Congress in adopting the Statehood Act of 1959 involved approval of this constitution, with two changes, noted below.

Under the terms of the Statehood Act, the Territorial Governor called the first State primary election for June 27, 1959. At that time the voters were to adopt or reject three propositions: (1) Whether Hawaii should be immediately admitted to the Union as a State; (2) whether the boundaries should be as prescribed in the act[1]; (3) whether the reservation of rights and powers to the United States and the prescribed terms and conditions of the act should be accepted by the State and its people. The vote of the people at the polls overwhelmingly favored acceptance. The Governor also called a general election for July 28, 1959, for the choice of State officers and two Senators and one Representative in Congress. After the election the Governor certified to the President the results of the plebiscite on the three questions and the results of the election of officers. Upon the President's findings that these propositions had been adopted and upon the certification of the returns of the election of officers, the President issued a proclamation of admission to statehood. Ten days thereafter the first State legislature of Hawaii met in special session. Incidentally, as in the case of Alaska, the Representative of Hawaii in Congress is to be temporarily in addition to the 435 members of the House now prescribed by law. This will hold until the next reapportionment.

HAWAII'S STATE CONSTITUTION

The constitution of the State of Hawaii has a preamble and 16 articles. The preamble reads as follows:

"We, the people of the State of Hawaii, grateful for divine guidance, and mindful of our Hawaiian heritage, reaffirm our belief in a government of the people, by the people and for the people, and with an understanding heart toward all the peoples of the earth, do hereby ordain and establish this constitution for the State of Hawaii."

All State constitutions have some statement of the rights of persons under the State's jurisdiction. In the Hawaiian Constitution this statement (article I) is called the bill of rights, and it generally follows the Bill of Rights of the Federal Constitution. Here is set forth a recognition of popular sovereignty, the equality of men and their mutual rights and duties. Specific guarantees include life, liberty, the pursuit of happiness, property, religion, speech, press, assembly, petition, due process, grand jury, trial by jury in both civil and criminal cases, proper accusation of crime, witnesses, counsel, habeas corpus, the subordination of the military to civil power, and the right to bear arms through a militia. There are specific guarantees against unreasonable search and seizure, double jeopardy, self-incrimination, excessive bail or fines, cruel or unusual punishment, quartering of soldiers or militiamen and imprisonment for debt. There is a final statement to take care of the principle of exclusion that the enumeration of rights and privileges shall not be construed to impair or deny others retained by the people.

These are the basic rights that are found in all State constitutions. However, other States have additional basic guarantees covering the right of privacy, the location of the power to suspend laws, the prohibition of ex post facto laws and the outlawing of slavery. On the other hand there are a number of specific guarantees in the Hawaiian Constitution that are not included in all of the other State constitutions, such as freedom of the press. The influence of the Federal constitutional model is here obvious.

Footnotes at end of speech.

Article II concerns suffrage and elections. Twenty years is set as the minimum age for voting. This contrasts with Alaska's 19 years and the 18-year minimum of Georgia and Kentucky. All other States have a 21-year limit. One year is set as the period of legal residence in Hawaii. In other States, this ranges from 6 months to 2 years. U.S. citizenship, registration, and a literacy test of ability to speak, read and write English or Hawaiian are added voting qualifications. The first of these is found in all States while registration and a literacy test are qualifications in about a third of the States.

The date of general elections follows the pattern of all of the other States except Alaska[2]—the Tuesday after the first Monday in November of even-numbered years. The legislature is specifically empowered to prescribe methods of voting, including absentee voting, with the provision that voting is to be secret. The legislature is also charged with determining the procedure for deciding disputed elections but this determination is to be in a court of competent jurisdiction. As is common in other States, persons of unsound mind or those convicted of a felony are barred from voting unless pardoned and restored to their civil rights.

Article III is the legislative article. The legislature (the collective name for the two houses) is to consist of a senate of 25 members and a house of representatives of 51 members. Only Delaware and Nevada have a smaller total number of legislators except, of course, Nebraska's single house of 43. One might have expected that the example set by the Nebraska unicameral experiment would have been followed, but Nebraska remains the only State with a one-house legislature. Members of the senate and the house are to be elected from districts. Six senatorial districts are set by the constitution, together with the number of senators to be elected from each. The 18 representative districts and the number of members to be chosen from each are temporarily set in the constitution. Reapportionment every 10 years is to be by the Governor by the method of equal proportion—the mathematical formula used in the apportionment of the lower House of Congress—among four basic areas in the islands. Apportionment is to be based on the number of voters registered at the last preceding general election.

This provision requiring the Governor to reapportion is unique among the States. In most States this is an exclusive power of the legislature, but California, Illinois, Michigan, Oregon, South Dakota, Texas, and Washington provide alternative procedures in case the legislature neglects to reapportion. Arizona, Arkansas, Missouri, and Ohio reapportion by means of boards, of which the Governor is a member in Arkansas and Ohio, but only in Hawaii is the Governor himself authorized to perform the function exclusively. The Hawaiian supreme court is empowered to require "by mandamus or otherwise" that the Governor perform this duty, if he fails to do it, or to correct errors he may have made in the process.[3]

Terms of representatives and senators are 2 and 4 years respectively, which is the arrangement in 30 States including Alaska. There is provision for overlapping terms with half of the senate membership chosen at each succeeding election. The legislature is authorized to provide for the filling of vacancies and to set the compensation of members. Qualifications for membership include an age minimum of 25 years for the house and 30 for the senate, residence in the State for at least 3 years, and the fulfillment of all requirements for voting in the district from which the candidate seeks to be elected. The usual legislative immunities are extended to members.

Sessions of the legislature are to be held annually, those in the odd-numbered years are to be known as general sessions and those in the even-numbered years are to be known as budget sessions. At the latter the only business eligible for consideration and enactment is to be the following: revenue bills, appropriation bills, emergency measures (requiring a two-thirds vote of all members of each house), bills calling elections, bill proposing constitutional amendmnts, and measures relating to the impeachment or removal of officers.

General sessions are to be limited to 60 days and budget sessions to 30 days. The Governor may call special sessions which are to be limited to 30 days. All of these periods exclude Sundays and holidays. Regular sessions are set for the third Wednesday in February. Only Alabama (May), Florida (April), and Louisiana (May) have later meeting dates. Almost all other State legislatures meet in January. Until changed by law, the constitution provides that legislative salaries are to be $2,500 per each general session, $1,500 per each budget session and $750 per each special session.[4]

Unusual provisions governing legislative procedure include the discharge of a committee from further consideration of a bill 20 days after that bill has been referred to the committee. Such recall of a bill is to be by a two-thirds vote of the entire membership of that house. The vote on the final passage of a bill in all cases is to be by a majority of the total membership of that house and is to be by rollcall.

The Governor has the item veto as applied to appropriation bills, as is true in most States. He has 10 days to consider bills normally, Sundays and holidays excluded. Only Georgia and Alaska permit a longer period of consideration. The Hawaii constitution tries to avoid pocket vetoes. Borrowing an innovation from New Jersey's 1947 constitution, Hawaii's new basic law authorizes each legislature to convene on the 45th day after its adjournment sine die for the sole purpose of considering bills vetoed by the Governor. Vetoes can be overridden only by vote of two-thirds of the full membership of each house. However, if the legislature fails to convene after its ordinary session, bills returned by the Governor do not become law.

Impeachment procedure is entirely normal by comparison with other States. Charges are to be brought in the house of representatives and trial is to be in the senate with a two-thirds vote of the members of the senate required for conviction.

Article IV is the executive article. The Governor is chosen by plurality vote. This is true of all States except Georgia, Maine, Vermont, and Mississippi, where a majority vote is required. In these States, if no candidate receives a majority of the votes, either the two houses in joint session (Georgia and Vermont) or the lower house of the legislature (Maine and Mississippi) makes the selection.

The term of office of the Governor of Hawaii is set at 4 years, as in 30 States, including Alaska. There is no limit on the number of consecutive terms he may serve as there is in 23 other States, also including Alaska. Qualifications include a minimum age of 35 years, U.S. citizenship for 20 years and qualifying as a voter. The Governor is ineligible for any other State or Federal office during his term. The constitution provides that his annual salary shall be at least $18,000. The 1959 Territorial Legislature increased it to $25,000 per annum.

As in all but 11 States, there is a Lieutenant Governor. He is chosen at the same time, in the same manner with the same qualifications, and for the same term as the Governor, but may be of the opposite political party. The Lieutenant Governor is to discharge the powers and duties of the office of Governor in the absence or disability of the Governor as well as succeeding to the

office on the Governor's death. The legislature is empowered to provide for succession beyond the Lieutenant Governor.

The powers of the Governor are of the usual sort found in the other States—to faithfully executive the laws, to serve as commander in chief of the armed forces of the State, to recommend measures to the legislature, and to grant reprieves, commutations and pardons. One unusual feature is the authorization to the Governor to appoint an administrative director "to serve at his pleasure." No duties are specified for this office, although this may develop somewhat along the lines of the chief administrative officer (CAO) being established in more and more cities. No other State appears to have an officer comparable to Hawaii's Administrative Director. It will be interesting to see how the office does develop.

Administrative departments are to be established by law but are limited to 20 principal departments.[5] The head of each department is to be appointed by the Governor with the consent of the senate and subject to removal by the same procedure. Appointees to these offices must have been residents of the State for at least 3 years immediately preceeding their appointment. The Governor is authorized to make recess appointments "but the person so appointed shall not be eligible for another interim appointment to such office if the appointment shall have failed of confirmation by the Senate."

An unusual feature of this constitution (and that of Alaska also) is limiting the number of elective executive offices to those of the Governor and Lieutenant Governor. Most State constitutions freeze a large number of offices such as auditor, treasurer, attorney general, and superintendent of public instruction in the constitution, all to be chosen by popular vote. This reduces the power of both the legislature and the Governor in those States, particularly the Governor, and opens the way for intra-administrative feuding. This has been avoided by the framers of the Hawaiian Constitution.

The last of the big three divisions of governmental power, the judiciary, is established by article VA supreme court and circuit courts are established by the constitution, but the creation of inferior courts is left for the legislature. (There are now 29 district magistrates' courts.) The supreme court is to consist of five justices including the chief justice. These are to be named by the Governor and senate for 7-year terms. All judges must have been admitted to the bar of the Hawaiian supreme court for at least 10 years prior to appointment. Mandatory retirement is set at 70 years of age. Removal of judges is to be by a two-thirds vote of the membership of each house of the legislature sitting in joint session. Provision is made for retirement of a judge for incapacity. This is to be done by the Governor upon the recommendation of an investigatory board.

The chief justice of the supreme court is made the administrative head of the courts with power to assign judges temporarily from one circuit court to another. He also has the power to name an administrative director of the courts. The supreme court is empowered to promulgate civil and criminal rules of practice, procedure, and appeals in the courts.

It is regrettable that the framers of the Hawaiian constitution did not adopt some variation of the plan used in California and Missouri for the choice of judges, as did Alaska. However, it is good that the example of the 36 States that use popular election for the choice of judges was not followed.

Footnotes at end of speech.

Article VI deals with taxation and finance. There is to be no discriminatory taxation of property owned by citizens of the United States who reside outside the state. All bonds and other instruments of indebtedness of a political subdivision must be authorized by its governing body. The state debt limit is set at an absolute sixty million dollars.[6] More than half of the 50 States have some fixed sum limitation on outstanding unpaid indebtedness. In Hawaii this debt limit can be exceeded when authorized by a two-thirds vote of the total membership of each house of the legislature. However, even with such authorization, the amount of general obligation bonds outstanding cannot exceed a sum equal to 15 percent of the total assessed valuation of real property in the State. Instruments of indebtedness issued for certain specified purposes, and to meet emergencies caused by disaster or act of God, may be issued without regard to the debt limit. The same is true if these instruments of indebtedness are issued in anticipation of revenue collections or to meet casual deficits or failures of revenue and are payable within 1 year.

Political subdivision in the State are limited in funded debt to 10 percent of the assessed value of real estate in the particular subdivision. The aggregate of a subdivision's debt contracted in any fiscal year is not to exceed 2 percent of such assessed valuation. These limits do not apply to borrowing by a subdivision in anticipation of revenue or to meet casual deficits or failures of revenue, if such indebtedness is payable within 1 year.

The constitution makes mandatory the adoption of the serial bond arrangement for repayment of debt. Such an application of the installment system of payment is to be preferred to a sinking fund arrangement. Revenue bonds are exempt from this provision.

The executive type of budget is provided. All but six States use this arrangement which establishes the Governor as the budget-making authority. He is further given the duty of submitting bills simultaneously with the budget to provide for any added revenues or borrowing that may be necessary to meet the proposed expenditures. This is a practical attempt to eliminate unbalanced budgets. The legislature is to appoint an auditor by majority vote of the members of the legislature in joint session. The auditor has the duty to post-audit and to report to the Governor and the legislature.

Article VII is the local government article. The legislature is required to create counties as the major political subdivision of the State and may establish other subdivisions. This is the usual pattern among the various States. Only Louisiana with parishes and Alaska with boroughs depart from this pattern.[7] Each subdivision is granted self-government, but this is potentially nullified by the further provision that the exercise of this self-government is to be done "within such limits and under such procedures as may be prescribed by law."[8]

Article VIII makes it the obligation of the legislature to provide for: (1) the protection and promotion of the public health, (2) the treatment, rehabilitation, and care of mentally and physically handicapped persons, (3) assistance for persons unable to live in a manner compatible with decency and health, (4) slum clearance and low income housing, and (5) the conservation of natural beauty spots as well as those of historic or cultural interest.

Article IX directs the establishment of a public school system free from sectarian control as well as a university (the University of Hawaii), libraries, and other institutions. Segregation on the basis of race, religion or ancestry is specifically forbidden. The wall of separation between church and state in this area is guaranteed by the proviso that public funds shall not be used for the support or benefit of any sectarian or private educational institution. A state board of education is to be appointed by the Governor and senate. This board, in turn, is to name a superintendent of public instruction as its executive officer. The members of the board of regents of the University of Hawaii are to be appointed by the Governor and senate. The president of the university who, along with the superintendent of public instruction, is to be an ex officio voting member of the board of regents, is to be named by the board, which is the policy-formulating body for the university.

Article X is concerned with the conservation of natural resources. The legislature is ordered to vest the powers of management and disposition of these natural resources—agricultural, fish, mineral, forest, water, land, game, and others—in one or more executive boards or commissions. All fisheries of the sea waters are to be free to the public, subject to vested rights. Any possibility of preferential treatment for private interests with respect to natural resources is guarded against by the requirement that the state power over public lands is to be exercised only by general laws except where public agencies are involved. Further, the public lands are to be used for the development of farm and home ownership on as widespread a basis as possible. This last provision reflects the historic background of land ownership in the islands where lease-holding arrangements have been prevalent and (on Oahu) land available for ownership in fee has been in chronically short supply.

The following article (XI) continues the consideration of homelands by adopting as a law of the State the Federal Hawaiian Homes Commission Act of 1920. The treatment of the Hawaiian Homes Commission Act (under which residential and homesteading properties are supplied at an annual rental of $1 to persons of at least half-Polynesian ancestry) comprises a constitutional anomaly. The act admitting Hawaii to the Union provides that those sections of the Hawaiian Homes Commission Act which relate to its administration can be amended in the State constitution or by statute, but that other sections, including those dealing with funds, cannot be amended without the consent of the United States. No parallel restriction upon the self-government of an American State appears to have been imposed by Congress, and in the light of the determination of previous similar, but different, restrictions, the provision may be legally vulnerable.[9]

Article XII guarantees to employees in private enterprise the right to organize and to bargain collectively. Those in public employment are extended the right to organize and to present to the Government their grievances and proposals.

The boundaries, the capital (Honolulu), and the State flag (the Hawaiian flag, modeled after the British) are established in article XIII.

Article XIV contains general and miscellaneous provisions, some of which are unusual. The merit principle is adopted for public employment subject to law. Any public employees' retirement system is to be a contractual relationship not subject to diminution or impairment. Loyalty to Federal and State governments is made a qualification for public employment and a constitutional oath is set forth. The exclusion principle is recognized with the provision that "the enumeration in this constitution of specified powers shall not be construed as limitations upon the power of the State to provide for the general welfare of the people."

In article XV are set forth the details of revision and amendment of the constitution. Two methods are provided, by convention and by the legislature. The periodic submission plan is adopted in the requirement that at least every 10 years the question of calling a constitutional convention must be submitted to the electorate.[10] The possibility that the Hawaiian Legislature may neglect to do this is guarded against by providing that the Lieutenant Governor must certify the question of calling a convention if the legislature has failed to do so. The legislature may propose amendments by a two-thirds vote of each house at one session after the Governor has received at least a 10-day written notice of the final form of the proposed amendment. Alternatively, amendments can be proposed by a majority vote of each house on the proposal at each of two successive sessions.

Regardless of whether the amendment is proposed by convention or by the legislature, it is then submitted to a vote of the electorate at a general election. The proposition must secure a majority of all of the votes cast on the question and this favorable vote must also constitute at least 35 percent of the total number of registered voters. There is the further requirement that any amendment proposition either changing this provision or changing the representation from any senatorial district must be approved by a majority of the votes cast upon the question in each of a majority of the four counties of the State. The Governor's power of veto does not apply to any proposed amendment. In effect this provision precludes reapportionment of the senate, since the outer islands, other than Oahu, cannot be expected to approve a reduction in their representation.

The final article (XVI) is the very necessary but transitory schedule article. This contains the details and the step-by-step procedure for putting the constitution into effect. All laws in force in the territory of Hawaii are to continue in force until their expiration, amendment, or repeal.[11] All legal determinations and court actions are to continue unaffected.[a] The debts and liabilities of the territory are to be assumed by the State of Hawaii. All officers of the territory and of local governments are to continue in office until superseded. The lieutenant governor is to succeed to the powers and duties of the secretary of the territory.

Also included in this article are details covering the election of the first officers of the State and the first Members of Congress from the State. The effective date of the constitution is set as "immediately upon the admission of Hawaii into the Union as a State." Under the admission act, this was accomplished by proclamations of the President, on August 21 of this year.

The Hawaii constitution is brief (11,400 words) [12] and generally incorporates the better constitutional provisions of the other American States. Its drafters, however, did not completely avoid the trap of being overly specific in dealing with quantities. The State debt limit of $60 million, which seemed generous when the constitution was drafted 9 years ago, is inadequate to the point of temporarily embarrassing the fiscal operation of the new State. The requirement that the lower house be reapportioned on or before June 1, 1959, proves to be ineffective, because the delay in achieving statehood left Hawaii without a State legislature on that date.

In addition, the Congress placed unusual limitations on Hawaii by requiring, in the act of admission, that basic amendments to the Hawaiian Homes Commission Act be approved by the United States in order to be effective. Despite these difficulties and shortcomings, however, the constitution of the State of Hawaii affords a good structure for the governance of the 50th State.

[1] The Congress changed the constitutional description of Hawaii's boundaries by excluding Palmyra, an atoll some 960 miles south of Honolulu.

[2] Alaska has set the second Tuesday in October of even-numbered years.

[3] The constitutional convention may have inadvertently made reapportionment of the house impossible until 1969. Art. III, sec. 4, says that the Governor shall reapportion on or before June 1, 1959, and every decade thereafter. On June 1, 1959, however, there was no State Governor or State legislature. An action is now being brought in the Hawaii supreme court to require the territorial Governor to reapportion the State legislature, but the likelihood of success in the effort is not great.

[4] Under territorial law, which carries over until amended, legislators from the island of Oahu also receive a per diem payment of $32.50. Those from other islands receive $45 per day in attendance at the legislature.

[5] There are now some 75 departments, boards, commisisons, etc. A major problem of the transition to statehood will be to effect this reorganization. The constitution allows the legislature 3 years, until the late summer of 1962, to group these various agencies within 20 principal departments. If the legislature does not meet that deadline, the Governor is to make the allocation, by executive order, within 1 year thereafter.

[6] The $400 million debt ceiling, which seemed generous to the constitution's drafters in 1950, when the territorial debt approximated $20 million, is already hopelessly insufficient. As Hawaii becomes a State, its outstanding debt will exceed $150 million. Living within the debt ceiling will be difficult until property values, expanding rapidly with a construction boom on Oahu, raise the permissible maximum to $160 million or more. This expansion will probably require 2 years.

[7] Connecticut has adopted legislation to abolish counties and leave towns as the first subdivision below the state level.

[8] For a description of the highly centralized government which has evolved in Hawaii see Norman Meller, "Centralization in Hawaii: Retrospect and Prospect," 52 American Political Scientific Review 98–107 (March, 1958).

[9] This may very well depend on whether the courts regard the arrangement as contractual with a quid pro quo basis. Cf. *Coyle* v. *Smith*, 221 U.S. 559 (1911) and *Stearns* v. *Minnesota*, 179 U.S. 223 (1900).

[10] Nine other States, including Alaska, have this provision for the submission of this question at intervals. Most of these States provide for 20 year intervals, but Iowa and Alaska have also specified 10 years.

[11] The Hawaii statehood act (sec. 15 of Public Law 86–3; 73 Stat. 4) provides that territorial laws enacted by the Congress shall terminate within 2 years of admission or upon the amendment or repeal of such laws by the State of Hawaii, whichever first occurs.

[12] Only 10 States have shorter constitutions, the most recent of these being that of Tennessee (1870). Of the other recent constitutions, Georgia's (1945) has 25,000 words, Missouri's (1945) has 30,000, New Jersey's (1947) has 12,500, and Alaska's (1956) has 12,000 words. See "The Book of the States 1958–1959," page 11.

The Steel Strike

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. HARTKE. Mr. President, yesterday I commented briefly on the termination of the Nation's longest and most costly steel strike. I informed my colleagues that in my opinion the strike could have been settled long before it actually was settled if the American people had true leadership in the White House.

This morning, Mr. President, I call to your attention and the attention of my colleagues an editorial in the Fort Wayne Journal-Gazette, of Fort Wayne, Ind., of January 12. This eminent newspaper and spokesman for the citizens residing in the heart of the Nation, editorializes on that so-called leadership the American people have been hearing so much about lately.

Mr. President, so that my colleagues here in the Senate and American citizens throughout the Nation may have the benefit of these views I ask unanimous consent that the January 12 Fort Wayne Journal-Gazette editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne (Ind.) Journal Gazette, Jan. 12, 1960]

RUNNING FROM THE STORM

The thunder and lightning which followed the settlement of the steel strike will continue for a long time.

The settlement was not, and is not, the happy thing which some of the people close to it claimed that it was.

Fact is that many people are very unhappy, and are going to remain that way.

Those who will be most unhappy will be the victims of the inflation which is bound to follow—and the inflation is something for which Vice President NIXON and Secretary of Labor Mitchell will not want to take credit.

Yet a writer to a Chicago newspaper already has nominated Mr. NIXON for the title of "Mr. Inflation."

It is an honor which Mr. NIXON will decline. He is always ready to take any credit, but never any blame.

When Secretary Mitchell says the steel agreement cannot set off a new round of inflation, he is merely defending his own handiwork. Denial of a charge is a very common defense.

The Wall Street Journal has said that the settlement "gives a big upward thrust to the inflationary wage-price spiral."

So does almost every informed person who does not have an ax to grind—especially a political ax.

Walter Lippmann, one of America's most objective commentators, says: "The strike was not settled by 'free bargaining.' It was settled by a political fix."

"So we have come to a crude and embarrassing ending to an inglorious and mismanaged policy," Lippmann comments.

Other authorities have recalled how the Eisenhower Administration has been talking against inflation as a terrible evil and yet engineered a settlement in the steel strike which has made more inflation inevitable.

The end of the steel strike negotiations should not be called a settlement at all. It would be more accurate to call it an unsettlement.

For much has been unsettled by it and will remain that way for a long time.

Those who claimed credit in the first hours, will be running away from the real results of their actions.

Among these runners will be Vice President NIXON and Secretary of Labor James P. Mitchell.

They sought the credit. They must also take the blame.

American Industry Needs Protection From Cheap Foreign Labor

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. GRANT. Mr. Speaker, I am privileged to insert in the RECORD a letter recently received by me from Mr. Donald Comer, chairman, executive board, Avondale Mills, Birmingham, Ala.

Mr. Comer is an outstanding, patriotic businessman and one who knows whereof he speaks. He has given much time and effort toward the problem discussed in his letter. This problem should have early and favorable consideration by this Congress as it is vitally important to a large section of our economy in all parts of the Nation.

AVONDALE MILLS, INC.,
Birmingham, Ala., January 12, 1960.

Hon. GEORGE GRANT,
Member of Congress, House Office Building, Washington, D.C.

DEAR MR. GRANT: When the President was asking for renewal of his misnamed reciprocal trade program, he wrote Congressman JOE MARTIN of Massachusetts that he would administer this legislation without injuring a single American industry. Senator JOHN SPARKMAN of Alabama put a copy of that letter in the CONGRESSIONAL RECORD.

The President referred to the escape clauses provided in the legislation: these escape clauses providing that any industry thinking itself injured by imports could plead their case before the Tariff Commission. The nationwide Committee on Import-Export Policy in Washington have kept a record of the results of such hearings before the Tariff Commission.

Industries seeking remedy from Tariff Commission	45
Remedy denied by Commission	19
Remedy recommended by Commission to President (one in process)	26
But denied by him	17
Remedy granted by President	8
But drastically diluted by him	6
Full recommendation granted (out of 45)	2

One of his denials was protection of New England fisheries against Iceland. Apparently he is asking the New England fishermen to pay for his air base in Iceland.

This same committee lists increasing imports recently into this country and they include in this list foreign cars, binoculars, typewriters, sewing machines, watches, and various other articles.

I am quoting from news items from our papers and magazines of today:

"U.S. import trade from Japan set an all-time record in 1959 and is approaching the $1 billion annual mark. Japanese products are making an impressive invasion into U.S. markets for textiles, foodstuffs, metal manufactures, and a wide variety of household and apparel products tailored to satisfy American consumers."

Here is what Assistant Secretary of Commerce Henry Kearns said in Japan: "Our U.S. policy to seek elimination of trade barriers remains unchanged, and the tremendous increase in Japan's exports to the United States thus far in 1959 and the favorable outlook for the remainder of the year hardly suggest there is strong [official] sentiment to restrict imports from Japan," Mr. Kearns said. "Furthermore, we shall do everything within reason to stem the tide of protectionism in the United States, for there is no future in protectionism for us or any other nation."

From Business Week of January 2, 1960, an article headed "Americans Step Up Foreign Sourcing" illustrates that the Litton Industries, a west coast office machine company, bought a plant in Sweden and now Swedish cash registers are coming over. They say "these moves point up a little-publicized but growing trend in foreign operations of U.S. companies—the purchase or production overseas of finished goods and components for export back to the United States. Western Europe and Japan are the two key places where U.S.-affiliated plants are feeding products and parts to the United States."

Argus Camera have been importing light meters and folding flash guns, the latter from Japan. Motorola and small radios are coming to the United States from Mexico. American automobiles made in Brazil are coming to the United States. Our newspapers and magazines are filled full of such notices. Mr. Bob Stevens, head of our largest textile company, calls this exporting jobs instead of things.

Another magazine headlines "Free Trade Theory Amounts to Importing Foreign Slave Labor."

The world-famous columnist Arthur Brisbane 25 years ago said: "While American manufacturers groan about cheap goods from Japan—cotton cloth, tennis shoes at 10 cents a pair, bicycles at $2, and other things with which our high wages seem to compete—the intelligent Japanese takes steps to protect their own labor."

I am attaching a copy of a letter I wrote to the New York Times which they declined to publish, but the America's Textile Reporter of Boston reprinted it in full in their December 31, 1959, issue. Also, I am enclosing you an article written for the Southern Textile News, of Charlotte, N.C., at their request.

The textile industry is not asking for any favors, we are asking that the President carry out his promise. He may not know it but the people who he put in charge of our foreign trade are not carrying it out. There are over a thousand of us in the textile industry and another thousand who are manufacturing our fabric into garments and both groups are having a difficult time making ends meet.

The 1959 profit statistics showed that of the 22 major industries, textile mills products and apparel rated 21st and 22d, respectively, in percentage of profit on volume. Petroleum was first, showing profits of 10.6 percent on volume of sales, whereas textile mill products showed only 1.9 percent. Our Government fixes our wages, our operating standards, and the price we pay the American farmer for our cotton. Our Government sells this same cotton to our foreign competitor, Japan particularly, at 8 cents a pound less than we pay for it, and their wages are one-tenth of ours.

At this late date the President has asked the Tariff Commission to investigate this situation and see if any American industry is being hurt. He is asking the Tariff Commission to prove that two and two makes four, and they have promised an extensive hearing to begin March 1, but in the meantime we suffer. The administration, with their delays, are really putting us in a position where we are going to need an ambulance, whereas, what we want is a doctor.

Our president, Mr. J. Craig Smith, has been appointed by Mr. Jim Chapman, president of our association, on a committee to present our case before the Tariff Commission. This assignment of duty comes at a time when these executives are especially needed at home in the management of their own properties.

Here the President, who has promised protection, now exposes us to such a situation. We are asking the garment manufacturers association to join with us, as they are suffering from imports of garments, particularly from Hong Kong and Japan, where wage rates are 9.75 cents, as compared with our rate of $1.25. They state that in July alone there came into this country from overseas 15 million garments, mostly from Hong Kong and Japan. In 1956 apparel shipments from Hong Kong was valued at only $56,000; in 1959 the import rate has been over $5 million per month.

Mr. Floyd Jefferson, of Iselin-Jefferson Co., in a recent speech, quoted Abraham Lincoln:

"You cannot strengthen the weak by weakening the strong. You cannot help little men by tearing down big men. You cannot help the wage earner by pulling down the wage payer."

Congress, not too long ago, appointed a committee under Senator PASTORE to investigate this that I am talking about, and I suggest that you ask Senator PASTORE and his committee present to the Tariff Commission a record of their findings. In the meantime, I think this committee, or some other congressional committee, should appear before the Tariff Commission and help tell this story.

The President promised us protection and I think if the industry, already in trouble, is going to have to burden itself with a big expense account that the President and Congress should bear some of the burden of presenting these facts and figures. I hope individual Congressmen will appear before the Tariff Commission.

It is rumored that the Japanese, who want to level down the American standard of wages and cripple American industry, have employed ex-Governor Dewey at $200,000 a year to present their case. It is also rumored that the late Secretary of State Dean Acheson will appear before the Tariff Commission in support of this unfair Government policy.

Mr. Grant, you remember in ancient history when Rome and its foreign trade was threatened by Carthage, Cato stood in the Senate every day and said, "Carthage must be destroyed." This situation I am mentioning today must be destroyed and I am not speaking only for the textile industry but for all industries. The American standard of living is the highest in the world and manufacturers everywhere look with hungry eyes on this market. We have to protect it and Congress is going to have to do the job. Every wise farmer who provides good pasture for his cows puts a fence around it to protect it from the hungry and the lean, from the less thoughtful, less provident and less fortunate, if you wish. We are willing to join in a nationwide program to help anybody, anywhere that the Government thinks needs our help. As my brother, Hugh Comer, says, "We will be glad to divide our milk, just don't cripple our cow."

The Government, at present, has a budget of some $40 billion against the possible invasion of hostile soldiers. This is a future threat. Our immediate danger is the invasion of these increasing things.

If these cheap imports continue until they destroy the American industry, how long do you think their price will stay cheap? Wouldn't they charge what the traffic would bear?

The textile industry are in entire sympathy with the program for reciprocal foreign trade. The late Secretary Hull is reported as having described such trade as nations swapping with each other what each has in over abundance that the other nation needs, with some three-way trading. To illustrate: we need certain raw products and surely there is no objection to clearing the road for such trading for such things as nitrates, bauxite, tin, rubber, coffee, etc. On three-way trading, Japan can buy our cotton, swap her cotton goods to Southeast Asia for tin

and rubber, etc.; or to South America for coffee, cocoa, etc., and send these things to us which we need. The immediate trouble comes from the fact that Japan is buying our cotton which she needs and shipping us back cotton goods which we don't need. We don't call that reciprocal.

Japan asks why aren't we willing to "live and let live." Our answer is that we go them one better—"Live and help live." That is why we have accepted her quota of cotton goods, not a yard of which is needed and slows down our looms. What did she do to the tuna fish industry and what is she doing to our plywood industry, chinaware, sewing machines, kodaks, etc., etc. All of these invasions possible only because of their cheap wages. We welcome competition where new style, design, idea or model are involved. We only ask protection from cheap labor. Remember ours is Government fixed, the highest in the world, and all the world has the same machines that we have.

Won't you please consider taking the lead with the Alabama delegation? Senator KEATING, of New York, has proposed legislation. Let's get behind him, prove it as necessary, and make it effective.

Yours very truly,

DONALD COMER,
Chairman, Executive Board.

Music Is Everybody's Business

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. JAVITS. Mr. President, American artists are making tremendous strides in overtaking the cultural lag which exists in many areas of the country. At the same time their achievements in music, painting, literature, drama, sculpture, and other arts are increasing the prestige of the United States all over the world. I have sponsored legislation which would establish a new U.S. Arts Foundation for the performing arts, and in this connection I would like to call attention to a discussion of the need to assist American music written by a world famous conductor. Wilfred Pelletier is a name familiar to all who know the Metropolitan Opera and the New York Philharmonic orchestras, both of which he once conducted. His report is entitled "Music Is Everybody's Business," and it was published in Allegro, November 1959, the newspaper of Local 802, AFM, Associated Musicians of Greater New York.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUSIC IS EVERYBODY'S BUSINESS

(By Wilfred Pelletier)

American music, financially speaking, seems never to be secure or stable. We are a wealthy Nation, with tremendous resources, but many potentially talented musicians are forced to relegate their art to the status of a hobby, our young composers must create in their spare time, and our younger generation of music students must compete constantly for the limited number of scholarships available. It might be all right for us to point with pride at the present situation were we living 50 years ago, but we must remember that we are 180 million strong and should now be producing far greater musical creativity.

In the past, serious music in our country was supported almost exclusively by ardent music lovers and a few wealthy patrons. In our small, underpopulated Nation of that time, it was gratifying that several cities established themselves as music centers. When I started as a conductor of the Metropolitan Opera Orchestra, I can remember the last of these great patrons, Otto H. Kahn, as he almost singlehandedly made up the opera's deficit each year. Men like Carnegie, Lewisohn, Frick, and Guggenheim gave millions to all forms of the arts, but now, with high taxes, the depletion of some of the great fortunes, and the passing of these men, few have taken up the reins.

We, in our traditional go-getter spirit, have tried to make music a business. It has been proved many times over that art is not, never will be, and should not be expected to be, commercially profitable. Music's profits exist in the personal enlightenment and aesthetic fulfillment that we receive from all great art—as well as from the international respect we attain through our cultural achievements.

In terms of the boxoffice, a concert, because of its enormous expense, cannot often see the black side of the ledger. For the first time in history professional musicians are being paid a decent wage while they work, soloists and conductors are finally getting due return for their talents and years of training. But our concert halls have not grown sufficiently in number and even the most ardent music lover has a limit to what he will pay for a ticket.

This places the concert manager or impresario in a very embarrassing position. Frequently his most modest productions, despite cutting every possible corner, are financially unfeasible and a merely "respectably adequate" production is a seldom-realized dream. But it is to the credit of these hardworking, unsung men and women that serious music is growing in penetration and impact. Speak to the concert producer, as I have done in many cities and towns in our country, and you will hear harrowing tales of financial woes that would be more suited to stock market speculators. Symphony orchestras must constantly search for funds to exist. What kind of pride or strength can we build in our art if it is forced to beg for its very existence?

The question now arises whether subsidy is the answer. Frankly, there is no other way. Serious music must be supported or we will see it slowly disappear from our concert halls. Who should subsidize music? There are many possible answers. First, government sponsorship—the way in which we as citizens can most closely support our cultural institutions through our taxes. There are potentially Federal, State, and local subsidies. Needless to say, Federal assistance is the most difficult to obtain because of regional differences, although Senator JACOB JAVITS, of New York, has sponsored a bill in Congress that will help solve many of the financial burdens of qualified cultural institutions.

State and local subsidies are the more immediately workable projects, closer to the specific needs of a State, or a community within that State. Citizens can activate these projects through committees to interest the legislative powers of their area in cultural undertakings that will not only provide enjoyment to the local residents but give the community prestige. Summer festivals of music, opera and dance are notable examples of what some cities and towns have done to raise their own cultural level.

With a long-range plan, government subsidies can help young talent prepare for the future. In Canada, where I direct the conservatories of Montreal and Quebec as well as conduct the symphony orchestras of these two cities, the government has taken full responsibility for educating our young musicians and composers. In many cases employment is provided for them in these and other government-subsidized symphonies. Because of the subsidy, Canada has managed to develop almost within a generation from the musical dark ages into one of the most promising creative nations in the world.

PRIVATE SPONSORSHIP NEEDED

We in America must think not only of Government help but also, in our tradition, of private organizational sponsorship. The great fortunes that were once held by families and individuals are now largely in the hands of vast corporations and institutions. Hand in hand, capital and labor can make funds available to sponsor not only orchestras, concerts, and festivals, but also to commission individual artists to create new works. Frequently a combination of government and private subsidy works unusually well in a public-spirited community.

Only one flaw exists in all talk of subsidy and that is the danger of a nonobjective attitude. We cannot allow artistic or political prejudice or favoritism to influence this program. No institution or government can possibly hope to dispense funds with the individuality of a patron—but there are enough qualified experts in this Nation among established creative artists and educators who would be eager to serve on subsidy committees. We must take a lesson from those European nations where almost all forms of art are government sponsored and establish a system that removes the specific allotment of funds from the sponsoring agency and gives these decisions to competent leaders in the arts. The major foundations in this country—Ford, Rockefeller, Guggenheim, and the government-sponsored Fulbright grants—are completely workable precedents for operating in this manner.

Music is everybody's business. As professionals, educators, and music lovers, we have all known young people who will never use their creativity to the fullest extent because of insufficient funds for training and an insecure future. We must give them their chance or, no matter how powerful America may become in every other field, we will be inadequate culturally. I do not doubt that the American people will awaken to their obligation to protect and develop this essential national resource; the question today is, Why must it take so long?

Congressional Action on the President's Requests for Appropriations and New Obligational Authority

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. EVINS. Mr. Speaker, the last session of Congress, the 85th, and the 1st session of this Congress, the 86th, have been labeled by partisans and propagandists as "reckless spenders" by those who would seek political gain by this misrepresentation. As we begin this new session and again undertake the serious and demanding undertaking of appropriating necessary and adequate fund needs to assure the continued progress of our Nation, I think it is appropriate that we review the actions of the Congress on budgetary matters in the past and in particular during the last 6 years.

Mr. Speaker, first let us look at how our national spending has increased through the years as our country has

grown and as we have faced grave crises both internally and nationally.

For almost three decades, preceding the turn of the century, the budgetary appropriations by the Congress were at a $300 million level. Then in 1891, the 51st Congress appropriated for the first time funds totaling more than half a billion dollars. The Federal budget remained at approximately this level until 1898 when it reached almost $900 million.

The 60th Congress in 1908 was the first Congress to break the $1 billion mark and I am sure that there were those in 1908 who labeled the Members of that Congress "reckless spenders."

Financing World War I made it necessary for the 64th Congress, 2d session, to appropriate the largest percentagewise jump from one year to the next that the Nation has even known when the total budget jumped from $1.6 billion for the year preceding to $18.8 billions for fiscal 1918.

As the country grew internally and as World War II approached the budgetary appropriations continued to grow until the 2d session of the 77th Congress—in the midst of World War II—appropriated the largest sum ever appropriated when the budget figure stood at $147 billions for fiscal 1943.

After the war spending was reduced sharply and hit a postwar low in 1946 when the 2d session of the 79th Congress appropriated $35.7 billions.

Mr. Speaker, now let us look at what has happened to the budget during the last 6 years—since the Eisenhower administration has been in office. The budget estimates and requests for fiscal 1955 was $60.77 billion. The Congress cut and reduced this by some $2.6 billion and appropriated $58.16 billion. Again for fiscal 1956 the Congress cut the President's budget by more than $2 billion as his estimates totaled $66 billion and the actual appropriations totaled only $63.9 billion.

Mr. Speaker, the fact is that the Congress has consistently cut the President's requests for appropriations and has made substantial reductions each and every year. The largest cut was made by the 85th Congress when more than $5 billion was slashed by the Congress from the President's request for $78.1 billion of appropriations. That year $73 billion was actually appropriated by the Congress.

Last year alone $1,881,410,083 was cut from the President's budget. Thus, the Congress during the last 6 years has cut the President's appropriations requests by approximately $12½ billion. These are the true facts.

Mr. Speaker, let me repeat, the Congress during the last 6 years has cut and reduced the administration's request for appropriations by approximately $12½ billion. This vividly demonstrates and should make it clear to all that the Congress is not the heavy wild spender that the partisans, both in and out of Congress, the President and the propagandists would lead the country to believe. The misrepresentation that has been made in this area has been made, I repeat, for political gain.

The true facts are, the President over the past 7 years has repeatedly asked for larger anr larger appropriations, for bigger and bigger spending. The Congress has exercised its collected judgments on these big spending programs and consistently cut and reduced them as the record indicates.

In this connection, Mr. Speaker, I commend to my colleagues, the press, and the public generally a concise and accurate report—Senate Document No. 67, 86th Congress, 1st session—relating to "Congressional Action on the President's Requests for Appropriations and New Obligational Authority"—a statement by the Honorable LYNDON B. JOHNSON, majority leader of the Senate.

In this connection, Senator JOHNSON comments that the Congress has consistently made cuts in the President's budget, and regarding the so-called backdoor financing. The report points out that the President has either advocated bills approving new obligational authority before the Congress acted or else they were approved by him after the Congress acted.

In this connection, Mr. Speaker, I ask unanimous consent that excerpts from this report be reproduced in the RECORD following my remarks hereon. The report and appropriation tables follow:

CONGRESSIONAL ACTION ON THE PRESIDENT'S REQUESTS FOR APPROPRIATIONS AND NEW OBLIGATIONAL AUTHORITY—86TH CONGRESS, 1ST SESSION

COMPLEXITY OF FEDERAL BUDGET

The Federal budget and budgetary procedures are very complex and difficult to discuss or explain in simple fashion. It is easy to see why this is so, from the simple fact that the budget document for fiscal year 1960, submitted to the Congress at the beginning of the session, was the size of a metropolitan telephone book, weighing over 5 pounds and containing over 1,000 pages—most of which consisted of detailed statistical and fiscal tables.

Even this document presented only a portion of the facts. The congressional committees dealing with the various programs involved in the budget held hundreds of hearings—and printed tens of thousands of pages of testimony—in an effort to get at all the facts and have a basis for sound legislative action.

Apart from the problems arising from the very size and scope of the Federal budget, there is a very real problem in talking simply and intelligibly about the budget because of the many technical details involved. For example, no money can be placed under contract (obligated) or spent unless the program has first been authorized by the Congress. In some cases this authorization is in a separate law, which must be followed by a specific appropriation act. In other cases, the authorization is contained in an appropriation act. In still other cases, the authorization act itself provides the contracting and spending authority. Finally, there are some cases, such as interest on the debt, where permanent authority exists and whatever amounts are needed become automatically available each year, without any action by the Congress.

AUTHORIZATIONS VERSUS APPROPRIATIONS

If this sounds complex and confusing, the actual budgetary procedures are even more tangled than indicated by the above description. For example, there is no requirement that the amounts authorized to be appropriated in an authorization act be matched by actual appropriations. The fact is that many billions of dollars have been authorized which have not been appropriated. Consider these examples:

1. Rivers and harbors and flood control: Between fiscal years 1936 and 1959, projects totaling $17,811,405,000 were authorized for rivers and harbors and flood control projects. Actual appropriations, however, totaled $9,987,652,000. This means that appropriations have not been provided for authorized projects involving $7,823,783,000.

2. Reclamation: Since fiscal year 1902, authorization has been enacted for projects involving $7,906,092,000 Actual appropriations, however, total $3,509,809,000, leaving an unfinanced balance of $4,396,283,000.

3. Military construction: During the past 8 years, authorizations have been enacted for military construction projects involving $13,021 million. Appropriations have totaled $11,784 million for this same period, or $1,237 million below the amounts authorized.

4. Mutual security (foreign aid): During the past 8 years, a total of $34,005 million has been authorized to be appropriated for the mutual security program. Actual appropriations, however, have amounted to $29,229 million, or $4,776 million below the amounts authorized.

In these four areas alone, actual appropriations have been $18¼ billion less than the amounts authorized. Despite this clear evidence that authorizations are not the same as appropriations, a good deal of misguided information has been released to the public in which authorizations and appropriations are lumped together as if they were one and the same thing.

DISTORTION OF CONGRESSIONAL ACTION ON BUDGET

Because of the complexity of governmental budgeting, it is easy to understand why people who are not expert in this difficult field can make honest mistakes in interpreting the facts. Getting the true story, however, is made even more difficult when the facts and figures are manipulated or distorted to prove a political slogan. This is what has happened in the incredible campaign to convince the American people that the Congress is a collection of irresponsible spenders and that only the executive branch stands like Horatius at the bridge to stem the onrush of the congressional spenders.

CONGRESS DOES NOT PRESCRIBE EXPENDITURES

Despite impressions to the contrary, the Congress does not prescribe the amount to be spent in any given fiscal year. Instead, the Congress provides spending authority, a large part of which remains available indefinitely until it is spent. In carrying out the various programs authorized by the Congress, the executive branch has exercised considerable latitude in determining both the rate and manner of using this spending authority. This extends from outright refusal to use funds provided by the Congress for specific purposes—as in the case of a large part of the $1.3 billion increase in defense appropriations last year—to the other extreme of spending at a deficiency rate.

In addition to this latitude, there are certain important areas of spending over which the Congress exercises no direct control. Thus, the executive branch has just announced that spending for interest on the debt during the current fiscal year will be $1 billion greater than had been estimated in January 1959. The Congress found out about this only when it was announced to the general public.

In truth, it is impossible for anyone to dissect the amounts spent in any fiscal year and determine with any degree of accuracy exactly how much the total spending has been increased or decreased by actions of the Congress or of the executive branch. This would be as accurate—and as rewarding—as unscrambling an omelet. Yet some people persist in trying to do this, apparently assuming that few people would realize the degree to which any such estimates are really slanted guestimates.

Bills providing appropriations and other new obligational authority, 86th Cong., 1st sess.

TABLE I. APPROPRIATION BILLS

Bill No.	Title	House					Senate					Final amount approved	Increase or decrease compared to President's budget estimates to date	Date approved by President	Public Law No.
		President's budget estimates to House	Date reported	Amount as reported	Date passed	Amount as passed	President's budget estimates to Senate	Date reported	Amount as reported	Date passed	Amount as passed

*Authorized $1,975,000,000 to be appropriated.

NOTE.—Amounts shown represent total new obligational authority actually provided by each bill. Differences in amounts may include changes in scope of programs and differences in time periods covered by various versions of each bill.

Grand total, all bills, tables I and II	$81,227,609,151		$77,984,088,261		$78,142,671,761	$82,009,008,445		$80,946,652,497		$80,673,029,557	$79,428,598,352	−$2,580,410,093		

CONGRESSIONAL CUTS IN BUDGET REQUESTS

This does not mean that there is no way of determining accurately what the Congress has done in acting on the President's budget. What the Congress has done in acting on the President's requests for spending authority is a matter of public record and can be documented beyond question. This should be well known to those who prefer—for reasons of their own—to present a distorted picture of what the Congress has done. Perhaps this is the reason why such persons persist in proving their misconception with figures attained by scrambling together appropriations, authorizations, expenditures, backdoor finances, failure to enact tax proposals, and other ill-assorted and unrelated fiscal concepts.

Just what are the facts concerning action by the Congress on the President's requests for appropriations and other spending authority? The facts concerning the last session are summarized in two tables printed on the last page of the CONGRESSIONAL RECORD. All the figures in these tables have been compiled by, or verified by, the Bureau of the Budget.

These tables, which are reprinted in this document exactly as they appear in the CONGRESSIONAL RECORD, show:

1. The Congress cut the President's requests for appropriations by a whopping $1,881,410,093.

2. The Congress cut the President's requests for new obligational authority contained in bills other than appropriations bills (this has been politically referred to as backdoor financing) by $699 million.

3. Thus, the Congress cut a total of $2,580,410,093 from the President's requests for new spending authority.

BACKDOOR FINANCING

Perhaps a few additional words should be said about the so-called backdoor financing. No one knows exactly who coined this phrase but it succeeds in giving the impression that there is something wrong with providing spending authority outside of an appropriation bill. This just is not so. Regardless of whether spending authority is provided by an appropriation bill or by an authorization bill, the same congressional and Presidential action is required to enact the spending authority into law. The only real difference is that the preliminary work is handled by a different set of committees before the bill in question is acted upon.

Perhaps those who imply that there is something sinister in the so-called backdoor financing are unaware of these significant facts:

1. During the 6½ years of the Eisenhower administration, the President has requested the Congress to enact 24 separate bills involving backdoor financing of $20,029 million.

2. The Congress has enacted 38 bills involving new authority of $25,726 million.

3. The President has approved 36 of these bills, involving new authority of $25,289 million.

In short, of the more than $25 billion of new authority that has been enacted into law outside of appropriation bills during the present administration, every cent was either advocated by the President before the Congress acted, or else approved by him after the Congress had acted.

CONGRESS HAS CONSISTENTLY CUT PRESIDENT'S BUDGET

The cut of more than $2½ billion in the President's requests for new spending authority clearly demonstrates that it is a sheer fabrication to describe the 86th Congress as a group of reckless spenders. Because of the widespread circulation given to this charge, however, some people may wonder whether the record of the last session was a "fluke" and think that the Congress normally votes for increased spending.

The fact is that the Congress has consistently cut the President's requests for appropriations each and every year. In addition to the $1,881,410,093 cut from the President's budget in the past session, the Congress cut over $10,600 million from the appropriation estimates in the preceding years. Thus, the Congress has cut the President's appropriation requests by approximately $12½ billion during the last 6 years.

These reductions are shown in detail in the following table:

Congressional reductions in the President's appropriation requests

Congress and session	Budget estimates	Appropriations	Decreased by Congress
83d Cong., 2d sess.	$60,770,315,686	$58,160,445,563	$2,609,870,123
84th Cong., 1st sess.	66,023,089,195	63,947,281,321	2,075,807,874
84th Cong., 2d sess.	73,298,859,629	73,041,364,417	257,495,212
85th Cong., 1st sess.	78,108,417,112	73,064,958,328	5,043,458,784
85th Cong., 2d sess.	81,737,060,999	81,119,818,276	617,242,723
86th Cong., 1st sess.	74,859,008,445	72,977,598,352	1,881,410,093
Total budget cuts by Congress in last 6 fiscal years			12,485,284,809

Unfair to FBI

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial which deserves to be widely read:

[From the Washington Daily News, Dec. 28, 1959]

UNFAIR TO FBI

(By Lyle C. Wilson)

The FBI has been sweating out one of those impossible spots which add up about to this: Heads you win; tails I lose.

Thus it is with the FBI and wiretapping. A Senate constitutional rights subcommittee has been looking into the wiretap situation. The pattern of testimony went about like this:

Wiretapping is a dirty business and the FBI engages in it. Or, by inference, wiretapping is illegal and the FBI engages in illegal acts.

The words "dirty business" and wiretapping became synonymous many years ago when the late Justice Oliver Wendell Holmes so characterized the tapping of communications wires. That made it official. The tendency to make the FBI the whipping boy of the wiretap controversy is less easily explained. The tendency to assert that wiretapping is illegal cannot be explained at all.

The facts are that wiretapping is not illegal. You may bet on that, and win. More than 18 years ago, an Attorney General explained the wiretap situation when there was uproar about the citizen's right of privacy. Here is what the late Attorney General Robert H. Jackson wrote:

"It would clarify the discussion if those who fear that the proposed legislation would deprive them of their 'right of privacy' would first learn just what 'right of privacy' they now have.

"There is no Federal statute that prohibits or punishes wiretapping alone. The only offense under the present law is to 'intercept any communication and divulge or publish' the same. Any person, with no risk of penalty, may tap the telephone wires and eavesdrop on his competitor, employer, workman or others and act upon what he hears or make any use of it that does not involve divulging or publication.

"To use evidence obtained by wiretapping for the protection of society against criminals often requires that it be divulged in open court. It is this divulging in law enforcement that court decisions hold to violate the statute. The courts do not stop the people from tapping wires—no one has ever been or under present law could be convicted of that by itself. What has been stopped is the use of evidence to enforce laws against criminals.

"Many uninformed persons, and some who ought to know better, are thinking that these decisions protect the telephone privacy. They do nothing of the sort. They only protect those who engage in incriminating conversations from having them reproduced in court."

That was the law then. That is the law now. Yet, it was suggested, without rebuke, before the subcommittee that the FBI deliberately was failing to prosecute wiretappers because the FBI, itself, illegally tapped wires. That, of course, was nonsense.

The FBI does tap wires but these taps can be made only with the specific consent of the Attorney General. The FBI uses taps only in cases involving internal security or in kindaping cases when the victim's life may be at stake. The FBI has fewer than 80 taps in effect at this time

The Senate subcommittee made no effort to protect the FBI against unfair charges with respect to wiretapping. It is not likely, however, that the subcommittee would go so far as to protest the kind of taps the FBI makes.

Needs of the American Merchant Marine

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, January 19, 1960

Mr. BUTLER. Mr. President, the American merchant marine is not only the fourth arm of national defense, as was demonstrated so gallantly during the Second World War and the Korean war, but an essential element in this Nation's expansion during peacetime. Whenever our fourth arm is the subject of a detailed analysis, that examination warrants the broadest possible dissemination.

Recently, an advisory panel of the National Academy of Sciences-National Research Council, headed by Adm. Ar-

thur W. Radford, formerly Chairman of the Joint Chiefs of Staff, published a report on the U.S. Merchant Marine. This report takes a hard look at our shipping and arrives at some disturbing conclusions, among them, that the American merchant marine is deteriorating while the Sino-Soviet bloc is tripling its capacity with modern-type ships.

The panel makes several recommendations, which are discussed in some detail in articles in the New York Times and the Baltimore Sun of January 18, the latter being written by that paper's maritime editor, Helen Delich Bentley. Both stories emphasize that drastic improvement in the American merchant marine is imperative if it is to maintain its military and commercial shipping lifelines.

I ask unanimous consent that the articles be printed in the Appendix of the RECORD and highly commend them to my colleagues for their study.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun, Jan. 18, 1960]

BETTER-SHIPS NEED POINTED—REPORT CITES DANGERS; U.S. SPEEDY ACTION HELD VITAL

(By Helen Delich Bentley)

WASHINGTON, January 17.—Drastic improvement in cargo-handling and ship-operating efficiency together with significant advances in future ship design and construction are absolutely vital if the United States intends to preclude complete dependence on foreign-controlled shipping for the maintenance of its military and commercial lifelines.

This warning, along with the blunt statement that the American merchant marine is deteriorating, while the Sino-Soviet bloc is tripling its capacity with modern-type ships, was issued today by a nine-man advisory panel of the National Academy of Sciences-National Research Council, headed by Adm. Arthur W. Radford, U.S. Navy (retired), former Chairman of the Joint Chiefs of Staff.

This panel on Wartime Uses of the U.S. Merchant Marine is one of several reporting to the Academy-Research Council's Maritime Research Advisory Committee, organized at the request of the Maritime Administration to advise it on research and development policies.

POSSIBILITIES STRESSED

The design and construction advances not only are technologically practical, but also can be commercially successful with minimum subsidy, the report says. To accomplish this, it recommends the construction of a new class of cargo vessels of advanced design with speeds in excess of 20 knots and incorporating * * * a unitized system of cargo-handling—embodying increased mechanization and permitting automation—to reduce stevedoring costs and to allow quick turnaround of the ship.

The Radford committee also calls for automation of ship operation both on the bridge and in the engineroom.

Increasing the productivity of labor and management is "a more constructive alternate to subsidization," but the report notes that in both subsidized and unsubsidized segments of the U.S. maritime industry, there is a "general lack of incentive to take advantage of technological advances."

The Government, particularly the military services, is vitally concerned over the decline of the merchant fleet, the council stated.

WARNING GIVEN

Warning that the U.S. flag fleet is "in danger of becoming unable to meet the challenge of the cold war," and, in the event of a limited war, would be "qualitatively deficient * * * because of inadequate speed, relatively low cargo-handling rates, and lack of 'over-the-beach' capability—coupled with obsolescence," the report recommends that the Government take the lead "in enlisting the cooperation of maritime labor and management to produce a technologically feasible fleet which will be competitive with minimum subsidy.

"Without a significant improvement in the attitudes of both labor and management toward technological advances, we can achieve no sound basis for competitive objectives," the committee stated.

The Russians not only have excellent shipyards (more advanced than some in Western Europe and the United States), the report Russian ships also feature modern equipment such as mechanical hatch covers and air-conditioned one- and two-man rooms for the crews. Smaller ships in the planning stages also feature shipboard cranes and adjustable-pitch propellers.

The committee calls for:

1. The establishment of a Federal agency to determine ways in which the transition to mechanized and automated production can be accomplished without undue harm to labor.

2. That consideration be given to the design and construction of an experimental aluminum cargo ship.

3. That blue-ribbon examples of U.S. marine technology, such as the nuclear ship *Savannah*, and high-speed mechanized and automated cargo ships be displayed in ports around the world.

4. Provision for a limited number of 30-knot, automated and unitized cargo ships to carry express cargo at premium rates.

Mechanization and automation at present can reduce ship crews from 55 to 35 members, it said, and reduce longshore personnel by 60 percent.

LABOR IS PROBLEM

"Although the economic history of the United States shows that, in the long run, advantages of mechanization and automation accrue to labor as well as management and the consumer, in the short run labor is the most adversely affected," the report said.

"Unemployment and dislocation of labor occur before an adjustment in the work force can be made. At the present time, there is no planned method employed for offsetting these hardships. * * *"

The alternatives to a positive technological program in the maritime industry are continued burdensome subsidies or the loss of a major industry, the report notes.

"It would be premature to suggest specific means by which an effective transition to more mechanized and automated crew and cargo-handling procedures might be accomplished," the study said.

COURSES SUGGESTED

"However, on the basis of current experience in dealing with such problems in the port of San Francisco, and with corresponding experience in Le Havre and Puerto Rico, certain possible courses of action suggest themselves as being worthy of further study."

It outlined four possible courses of action: Taking maximum advantage of the natural attrition from the available work force, lowering retirement ages, retraining and relocating workers both within and without the industry, and adjusting salaries and increasing fringe benefits for those workers who remain in the industry.

The panel also noted that the reluctance to embrace automation is not restricted solely to labor, but a substantial portion of maritime management yet has to be convinced that the advantages of technological improvement outweigh the increased capital investment required, in light of the uncertainties of the future.

[From the New York Times, Jan. 18, 1960]

STUDY WARNS UNITED STATES TO IMPROVE FLEET—SURVEY HEADED BY RADFORD FINDS IT OUTMODED—ACTION BY GOVERNMENT URGED

The resistance of American maritime management and labor to technological advances is jeopardizing the future of the merchant marine, according to a report made public today by the National Academy of Sciences-National Research Council.

It called on the Government to get both groups to produce a "technologically feasible" fleet.

This Nation's ability to maintain its military and commercial lifelines depends on drastic changes in ship management and vessel design, the study said.

The report was prepared by a nine-man advisory panel on wartime uses of the merchant marine. The panel was headed by Adm. Arthur W. Radford, former Chairman of the Joint Chiefs of Staff. The group is one of several that report to the Academy Council. It was organized at the request of the Maritime Administration.

In a detailed appraisal of the present state of American-flag shipping, the panel warned:

"If the United States intends to preclude complete dependence on foreign-controlled shipping * * * the only realistic solution lies in a drastic improvement in cargo-handling and ship-operating efficiency, together with significant advances in future ship design and construction."

The panel cited symptoms of decline. This deterioration, it said, "was a matter of vital concern to the Government, to industry and very particularly of the military services." Some of the symptoms cited were:

Four-fifths of the privately owned fleet in the United States was built before World War II.

United States flag shipping is carrying a steadily decreasing share of the Nation's foreign trade—only 12 percent in 1958.

The Nation faces the danger of losing its so-called flag of convenience fleet of about 7,000,000-to-8,000,000 deadweight tons, which carries about a third of the country's foreign trade.

Opposition by labor unions and some foreign interests have brought threats from owners to transfer to flags of traditional maritime nations. The fleet now flies the flags of Liberia, Panama and Honduras.

As a result, the panel said, the Nation's fleet might fail to "meet the challenge of the 'cold war.'" This "obsolescent" fleet, it said, would in any case be inadequate in a limited war because of insufficient speed, low cargo-handling speed and a lack of capability to discharge cargoes in areas where port facilities do not exist.

To meet this inadequacy, the panel suggested the use of technological advances, which, it said, are not only practical, but can also be successful commercially with minimum subsidization.

These, the report said, should include new cargo ships with speeds of over twenty knots. They should be equipped with a "unitized" system of cargo handling to reduce stevedoring costs and to permit quick vessel turnaround. They should also incorporate some automation of ship operation both on the bridge and in the engine room.

Through mechanization and automation techniques already developed, the panel said, ship crews could even now be reduced from

55 to 35 members and required longshore personnel could be reduced 60 percent.

The report said it was more constructive to increase the productivity of both labor and management than to subsidize ship operation.

Management, the report found, has not been a strong supporter of research and development. A large portion of maritime management, it declared, has yet to be convinced that technological improvement outweighs the increased capital investment required in light of the uncertainties of the future.

An End to Quiet Diplomacy?

EXTENSION OF REMARKS
OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks I would like to include two editorials which appeared in the December 18 and December 25 issues of the Jewish Observer and Middle East Review, published in England, and, in the opinion of many, one of the best informed periodicals on the Middle East.

The first editorial is entitled "An End to Quiet Diplomacy"; and the second is entitled "Jews—What Is Russia's Game?"

They are well worth the few minutes' reading time they will take. The editorials follow:

[From the Jewish Observer and Middle East Review, Dec. 18, 1959]

AN END TO QUIET DIPLOMACY?

Mr. Hammarskjold's profitable quiet diplomacy appears to have come to a clattering end. For the past 2 weeks, a noisy campaign against Israel's projected Jordan River development has broken the silence of the Hammarskjold method. And for the moment it is more interesting and more revealing to consider the reasons for this switch in Cairo's diplomacy than to dwell on the substance of the campaign.

First of all, what is it that President Nasser wants? The answer to this question is probably the decisive clue to the situation in the Middle East today. But it is not easy to provide this answer. For, once again, Colonel Nasser has managed to confuse Western public opinion by a masterly display of his favorite role: of being all things to all men.

Thus on Sunday, Mr. Walter Lippmann reported (in the Sunday Observer) on the conversations he had with President Nasser and his principal officials. He came away with the conviction that Israel was a secondary issue in Nasser's thinking which was focused entirely on his domestic development problems.

On Monday morning, the Daily Express's Cairo correspondent reported from Beirut (in order to avoid the Egyptian censorship) that Nasser had reinforced his forces at el Arish, near the Israel border; that Nasser was prepared to go to war to stop Israel from carrying out the Jordan River diversion and that Nasser was sure that this time he would win the military encounter. But without question, most revealing of all were the Cairo television interviews with Robin Day which were shown by the B.B.C. on Monday night.

These ought to make a lot of people think very hard about what is going on in Cairo. These were no sophisticated, sterilized opinions trimmed for Western ears; these were the Cairo students in the raw, complete with the political prompters and commissars in the background. On one point, the students clearly ran away from their political controllers. Instead of replying with the evasive and noncommittal answers which the prompters wanted them to give to the question "Do you want to destroy Israel?" the students, without exception, said, "Yes, Israel must be destroyed." And they said it as if they meant it.

In other words, while the soft-spoken Nasser is reassuring Hammarskjold, the World Bank, the British, and the Americans about his preoccupation with domestic problems (and possibly even means it), he is creating at the same time a Frankenstein at the universities, in the schools, and in the street, which is already ruling him, as Lippmann pointedly underlines. Thus, while the private and public speeches about his concern for scientific progress and social development may correctly reflect President Nasser's aspirations, his policies and politics in the schools, the universities, and the press and radio have made their attainment almost impossible.

For the significance of the sudden blowup over the Jordan water development is the stand which Nasser has taken and the propaganda which has accompanied it: The meeting of the Arab league, the reports of troop movements, the threats of war. Nasser himself is far too sensible and too sensitive to world opinion to get himself involved in this on the eve of the summit meetings; and yet he cannot extricate himself. He has become a prisoner of his own policies. What matters is not what he says to Lippmann but what the students say publicly on television. They set the pace—and if this Jordan blowup is anything to go by, Nasser follows.

This is the ultimate significance of the present situation. And it is one over which the West might well ponder. For it gives a new and much more unpredictable perspective to the situation. We can only assume—as did Walter Lippmann—that the degree of noise about foreign problems is roughly in ratio with the growing problems at home. And if this is so—and there is a good deal of evidence to bear this out—then the one lesson the West must learn about the present situation is that the satisfaction of the foreign demands, for example, the halting of Israeli development, will solve nothing; it would merely switch the Arab offensive to another target.

It is the root problem of overpopulation and underproduction in Egypt that has to be solved, and it will not be solved by wide new roads, luxury apartments or American hotels in Cairo and Alexandria; it will not be solved on the Jordan River; not even on the Nile. Egypt's problem is so big, as Mr. Hammarskjold demonstrated in his refugee report, that it cannot be tackled in isolation. Its only hope is a great combined operation embracing the whole of the Middle East.

Thus the threats, which are now being uttered against the Jordan scheme, are unlikely seriously to threaten the Israelis. But by diverting attention from Egypt's fundamental problem, they are a much greater threat to the recovery and development of Egypt. Is there no voice in Cairo strong enough anti bold enough to ram home this home truth to the students, to the street and to the politicians and publicists who may well now be encompassing Egypt's ruin with this diversion from the Nile to the Jordan?

[From the Jewish Observer and Middle East Review, Dec. 25, 1959]

JEWS—WHAT IS RUSSIA'S GAME?

There has been nothing quite like this since the anti-Jewish campaign and the so-called doctors' plot during the last days of Stalin's reign at the beginning of 1953. There was then a manic element in the Soviet campaign against the Jews which was subsequently attributed entirely to Stalin's megalomania and to the excesses to which this gave rise. But Stalin has now been dead almost 7 years and the practice of Stalinist excesses, we are told, has been totally liquidated. How then are we to explain the recurrence of the anti-Jewish and anti-Israeli attacks which have assumed an entirely new virulence during the last 2 weeks?

For something startlingly different has crept into this anti-Jewish and anti-Israeli propaganda, something which has not been in evidence since Stalin's death. Until the beginning of December, the Soviet campaign could be explained by all kinds of reasons. The most common were that the Soviet leaders were not against the Jews, nor against Israel, but that they were continuing the Communist campaign against all religion, and that they were opposed only to the pro-Western orientation of the Ben-Gurion government.

Another plausible explanation that made the rounds was that the Russians were merely giving tit for the Israeli and Jewish tat, that they were merely responding in kind—their kind—to the criticism of their treatment of Soviet Jewry. However, one may argue about the past, the most recent developments have created an entirely new and different situation.

The difference affects both the attacks on Soviet Jewry and on Israel. That this should have happened in both these fields, which the Russians usually keep quite separate, suggests that it may not be altogether accidental. We published the denunciation of the Jews of Kirovograd (a town with a population of some 140,000) in last week's Jewish Observer. It differed neither in content, language nor tone from anything that might have appeared in the Nazi Stuermer.

Even so, it might be said, it was probably no more than a local lapse which did not reflect national policy. But just this attack was selected for broadcasting over the Ukrainian network of the Soviet Broadcasting Service. This means that in all probability this same article was heard by many millions and reprinted by local newspapers throughout the Ukraine. It set the new keynote for the attacks on Soviet Jewry.

A week later came the new approach to Israel. We print this week a summary of three broadcasts from Moscow radio by its leading Middle East expert which are directed against Zionism, the Jewish Agency and Israel. The significance of these three talks does not lie in their vulgar detail, or in their more than usually extensive falsification of history; it lies in the root assumption on which this attack is based. For this assumption has now been given a significant new twist.

Until this last week, Soviet propaganda has never challenged the right of Israel to exist; it did not do so even at the height of the Stalinist fury. In this, it was always strikingly different from Arab propaganda. But now, by rewriting the history of the last 30 years in a manner that would have done credit to the protocols of the elders of Zion, Soviet propaganda is projecting a new image of Israel and world Jewry. It is not, in this new version, a genuine national liberation movement (which was the Soviet description in 1948) but nothing less than a false front

for British, French, and American colonialists and oil exploiters. Israel, the Russians now charge, is not a state; it is merely an imperialist device to capture Arab oil for the Western exploiters.

It is not possible to argue seriously with such a farrago of invention, but that makes it nonetheless serious when it is broadcast to the Middle East with all the noise and prestige that Moscow can give to such a thesis. Again, then, we must ask what the reason for this is? It is clearly, like the Kirovograd affair, not an accidental incursion into propaganda by an ignorant departmental enthusiast. This begins to look like a sustained effort to denounce and denigate Soviet Jewry, world Jewry, and Israel.

Yet it is difficult to believe that Khrushchev would embark on such a policy at this moment when the summit is within sight; what sort of threat is Israel to mighty Russia that he must make use of these un-Marxist, racialist, and reactionary methods to discredit the Jews and Israel? Khrushchev, however, is no fool. He may not be able to keep an eye on every aspect of Soviet policy, but it is unlikely that so significant a departure from general policy would be permitted without the Kremlin's approval.

What then are we to conclude from this? The answer can hardly be in doubt. All that Khrushchev can hope to achieve by this new propaganda tactic is to sharpen the Arab-Israeli conflict in the Middle East, to commit the Soviet Union more strongly than ever before to the Arab cause and to serve notice—and this is the crucial feature on the Western Powers that the Middle East is not part of the summit detente.

If this new Soviet line means anything it is this: that while the West is soothed by concessions in Europe, the pressure in the Middle East (and also in Africa) will be intensified.

Our Highway Program

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of January 16, 1960:

OUR HIGHWAY PROGRAM

The Federal interstate highway program is to be the subject of legislation in the last session of the 86th Congress. It is such a vast program, involving such vast sums of money, that every American citizen should be interested.

Senator HARRY F. BYRD, Virginia Democrat, who is chairman of the Senate Finance Committee, has recently been in correspondence with the Secretary of Commerce concerning the program.

Among other things, Senator BYRD believes that costs have risen too steeply in estimates on the program, and he points out that:

"You will recall that the Clay Commission, in 1954, estimated the Interstate System basically would cost $23 billion. This estimate was revised to $27.6 billion in 1955. Now the program has been revised and the estimate raised to $39.9 billion.

"This is an increase of $16.9 billion, or more than 73 percent in 5 years. And State highway officials have testified that only about a fourth of the increase has been due to the 12 percent rise in cost of materials and labor. The rest has been due largely to change in designs and expansion of the program.

"On the basis of the kind of expense we have had with the Interstate System to date, it is not difficult for me to foresee costs rising to a point in excess of $50 billion by 1975, for the presently scheduled completion date."

Secretary H. F. Mueller, of the Commerce Department, has replied agreeing that costs must be held down. He appeals, with BYRD, for a sane, sound program by Congress, which will not allow costs to continue to rise. In 1958, it will be remembered, we departed from the pay-as-you-go method of financing the huge highway program, and it would be well for the country to get back on a pay-as-you-go basis.

It is desirable for the gas-tax increase to eventually be eliminated, and that temporary diversions of general revenue to the Highway Trust Fund should not become permanent. The history of highway building in most of the States shows that highway systems are never adequate, that these are constantly changing, and that it is most difficult to build in anticipation of advanced needs 20 years hence.

Crash programs in highway building, with huge borrowed sums of money, on which huge interest payments must be made, are undesirable, and the pay-as-you-go method is obviously the best. We hope BYRD and Mueller and others interested in sound Government financing will win their fight to keep the Federal Interstate System on the right track.

The So-Called Loyalty Oath in the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. WHITENER. Mr. Speaker, on January 12, 1960, I received a letter from Mr. Ronald M. Heafner, Director of Civil Defense at Gastonia, N.C. Mr. Heafner's letter expresses what I believe to be the general consensus of opinion held by the average citizen with respect to the so-called loyalty oath in the National Defense Education Act of 1958.

I commend his patriotism and under unanimous consent I include his letter and the Federal civil defense loyalty oath in the Appendix of the RECORD, as follows:

CITY OF GASTONIA, N.C.,
January 12, 1960.

Hon. BASIL LEE WHITENER,
Congressman,
House Office Building,
Washington, D.C.

DEAR MR. WHITENER: In regards to the repeal of the loyalty oath Senator JOHN KENNEDY is supporting I would like to say that I would like to see it stay as it is. I had to take such an oath when I was appointed Director of Civil Defense, and all our people here when they volunteer for civil defense take it too. I consider it a privilege and an honor to my country and fellowmen to take such an oath. I don't see why a student should mind. A lot of people feel as I do, but they will never write to you and express their views. I feel it my duty to express my desire. Enclosed find loyalty oath for civil defense. Thanking you again.

Sincerely yours,
RONALD MARSHALL HEAFNER,
Director of Civil Defense, Gastonia and Gaston County.

FEDERAL CIVIL DEFENSE LOYALTY OATH

I, ——— ———, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true and faithful allegiance to the same; that I will take this obligattion freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties upon which I am about to enter.

And I do further swear (or affirm) that I do not advocate, nor am I a member or an affiliate of any organization, group, or combination of persons that advocates, the overthrow of the Government of the United States by force or violence; and that during such time as I am a member of the ——— ——— I will not advocate nor become a member or an affiliate of any organization, group, or combination of persons that advocates the overthrow of the Government of the United States by force or violence.

——— ———
(Signature)

Witness ——— ———.
Date ———.

The Christian Amendment to Our National Constitution

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. GRANT. Mr. Speaker, Dr. John Coleman, whose record is given in "Who's Who in America" and who has taught political philosophy in American colleges for over a third of a century, has prepared the following radio program which is being broadcast on some 100 stations in our country. This program is No. 12 in a series of 13:

I am speaking in behalf of the movement which is seeking the adoption of the Christian amendment to our National Constitution. It has been before Congress for several years. The first section of the amendment reads:

"This Nation devoutly recognizes the authority and law of Jesus Christ, Saviour and Ruler of nations, through whom are bestowed the blessings of Almighty God."

A second section has been added to prevent any possibility of the use of the amendment as a basis for the establishment of any religious denomination as a national church; and a third section has been added to make it possible for those who do not accept Jesus Christ as Lord to take a modified oath of allegiance or of office.

The subject of this broadcast is: "America, a Pilot Plant for the Nations."

The greatest and most admired philosopher of all time probably is Plato, a Greek of Athens, who lived about four centuries before Christ. Plato roamed through all the fields of philosophy, but his chief delight was in the philosophy of politics. For a time Plato served as adviser of the young King of Syracuse in Sicily, but neither the King

nor his people were ready for Plato's stern ideals, and, somewhat disillusioned, Plato returned to Athens and established his famous school of philosophy. One series of his lectures is called "The Republic." It is a vivid picture of Plato's conception of an ideal city-state, one governed by a group of wise philosophers who sought nothing for themselves but only the welfare of the commonwealth, and were models of justice, temperance, courage and generosity.

In the ages since, men have read "The Republic" and have been inspired to dream their own dreams of a perfect society. Sir Thomas More wrote "Utopia"; Campanella, "The City of the Sun"; Ignatius Donnelly, "The New Atlantis." These are only samples.

I can remember as a boy in my later teens working out with real pleasure the pattern of a miniature republic, perhaps on an island, with every man prosperous and having his own home; no slums, no liquor, no vice; education for everyone, for most of them college; measures for physical health; the voice of worship heard in every home morning and evening and the churches filled on the Lord's Day. Through the Lord Jesus as Saviour and Ruler we would enjoy on that island the blessings of Almighty God, and our Christian democracy would be the admiration of the world and a model for the world's imitation; a pilot plant for the nations.

A pilot plant: is that a term that for any of you needs explaining? In western Pennsylvania, my home for most of my life, a professor of metallurgy at the Carnegie Institute of Technology devised a method of producing wrought iron without the cost and the arduous labor of the old puddling furnace. The great Byers Co. was interested, but was not ready at once to set up a full-sized plant that would cost $15 million. First a smaller plant costing only $100,000 gave the method a full testing, then the company invested its millions in full-scale production. Such a little experimental project is called a pilot plant.

What I dreamed of as a boy, what the world needs today, is a pilot plant, a Christian pilot plant, for the nations; or, still better, since Christianity has already in one field or another proved its supreme value, what the world needs is not a mere pilot plant, but a full-scale—vibrant, wholehearted and enthusiastic—Christian nation.

Ancient Israel was to have been such a pilot plant. Centuries ago a genius, Moses by name, was sent by the Lord to take a nation of slaves laden with the vices of slavery and of their heathen masters, and in one generation—40 years—make them into a stalwart, free and godly people. Moses not only set before them in great detail the laws and manner of life of the new civilization, he drove them hard in their education and God blessed them wonderfully. You can read the whole story in what are called "The Books of Moses." The last of these, Deuteronomy, is chiefly his farewell addresses to the nation, delivered before they entered into the land of promise. In the first address he set before them their mission as a pilot plant for the nations of the earth (Deuteronomy 4:5–7):

"I have taught you statutes and judgments, even as the Lord my God commanded me, that ye should do so in the land whither ye go to possess it. Keep therefore and do them; for this is your wisdom and your understanding in the sight of the nations, which shall hear all these statutes, and say, Surely this great nation is a wise and understanding people. For what nation is there so great, who hath a God so nigh unto them, as the Lord our God is in all things that we call upon him for?"

But Israel did not choose to fulfill her destiny.

Eighteen years ago "The Earnest Worker," Bible study magazine for the Southern Presbyterian Church, contained a paragraph presenting the need for America to become a Christian Pilot Plant for the world:

"What the world has waited for through the centures in a sample Christian nation. The greatest hindrances to the conversion of the heathen world come from nominally Christian nations. If America were thoroughly Christian, it would not take long for such an object lesson to work the conviction and conversion of all heathen people. If our American Christianity cannot purify our politics and elevate our ethical standards of business and establish just relations between races and classes in our own midst, with our increasing facility of communication, which is making the whole world a neighborhood and publishing our national sins on the heathen housetops, this failure will soon paralyze our missionary efforts in all the world and subject our missionaries to the taunt, 'Go back to America, and first cast the beam out of the eyes of thine own countrymen, and then come and cast the mote out of ours.'"

Yes, what the world has waited for through the centuries is a sample Christian nation.

America has been in many ways a model for the world. Back in the 1860's Japan sent a delegation to seek out institutions that Japan might profitably imitate. They found a model for the army in Germany, for banking in England, for industry and popular education in the United States. When asked about religion by those who sent them, they said that in the field of religion Japan did not need a change. Perhaps their guides in America did not show the travellers that side of our life, and our civilization seemed to them to be secular, that is, unrelated to religion. That was tragic. Had we been vitally Christian, and had they followed us in this also, there would have been no Pearl Harbor, no New Guinea, on Iwo Jima, no Okinawa, no bombing of Hiroshima and Nagasaki.

It is getting late in the world's history; perhaps it is even later than we think. International tensions are growing more tense; more and more the Communists seem to be proceeding on the assumption that the democracies will yield rather than subject their peoples to the ghastly tragedy of the most destructive war in history. Twice America has sent her sons across the oceans, in some measure to fight for her own safety, but more for the defense of other nations, and for the better cause. After each war, America, on her own initiative, has given billions, both by the acts of our legislators and by private contributions, for the rebuilding of the world. History knows no parallel. The second commandment, as Jesus stated it, "Thou shalt love thy neighbor as thyself," has been obeyed by our Nation. But it has been on a secular and humanitarian basis, not consciously on a Christian one. And we have forgotten that first commandment: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind."

Crime at home has crowded our jails until in some sections the lesser offenders are released before their time to make room for greater and later offenders. Juvenile criminals increase in numbers and in the recklessness with which they act—crime for crime's sake. While we have helped others, our own children have gone astray. Let us turn to the Lord Jesus, His law, His example, and His forgiveness; let us become a nation as righteous as we are mighty, and fulfill the mission of which the Pilgrims, William Penn and the Quakers, and many another company of our forefathers dreamed, when they came in their pitiful little vessels across the Atlantic—God's people, hoping to found a city of God in a new land.

Let America give her heart to the Lord, profess His name in her Constitution, rebuild her civilization according to His pattern, and then the world will say of us: "Surely this great Nation is a wise and understanding people." America will have become a Christian pilot plant for the nations.

Body and Soul

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following very interesting editorial which appeared in the National Tribune-Stars and Stripes, on January 7, 1960:

BODY AND SOUL

The caption which we have chosen for this editorial was not picked at random. It is directed to all the Members of the U.S. Senate and the House of Representatives, and more particularly, to the Members of the House Committee on Veterans' Affairs and its chairman, Representative OLIN E. TEAGUE, of Texas. The subject of this editorial is the income limitation called for under present pension law for World War I veterans and the new pension law, Public Law 86-211, which goes into effect on July 1, 1960.

First, let us say frankly that we are opposed to income limitations when it comes to the question of payment of pensions to veterans of the First World War, or, to veterans of any war when the time comes where they may need some extra aid from the country for which they fought.

However, we do try to be practical in seeking aid for our war veterans and if some income limitation must be imposed we are ready to understand the situation and recognize it and agree that, for the benefit of those who oppose all war pensions, some concession must be made to keep them happy. We refer here to big business which apparently hates to put out for those who, by their courage have made big business so big.

Of course we could offer generalities in an attempt to prove our point that there should be no income limitation when it comes to payment of pensions to war veterans who need this extra help.

But we believe, if we are to impress our legislators we should offer them something concrete to consider when it comes to the possibility of amending the present pension law or the new law known as the Veterans Pension Act of 1959.

First of all we are firmly convinced that no war veteran should be penalized for whatever income he may have been able to acquire during his years of employment. By this we mean such benefits as social security, railroad retirement, and other pensions, annuities, and retirement benefit, whether payable by law, contract, or otherwise.

We are willing to go along with the proposal that an income earned by a World War I veteran—and we mean by this, earned from actual employment—should be considered in determining the eligibility of the veteran for pension, but we cannot admit that any benefits for which the veteran has paid during his working period, such as those listed

above, should be considered as earned income.

True, these benefits were bought and paid for by the veteran and by a far stretch of the imagination they could be considered as earned income, the veteran having made them possible during his employment period, but in a more liberal sense we do not believe they should be considered as earned income once the time has come when he can no longer contribute towards such benefits.

If we face the situation honestly we should admit that earned income is something which the veteran might earn when he is actually employed—not something that he had earned before his full employability ceased.

In our editorial of October 15, 1959 we printed a résumé of figures compiled by the General Accounting Office at the request of Congress as of July 31, 1957, dealing with the income of World War I veterans. These figures show that there are few veterans of the First World War who had excessive income and it follows that 3 years after the figures were put together there are many more veterans of World War I whose incomes have diminished.

While we may have indulged in some generalities in the foregoing these generalities are backed up by Government figures which show that there are few veterans of World War I with bloated incomes at the present time.

Now, let us take up a specific case. Under present law a World War I veteran, without dependents, 65 years of age, with sufficient disabilities may be paid a pension of $78.75 a month, provided his income does not exceed $1,400 a year.

Let us consider this particular veteran. He has worked steadily for many years. During that time he has held down a good job which required him to pay for social-security benefits at the highest rate the law demanded. He now reaches a period of unemployment. He may be paid as high as $120 to $127 a month from social security. Now 12 times $120 or $127 a month puts him over the $1,400 income limitation prescribed under present law.

Thus, he may not receive the $78.75 monthly pension because of the income limitation. As a consequence his ability to enjoy the few years which are left to him is curtailed since, in all reason, a man accustomed to the decent things of life is bound to feel the pinch when he has to exist on his social-security payments alone.

All this applies, of course, to the single veteran under Public Law 86-211 which becomes even more vicious when we come to the veteran with a dependent.

Under the new law not only does his own income earned from previous employment come into consideration in determining his eligibility to pension but any income which his wife might be able to earn, as well as any little nest egg which he and his wife have acquired over the years is also counted as is any property of which he and his wife may be possessed.

Under the new law this is known as the corpus of the estate. We would venture to say that very few World War I veterans know what is meant by "corpus of the estate." It is a neat legal term which the smart boys have inserted in the law. It sounds good when you roll it off the tongue but it amounts only to penalizing a man and his wife for being thrifty.

Now, "corpus" is the Latin word for "body"—in other words the body of the veteran's estate. With the introduction of the veteran's body we may look eventually for the inclusion of the word "anima" which is Latin for "soul."

Having made the veteran pay for having a corpus we may look for some other legal phrase which would include his anima.

Now this veteran might have in his soul some precious memories of the past—memories which to him are priceless. Should the Veterans' Administration and the Government attempt to put an estimated price on these memories the veteran, after having paid for his corpus would find his soul included with the result that he would wind up using as this theme song when he applied for Government aid the title of a one-time popular song, "I'm Yours, Body and Soul."

Two Natives of Wilkes-Barre Pass 50th Milestones in Notable Careers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of January 11, 1960:

TWO NATIVE SONS PASS 50TH MILESTONES IN NOTABLE CAREERS

It is a singular coincidence that the E. I. duPont de Nemours Co. of Wilmington, Del., paid an impressive tribute to the chairman of its board of directors, Walter S. Carpenter, Jr., in the current issue of the employee magazine, Better Living, for a half century of service as another famous native son, Andrew Sordoni, founder of Sordoni Enterprises, is embarking on his 50th year in business. Mr. Sordoni was born in Nanticoke in 1887; Mr. Carpenter, in Wilkes-Barre just 1 year later.

This community has produced many outstanding executives for business and industry, as well as leaders in other fields. The names of Andrew Sordoni and Walter Carpenter rank high on the list of notables who started from scratch and carved for themselves outstanding careers in the finest American tradition. As self-made men, their achievements are all the more noteworthy.

While they are of different backgrounds and personalities, Andrew Sordoni and Walter Carpenter had, and still have, much in common. They share, among other things, a driving ambition as well as boundless energy and the courage of their convictions.

Andrew Sordoni, the youngest of 12 children, is the son of an Italian immigrant who came to Wyoming Valley from Venice, Italy. His father was a member of an old and wealthy family. His mother was a remarkable woman, serving as a court interpreter for more than three decades. "I owe what artistic appreciation I have to my father and to my mother I owe the determination to do that which is right," Andrew Sordoni once observed.

Life was no bed of roses for him. After a tour of duty in the Regular Army, he embarked in business for himself with a team of horses he borrowed from his father, a set of secondhand harness, a coal wagon, and a dump wagon. He worked 12 to 16 hours a day, a schedule he still follows despite efforts to slow him down.

Andrew Sordoni seems to possess an uncanny business sense. Everything he touches, associates say, turns to gold. But this is not accident or luck; it is the result of a combination of ability, experience and, above all, hard work. It explains his success as an industrialist, philanthropist, and public servant.

An extremely modest man for all the eminence he has attained, Walter Carpenter, like Andrew Sordoni, is one to recognize opportunity and take advantage of it. As a college boy, he worked summers for the Du Pont firm. In 1909, 2 years before graduation, he heard of an opening in a nitrate subsidiary in Chile and took off for South America. His judgment was vindicated, for in 1911 he was recalled to Wilmington on the basis of his record and he moved rapidly up the ladder until he became president of the company and chairman of the board, in which capacity he not only became a leading figure in American industry and philanthropy, but contributed substantially to his country's welfare and the cause of freedom.

While Mr. Carpenter insists on giving credit to others and minimizes his own importance, associates have other views on this subject. They know him not only for his broad knowledge and thoroughness, but for his fairness, self-control, and consideration of others.

It is a privilege and pleasure, on behalf of the community, to salute these two distinguished sons of Wyoming Valley on this milestone in their careers. That they still are in harness is most gratifying.

Shorter Presidential Campaigns

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. MONAGAN. Mr. Speaker, in further support of my suggestion for shorter presidential campaigns, I append herewith the following editorial which appeared in the New Milford Times on October 8, 1959:

GOOD IDEA, CONGRESSMAN

Representative JOHN S. MONAGAN, Democrat, of Connecticut, told his colleagues in the House of Representatives recently that "the time has come to reduce the campaigning period in our national election."

The Congressman pointed out that the total campaign time in the British election being conducted today amounted to just a shade over 1 month; the American presidential candidates are compelled to woo the voters for more than 4 months.

"The extended presidential campaign serves no useful purpose," Mr. MONAGAN declared. "Certainly we cannot say that as a result of our system, the American voter is better instructed than his British counterpart. On the other hand, a shorter campaign in this country would prevent wear and tear on the candidates, save millions of dollars and preserve the voters' interest in the candidates and the election."

We're inclined to agree. In fact, it seems that the Congressman may have understated his case. We can think of several advantages to a shorter campaign that he overlooked completely.

For instance, while he noted correctly that the prolonged politicking "brings the candidates to physical prostration," he said nothing of the effects of such a campaign on the voter. Besides the frustration of seeing their favorite TV programs chased off the air for months on end in favor of an address by the Honorable Zachariah Zilch, the voters often find themselves just this side of migraine in trying to sift some sense from the conflicting statements offered by candidates for the same office. Naturally, the longer the campaign; the more severe the headache.

Another significant factor to be considered, we believe, is that although the purpose of the campaign is to inform the voter about the issues, too many modern-day candidates decide at the outset to avoid as many of them as possible. This unfortunate choice puts a decided strain on the politico—he is confronted with the necessity for talking for 4 months without saying anything, and that kind of thing is bound to inflict hardship on both sides of the microphone.

Representative MONAGAN concluded his appraisal of American campaign methods with a pledge to introduce legislation that will correct the situation. For whatever it's worth, Congressman, we're behind you all the way.

Quesada and Air Safety

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. BROYHILL. Mr. Speaker, I am not a member of any of the congressional committees currently holding, or about to hold, hearings on air safety. However, I represent a congressional district in which many thousands of airline employees live.

The 10th Congressional District of Virginia is unique in that so many dedicated airline employees reside in Fairfax and Arlington Counties and in the communities of Alexandria and Falls Church.

The Washington National Airport is one of the world's busiest. Within another 2 years Dulles International Airport at Chantilly will assume some of the overload from Washington National, and, because of its great refinements, Dulles is certain to become one of the great commercial air centers of the world.

Mr. Speaker, airline personnel who reside in my district are dedicated people. Air safety is not only their job but their moral objective. We have all felt a sense of greater security since the passage of the Federal Aviation Act of 1958 and even greater confidence since the President appointed Gen. Elwood R. Quesada to the position of first Administrator under the new act.

Mr. Speaker, the Washington Daily News of January 15 carried a most inspiring editorial entitled "Quesada and Air Safety," which, under leave to revise and extend my remarks, I include in the RECORD.

The editorial follows:

QUESADA AND AIR SAFETY

Gen. E. R. "Pete" Quesada told a Senate committee the other day he thinks it is his public duty to make air travel as safe as possible.

There should be few to fault him on that score.

But apparently there are a few. General Quesada testified a "small hard core" of airline pilots was opposing some of his regulations.

Perhaps they have some talking points. This is true of almost any regulations. But General Quesada, while a determined man, is not unreasonable.

The fact is that last year the fatalities in plane accidents were the highest on record. This may be explained by the increase in air travel. But 294 deaths from commercial airline mishaps ought to be ample reason for the most stringent rules. If there is any doubt, it has to be on the side of safety.

The airlines have a remarkable record for safe flying. Everybody concerned — pilots, management, mechanics, the Federal aviation authorities — can be proud of it.

But there are more planes, more passengers, and more and more speed all the time. Airports are becoming more congested. The need for safety thus is increasing at a rapid pace.

Accidents never are prevented after they happen.

Those who oppose the strictest kind of safety rules for the air are inviting the type of fatal chaos which now besets our motor roads.

Rosiest Message in 30 Years Gives Ground for Caution

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. MULTER. Mr. Speaker, again referring to the President's state of the Union message, I commend to the earnest attention of our colleagues the following article by Leslie Gould, financial editor of the New York Journal-American, as it appeared in that newspaper on January 8, 1960:

ROSIEST MESSAGE IN 30 YEARS GIVES GROUND FOR CAUTION

(By Leslie Gould)

The President's state of the union message was one of the rosiest in years—30 years to be exact—which may explain some misgivings.

The stock market did not respond as might have been expected. It acts almost as if it were suffering from an overdose of bullishness—or is it "fever of bullishness."

The President sees 1960 as the most prosperous year in history.

He promised a budget surplus for the current fiscal year, ending in June, but he did not refer to a $266 million "windfall" from the Federal Reserve—the turning over to the U.S. Treasury of that much from its surplus funds. This will be a major factor in any balance of this year's budget.

MORE INFLATIONARY SPENDING

The President interpolated in his message a promise of a whopping budget surplus of $4.2 billion in fiscal 1961.

Despite this promise and his emphasis on the need for holding down prices, the message is inflationary.

For example on the budget, after promising 1961's will be balanced, he boasts:

"In the area of defense, expenditures continue at the record peacetime levels of the last several years.

"With a single exception, expenditures in every category of health, education, and welfare will be equal or greater than last year.

"In space expenditures the amounts are practically doubled."

Nowhere is there a word or step in the direction of economy. Just continued heavy spending and, more often than not, increased spending.

Even in foreign aid, there is no indication of a reduction, although the President properly warns other nations, now restored to prosperity through U.S. beneficence, must carry their share of the burden.

While the theme of the message is "peace and prosperity," the President warns that the only present security from a general war is the United States and its Allies' military strength. This correctly justifies continued large defense spending, particularly in the missile field. On missiles he had encouraging words—the Atlas ICBM is now operational.

TONGUE IN CHEEK ON STEEL

The President must have had his tongue in his cheek when, in speaking of the steel settlement, he said the major steel companies announced "There will be no increase in steel prices at this time." He didn't say anything about later in the year—say, 6 months after the 7-cent-an-hour boost becomes effective at the end of June.

The steel companies were forced by political pressure to give up their demand for changes in local work rules which would have cut down union featherbedding. The President apparently is hoping this can be negotiated when he says "National interest demands * * * both management and labor make every possible effort to increase efficiency and productivity in the manufacture of steel so that price increases can be avoided."

REDS FORMIDABLE COMPETITORS

On the farm problem, he said production must be geared to the markets. Agriculture Secretary Benson wants a new wheat law to peg support to the average market price received by farmers in the last 3 years instead of the present "fair-price" parity system.

The President is hopeful of, but not trustful of, the present Russian gestures, and he warns the "competition they provide is formidable."

Extremists Raise Their Ugly Heads

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, one of the best editorials that I have seen on the unfortunate resurgence of neonazism in Germany was published in the San Leandro (Calif.) Morning News.

I am inserting this editorial and urge my colleagues to read it:

EXTREMISTS RAISE THEIR UGLY HEADS

It is easy to speculate that the Communists are behind the new outbreak of anti-Semitic incidents, hoping to discredit West Germany as the time for negotiations over the German future approaches, but the speculation may not be well founded.

In the first place, there is no denying that there are Nazis left over in Germany, and neo-Nazi organizations containing hoodlums perfectly capable of the acts. The overwhelming popularity of Chancellor Konrad Adenauer, who has sought zealously to lead German thinking away from such fields, is sufficient evidence that these elements are neither representative nor powerful. But in Germany and the rest of the world there are enough extremists who, like anonymous letter writers, are willing to act surrepti-

tiously to create the impression of an organized movement.

Any Communist conspiracy in such a matter would be in constant danger of discovery and the resultant danger of the Communists' cause is very real.

The Communists have always been extremely wary of charges of anti-Semitism, recognizing it as a link to czarist Russia where the pogrom was once a well-used weapon of the government to keep the minds of the people off their other troubles.

It still exists, of course, and at times has flared to the point where it was clearly discernible even through the Iron Curtain. But the line has seldom been clearly drawn betwen anti-Semitism and the general running fight which communism carries on against all religions in its effort to stand as a religion within itself.

Stirring up hatred is not the Soviet line today, although the Chinese Communists still go for it in a big way.

An Interesting Commentary on the Decline of the American Railroad System While Soviet Railroads Make Notable Progress Because They Are Used to Their Capacity

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. VAN ZANDT. Mr. Speaker, it is common knowledge that the American railroads have multiple problems many of them posing a real threat to the survival of an industry that has proved of vital importance in war or peace. It is an accepted fact that the importance of the American railroad system was never more apparent than during national emergencies when it was freely recognized as a strong and indispensable arm of our national defense. Such recognition was earned through stellar performance in doubling freight volume, tripling passenger traffic, and, at the same time, accomplishing such a feat with existing equipment and personnel.

An article by Harold E. Wefald, titled "Soviet Railroads in Boom Period," appeared in the January 17, 1960, issue of the Washington, D.C., Evening Star. It is an interesting recital of the growth of the Soviet railroad system at a time when many American railroads are teetering on the brink of bankruptcy unless rescued from their plight by an aroused America who recognizing their indispensable role in the economy and defense of this Nation will rise up and demand that they be dealt with in a realistic and practical manner lest they be forced to depart from the American scene.

The article by Mr. Wefald follows:

SOVIET RAILROADS IN BOOM PERIOD

(By Harold E. Wefald)

When train No. 8 of the St. Louis & Southwestern Railroad arrived in East St. Louis on November 30, with six revenue passengers, 59 years of passenger service on the Cotton Belt Line came to an end.

In the same month one New England railroad petitioned to drop commuter service and another asked to drop all passenger service.

With the Nation's railroads losing more than $600 million on passenger service last year, it is not surprising that such famous trains as the New Haven's Merchant's Special look ever more seedy. If present trends continue, railroad passenger service will disappear entirely by 1970. Freight volume also declined 10 percent in 1958, and in the first 10 months of 1959 the net income of class I railroads was 25 percent less than in 1957.

Meanwhile, Russian railroads are growing about as fast as ours are declining. In fact, Soviet Russia, in traffic volume, has become the biggest railroad country in the world. In 1957, when American railroads carried 626 billion ton-miles of freight, the Soviet haul was 680 billion ton-miles—the equivalent of 680 million tons carried a thousand miles. The passenger volume of Russian railroads is well over three times the American figure.

INHERITED FROM CZARS

In contrast to the largely new heavy industry, the Soviet rail net is essentially the system inherited from the czars, expanded and improved. The first Russian line was built in 1838, but not until after 1856, when the Russian defeat in the Crimean War revealed a shocking lack of transport, did Russian railroad building begin in earnest.

Two great railroad booms laster from 1868 to 1874 and from 1891 to 1900. They were nothing like the great American railroad boom, however. Between 1880 and 1890 we expanded our rail net from 94,000 miles to 163,000 miles—a 10-year increase almost equal to the total mileage of the entire Soviet Union today.

French money helped the Russians achieve their greatest railroad success, the building of the Trans-Siberian. Siberia was practically useless until the coming of this railroad, which was begun in 1891 and completed in 7 years. Since the Bolsheviks repudiated the czarist debt, the longest railroad in the world remains unpaid for. It is perhaps the most strategic railroad in the world, for in a large measure this ribbon of steel is Siberia.

This was demonstrated in the summer of 1918, when about 35,000 Czech troops were spread out along this railroad, for 5,000 miles from European Russia to Vladivostok. They were trying to reach the western front by traveling east around the world. The Bolsheviks, touchy about German pressure, ordered them to give up their arms. The Czechs answered by seizing the railroad. In effect they seized Siberia as well, for by their action this vast region, far larger than all of the United States, was lost to Bolshevik control. The opposition could thus organize, and the Russian civil war began in earnest.

GAINS UNDER SOVIET

During the Soviet period, Russian trackage has about doubled. Yet, with about 75,000 miles of main track, they have barely a third of our own railroad mileage. However, the 218,000 miles of line operated in the United States last year represents a decrease from the 1920 figure of 252,000 miles, which is almost as great as the Soviet increase during the same period.

Today, while some in this country raise the question of the railroads' survival, the Russians are embarking on a major program of railroad modernization. They plan to increase train weights to 4,000 tons and more. They could handle it with steam, which is cheaper to build, horsepower for horsepower.

But if they build 6,000 horsepower into a steamer, they would get such concentrated weight that many existing bridges and rails wouldn't stand up. In addition, steam locomotives convert much less of their heat energy into mechanical energy, and they run much less efficiently during the long and severe Russian winter. So in 1957, Russia built its last steam locomotive.

While in this country the switch has been almost entirely to diesel power, the Soviet production target for 1965 is 2,500 diesels a year and 2,700 electrics, with each handling about 44 percent of the traffic. By 1970, when steam is scheduled to disappear, they plan to have 24,000 miles of track under the overhead wires. The electrics are expensive, but they will run a million miles between capital repairs and will last 40 years. They are especially valuable in mountainous areas, because on the downgrade they reverse their motors and feed power back into the grid.

NORTHERN SIBERIA JOB

The next big railroad job is to help unlock the vast wealth of Northern Siberia. Almost 4 million square miles are covered with permafrost. The surface thaws out in the summer, but the ground underneath remains frozen the year around. In many areas rail beds won't stand up. The Reds are so concerned about this that they have even experimented with refrigeration pipes to keep the surface from thawing in the summer. If they ever solve this problem, they will increase the effective area of the Soviet economy by several million square miles.

In the United States, the volume of rail freight has fallen to less than half of the total freight volume; but in Russia the railroad share has increased during the Soviet period, and the rails now haul well over 80 percent of all Soviet freight. Russia has nothing to match our fantastic highway system. Compared to ours, her pipeline net is puny indeed. Her rivers and coastal waters remain frozen up to half a year and more. How then can the railroads meet the transport requirements of an area 2½ times the size of the United States?

They use their railroads to capacity. We don't. Only the innate efficiency of the steel wheel on the steel rail explains how the Soviets can begin to hold their burgeoning industry together over the gigantic Russian land mass. The modern diesel locomotive can produce 625 gross ton-miles on 1 gallon of dieses fuel, compared to less than 150 for a diesel truck. The average automobile produces only 20 to 30 ton-miles on a gallon of gasoline. With the flanged wheel and rigid couplings, the railroad represents built-in automation. It would take 13 times as many man-days to move 100,000 tons of freight between New York and San Francisco by truck as it would by rail. A single track can transport 20 times as many people as a single lane of highway.

DOUBLING FREIGHT VOLUME

The meaning of this is apparent from our own experience in World War II. Our railroads doubled their freight volume and more than tripled their passenger volume, and they did it with no appreciable increase in the railroad plant. When Nazi submarines hit the coastwise tankers, the railroad haul of oil to the East was increased nearly a hundredfold to a million barrels a day. Soviet Premier Khrushchev, who speaks to the production front as though it were a battlefront, had much the same transport objectives as ours during the war—to meet transport requirements with the least expenditure of manpower, fuel, and steel.

Perhaps the decline of American railroads is part of the price of being rich. Soviet motor vehicle production is less than half that of France, while America has twice as many automobiles as all the rest of the world. The $29 billion we spent on the purchase and operation of automobiles—exclusive of trucks and buses—in 1 year, 1955, is greater than the entire net investment, accumulated over a period of more than a century, of all our railroads combined. Perhaps the key word is "convenience." Russian pota-

toes ride the rails, American cake mixes go on the highway.

If the American people are rich, so, it appears, are the Federal, State, and county governments. The railroads looked huge 60 years ago, but they are quite small alongside the roadbuilders. The $8.6 billion spent on highway construction and maintenance in 1957 was greater than the total expenditure of all the railroads combined. At the same time, the unused capacity of our railroads is far greater than the total capacity of all the trunk highways in the United States.

Competition, Credit Policies, and the Captive Finance Company

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Paul H. Banner as it appeared in the Quarterly Journal of Economics, May 1958:

COMPETITION, CREDIT POLICIES, AND THE CAPTIVE FINANCE COMPANY

(By Paul H. Banner)

The development of the captive finance company [1]—the finance company wholly owned and operated as a subsidiary of a nonfinancial firm—presents new problems in the field of consumer credit. The captive finance company has as its primary purpose the underwriting of the sale of the parent company's products and it is therefore influenced in its actions and policies by merchandising requirements, not by objective monetary standards and credit conditions. It is the purpose of this study to determine the effect of this sales device upon competition and upon credit conditions. This study suggests that the captive finance firm is most effectively used by, and is a competitive advantage primarily available to, the large company. A second conclusion is that consumer credit controls now available to monetary authorities are largely ineffective in dealing with this rising source of consumer credit. It is possible therefore that either direct controls will be required to regulate consumer installment debt expansion or divestiture will become necessary if the current growth of captive finance companies continues.

Installment credit is an absolute necessity in certain industries. The automobile industry, for example, could not have grown to its present size without some form of time payment plan. Credit, however, is not uniformly available as a sales method. Inadequacy of credit facilities has been a chronic complaint in industrial and agricultural history. In part, this complaint stems from the fact that credit institutions normally approach new uses of credit cautiously. New industries present greater risks than old ones. The prefabricated-house and home-trailer industries are current examples—the automobile industry an illustration of a few decades ago. Inadequacy of credit facilities is a relative matter, however, and in many industries today certain firms feel this inadequacy because of their inability to meet the credit terms offered by their competitors operating captive finance firms.

Footnotes at end of speech.

THE GROWTH OF CAPTIVE FINANCE COMPANIES

This study indicates that the number of captive finance companies has been increasing continuously. Since 1948 their number has doubled and in recent years there has been an acceleration in their formation.

Organization of captive finance companies [2]

Year of organization:	Number organized
1948 and prior years	19
1949	2
1950	3
1951	5
1952	1
1953	3
1954	5
1955	5
1956	7
10 months 1957	8
Unknown	11
Total	69
Number of parent firms	55

[2] Sources utilized in the preparation of this study include: "A List of 1,000 Large Manufacturing Companies, Their Subsidiaries and Affiliates," Federal Trade Commission, 1951; Standard and Poors Corp. Records; Moody's Industrial Manual; Wall Street Journal; Journal of Commerce. Company reports and stock registration statements were also used. The above summary does not represent a complete census of financing affiliates. There is no directory of finance companies reporting data such as is required to determine ownership. Subsidiary corporations are not always reported separately in financial manuals or they are referred to so obliquely as to make their operations difficult to determine. In certain cases in annual reports partially owned firms are treated as investments rather than as subsidiaries and little or no information is offered as to their operations. If the parent firm is not registered on an exchange, difficulties are compounded.

Most of the captive finance firms studied are affiliates of firms listed as among the 500 largest industrial firms in the country by Fortune magazine in its July 1956 Supplement. To some extent this indicates a limitation on the quality of the sample. It is known, for example, that automobile dealers frequently operate finance companies in conjunction with dealerships. If the number of firms with finance companies is considered small, however, it should be noted that many industry products are of such low unit cost that financing of sales is unnecessary. Also, in those cases where industry products are intermediary rather than consumer products, different forms of financing are utilized. In the petroleum, chemical, food, and textile industries, for example, sales financing is unnecessary to move a significant proportion of industry product. Among the top 25 firms ranked according to sales are 8 oil firms, 3 food processors, and 2 chemical firms, all of which would not be expected to utilize installment sales techniques.

EFFECTS ON COMPETITION

Frequently it has been found that ability to provide credit is a more effective competitive weapon than an attractive product price. Many instances, especially in automobiles and housing, can be found where the absolute level of monthly payment, not the overall cost of the product, is the determinant of sale. Flexibility in financing arrangements can be more important than total interest cost in selling a product. A captive finance firm whose only purpose is to further the sale of the parent firm's products can, therefore, provide competitive advantage.

Examples of the advantage to a producer in having a financing affiliate are found in many industries. Bus producers have insisted that financing is one of the chief advantages of General Motors. ACF Brill's president, for example, stated that his buses were priced competitively but because he could not offer financing for so long a period, he lost many sales.[3] The president of the Southern Coach Manufacturing Co. offered similar evidence. His firm was specifically told it could have sales if it could provide financing. His firm now makes no attempt to get customers unless it knows such customers can finance purchases locally.[3] A representative of another firm, the Flxible Co., stated that his firm had utilized General Motors Acceptance Corp. (GMAC) to finance its sales. He reported an instance of GMAC refusing to handle his financing of a bus sale and General Motors thereupon receiving the same order which it financed on longer terms through Yellow Motors Acceptance Corp., another General Motors affiliate.[4] Flxible now relies on customer financing by local banks.[5] The Ford Motor Co. reportedly left the bus business not only because the market was declining but also because financing of customers was necessary.

On July 6, 1956, the Department of Justice filed an antitrust suit against General Motors charging among other things monopolization of the manufacture of buses and the financing of the sale of buses through YMAC on terms which General Motors' competitors with more limited resources could not meet. One element of relief requested was that General Motors be required to offer to finance the sales of buses manufactured by any other company upon the same terms and conditions as it finances its own buses.[6]

Probably in no industry has credit become so important a sales device as in the retailing of automobiles. Only one firm, General Motors, owns a sales finance company. The problem posed will be discussed hereafter as part of a general discussion of the automobile industry, but at this time it can be pointed out that in 1954–55 there occurred a major challenge to General Motors' leadership in the automobile industry. The Ford Motor Co., planning a public offering of its stock, drove the industry into the most competitive battle for sales leadership in the postwar period. One retaliatory device resorted to by General Motors was liberalization of credit. This liberalization occurred only shortly after the firm in a policy announcement declared:

"GMAC's current experience shows that where downpayments on new cars are less than one-third, repossessions are disproportionately higher, as dealers are well aware." [7]

Shortly after this statement GMAC's policies were changed and the number of transactions involving downpayments lower than one-third about doubled percentagewise.[8] This flexibility had an immediate effect upon dealers of other cars and upon competing finance companies. A dealer testifying before the Subcommittee on Antitrust and Monopoly stated that the finance firm he had used had always offered competitive rates in the past, but in early 1955 he found he was losing sales to GM dealers because of financing. GMAC was taking automobile paper that in the past it would not have taken.[9]

There are insufficient data available to reveal whether GMAC initiated the liberalization of automobile credit terms in 1954 and 1955 which resulted in the greatest increase in automobile credit in any single year, but from 1954 to 1955 it can be shown that the major finance firms, the most important of which is GMAC, were more liberal than their smaller competitors in the granting of credit. In 1954 the median credit on new-car purchases for the four major companies in this

field was $1,590 in comparison with $1,650 for all other sales finance companies. In 1955 the median credit allowed rose to $1,790 and $1,770, respectively, or the four major companies increased the median size of loans $200 in 1 year, while their smaller competitors increased the median size of their loans only $120.[10] General Motors' share of the passenger car market in this booming credit market rose to its highest percentage in history. In a market in which credit purchases rose by one-half while cash purchases rose less than one-sixth, the firm with a financing affiliate found its market position considerably enhanced.

Credit liberalization is so effective as a competitive weapon in this industry because of the high number of sales involving trade-ins. More than four of every five new car sales involve trade-ins so that cash requirements for the purchase of a new car represent the difference between downpayment requirement and the trade-value of the used car. Liberalization of credit can reduce cash requirements to a negligible amount. A reduction in downpayment requirements from one-third to one-foutrh on a $2,400 car is $200. A three-year-old car which cost when new $2,400, is roughly worth $800, or the one-third down payment on a new car without any further cash payment. A four-year-old car would be worth about $650, or would require an additional $150 cash for a new car purchase on credit. A decline in downpayment requirements, however, to one-fourth or $600, would mean that another age group of cars could be tapped as a market for new car sales without cash down payment. According to Federal Reserve Board data the median interval before repurchase of a car declined from 37 months in 1954 to 32 months in 1955 for credit buyers of automobiles.[11] Concomitant with this decline in the median time interval on transactions, credit rose and cash paid declined.

Selected averages for credit purchases
[Mean dollar amounts]

Item	*1955*	*1954*
Contract car price	$2,890	$2,690
Effective car price [1]	2,480	2,320
Value of car traded-in or sold	590	580
Net outlay	1,900	1,740
Amount of additional cash [2]	210	240
Amount of credit [3]	1,690	1,509

[1] Contract car price less estimated overallowances on trade-in, if any.

[2] Cash paid less encumbrance on trade-in, if any.

[3] Excludes finances and insurance charges; excludes any supplementary borrowing for down payment.

Source: Board of Governors, Federal Reserve System, Consumer Installment Credit, Part IV "Financing New Car Purchases," 1957, p. 65.

While these important changes in the character of automobile installment paper occurred one item did not change, the average monthly payment on new car installment contracts. This remained constant from 1954 to 1955 at $72. Thus the lower downpayments were accompanied by a lengthening of maturities, the median for which rose from 24 months in 1954 to 30 months in 1955.[12]

The effect can be seen in the age distribution of cars traded in on purchases of new cars. In 1953, 50 percent of all cars traded in on new cars were 3 years old or less. Cars 4 and 5 years old comprised 20 percent of cars traded in. In 1954 and 1955, cars aged 3 years old or less declined to 45 percent and 42 percent, respectively, while cars 4 and 5 years old rose to 28 percent in 1955. Thus concomitant with a decline in downpayment requirements the importance of 4- and 5-year-old cars as trade-ins rose 50 percent.

Footnotes at end of speech.

OTHER EXAMPLES OF THE COMPETITIVE USE OF CREDIT

Another competitive use of the finance company is in the introduction of a new product. The firm offering liberal financing makes its sale easier. A recent example is the automatic pinsetter for bowling alleys. The substitution of capital equipment for labor in bowling alleys is a large investment for a business which has not previously required high capital outlay. The Murray Corp. and Brunswick-Balke-Collender Co. developers and marketers of this product, formed an affiliate, the Brunswick Murray Automatic Pinsetter Corp. to finance installment sales of these machines. Competition was undoubtedly a factor also. A rival product is offered on a rental basis by its developer.

An older example of the use of credit to introduce a product is the diesel locomotive. When General Motors introduced its diesel engines 40 percent of the mileage of American railroads was in receivership. Obviously railroad credit was poor, and in the depression period capital expenditures were avoided. In order to introduce its product General Motors offered to finance its sale with no downpayment required. A revolving credit of $5 million was established and engines were leased to railroads with purchase options. In 1937 and 1938, GMAC financed 12 percent and 67 percent, respectively, of GM sales to domestic railroads.[13]

In the appliance industry when production declined in 1956 and various firms dropped lines or sold out completely, General Electric turned to easier consumer financing as a stimulus to sales. It announced that a homeowner, or long-term renter, who made structural changes in his kitchen or laundry could have the whole project financed through General Electric Credit Corp., if at least two major appliances were bought. The President of the Philco Corp., a firm with only one-tenth of the sales of GE, commented "GE's new financing plan will have a lot to do with sales and will make it very rough for other manufacturers. Only a big outfit like GE could do such a thing."[14] The terms offered by GE include 10 percent down payment with 5 years to pay the balance. Philco is a well-known name in the appliance industry. The effect of GE's competition on smaller firms can be imagined.

Financing terms are powerful competitive tools which can best be utilized by the large firm which has better access to the money market and can borrow at lower interest rates. The large firm invariably has established sources of financing. Its name is known and it has established credit status. This is of importance since capitalization of a finance firm is less important than its borrowing ability both in the long-term capital market and in that for short-term money. With the parent firm's credit status, name, and reputation, the newly formed financing company has little difficulty in securing entry into the capital market. Sears, Roebuck, for example, upon the organization of its financing affiliate, did not find it necessary to operate its subsidiary using capital funds alone until it had built up a credit rating. Immediately upon the organization of the subsidiary in November 1956 with a capitalization of $35 million, a $50 million debenture issue was floated, underwritten by leading security houses and repeated soon thereafter. The firm which handled the greatest share of the issue was the firm which in the ordinary course of Sears' business handled its financing and the sale of its commercial paper.

With reference to the cost of money, a major part of the finance company's cost of doing business, one need only consult the difference in interest rates according to size of borrower. Rates normally vary with the size of loan. In addition, the firm which can place its short-term paper directly secures advantageous rates in comparison with paper placed through brokers. The average money market rate in 1956, for example, was 3.06 percent for directly placed finance company paper in comparison with a rate of 3.31 percent for prime commercial paper of comparable maturity.[15] Thus it is not only that the large firm can more readily utilize financing terms as competitive weapons, but the advantages of the parent firm's size can be translated into advantages of size in the money market.

NONCOMPETITIVE USES OF CREDIT

Interesting variations in sales financing arrangements are occurring in the carpet and trailer truck industries, variations which would appear to benefit the smaller rather than the bigger firms in the industry.

Sales financing arrangements in the carpet industry have developed in such a manner as to minimize competitive effects among carpet producers. In September 1955 Mohawk Carpet Mills arranged with Allied Building Credits, a subsidiary of the Transamerica Corp., to finance dealer sales of its products. In succeeding months other firms made similar arrangements with the same finance company. In October 1956 Alexander Smith, First Carpet Co., A & M Karghensian, and C. H. Marland & Sons simultaneously announced these arrangements and in December James Lees & Sons. Other mills in the country are reported to have done likewise. Terms offered are similar to all users and provide no advantage to any particular manufacturer. Such an arrangement is apparently the only noncompetitive intra-industry credit arrangement in effect.

Another noncompetitive credit arrangement different in purpose has been suggested for the truck trailer industry. In this industry a credit pool has been proposed to help both small truckers and producers.

EFFECTS ON CREDIT POLICY

The existence of large captive finance companies owned and controlled by leading manufacturers in their respective fields cannot but affect the credit structure of the country. The captive finance company is not an independent business entity. The fundamental objective of the company is not necessarily the same as that of an independent finance company. Is it to function principally as a finance company, or is it to function as a means of furthering the interest of the parent? It would appear that the paramount purpose is usually the latter. If so, then the existence of captive finance companies, as major suppliers of consumer credit, can create conflict with overall national credit policy. It may be to the competitive advantage of the parent to adopt policies at variance with monetary objectives and to be in a position to do so. If the Government, for example, is fostering credit restriction to limit business borrowings for inventory purposes, banks will more carefully review consumer credit applications and generally slow down their lending activities. If captive finance firms are the sources of credit for dealer inventories, pressures from the parent firm to continue lending may be too strong to resist even though further lending may be unprofitable. Independent market forces do not directly pass judgment on this demand for credit. One automobile dealer informed the author that his greatest protection from factory pressure to buy more cars was the independent finance company he used, which exercised independent judgment as to how many cars it would floor plan for him. He obviously did not build up the large inventories many other dealers did in the latter part of 1955.

Structurally, there are other effects of the captive finance company. In the market for funds, the capitive finance company probably has better credit than most independent finance companies. Its affiliation with an important manufacturing firm is advantageous. It has the credit of the parent organization behind it. It is therefore a preferred credit risk to the independent finance company. Credit policies that reduce the availability of credit will bear more heavily upon the independent than upon the captive firm of comparable size. The captive firm, though smaller than many independent firms, as an affiliate of a large manufacturing firm with nationwide sales, can secure credit lines in many banks.

Complementary to availability of credit as a limit upon the activity of finance companies in a tight market is the treatment of credit risks. With higher rates and restricted availability, independent firms survey their borrowers more carefully, ration credit, and react in the manner monetary authorities anticipate. Captive finance companies canont be relied upon to react in this manner. It must always be remembered that the captive firm exists primarily to promote the sale of the parent firm's products. Not only may it not feel the usual profit incentives operating upon the independent firm, but knowing that these conditions exist it may take advantage of the situation to enhance the parent firm's market position. If the captive firm is to be used to further the parent firm's market position, it cannot allow itself to be limited by the same criteria as limit the independent firm.

The captive firm usually has much better knowledge of its customers' positions than a banking relationship alone would supply. It surveys its own industry and while perhaps more parochial in outlook, it is more knowledgeable of its specialized field. Hesitation in judgment of credit worthiness or a general lagging in the granting of credit is unlikely.

More important, however, is the positive use of credit. If credit costs are rising it may be advantageous to absorb this higher cost and if necessary operate at a deficit to enhance a market position. The very limitation on credit for competitors' products may be the impetus to provide credit for the parent firm's products. At such a time new markets can be invaded and a broader distribution of products achieved. These are advantages to the firm which would impel it to act counter to current credit trends.

The above discussion has been applicable to a period of restricted credit. What of a period of liberal credit? In such instances either the captive firm can retire from the market and act passively or it can utilize its preferred position with the parent firm's customers to assure itself of a market for its services. This has been done. Pressure to use the financing and other services offered by a parent firm are not uncommon.

An example of credit policies entirely subservient to the interests of the parent corporation was previously noted in the action GMAC took in 1954–55. The same flexibility in interest rates was noted in the case of General Electric which in 1956 announced a liberalization of financing terms in a period of continuously rising interest rates and attempts by monetary authorities to limit availability of funds for credit expansion. The president of General Electric at a press conference praised the Federal Reserve Board's policy of credit restraint but at the same time announced that the GE credit company was helping those feeling the pinch.[16]

Footnotes at end of speech.

The tight money market has not prevented the growth of the captive finance company. It is possible that there is no casual relationship and the growth can be ascribed to demonstration effort. On the other hand, the very tightness of the market may be contributory and in addition the profitability of installment paper, in comparison with shrinking profit margins, may be influential. Large firms, and those studied were primarily among the largest manufacturing firms in the country, usually have established sources of credit and can be expected to attempt to circumvent credit restrictions as a barrier to sales. Furthermore, the large firm with a distributive organization can readily expand its services to include sales financing. Ease of entry is not a problem. The effect of such entry is a problem.

INDIVIDUAL INDUSTRY EXPERIENCE

The captive finance firm is usually a specialized firm. It handles paper arising from the operations of the parent corporation, and rarely handles other financing.[17] There can be, therefore, significant differences among firms, and no uniform pattern of operations can be expected. Credit requirements, procedures and practices vary among industries and the captive firm will be designed to fit industry requirements. Indeed the very existence of the firm may be in part due to the inadequacy, or lack of flexibility of alternative financing institutions. Channels of distribution, seaonality, and historic practices vary among industries and will influence credit requirements.

The motor vehicle industry is particularly dependent upon installment credit. Approximately two-thirds of all passenger car sales involve the use of credit and automobile paper accounts for almost one-half of the total outstanding installment credit. In an industry in which credit is of such importance, only General Motors owns its own finance company, and until recently its two major competitors were restricted by law from any affiliation with such a firm. In 1938 both Chrysler and Ford were prohibited by court order as a result of an antitrust action from any such affiliation, an order which was modified by the Supreme Court in 1948. General Motors now owns and operates two finance companies, General Motors Acceptance Corp., the largest sales finance company in the world, and Yellow Motors Acceptance Corp., a separate firm to finance the sale of GMC trucks and other heavy equipment.

Credit has always been a problem in the automobile industry, and in the twenties considerable attention was devoted by automobile firms to methods of supplementing credit facilities. While the automobile industry was profitable, there were many failures and the industry credit was low. The need for supplemental financing in the automobile industry arose from the unwillingness of banks to finance the installment sale of automobiles. Specialized lending facilities in the forms of sales finance firms grew rapidly after World War I, and without the ethical practices of the banking profession. Exorbitant finance charges, excessive insurance charges, "packs" fees, and so forth were loaded upon the auto purchaser, and the charges quoted in a purposely ambiguous manner so as to confuse the buyer. These practices, while still utilized today, were more blatant in the twenties when alternative financing sources were unavailable. The excessive charges for automobile financing detracted from the reputation of the industry and in addition raised the price of the product to the consumer. Automobile firms, therefore, defensively concerned themselves with sales financing and sources of credit.

General Motors organized its financing affiliate in 1919. Ford organized the Universal Credit Corp. in 1928. Other firms made agreements with "factory preferred" finance companies. Arrangements in the latter case varied but generally in return for lending at agreed upon rates the automobile firm paid a subsidy to the finance firm or assumed responsibility for repossessions.

General Motors initially provided its financing services as supplementary financing, but this practice was soon modified. GMAC financed on a recourse basis, that is, the dealer was obligated to buy back repossessed cars, a risk dealers preferred to avoid. Furthermore, it was profitable for the dealer to enter an agreement with a local finance company. In 1925 GMAC wooed dealers by offering a rebate on finance charges in the form of a dealers' reserve equal to 20 percent of the finance charge on new car sales and 30 percent on used car sales. Simultaneously pressure was exerted upon dealers to use the affiliate's services. By 1935, when it was estimated that 55 percent of all new cars were sold on installment sales plans,[18] GMAC's retail financing equalled 46 percent of General Motors car sales, which would imply that GMAC secured about 80 percent of its dealers' finance business.

In 1935 General Motors announced its 6 percent plan which provided the purchaser with a quick methods of computing his total finance charges. The plan while not the same as 6 percent simple interest offered lower interest rates than were currently being charged by other finance companies and forced a competitive reduction in finance charges. The competitive advantage of the plan can be seen in that form 1935 to 1936 GMAC retail financing increased 50 percent while car sales of General Motors increased 21 percent in value. General Motors' market share in the passenger car field also rose. from 38 percent in 1935 to 43 percent in 1936. In the following year as other firms met the GMAC rate, General Motors' market share dropped back.

The importance General Motors attached to financing can also be illustrated by its action in Germany upon purchasing an 80 percent interest in Adam Opel A.G. When it purchased this firm in 1929 it immediately formed a Germany Acceptance subsidiary. Opel Finanzierungs G.m.b.H.[19]

Chrysler Corp. had an agreement with Commercial Credit Corp., an independent finance company, from the time of the former's reorganization. In 1935 this agreement was revised and Chrysler bought considerable stock in the finance company. The agreement provided that Commercial Credit pay Chrysler a percentage of its earnings and that Commercial Credit provide financing terms for Chrysler dealers as favorable as those given to all but Ford dealers. Where preferable terms were given Ford dealers, their names were supplied the Chrysler Corp. Chrysler could request Commercial Credit to provide lower rates but would have to pay the subsequent difference in interest rates. Chrysler dealer and distributor contracts were revised to include the provision that charges in excess of those of Commercial Credit could not be charged. Pressure was also applied upon dealers to use Commercial Credit financing. In return Chrysler profited and in the 3 years this contract ran, Commercial Credit paid Chrysler more than $3 million.[20]

Ford organized the Universal Credit Corp. in 1928 to finance the sale of its cars. In 1933 Ford sold Universal to CIT. Ford also owned a finance company in Japan, the Fordson Finance Co., but it is unknown whether this firm is still in existence.

On May 27, 1938, the Department of Justice, as a result of complaints of independent finance companies and automobile dealers,

instituted an antitrust suit against the Big Three automobile producers charging a conspiracy in restraint of interstate commerce and coercion of dealers to use factory affiliated finance companies. On November 15, 1938, civil suits were substituted for criminal indictments and consent judgments entered in the cases of Ford and Chrysler. General Motors preferred to stand trial. The court's verdict held General Motors guilty and fines were imposed. General Motors appealed and the judgment was affirmed in 1941.[21] A civil suit was thereupon filed seeking divestiture. The final decree against General Motors was entered in 1952 and was similar to the judgments entered against Chrysler and Ford. In each case coercion of dealers to utilize certain finance firms was barred but General Motors was not forced to divest itself of GMAC. In 1941 and 1942 Chrysler unsuccessfully fought the bar against affiliation. On September 19, 1946, Ford appealed to have certain provisions of the consent decree lifted and in 1948 was successful. The Supreme Court reversed a decision of the lower court and lifted the ban on the Ford Motor Co.'s affiliation with a finance company.[23]

Financing of sales is also important in the sale of other transportation equipment. In the railway car and locomotive field, financing was particularly important during the depression when railroad credit was poor. General Motors as noted previously was able to enter the diesel locomotive field because it was willing to finance the sale of its product. ACF Industries, Inc., a producer of cars, has various financing affiliates. Fairbanks Morse has its captive finance company, the Municipal Acceptance Corp. Pullman, Inc., also has a financing subsidiary to aid in the marketing of its railroad products.

The largest producer of truck trailers, Fruehauf Trailer Co., established a financing subsidiary in 1948, the Fruehauf Trailer Finance Co. In 1956 it established the Trailer Acceptance Co. in Canada to finance the sale of its Canadian subsidiary's output. Trailmobile, a subsidiary of Pullman, Inc., established the Trailmobile Finance Co. in 1955, Fruehauf and Trailmobile are estimated to control about 60 percent of trailer production with the remainder of the market divided among many small producers. Since so many truck operators are relatively small and equipment comprises the major cost of entry into this industry, credit is extremely important. Fruehauf has offered its customers a 7-year financing plan, roughly parallel in time to equipment life, and longer than regular financing agencies have offered. Smaller trailer companies have been unable to offer similar terms. On August 17, 1956, the Federal Trade Commission charged the Fruehauf Trailer Co., among other things, with using its financing subsidiary to lessen competition and unfairly diverting trade to Fruehauf from its competitors.[25] This case has not been settled as yet.

Truckers themselves through the American Trucking Associations, Inc., are investigating a plan to establish an industry-sponsored credit pool to help truckers. Such a pool established by truckers and suppliers would not only help purchasers but would help the many small producers of truck trailers.

In addition to making passenger cars the big three auto producers are also major truck producers. General Motors' other financing subsidiary, Yellow Motors Acceptance Corp., exists primarily to finance its truck sales. There are about 11 producers in the automobile industry which produce trucks but not passenger cars. Among these producers are included International Harvester which operates a finance affiliate. In 1955 Mack Truck arranged a revolving credit with 48 banks to finance the sale of its products. White Motor Co. handles installment paper as ordinary receivables.

The aircraft firms have less need to finance the sale of their products since the Government is the largest single purchaser, and airlines have in the past arranged their own financing. The two major producers of aircraft for private use have financing subsidiaries: Cessna organized a financing affiliate in 1955, and Beech Aircraft organized an affiliate in 1956. Lockheed has had an affiliate since 1943; Bell Aircraft's major stockholder is a finance company.

Sales financing is of particular importance in consumer durable goods and agricultural machinery. Manufacturers of consumer durable goods have been particularly active in the establishment of finance affiliates.

General Electric Corp. has had a financing subsidiary for many years. Its major expansion, however, has occurred since World War II. American Motors' Kelvinator Division has had a financing subsidiary to finance the sale of its appliances since 1934. The Westinghouse Credit Corp. was organized in 1956 with initial capital of $10 million to help the company's appliance dealers obtain financing. Philco established a financing affiliate in 1954, with an initial capitalization of $5 million and its line of credit is now $25 million.

Avco Manufacturing Co. announced plans for a multimillion dollar financing plan for its dealers to meet the extended terms offered by competitive producers but no further information is available at this time. Borg Warner, producer of Norge appliances, established BW Acceptance Corp. in 1953. Various other manufacturers of heating equipment also have finance firms.

In the agricultural machinery field credit has always been of major importance and again we find the leading firms operating financing subsidiaries. Agricultural machinery producers in the past extended credit to their dealers and helped dealers to carry customer accounts. This is still the method used by Deere & Co., the Oliver Corp., and the Minneapolis Moline Co. The largest firms in this industry, however, have organized sales finance firms. International Harvester, the largest producer of agricultural machinery, established its financing affiliate in 1949. Caterpillar Tractor established its affiliate in 1954; Cockshutt Farm Equipment, Ltd., established the Farmers Financial Agency in 1955 and Allis-Chalmers established the Allis-Chalmers Credit Co. in 1956. The J. I. Case Co. has indicated that it, too, will organize a financing subsidiary.

Ford's activities in the agricultural machinery industry and the financing of such products is of interest in the light of Ford's experience in automobile financing. Various Ford Motor Co. officials, though not members of the Ford family, including Ernest R. Breech, John S. Bugas, Lewis D. Crusoe, John R. Davis, William T. Gosset and Delmar S. Harder, own more than one-half of the stock of the Dearborn Motors Corp. which distributed Ford tractors and manufactured agricultural machinery. The company has, as a wholly-owned subsidiary, the Dearborn Motors Credit Corp. which finances tractors and other farm equipment at wholesale and retail. On July 31, 1953, Ford purchased the assets of Dearborn Motors Corp., excluding Dearborn Motors Credit Corp. The latter firm has continued its finance business and has financed more than half of the wholesale sales of Ford tractors and farm equipment and a smaller portion of the retail sales of such equipment. Thus, the Ford Motor Co. does not own a finance company, but the Chairman of the Board of the Ford Motor Co. and five vice presidents own one which finances a goodly proportion of Ford agricultural implement output.

In the road machinery industry credit will undoubtedly be a major determinant among firms selling equipment for the new road building program. Contractors are generally small firms and in bidding for jobs must indicate financial soundness. Rental, long-term lease and extended time sales for equipment will be sought by this industry. Those firms with finance affiliates will be in a strong position to bid for this market. It should be noted that the large truck and agricultural machinery producers also build road machinery equipment, and also own finance companies, unlike smaller producers of specialized equipment.

In addition to manufacturers supplying credit, sufficiently large retailers have also entered the field of consumer credit. Various manufacturers who operate retail stores have been previously mentioned. In addition, the mail order houses have pushed time sales.

Sears, Roebuck recently found it advantageous to establish a sales finance company, Sears' second venture in this field. It first entered the installment field in 1911. When the Federal Housing Administration was established Sears organized the Sears Finance Co. to provide FHA improvement financing. When banks entered this field, Sears retired, selling its accounts to banks and its financing affiliate became inactive at that time. It continued to finance installment sales, however, and the growth of such sales has been impressive. In the 9 month period ending October 31, 1956, installment sales comprised 44 percent of total sales.[24] In 1937 Sears began selling some of its installment paper to banks. In 1952 as installment sales continued to rise, Sears borrowed $200 million from various banks to finance the time payment accounts held rather than sold.[25] On January 31, 1952 installment balances outstanding were $493 million and by October 31, 1956, these balances had grown to $973 million, and the number of accounts from 5.7 million to 8.1 million. With the maturity of the bank loans Sears established the Sears Roebuck Acceptance Corp., wholly owned by Sears. Its initial capital was $35 million plus $50 million in debentures. Sears is particularly well situated to enter the field of consumer credit. It has extensive local representation in the form of retail stores and catalog offices.

Montgomery Ward finances its own credit accounts and at present holds in excess of $200 million of such accounts.

SUMMARY

It is probable that monetary authorities have little interest in the competitive effects of captive finance companies and that antitrust authorities have little interest in their monetary effects. Each problem is significant in its own right but together they add up to the general problem of size in our economy.

If we are to experience a continuing expansion of captive finance firms, general credit controls will become increasingly inadequate to limit expansion of installment credit and the only control methods that could be effective in dealing with the situation created by the captive finance firms are direct credit controls. Furthermore, a critical study of the captive finance firm is needed to determine whether this is a more powerful tool to limit competition than has heretofore been utilized.

The captive finance firm is a growing influence in the credit structure of the country. The basis upon which these firms operate, their very reasons for existence, indicate that they are more effective from the parent firm's point of view when countering national monetary policy than when paralleling it. There are also reasons to believe that these firms are less responsive to general credit controls than are independent finance

Footnotes at end of speech.

companies. Secondly, since the captive finance firm can be effective only if it has large sources of credit, its successful use is restricted to the large firm. As such it is another competitive advantage of size.

---

[1] This study is concerned only with the financing of sales by nonfinancial firms, in most cases manufacturing concerns. Factoring is not included since it does not present the same competitive and monetary problems. Ownership of financing affiliates by other financial firms is also excluded from consideration since this is a problem of concentration and no new monetary problems are at issue.

Grain Storage Costs

EXTENSION OF REMARKS
OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. WOLF. Mr. Speaker, there are over 1 billion people in the world who are literally starving, and yet we are paying outrageous prices to individuals and groups in order to store food which we call surplus. This is a social paradox which is, to me, beyond comprehension.

Within the rotten mess which is coming out of the hearings that are being held, certain pertinent facts have been made known.

First. Benson uses private storage tanks at a cost which is six times greater than it was when public bins were used.

Second. In Iowa alone the price for storing grain has jumped from 3 cents a bushel to 17 cents a bushel by the transfer of stocks from Government to private storage bins.

Third. This has become big business. And just as some armaments manufacturers have a vested interest in the cold war so it is that many private groups and contractors have a vested interest in seeing that the food distribution problem is not handled rationally.

Fourth. The farmer is being reviled for difficulties which he can neither control nor change—nor which he caused.

I hope that these hearings will point up the fact that we would do better to help people all over the world with food than to line the pockets of various speculators.—

Under unanimous consent I include the following statement by Drew Pearson in the Appendix of the RECORD:

[From the Washington Post, Jan. 14, 1960]

GRAIN STORAGE COST LAID TO BENSON

(By Drew Pearson)

In connection with Senator Symington's investigation of the cost of storing of Government farm surpluses it should be noted that until recently Secretary Benson had done nothing about getting a yardstick to show what the cost of grain storage really ought to be. He just paid what the big elevator operators demanded.

Result: Benson is shelling out $1.5 million of the taxpayers' money per day for storing surpluses, not including transportation, interest, administration and other overhead.

Benson's cost for wheat of about 19 cents per bushel is three times that paid by his predecessor, Charlie Brannan. It is also double the cost of storing wheat on surplus Government ships—10 cents per bushel.

One of the unsolved mysteries of the Benson regime is why he hasn't made more use of these idle ships. In the past a total of 100 million bushels was stored on ships in the James River, the Hudson, Puget Sound, and the Columbia River. The storage has been very successful, the grain well preserved in quality, and it costs half as much as in private elevators. Despite this, Benson has cut down on ship storage by over 50 percent. Today only 40 million bushels are stored in Government ships.

Shortly after he took office, Secretary Benson announced that he was turning grain storage over to private enterprise.

GREEN LIGHT FOR PROFIT

Charlie Brannan had built Government bins and encouraged building of private bins on farms, had managed to keep storage costs at between 4 and 6 cents per bushel. But when Benson announced he would build no more Government bins, would turn all storage over to private industry, it was the signal to big elevator men to charge whatever the traffic would bear. And they have charged plenty.

Here is how some of them profited from storing farm surpluses:

Biggest beneficiary from surplus storage is the C-G-F Grain Co. which raked in $14,787,434 in 1958 for storing wheat, grain, sorghum, and corn in its elevators in Texas, Kansas and Nebraska.

Close behind is the giant Cargill company of Minneapolis, headed by stanch Republican John H. MacMillan, which was paid $13,226,340 by Benson for storing grain in 1958, the last year for which figures are available.

Another elevator company which profited from Government storage was the F. H. Peavey Co. of Minneapolis, headed by Frank Peavey Heffelfinger, finance chairman of the Republican Party in 1953, and husband of the Republican National Committeewoman from Minnesota, Mrs. Elizabeth Heffelfinger. His company was paid $2,428,860 by Benson. He and his family contributed $3,000 to Republican organizations in 1956.

Benson, however, did not play politics. He even rewarded some of his critics. The Farmers Union has been vigorously critical of Ezra, but Bill Thatcher's Farmers Union Grain Terminal at St. Paul picked up $3,328,487 from Benson for storing wheat, soy beans and rye in 1956.

Some of the other big firms which received big warehouse rentals were Union Equity of Enid, Okla., $6,452,587; Archer-Daniels-Midland of Minneapolis, $6,240,198; Continental Grain, with elevators in Fort Worth, Kansas City, Buffalo, Norfolk, Minneapolis, and Chicago, $5,833,689.

MERRY-GO-ROUND

Clark Clifford, Harry Truman's former counsel, says: "Secretary Benson announces that last year he traveled 547,000 miles—1 mile for every farmer who's chasing him."

That swank birthday party for Senator EVERETT DIRKSEN of Illinois certainly made headlines. What didn't make headlines was who picked up the tab. He was Ben Regan, who rents the Senate restaurant. This nice little contract has helped Regan build up a multimillion-dollar food business around the Nation, and he showed his gratitude to the man who swung it for him—Senator DIRKSEN. President Eisenhower rushed from his airplane to the Dirksen birthday party, but didn't attract as much attention as Vice President NIXON. At one point Ike was left with only two ladies talking to him while the politicos clustered around the man they think will be the next President. (The king is dead; long live the king.) Pretty Iris Peterson of United Airlines has been conducting an effective lobby on Capitol Hill against drinking on airplanes. She has cases showing where drunk passengers have barged into the pilot's compartment and interfered with the operation of the plane. This was one reason the FAA suddenly banned private bottles—and tipplers. However, when stewardesses are busy serving drinks to drinking passengers, other passengers frequently go hungry. Meals are delayed. Gen. Nathan Twining, who has long and ably guided the Air Force will resign soon as Chairman of the Joint Chiefs of Staff.

[From the Washington Post, Jan. 15, 1960]

SLUGGING OF U.S. GRAIN ASSAILED

(By Drew Pearson)

One of the worst scandals connected with Government storage is the manner in which some of the big grain companies have been slugging high-quality Government wheat by mixing it with wheat screenings, then selling it as high-quality wheat to our foreign customers.

This practice of willfully deteriorating American wheat is gradually driving it off the foreign market, so that about the only wheat being sold abroad today is that which is virtually given away under Public Law 480.

Yet Secretary of Agriculture Benson insists on selling Government-owned wheat through the big grain companies.

The practice of slugging has become so flagrant that Congressman CARL ALBERT, of Oklahoma, recently returned from a European wheat survey, is asking for a congressional investigation.

"The big grain dealers would just as soon sell Canadian or Argentine wheat as they would American wheat," Congressman ALBERT told me.

"Too many exporters are after quick profits rather than long-term markets. Slugged wheat is ruining our markets. When we throw trash in our wheat, we just can't expect European customers to continue buying.

"I found that our farm exports had dropped 18 percent to Britain for 1958," the Oklahoma Democrat continued, "30 percent to West Germany, 34 percent to Italy, and 30 percent to Belgium—partly because of this practice."

PROSECUTION IS DROPPED

Previous Secretaries of Agriculture stored a large part of Government-owned wheat in Government elevators and shipped it abroad under careful Government supervision, frequently in Government ships. Benson, in contrast, has let the private elevator operators make huge profits on storing grain, and then has required that all wheat be shipped abroad by private companies. This, in effect, means the Big Four—Cargill, Buneg, Leval, and Continental.

In addition, the Eisenhower administration has dropped the prosecution of several grain companies which slugged and stole Government-owned grain.

In one case the Justice Department had indicted the Argentine Bunge Corp. for defrauding the United States to the extent of $1.7 million by mixing frost-damaged Canadian wheat classified as hog feed with good-quality U.S. Government-owned wheat at Galveston, then selling it abroad as wheat fit for human consumption.

This had the effect of both getting rid of Canadian wheat "unfit for human consumption" as American wheat and simuletaneously spoiling future American markets abroad. Yet just before officials of the Bunge Corp. were to go on trial in Houston, Tex., Gov. Allan Shivers, of Texas, flew to Washington, lunched with Eisenhower, and immediately thereafter orders were given the Justice Department to drop the prosecution.

E. H. Thornton, father of Governor Shivers' campaign manager, was one of those under indictment.

Thornton, manager of the Galveston grain elevators, had freely confessed to slugging grain ships with poor quality wheat.

"I gave orders," he had testified, "to slug as many ships as possible."

Yet, on direct orders of President Eisenhower the indictments of Thornton and officials of the Bunge Corp. were dropped. Later the Bunge firm, as a corporation, pleaded guilty and was fined $5,000. But the individuals involved did not have to face trial.

LEGAL OFFICE CLOSED

On another occasion, the Government had indicted, and in some cases convicted, a number of grain dealers for selling Government grain and beans which they were supposed to be storing. Under direction from Benson's predecessor, Charlie Brannan, the following grain elevator men and grain dealers were convicted:

C. M. Henderson, Farwell, Tex.: Four years plus $1,000 fine and the repayment of $1,086,000 for stolen grain.

Tenner's, Inc., Cortez, Colo.: A series of prison sentences ranging from 18 months to 3 years for its executives, plus the repayment to the Government of $1,108,000.

Herman Dawson, Fort Worth: Six years imprisonment and $15,000 fine with the repayment of $454,000.

O. L. Shannon, Sudan, Tex.: Five years in prison and $15,000 fine with $1,043,000 to be repaid.

On March 30, 1953, however, 2 months after Benson took office, a letter was sent to William Farrell, Dallas attorney for the Agriculture Department who had secured these prosecutions, which stated in part: "You should not take any affirmative steps toward the institution of new suits against third-party purchasers or the making of additional demands for payment upon them until further advice is received from this office."

The most important further advice received was word that the Agriculture Department's legal office in Dallas was being closed down and Farrell, the man who obtained the convictions, transferred.

New Senate Subway Cars Made at ACF Plant at Berwick, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Record of Friday, January 8, 1960:

SENATE CARS FROM BERWICK—FOUR USED TO WHISK SOLONS TO CAPITOL

WASHINGTON.—A new railroad system started rolling here when the first of four Senate subway cars made its inaugural run from the New Senate Office Building to the Capitol.

The four cars, each with its own power unit, specially built for the Senate subway by the Berwick, Pa., plant of ACF Industries, Inc., replace antiquated monorail cars that operated for 45 years between the Old Senate Building and the Capitol.

The new cars links the Capitol with both the Old and New Senate Buildings. Two cars are used on each line. The monorail subway, a point of interest to tourists through the years, will continue in use as a utility tunnel.

An ACF spokesman said the new four-wheeled cars make the 1,200-foot trip in about 45 seconds, thus making it possible for Senators to be hurriedly whisked to important Capitol business.

The cars have open tops and partially enclosed sides. Each car seats 18, 3 abreast in 6 seats. The driver sits in the middle of the car and automatically controls all operations from a small instrument panel. The cars require no turn around at either the Capitol or Senate terminals. "They go back and forth, carrying passengers either way, much like a horizontal elevator," said the spokesman.

A Government contract for $363,180 awarded to ACF, covered the four cars, an overhead conductor system, and a power supply substation.

Air Service in the State of Tennessee

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. REECE of Tennessee. Mr. Speaker, as a member of the committee and of the Subcommittee on Interstate and Foreign Commerce that wrote the original civil aeronautics legislation and set up the Civil Aeronautical Board, I have taken great pride in the development of civilian aviation and in the work of the Civil Aeronautics Board.

Before the civil aeronautics legislation was enacted, civil aviation, as did military aviation, came under the House Committee on Military Affairs, of which I was a member at the time.

Recently an Opinion and Order E-14754 in the Southeastern Area Local Service Case, Docket 7038 et al. was rendered that caused grave concern among a great many people. The application involved service in the State of Tennessee. The decision was significant in that an examiner recommended that Southeast Airlines, the existing Tennessee carrier, should continue in the service. The majority opinion selected the Southern Airways, which initially had made application to render part of the service but, as a result of a study conducted prior to the hearing, Southern decided not to prosecute its limited application for Tennessee. The Southeast renders Convair service from Bristol to Memphis, and additional feeder service to some half a dozen significant points in the State. It has rendered a highly satisfactory service without any subsidy or even permission for interchange.

It is significant that only three members of the board participated in the final decision and only one of these heard the oral argument. It would seem as if it would be good procedure for the Commission as presently constituted to rehear the case with a view of the majority of the opinion reaching a de novo decision in this case of such great importance to the State of Tennessee and the area served.

I am including a copy of the dissenting opinion, signed by Hon. G. Joseph Minetti, December 30, 1959.

SEPARATE CONCURRENCE AND DISSENT

(Opinion and order E-14754 in the Southeastern Area Local Service Case, docket 7038 et al., dated December 18, 1959)

MEMBER MINETTI, CONCURRING AND DISSENTING

Like the examiner, I would authorize Southeast Airlines (Southeast), the existing Tennessee carrier whose continued services have been enthusiastically supported by the residents of that State, to provide local air service in Tennessee.

I am astonished by the award to Southern Airways, Inc. (Southern). Considering Southern's disinterest in providing local service in Tennessee, plus the inevitable difficulties in assimilating its many new route awards, it is highly doubtful whether Southern will soon provide Tennessee with satisfactory local service. Yet in the face of these factors, the majority has selected Southern over a carrier which currently serves Tennessee, to the satisfaction of its residents, with more modern equipment than that operated by Southern.

The majority selected Southern because of its belief that Southern would require less subsidy support and provide greater passenger benefits. As to subsidy it is the majority's surmise that Southern will serve Tennessee at less expense than Southeast by virtue of the availability of a more extensive route system over which indirect costs may be spread. The argument, unfortunately, overlooks a number of important considerations. First, Southern's probable costs are entirely conjectural, since due to its lack of interest in providing local service in Tennessee, Southern did not submit cost estimates or any other evidence related to Tennessee service. Second, whatever such estimates might have revealed if submitted, there can be little doubt that Southern will require far more subsidy support than presently estimated by the majority if Southeast continues to serve its present routes in direct competition with Southern, as it well may. In these circumstances, Southeast's advantages as the existing carrier, as the carrier supported by Tennessee civic groups, and as a carrier which has demonstrated its willingness to serve Tennessee, would be overwhelming. Third, and lest we forget, Southeast has offered to provide service over a selected route in Tennessee[1] without subsidy and for this reason alone the majority's cost argument must fail. As to this selected route, Southeast seeks only the right to service mail pay and the advantage of interline connections. Both rights, of course, would follow Federal certification and would materially enhance the carrier's revenue position. Finally, Southeast, as a new entry into air transportation, would provide a long-needed yardstick by which to measure the reasonableness of the costs of the entire heavily subsidized local service industry.

The passenger benefits foreseen in Southern's service by the majority, moreover, are illusory. The existence of trunkline service at major Tennessee cities, for one thing, is of far greater benefit to passengers than any beyond-area service benefits which could be provided by Southern. Certainly it is unlikely that many passengers will travel to distant points on Southern's system via that carrier in preference to faster connecting trunkline service. Moreover, any possible passenger benefit that might exist by virtue of Southern's more extensive system would be more than counterbalanced by the deficit in ontime performance which that system vis-a-vis Southeast's would entail.

In my view, clearly, superior passenger benefits would result from the selection of Southeast, nor Southern. For, Southern would provide an all DC-3 operation, in contrast to Southeast's present operation of Convair-240 aircraft between the more populous cities of its Tennessee routes. Amazingly, while Southern has not sought to avail itself of the opportunity to purchase replacement equipment under the Government guaranteed loan program, Southeast, without the benefit of that program and without even the minimal security of Federal operating authority, has itself raised the capital to purchase its Convairs out of consideration for the comfort of its passengers and a desire to lower its unit costs of operation. In spite of these highly commendable efforts by this small independent carrier, the majority, in choosing Southern's inferior, reluctant service, may well have destroyed Southeast's Convair investment.

My difficulties with this award are fundamental. First, as the result of a study conducted prior to trial of this proceeding, Southern decided not to prosecute its limited applications for Tennessee service.[2] Accordingly, by letter dated November 12, 1957,[3] F. W. Hulse, President of Southern, notified the examiner that it would not prosecute its application for Tennessee route authority other than its application to serve Jackson, Tenn. Yet in the total absence of evidentiary foundation for determining Southern's willingness, fitness and ability, the majority has certificated Southern for extensive Tennessee local service. Even more serious, however, is the fact that the lack of evidentiary basis for selecting Southern has in effect denied Southeast a hearing on its opposition to selection of Southern. For, in the absence of Southern estimates of revenues and expenses, proposed schedules or other evidence in support of Tennessee local service by Southern, Southeast has been effectively deprived of the opportunity to analyze the merits of Tennessee local service by Southern or to argue, other than through noting Southern's total disinterest, the reasons why it believes that such service would be economically infeasible or otherwise unsuited to the needs of the people of Tennessee. Elementary fairness, if not due process, demands nothing less.

Second, the consequences of duplicating the services of a nonsubsidized, intrastate carrier with a federally subsidized local service carrier, even an unwilling one such as Southern, are disturbing. On the one hand, Southern may divert enough traffic from Southeast to cause that carrier to suspend its operations. On the other hand, because of the obvious preference of Tennessee residents for Southeast's service and because of its superior equipment, Southeast may successfully continue operations over the more populous cities of its present route, with consequent large increase in Southern's subsidy costs. Even assuming that Southeast could not permanently survive the U.S. subsidized competition, destruction of the private investment in Southeast will only be accomplished at high cost in Federal subsidy. Neither alternative is in the least satisfactory.

I conclude that this Board should grant Southeast a 3-year certificate to provide complete local service in Tennessee except for those points in West Tennessee as to which the Ashbacker principle requires contemporaneous consideration of Lake Central's application with that of Southeast. As to West Tennessee local service, however, and because of the Board's disposition of applications for service in that area, I would recommend a different solution. The Board has deferred decision on service to West Tennessee until it can give contemporaneous consideration to other applications consolidated in the Piedmont Local Service Area Investigation, docket No. 5713 et al.[4] Since both the Examiner and the Board, in their respective opinions, have recognized the thinness of the traffic potential in West Tennessee, as contrasted with other Tennessee areas, and since Southeast has long served West Tennessee and may continue to do so, despite the majority decision here, I would certificate Southeast, with right to subsidy, to continue to provide West Tennessee local service until 60 days subsequent to final decision on that issue in the *Piedmont* case or other proceeding in which the right to provide the local service is finally resolved.[5] Since service to these cities will in any event require subsidy, Southeast, like any other local service carrier, is entitled to be reimbursed for losses sustained in providing interim public service and Tennessee, like any other State, is entitled to the benefit of that service.

In passing, I note that the Board in deferring decision on the applications of Southern, Piedmont and Trans-Texas for route authority in Western Tennessee, failed to similarly defer action on Southeast's application for West Tennessee authority. The omission can only be an oversight which, I assume, will be soon and suitably corrected.

G. JOSEPH MINETTI.

DECEMBER 30, 1959.

Footnote at end of speech.

[1] Between Memphis and Tri-Cities via Jackson, Nashville, Knoxville and Chattanooga (tr. 2120, 2121). The offer appears to have been amended in brief by the addition of Shelbyville-Tullahoma (brief to the Examiner, p. 80).

[2] Tr. pp. 2519, 2520.

[3] Letter accompanying Supplemental Exhibit SOU-D.

[4] It is not clear whether comparative or contemporaneous consideration of other applications is contemplated by the majority. I note that in an earlier stage of this proceeding the Board, in discussing the possibilities that an award of West Tennessee authority might preclude the grant of a similar Lake Central application, stated: "Should the record lead to such conclusion, 'the Board would not make the award without affording Lake Central a comparative hearing' on its application." (Order No. E-11821, September 26, 1957.) Compare the majority opinion, at pages 18 and 31, which speaks of "comparative" consideration and "contemporaneous" consideration, respectively.

[5] While, as the Board notes, hearings on the expedited portion of the Piedmont case have been completed and briefs have been filed with the Examiner, the matter may not quickly be resolved. Southeast, for example, is not an applicant in the Piedmont case, presumably because it believed that all Tennessee local service issues would be resolved in this proceeding (see order No. E-11519, July 2, 1957). Accordingly, however quickly the Examiner arrives at a decision in the Piedmont case, the Board must at the very least, review the record in both proceedings in arriving at its final decision. As yet the record in this proceeding has not been consolidated into the Piedmont case.

Social Security Benefits

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. McINTIRE. Mr. Speaker, numerous bills have been introduced to the Congress with a design to broaden coverage and increase benefits through certain amendments in our social security law.

While nobody will take issue with the worthy objective of extending enhanced benefits to deserving American citizens, we of the Congress might well give some serious thought as to how this might best be accomplished. For instance, there is a need for effecting a critical examination of the dimensions of the proposed changes in the Federal law, just as there is the necessity of appraising the feasibility of advancing the desired ends

through a private rather than a Federal approach.

Just recently I received a letter from one of my constituents which, because it contains some poignant thoughts with regard to this important matter, I commend to the attention of my colleagues.

BANGOR, MAINE,
December 28, 1959.

The Honorable CLIFFORD G. MCINTIRE,
U.S. Representative, Maine, Third District, Washington, D.C.

DEAR SIR: Who will deny that the year 1960 will be big? It will be big in domestic politics; big in spending, public and private; big in international affairs; and big in "ax-grinding." It will be a tough year to keep one's balance.

In the coming session of Congress, more could be heard from the Forand bill (H.R. 4700) backers. The principal supporter of this bill, the AFL–CIO, could become a bit intoxicated, with their new combined strength, and make a very loud noise for the members. Or, it could be that the new steel contract may not be everything desired from the union standpoint. The Forand bill, therefore, could provide a "save-face" issue for the union leaders.

Nevertheless, should the Forand bill be presented for further consideration, your opposition should be felt.

Every line of information, statistic, and evidence of private industry effort show that this proposed amendment to the Social Security Act cannot be given serious consideration, at this time.

Our social security taxes will increase substantially in January 1960, but the benefits will not increase. The increase is due to previously voted benefits. Increases are scheduled every 3 years to 1969, using past predictions of mortality and morbidity.

We have not yet felt the impact of the "Disability Over 50" amendment. Should one attempt another extension into the morbidity field, under the controlled(?) basis, on which a public fiscal policy must operate, then, most assuredly, we shall have the proverbial lion by the tail. Another political football will have been tossed onto the field and God knows, the air is filled with enough footballs now.

Private enterprise can, and is now solving the problem of the senior citizen's need for hospital and surgical protection. Nearly half of all people, over 65, are now covered. This is an increase of 25 percent since 1952. Today, these senior citizens are being covered at a faster rate than the number of people who are entering this age bracket.

The Forand bill would exclude some 25 percent of our over-age people. It would take much longer to provide maximum number coverage, by this bill, than it would by letting free enterprise and competition solve the problem, at the present pace. This would be independent of such considerations as relative costs of the two methods (who will deny that private business is more efficient than Government business), the future impact of increased Social Security Act taxes and, without a doubt, in conjunction with higher personal income taxes (if present inflationary spiral continues) and the continuing trend toward the evasion of personal responsibility which has been one of the cornerstones of our system of government, since its founding.

Thinking citizens, in the United States, young and old, like the responsibility that goes with freedom. Nowhere, in the world, has it ever been proven that individual freedom can be retained under any other system than the one we have enjoyed.

Social security legislation is a segment of our economy which needs very careful treatment—even in a political year.

Very truly yours,

ROBERT F. SEDGELEY.

The Postal Deficit

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, it was no surprise that the President, in his budget message yesterday, included as part of his anticipated surplus some $554 million, which he proposes be raised by increasing first-class and airmail rates by 1 cent to liquidate the postal deficit.

Over the years the administration has complained about the size of the postal deficit and has periodically proposed legislation to increase rates. Yet, for some strange reason it carefully avoids proposals which would increase the rates on the types of mail which really cause the tremendous postal deficit.

I refer, of course, to the preferential second-class rates granted newspapers and magazines—outright subsidies totaling more than $200 million a year for profitmaking second-class publications. A few large magazines, such as Life, Saturday Evening Post, Reader's Digest, Look, and others, are carried at taxpayers' expense to the tune of $4 million, $7 million, and up to $10 million a year.

Mr. Speaker, last July 28 I introduced H.R. 8433 to place an annual limitation on publishers' second-class mail subsidies, based on a 5-year sliding scale—CONGRESSIONAL RECORD, July 28, 1959, pages 13275–13279.

The bill would provide that during the first year, Post Office Department costs of receipt, handling, processing, transporting, and delivering of second-class publications to its subscribers by mail may not exceed by more than $5 million the annual postage paid by the publication. During the second year this subsidy could be a maximum of $3 million per publication; the third year a maximum subsidy of $1 million; the fourth year a maximum subsidy of $500,000; and during the fifth year and each year thereafter, a maximum subsidy of $100,000 for each publication. Once the subsidy limit were reached for any publication during any year, the full postal rate necessary to cover the Department's costs for that publication would go into effect.

This bill is similar to, but meets specific criticisms offered by the magazine publishing industry to a previous version of my bill, adopted by the House as an amendment to the postal rate bill in the last Congress, but subsequently dropped from conference.

Mr. Speaker, my bill would bring in new revenue to the Post Office Department from the types of mail now incurring the deficit. First-class mail is more than paying its own way. The administration proposes to impose the burden on the average mail user to cover up the huge deficits being incurred by profit-making magazines. There is no doubt of this fact. During the last year's hearings before the House Appropriations Subcommittee on Treasury-Post Office Department, Mr. Hyde Gillette, Assistant Postmaster General, Bureau of Finance said, in anwer to a question about magazine losses to the Department:

Mr. Chairman, it is true that magazines probably pay more than a hundred million dollars less than the cost of handling them, but part of that is offset by the extra amount that the first-class mail pays over and above its fully allocated cost, so that the net effect is not carried through directly to the deficit.

If the Post Office Department were really interested in eliminating the postal deficit, it would support my bill and urge that the Post Office and Civil Service Committee schedule hearings. Yet both the Department and the Bureau of the Budget has reported adversely on H.R. 8433 and its companion bill, H.R. 8603, introduced by the gentleman from Wisconsin [Mr. REUSS].

Mr. Speaker, the overwhelming support I have received for my bill from persons all over the country has convinced me that Americans are becoming increasingly resentful of having their tax dollars used to subsidize profitable publishing companies. As evidence of this fact, I call attention to Bulletin No. 252 "The Mandate," published by the National Federation of Independent Business. Members are familiar with these ballots on national issues, conducted by this organization for many years.

Question No. 3 of Bulletin No. 252, circulated last fall reads:

Reduce postal rate subsidies: Are you for or against Congress requiring all large national magazines to pay their full share of Post Office mailing costs, the same as users of first-class mail are required to do?

As is the usual practice, a pro and con statement on the issue was presented:

Argument for reducing subsidies: $200 million yearly, that's what it is costing the U.S. Post Office to handle the weekly and monthly mailings of the Nation's giant magazines. That is the difference between its costs, and what they pay for postal services. This subsidy has amounted to $2.5 billion during the past 12 years, and it has been paid for out of the pockets of people who more than pay their way when they use first-class mail. Meanwhile the firms publishing these magazines have been running up record profits, and indulging in all sorts of cut-rate offers to take bread and butter out of the mouths of small businessmen in the magazine distribution field,

Argument against reducing subsidies: These national magazines are paying their way. Through countrywide advertising programs they make possible, they help to keep the wheels of industry turning, employment high, and earnings ever mounting, which means purchasing power available for business, large and small. More than this, they are educating our people about important national issues and events, and furnishing them top-flight entertainment. In our postal scheme, they are never supposed to "pay their way," in anyway other than these. Despite this, their mail handling cost is low, and they are charged for part of the services they receive.

Mr. Speaker, the results of this nationwide poll among small businessmen were published in bulletin No. 253 as follows:

Reduce postal-rate subsidies: For, 84 percent; against, 13 percent; no vote, 3 percent.

So long as the administration opposes efforts to curb the exorbitant second-class publishers' subsidies, we must continue to vigorously resist pressures to raise the rates on first class and air mail.

Jews and Judaism in the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a memorandum by Dr. Richard C. Hertz, rabbi of Congregation Beth El, of Detroit, Mich., which he presented to the White House upon his return from a visit to the Soviet Union. The purpose of Rabbi Hertz' visit was to study the status of Jews and Judaism behind the Iron Curtain and I believe his report will be of great interest to all Members of this body.

The memorandum follows:

MEMORANDUM TO THE WHITE HOUSE ON JEWS AND JUDAISM IN THE U.S.S.R.

(By Dr. Richard C. Hertz, rabbi, Temple Beth El, Detroit)

I. On the basis of my visit to the U.S.S.R., Poland, and Czechoslovakia this summer, I am convinced that the U.S.S.R. leaders are very touchy on the subject of the Jewish question. It is obviously a sensitive, sore spot on which they feel considerable embarrassment because of their inability to resolve it to the satisfaction of Soviet Jews or world opinion.

II. I am convinced that expressions of concern over the Jewish question by the United States will be received sympathetically, since the U.S.S.R. is anxious, particularly at this time, for peace and friendship with the United States of America.

III. The discrepancies and inconsistencies between publicly announced Soviet goals and actual reality in the U.S.S.R. are so flagrant that the lack of good faith of U.S.S.R. leaders is transparently demonstrated by their position vis-a-vis the Jewish question.

IV. The post-Stalinist years have revealed that Stalin's special policy regarding the Jews, placing them in a special category with a double standard applied to them as Soviet citizens and as a Jewish minority, is still in force. This special treatment discriminates against them and places them in a position infinitely worse than that of all the other national, ethnic, cultural, or religious groups in the U.S.S.R. This special treatment singling out the Jewish minority is a flagrant contradistinction to both the ideological and constitutional principles of the U.S.S.R.

V. Mikoyan's visit with the leaders of the American Jewish committee in New York, January 1959 revealed that he denied that Jews would be transferred to Biro-Bidjan. He denied that cultural or religious discrimination is being practiced against Soviet Jews on the ground that Jews are now assimilated and not interested in separate cultural outlets. He defended his position by saying that Jews occupy high posts in the Soviet hierarchy and that many Soviet leaders are married to Jewish women. On his return to the U.S.S.R., he said nothing in public that he had been questioned in the United States of America over America's concern for Soviet Jews.

VI. What is the situation now with respect to Jews and Judaism?

1. U.S.S.R. says it officially guarantees equality of rights in law and fact for all its citizens.

(a) Yet discrimination is widely practiced against Jews.

(b) Anti-Semitism has not been uprooted, as its leaders claim.

(c) The government is dedicated to the complete extinction of Jewishness and the liquidation of all Jewish culture.

(d) Every identification card and internal passport carried by a Soviet Jewish citizen is a direct contradiction of freedom and equality. It reads: "5. Nationalnost—Evri" (Jew).

2. Jews are recognized and singled out as a special minority, yet Jews have none of the privileges granted other national minority groups.

(a) No newspapers, no voluntary associations, no cultural groups, no Yiddish schools (primary, secondary or of higher education), no books, no artistic or cultural life—none are permitted to Jews.

(b) Synagogues are being closed by the government, despite their denials, in a calculated program of spiritual starvation for Soviet Jewry.

(c) Again and again people expressed their fears to me at attending synagogue worship lest in retaliation their jobs be jeopardized and they be "reported."

3. Of the four major religious groups in the U.S.S.R.—Russian, Orthodox, Moslem, Protestant (Baptist) and Jewish—only the Jewish are prevented from having a centralized organization.

(a) The Russian Orthodox has its Patriarch Nikolai, with 22,000 churches and 35,000 priests, one for every 4,000 Russian Orthodox citizens.

(b) Jews have no chief rabbi or federation of Jewish synagogues. No contact or communication exists between the synagogues scattered over the U.S.S.R. In all the U.S.S.R. there are about 60 rabbis for the U.S.S.R.'s 3 million Jews—one for every 50,000 Jews. Percentagewise, Jews have less than one-twelfth the religious personnel of the Russian Orthodox. Of the 60 rabbis, all are old and many of them are not properly ordained.

(c) Many confiscated mosques have been returned to Moslem congregations. Not a single synagogue has been built or returned to the Jewish congregations.

(d) Ten Russian Orthodox theological seminaries for the training of priests exist, with over 1,000 students. Until 2 years ago, there was no Jewish seminary. The one started at that time at the Moscow synagogue has only 20 rabbinical students. When I went to inspect it, I was refused admittance because the rector was so embarrassed over its inadequacy.

VII. What would American citizens of the Jewish faith like to see done on behalf of Soviet Jewry?

(1) Guarantee that no further synagogues will be closed and those cities where synagogues have not been restored will be returned. This would do much to end the atmosphere of fear of retaliation for those Jews who choose to attend synagogue worship and thus guarantee freedom of worship.

(2) Lift the ban on Jewish and Yiddish publications and encourage cultural activities, as other areas of culture are officially encouraged in the U.S.S.R.

(3) Seek an opportunity of contacts between Jews of the U.S.S.R. and the rest of the world on mutually interesting and vital subjects relating to literature, art, history, philosophy, ethics, and other scholarly subjects.

(4) Seek permission for providing religious necessities which I found to be in evident short supply—such as matzoh at Passover time, new prayerbooks, Bibles, talesim, tephilim, religious calendars, and other ceremonial objects.

(5) Open up an opportunity for relatives and humanitarian organizations like CARE or Red Cross or American Joint Distribution Committee to send clothing and food to Soviet Jews in need.

(6) Open up contact between Soviet and American Jews through exchange of visits between delegations of Jewish leaders, such as rabbis, writers, social workers, professors, artists, and others in Jewish life.

(7) Maintain vigilance to register foreign opposition on humanitarian grounds to the Biro-Bidjan plan of forcing the mass settlement of Jews in that primitive, underdeveloped area. In my conversations in the U.S.S.R., Biro-Bidjan was often pointed to as the Soviet solution to the Jewish question. I came away with grave fears lest the plan be seriously activated.

(8) Recognize the right of emigration to go to countries of their choice for Jews who wish to leave their present countries of residence, including the right to take with them all possessions. All compulsion upon the individual to uproot himself should be opposed, so that emigration should be a voluntary and not a compulsory act.

(9 Give an opportunity for Jewish culture in the U.S.S.R. to exist and flower as it once did in former years, prior to the 1948–53 "black years." I came away from the U.S.S.R. convinced that people want Yiddish magazines and books and newspapers and schools and theaters. They are hungry for this "bread of the spirit." They also want some kind of voluntary association that would give connection and communication to this minority group of 3 million Jews.

(10) Recognize that the argument of Soviet leaders that "there is no demand for these things" is coy. Who is going to demand these things now when to make such a request is to invite the secret police in or be sent to Siberia?

VIII. It is hoped that in the interest of better feeling and good will between the U.S.S.R. and the U.S.A., President Eisenhower on his forthcoming visits with Soviet leaders may express the moral concern of American Jews over the lot of Soviet Jews.

WASHINGTON, D.C., *August 24, 1959.*

The Future of State Labor Relations Agencies and Federal-State Jurisdiction

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. DENT. Mr. Speaker, there has been an uncountable number of words written and spoken about the Landrum-Griffin bill.

There has been little said, however, that would add to our thinking on this legislation as it affects Federal-State labor relationships.

I am introducing today, for the RECORD, an address entitled "The Future of State Labor Relations Agencies and Federal-State Jurisdiction," by the Honorable Stephen R. McCloskey, chairman of the Labor Relations Commission of the Commonwealth of Massachusetts.

This address was given at the third annual conference of the Association of

State Labor Relations Agencies, in Detroit, Mich., recently.

Since this subject is an ever-present problem before both Federal and State Governments, I believe that it will give Members of Congress an insight into this subject on a phase seldom discussed either in committee or on the floor.

I present the address without comment exactly as it was given:

Mr. President, officers of the association, distinguished guests, chairman and members of State labor relations agencies and their guests, I deem it a privilege to be given the opportunity of addressing you on the occasion of your third annual conference. Thank you for the invitation. His Excellency Gov. Foster Furcolo has asked me to bring to you the greetings of the Commonwealth of Massachusetts. Before I begin my remarks on today's subject for discussion, I have a few items of interest regarding the Massachusetts Labor Relations Commission, which I would like to mention.

Our commission, in addition to providing advice and information to employers and employees under the statute, also provides information on a multitude of labor relations matters that do not come within the purview of our State labor relations law. Frequently we find it necessary to direct the employer or employee elsewhere. I think it is about time we took credit for the service we provide employers and employees and it is my intention to set up within our commission an information center which will supply the employer or employee with the answer to his inquiry or direct him to the proper State or Federal agency. Perhaps you could do likewise on your own board or commission.

The organizing efforts of State, county, and municipal workers should provide opportunities for increasing the caseload of State labor relations agencies. Cities and towns are excluded as employers within the meaning of our statute. However, in a few cases involving the representation of employees, the city or town, on the petition of a local union, has made certain stipulations, consented to an election and asked us to supervise and conduct an election. For the future I can foreseee legislation amending our statute to include cities and towns as employers within the meaning of the statute. When this legislation is enacted it should provide many new representation cases for our commission.

This is an untapped area of additional cases for us, and I hope it will provide the member States of this association a similar opportunity for expanded service in their respective States.

In the void that has existed since the passage of the Labor-Management Reporting and Disclosures Act of 1959, because no staff or even employee has been made available in the Boston office of the U.S. Department of Labor who can answer questions about the new law, we have made our staff available to assist employers, union officials, and union members in reaching conclusions regarding their inquiries concerning the new law.

My thoughts on "the future of State labor-relations agencies," especially since the passage of title VII of the Landrum-Griffin bill, produces mixed feelings of deep concern on the one hand and subdued elation on the other. As a trade-union leader and a member of the Bridge Structural & Ornamental Ironworkers' Union, I am very apprehensive for the labor movement in the South and those States where no State labor-relations law or agency exists. There unions must face an archaic and reactionary common law and rely on economic force to obtain their objectives while they face labor's mortal enemy, the injunction, in an unfriendly atmosphere.

My feelings of elation, on the other hand, are subdued and not as strong as they might be for the reason I have mentioned and for the additional reason that I am not yet quite sure whether the Congress has given us anything to be happy about.

Under the Taft-Hartley amendments contained in title VII, the National Labor Relations Board is permitted to decline to assume jurisdiction over that class of employers where the effect of the labor dispute is not sufficiently substantial to warrant the exercise of jurisdiction. The State agencies are then permitted to exercise jurisdiction over those cases which the National Labor Relations Board has declined to assert jurisdiction. However, the prohibition in the law preventing the National Labor Relations Board from lowering the jurisdictional standards that were in effect on August 1, 1959, seriously limits State labor-relations agencies, for it is my opinion that the impact on interstate commerce in the cases of many of these employers is not sufficiently substantial to warrant the exercise of jurisdiction. Apparently the National Labor Relations Board is reluctant to permit the exercise of jurisdiction over those cases which commonsense indicates really belong to State labor-relations agencies.

If State labor relations agencies are to have a future, a realistic and commonsense approach to the problem of jurisdiction must be developed. The line should not be drawn according to the dollar size of a business or the volume of goods brought from or sent to other States, although the second method should not be entirely excluded as it might be necessary to use it in some cases. I do not believe that Congress should write detailed jurisdictional standards into the National Labor Relations Board. Rather a combination of legislative and administrative action could achieve the desired results. Perhaps we should organize and conduct a study of various segments of the economy in order to formulate a new concept or new criteria for the exercise of jurisdiction by State labor relations agencies. The feasibility of such a course of action and its implementation I leave open for discussion by the lawyers and by the members of this association for your ideas.

The come-to-rest doctrine is one that deserves review and the thoughtful consideration of the State agencies and the National Labor Relations Board.

Such an approach should, of course, recognize those employers and companies that have a truly interstate character and have a substantial effect on interstate commerce.

The employers that should be subject to the National Labor Relations Board are those in the manufacturing and production industries, the transportation industries, newspapers and communications systems, utility industries and those industries that have a substantial effect on national defense.

Those employers who should be subject to the local control of State agencies are companies operating office buildings, retail concerns such as supermarkets and department stores, hotels, motels and restaurants, automobile agencies, gas stations and metropolitan transit systems. The employment relations of the above employers are not matters of national concern, but rather of local concern.

Local authority means local responsibility which is closer to our democratic philosophies of home rule and to our ideal of self-determination. State agencies are more flexible, closer to the facts and can reach practical and sound decisions because of their knowledge of and familiarity with local conditions. Their familiarity with the individuals involved permits them to appraise the human problems and this, of course, is not the case where the National Labor Relations Board is forced to consider cases on the basis of a printed record.

I think it is most important to the economy of our individual States to see to it that a good industrial climate exists where the labor disputes of local unions and small business may be settled quickly and inexpensively. Since State agencies are able to handle cases more conveniently and expeditiously, local unions and small businesses should not be required to make time consuming and expensive trips to Washington.

In addition, the prospect of 50 States, or in reality 15 States administering a State labor relations law appeals to me for each of these States could supply new ideas and new solutions to labor-management problems. No better approach could be developed in providing constructive thought and action in this vital field than by allowing each State to serve as a research laboratory for testing progressive measures.

The views of the Honorable John R. Dethmers, the distinguished chief justice of the supreme court of this State in the area of Federal-State relationships are the most compelling and profound of any I have heard or read. His remarks made in an address delivered before the midwinter meeting of the Massachusetts Bar Association at Holyoke, Mass., on February 14, 1959, are, I think, apropos and particularly deserving of our attention at this time. Your chief justice was speaking by reason of his chairmanship last year of the National Conference of Chief Justices whose report he was discussing. The title of that report was, "Federal-State Relationships as Affected by Judicial Decisions."

The following remarks are meaningful to me and, I trust to this association:

"Of transcendent importance to the Nation, overshadowing all others in the concern of the conference, is the matter of Federal-State relationships as affected by judicial decisions.

"No consideration of the report can be balanced or complete without these observations:

"(3) The conference's expressed alarm, and mine, at the noticeable trend toward increased national powers accompanied by a diminishing of the powers of States and local governments, relates not to mere sectional or selfish interests, but springs from the same concern as that of our Founding Fathers that liberty's cause may be lost in too high a concentration of powers in the National Government, and from the conviction that safety for the rights of man inheres in a diffusion of those powers and maintenance of the highest possible degree of local self-government compatible with national security and well-being. So long as we would adhere to the determination of the fathers that the State, the Government, exists for man and not man for the State, in the consideration of every proposed extension or withholding of governmental powers and the division of those powers between the States and the Nation, our lodestar must always be, 'How will the cause of freedom best be served, how the rights of man advanced?' The 14th amendment achieves its intended goal when it prevents State action destructive of human freedom; it misses that goal when used as a tool to concentrate power in the National Government at the cost of liberty."

A close analysis of these considerations reveals that a sound labor policy requires participation by both States and Federal Governments. Perhaps the criteria to be employed by the Board should be whether sound labor policy requires State action and not consistency with specific provisions of the act.

Although a multiplicity of tribunals may well lead to a multiplicity of results, this is not necessarily undersirable for it is in diversity, that this country has found its greatest strength and unity.

The President's Proposed Tour of Latin America

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. WOLF. Mr. Speaker, shortly the President is going to leave for Latin America on a good will tour in order to remedy some of the bad feeling which exists between some of the Latin American nations and the United States. It is supposed that the President will try to restore some of the good neighbor policy which was enunciated by President Roosevelt in the 1930's and which has deteriorated badly since the Second World War. The United States will long remember the treatment accorded Vice President NIXON in 1958 on his tour of South America as a result of shabby relations on the part of various members in the State Department.

Although good will tours may have some value, their results are transitory and, in many cases, may well backfire. For example, in personal contact with De Gaulle of France, the President personally assured him of his support for the French position in Algeria, an assurance which was not met, nor should it have been, since it involved a derogation of American principles as regarding political independence for that area of the world. What the President promised he could not carry out. And consequently, our country suffered badly in the eyes of the leaders of France. The entire NATO alliance was further weakened.

This same problem exists with the President's impending trip. It is hoped that the President, who will be leaving office, at the end of this year, will not promise anything which he knows cannot be carried out or won't be carried out by our Government. He should promise only that which he intends to initiate and make successful. Otherwise, the trip to Latin America could be disastrous for the United States. Joseph Alsop, in his article, which I wish to insert into the body of the RECORD suggests that this haphazard method of diplomacy was followed in India where he hinted strongly at more foreign aid for that nation, but sent budget conscious Joseph Dodge to be his economic emissary to India.

Mr. Speaker, I submit that it is a dangerous practice in international affairs to promise and then, not to perform: to raise hopes and expectations and then to disappoint. I sincerely hope that this will not happen on the impending visit by the President to Latin America.

The above-mentioned article follows:

[From the Washington Post, Jan. 15, 1960]

JOURNEYS AND JUNKETS

(By Joseph Alsop)

The scene was the Elysee palace. The chief actors were President Eisenhower and Gen. Charles de Gaulle, but in this curious scene that took place last month in Paris, the speaking part belongs almost wholly to Mr. Eisenhower. De Gaulle merely listened in a silence that was glacial, almost hyperboreal.

The President was protesting American good will toward France in North Africa. He was explaining that the American failure to vote with France on the Algerian resolution in the United Nations had by no means meant what the French thought it meant. He believed, evidently, that the Franco-American misunderstanding could be straightened out. James Hagerty was even waiting in an outer room, no doubt to superintend the issuance of a cordial joint communique.

But the misunderstanding could not be straightened out. While the President's explanations and expressions of good will continued, De Gaulle maintained his silence. When at last the President also fell silent, De Gaulle was content to answer in two frigid words, "Je regrette—I am sorry." And so the meeting ended with no joint communique, as badly as it began.

This summary of General de Gaulle's own account of his meeting with the President comes from an undoubted Parisian source. It is worth attention at this time primarily because the President's plans for a South American journey have just been announced, while a visit to the Far East after the Soviet Union is already being talked about. The point is that the inglorious episode in December stemmed directly from the President's glorious triumphal tour of Europe in September.

On that tour, France was the high point. Never, said everyone, had there been such a reception. No one, said the whole world, could have done so much to improve the always difficult relationship with General de Gaulle.

But what the President did in September was to give De Gaulle promises, or what were interpreted as promises, of all-out support for his Algerian policy. With considerable justice, De Gaulle interpreted the American U.N. vote as a betrayal of those promises. It was the sense of betrayal, much more than the U.N. vote itself, that made the ugly trouble when the President visited Paris again.

In other words, these good will journeys that the President so much enjoys can be exceedingly dangerous as well as enjoyable. The danger is, very simply, that the President will awaken expectations which he cannot or does not wish to satisfy. He did so in France, with really grave results. There are some signs he also did so in India. He had hardly left Delhi before Nehru, at a press conference, delicately but quite plainly hinted that he now expected much more generous American aid. Judging by the man the President has chosen as his economic emissary to India—former Budget Director Joseph Dodge—Nehru's expectations are also due to be disappointed.

At the risk of seeming ironical, it is interesting to compare the Eisenhower method with the method of Nikita S. Khrushchev, who is also going junketing this spring to India, Burma, and Indonesia. India has an inflamed border problem with Communist China. Burma has a smoldering border problem. Indonesia is in a bitter row with China over the status of the oversea Chinese in Java. Khrushchev will quite certainly talk about these problems during his junket.

Almost equally certainly, there is a decided chill in the relationship between Moscow and Peiping. The Western policymakers are currently much stirred by the report of a semi-public lecture at Moscow University, in the course of which the Chinese Communist leaders were sharply rebuked for their improperly cold reception of Khrushchev at Peiping in October. There is other evidence of the same sort. But now, apparently, the adroit Khrushchev is going to turn the Moscow-Peiping chill to his own advantage. He will use it, in fact, as proof of his admirable impartiality, and thus assume the role of jolly mediator between China and India, Burma and Indonesia.

There are symptoms, already, that Khrushchev is doing what he needs to do for this purpose—persuading and bullyragging the Chinese into agreeing in advance to arrangements which Khrushchev can then offer to the other Asians as generous compromises. The outlines of the Indian compromises are already visible, too. China will retain de facto possession of northern Ladakh, with its crucial strategic road, while giving ground on the eastern border, in the area of the MacMahon line.

The Chinese have lately increased their force in Tibet from 70,000 to 100,000 men. The Indians now really fear a serious attack on their border. Thus they will quite probably be grateful for Khrushchev's compromise. In this event, their gratitude will teach the lesson that there are even more ways of generating good will than there are ways of skinning a cat.

The Swinging Pendulum

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. MICHEL. Mr. Speaker, in recent years there has been considerable discussion and volumes written on the philosophy of liberalism and conservatism. An editorial entitled "The Swinging Pendulum" from the January 17, 1960, Peoria Journal Star sums up the issue very well and I commend its reading to all my colleagues.

THE SWINGING PENDULUM

The most used and least understood word in American politics today is liberal.

Historically, liberal parties have been distinguished by reform in behalf of the masses and by increasing the political power of the people and gaining privileges for the underprivileged.

That corresponds roughly with the concept of liberalism in this country since 1932, the year the New Deal was voted into power. But along with this we have the juvenile concept that the "good people" are liberals and the "bad people" conservatives. Another naive concept is that conservative politics is a thing of the past, as dead as prohibition and the gold standard.

Actually the two opposite political poles, liberalism and conservatism, are both, necessary in two-party politics. One checks and balances the other. If liberals are long in power, as they have been in the United States in both parties, that doesn't mean that they will remain in power permanently.

All Government policies tend to be self-liquidating. Conservative policies eventually evoke liberal sentiments. Liberal policies finally revive conservative thinking. The pendulum never stops swinging.

Many Americans equate liberalism with the New Deal policy of granting new powers and privileges to labor. The underdog of our economy in 1933 was labor and it needed the new power it got from the Roosevelt administration. But abuses came with that power and now, a quarter of a century later, they have been revealed. The pendulum has started to swing the other way.

Farmers desperately needed the help of a liberal government and got it. But with this

help came new problems of surpluses and heavier tax burdens. Only a conservative government will eventually solve these.

The poor and the aged needed the help of social security and got it from a liberal government. But financing the ever-expanding social security system is fast becoming a problem that only a conservative party can solve.

Liberalism broke stubborn barriers depriving Negroes of civil liberties, and that was good. But some are now beginning to believe that a conservative government can pace the integration of schools and other civil rights progress more practically.

Liberalism has boosted taxes to the confiscatory point, raised the national debt to an astronomical total and got Government bureaucracy breathing down every citizen's neck.

So conservatism will return. The pendulum must swing and it has started.

The question is, will it swing far enough to become a real political force in 1960? Or will it need another 2 or 4 years to gain that momentum?

Resolution of New England Governors' Textile Committee on Importation of Woolens and Worsteds

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the New England Governors' Textile Committee at Boston, Mass., on November 19, 1959, and an explanatory memorandum accompanying the resolution:

RESOLUTION (AND EXPLANATORY MEMO) OF CONFERENCE OF NEW ENGLAND GOVERNORS, ADDRESSED TO THE PRESIDENT OF THE UNITED STATES, NEW ENGLAND CONGRESSMEN, AND THE COMMITTEE FOR RECIPROCITY INFORMATION

Whereas since 1947, when duties were reduced, importation of woolen and worsted fabrics have increased almost nine times; and

Whereas employment in this industry during the same period has been reduced by two-thirds; and

Whereas the change in the country's balance of payments has greatly strengthened the case against liberalization of trade and in fact, points toward increased exports, reduced imports as required by our balance-of-payment situation as well as reduced offshore (abroad) purchases by the United States; and

Whereas under pressure from the British Government and others, the State Department has announced intention to renegotiate through GATT woolen and worsted fabric duties, including the tariff quota: Now, therefore, be it

Resolved, That quotas by quarterly periods on the importation of woolens and worsteds be applied on a country-by-country basis and on the basis of categories of goods.

EXPLANATORY MEMO ON WOOLENS AND WORSTEDS

In the course of his visits with President Eisenhower, Prime Minister Macmillan of the British Government urged the President to reduce further the tariffs on wool textile fabrics, including British woolens. The British have experienced increasing competition in the U.S. market in selling woolens as the result of intensified competition from Italy and Japan. Dealing with global problems, the President apparently felt that such demands should be explored. Hence it has been announced that there are to be hearings before the Tariff Commission and the Trade Agreements Committee prior to negotiations with the British and others on tariffs and quotas on woolen and worsted imports.

We point out that the Geneva protocol of 1948, which reduced tariffs on woolens and worsteds from 45 to 25 percent, with a reservation that the issue would be reconsidered if imports exceeded 5 percent of domestic production, caused the industry a great deal of harm. In the succeeding 8 years the industry lost about 50 percent of its jobs, and since it is heavily concentrated in New England, New England's losses were especially severe. The industry continues to suffer declines. We are not implying that the explanation is merely the trade policies of the Federal Government, for we realize that man-made fibers have to some extent been substituted for woolens and changes in fashion have also contributed to the decline. We are also aware that the relatively high price of wool has been a serious factor. But an industry that has been subjected to such depressing forces should not be subjected to additional losses through governmental policy,. Liberalization of tariffs has been an important factor in this loss.

We are not opposing liberal trade policies in general, but it is important that these concessions which result in increased imports should not be too heavily concentrated on textiles and especially on woolens.

In view of the fact that it took the Federal Government 8 years to rectify to some extent the mistakes made in 1948, a period of great losses for the woolen and worsted industry, we are not too hopeful that any mistakes made in 1960 will be soon corrected.

It is also important to take into account the change in economic conditions since 1957. In a period of less than 2 years, this country has lost about $7 billion in gold and dollars and promises to lose even more over a 2-year period. The excess of gold reserves over short-term claims on our gold has been reduced from $7 billion at the end of 1957 to a negligible sum by the latter part of 1959. Before 1957, we could argue to some extent for increased imports or increased exports of capital or even reduced exports for the United States in order that other nations should have the dollars that they need to carry on their economic programs.

But the world has changed greatly since 1957. Our problem now is not a shortage of dollars, but a glut of dollars for foreigners. This problem has to be solved in some form or other. One obvious solution is, of course, for the United States to increase its exports, and we should therefore plead for a reduction of restrictions on American exports, for generally these restrictions have been much greater than ours, on the whole. It is also possible that in some areas Government grants and loans, and military spending abroad may be cut, and also that capital investment abroad might be discouraged or not encouraged as much as it has been in the past. But surely, in view of the changed situation, a case for an increase of imports through a liberalization of tariffs is much weaker than it was in the past. A rise of exports stimulated by increased efficiency and lower costs here and reduced barriers abroad, and increased purchases in the United States under various aid programs should contribute to the improvement in the dollar position. Unless our dollar position does improve, this country will be hampered in its program for high levels of employment and for the kind of level of activity that we have had since the outbreak of World War II. Surely in this kind of situation the case for liberalization rests with foreign countries, not with the United States—and above all not in an industry that has lost two-thirds of its jobs and 50 percent of its output since 1947.

The Late Charles A. Boyle

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. CELLER. Mr. Speaker, I place in the RECORD an editorial from the Sunday Star of Chicago, concerning our late, lamented friend for whom we all had an affectionate regard. The editorial follows:

HIDDEN LAUGHTER
(By Leo A. Lerner)

Charlie Boyle's life was suddenly snuffed out on election night, when his automobile struck one of those steel posts on Western Avenue, the kind that stick out into the street.

This was an irony in itself. Here was a Congressman serving his third term, with one of the best voting records in Washington, an expert on housing and planning in big cities, killed by the posts which were bound to be eliminated if Charlie Boyle's plans and program had come to thier ultimate conclusion.

But the posts couldn't wait. They were impatient to take home the life of a man who in principle was their enemy. They seized the opportunity on a wet, dark night when he had worked too hard and too long on election day.

All the city hazards lurk and wait like that for their chance. The bottlenecks, the overpasses, the blind corners, the misplaced posts, the slippery outer drive—they all wait in light and night for their victims.

When I think of Charlie Boyle, I get only one image—that ruddy face, crown of grey hair, and eyes that seemed to say, "I like you."

He would come into the office, stand around talking in a very offhand way with the staff members, and those gleaming, moist eyes would take everything in.

If I came hurrying through the room with a fistful of papers in my hand, he would murmur with a certain good-humored tolerance, as if he were smiling at me from up above instead of from the floor he was standing on, "There's the editor, my editor, hello editor."

It was just a way of talking with three parts to it, part amusement because I was always in such a hurry, part respect (I preferred to think), and the part that comes clearest to me now that he is dead—a friendly voice from the distance, a sound from a mysterious bourn, a purr, maybe a whisper, from somewhere out of this world.

We always think that people who die before their time had some premonition of it. There was more evidence of that in Charlie than in other people I have known who died unexpectedly, not because he spoke of it, but because he had the undefinable ethereal quality of a person attached to the world and yet somehow detached.

Yet Charlie's attachment to the world was quite tight. He was interested in a thousand subjects.

He understood the intricacies of many things only a conscientious Congressman has to learn, not that all of them do. He moved over the face of his world, between Chicago and Washington, like a moth attracted to the flame of human affairs. I learned many things from his enthusiasms and intrests.

He sent me one copy of almost everything he put in writing, and while there are some people whose memos I seldom read, I always read Charlie's, even those that were printed by the U.S. Government. There was a pixie somewhere in Charlie that forced me to look through all the dull things for that hidden laugh I knew was there.

Charlie was a man full of hidden laughter.

Every once in a million there's a man with a personality like that.

On election night of 1958, he dropped into the office, not to get congratulations on having been reelected, not to have his hand pumped or get a little gloating started, but just to be with the newspaper boys, to smell the ink, to observe the tabulation, to watch the headlines being written. Other candidates came in for a minute, or phoned, but Charlie sat the whole night in the newsroom, away from the big celebrations downtown, away from the tumult of ward headquarters.

He loved the atmosphere of politics. We were the last two people to leave Democratic headquarters in 1948. I had gone there to get their precinct totals.

"Well, it looks like Dewey beat Truman," said Charlie, reluctantly.

"What'll you bet?" I asked.

"A new hat," he said. I knew he was praying he would lose.

He did, of course, when the West was heard from, and the next week I wore a new gray feedora, bought by Charlie Boyle, the man who was then, as later, willing to lose for a good cause.

Winston Churchill, on his 75th birthday, said, "I am ready to meet my Maker, but I am not sure that my Maker is ready for the ordeal of meeting me."

I think Charlie Boyle's wife and family may be sure that wherever the meeting is taking place, Charlie Boyle is organizing a caucus to establish a liberal side in heaven, if they don't have a good one there already. And his voting record will be perfect.

The Late Honorable Richard Simpson

SPEECH

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MACK of Washington. Mr. Speaker with the passing of my longtime friend and colleague RICHARD SIMPSON, DICK most of us fondly called him, the Nation lost a great and able statesman and we who knew him best a kind, companionable and lovable friend.

DICK SIMPSON was gifted with an alert and constructive mind. He dug hard and diligently for facts. Once he possessed them he based his decisions on the facts as he found them and courageously made known his views letting the chips fall where they would.

Because of his forthrightness and courage he held the confidence and respect of friend and foe, if those of different political opinions can be called foes. His influence was great. He was universally liked, admired and respected by all who knew him. DICK SIMPSON will be greatly missed in the Halls of Congress.

Competition—TVA Style

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, I suppose that, in view of the legislation passed last year, any further discussion of the immediate future of the Tennessee Valley Authority is somewhat academic. For the longer-range view, however, I think it well for all of us to try to keep in perspective what TVA's impact has been and can be on the industrial States situated outside the valley it serves. To that end, I include the following "Letter to the Editor" from the New York Times of January 15, 1960:

To the EDITOR OF THE NEW YORK TIMES:

It is understandable that you deemed it necessary to preface your editorial of January 4, "TVA Keeps Growing," with the explanation that TVA is not "that entertainment gadget so many of us have in our homes."

Perhaps a complacent public would not need this clarification if they realized how they shared in the cost of this growth in two ways: That the taxpayer's interest-free investment in TVA for electric power purposes now totals more than $1,850 million plus spending commitments during 1960 of $303 million more and, despite a constitutional requirement that taxes shall be uniform, TVA pays no Federal taxes on power sales to its 1½ million customers.

Investor-owned electric light and power companies of America, serving approximately 80 percent of the Nation's electric customers, pay more than $1 billion annually to the Federal Government in taxes. In addition, these taxpaying utility companies pay more than $600 million to local and State governments. Taxes represent about 23 cents on every dollar of electric revenue of these companies. Compare this with 6.8 percent of electric revenues stated as taxes in your editorial and we see why this seems to satisfy people of the valley.

TAX DISPARITY

During the fiscal year 1958 TVA paid 77 cents per $100 of plant investment in taxes (this excluded power sales to the Atomic Energy Commission), whereas the American electric utilities paid $5.14 per $100 of plant.

While this tax disparity may be alarming to some of our citizens outside the valley, few taxpayers know what share of Federal money is invested in TVA.

The Economic Research Department of the Chamber of Commerce of the United States has computed the percentage of all Federal taxes paid by each State. For example, the Federal Government collects 13.68 percent of all taxes from New York State taxpayers. These New Yorkers have contributed $294,530,400 to make TVA possible—13.68 percent of $2,153 million.

New Jersey taxpayers with a tax burden of 4.22 percent of all taxes paid to our Federal Government, paid $90,856,600. Connecticut taxpayers (2.25 percent) $48,442,500.

I often wonder why so few Americans realize how near we are to socialism under the guise of the Federal power program. We have learned by bitter experience that Federal power projects such as TVA and others, which were authorized for the purpose of irrigating arid lands or controlling floods or for navigation aid, often turned out to be the means of putting the Federal Government into the power business further.

Back in 1932 7 percent of the country's electric generating capacity was Government-owned or financed. By 1940 this had increased to 14 percent of the total generating capacity and in 1958 23.5 percent of generation facilities in the United States was Government owned or financed.

POWER INVESTMENT

As of January 1, 1959, $5½ billion of public money had been allocated for Federal power projects. If the projects now under construction, authorized and planned are completed this power investment of taxpayer money will soar to $15 billion.

Getting back to TVA—we wonder how many of your readers in New York, New Jersey, and Connecticut realize how this tax avoidance and interest-free Federal money competes economically.

Advertisements have appeared in the New York Times and other newspapers inserted by the Tennessee Industrial and Agricultural Development Commission pointing out that industry moving to the Tennessee Valley could buy industrial electric power as low as 6.03 mills per kilowatt-hour.

It may startle some readers to know that an investor-owned company pays almost this much per kilowatt-hour for taxes alone. Some day the Northern industrial States will feel this unfair use of Federal subsidy.

Is TVA leading the way? We agree with you, it is—down the left road to socialism.

B. L. ENGLAND.

ATLANTIC CITY, N.J., *January 7, 1960.*

New Starts, U.S.A

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement which I was privileged to make before the Electric Consumers Information Committee on January 18, 1960, at the Willard Hotel in Washington:

NEW STARTS, U.S.A.

(Remarks by Hon. JAMES C. OLIVER, of Maine, at the ECIC Legislative Workshop in Washington, D.C., on January 18, 1960)

Ladies and gentlemen, we meet here today to discuss one of the most vital problems which confront the American people and, in effect, that could mean, as well, the people of the entire free world, because of the international leadership which has been thrust upon us since the end of World War II.

I refer, of course, to the issue of so-called new starts in the progressive and aggressive developments of the natural resources of America. At least, in my opinion, the effect of availing ourselves or not availing ourselves, both as people of America, and as people of the world, of the maximum benefits which can, and will flow from such development of our real wealth, namely, the natural resources of our earth and its usable environment can mean the difference whether we survive, both physically and economically. Therefore, to me, the issue of new starts goes far beyond the immediate

scope of the specific projects which may be in our minds for fiscal years, 1961, or thereafter.

Naturally, every one of us is concerned as to the fate of specific projects which have great importance for our States and our regional areas. This, of course, is as it should be. But, when I think of the dedication of such great Americans as Senator George W. Norris, and his vision of multipurpose development of the great major river basins of this Nation, together, with the unselfish and never-deviating determination which he applied over the years; then, it is, that I am forced to lift my thinking from the trees of individual projects to the forest of the basic significance of full exploitation of the great unharnessed potential of the natural resources of America and of the world.

Mr. Chairman, unless we get bold, courageous, and creative imaginative leadership in our Government in the elections of this year, the new starts, so vital to America and the world are doomed. We can no longer gamble that time is running in our favor as we realize the potency of the drive and the determination of the Soviet-Sino bloc. My distinguished colleagues, here today, have a far better understanding than I, in this regard. My friend and leader from Maine, our former Governor and now Senator, able ED MUSKIE, for whom Maine people have a most abiding and sincere affection and the upmost respect, has already given our folks his impressions of the dedicated drive and purpose of the Soviet leadership and the Soviet people to unceasing efforts to develop all of their natural resources.

The Soviets and the Chinese know nothing and want to know nothing of the issue of new starts. They never stop. Our policy of stop and go, of the turning off and on of the spigot of needed public projects is a luxury that we might conceivably have afforded in the past, but, not today as we face up in this last half of the 20th century to the life and death challenge of those who would bury us.

However, I appreciate that this gathering of leaders and members of organizations, who have been devoted for years to the philosophy and crusading spirit of statesmen of the stature of George Norris, does not need any words from me to renew their faith or to stimulate their already aggressive attitudes to get this job done.

As I see it, the job which must be done is to persuade the American people that we can no longer rest upon our gains of the past. This means that we must move forward with progressive action. In science, and technology, we do not hesitate. We know that we must have basic research, and from the ideas, gleaned from such research, we have no hesitancy in applying these ideas to our industrial operations. Without this sort of pioneering, we would soon be bankrupt. Conservatism, to the point of ignoring our needs, and of sweeping under the rug, our obvious problems is nothing but radicalism of the most dangerous type. It means ruin. These next 40 years of the 20th century will continue to find us in such competition as we have never known before. Being afraid or reluctant to reach for unorthodox answers to unorthodox problems is not Americanism or the American way. Call it smugness, complacency, or what you will. It adds up to defeatism—defeatism which must result in bankruptcy and ruin.

But, my friends, this has been the policy of this administration. It has called itself progressive; but, it has failed to meet the needs of the people; and, consequently, it has been regressive. It has failed to measure up to the challenge. It has placed dollars above needs. It has subordinated the dignity of people to an idolatry of dollars. It has paid obeisance to stability, and, in some areas, even stagnation when we should have been surging ahead with new life, growth and expansion.

Under these condition, it is only natural that we should have the policy of no new starts. It is only natural that we should be handicapped with the tight-money policy and the unconscionable increase in the interest rate structure which is strangling us with accumulative usurious results. This has been done in the name of anti-inflationism. We are told that there is scarcity of credit and money. Money should only be thought of, in my opinion, as a reflection of our economic activity. When the administration decides to get off its knees where it has been paying tribute to the golden calf of dollars, and decides to expand the credit supply of this Nation; then, and then only, will we get the new starts which are so essential to our survival.

The money supply today is less in terms of the gross national product than it was 7 years ago. For example, per $1,000 of gross national product in 1953 there was $345 of money supply. In 1959, per $1,000 of gross national product, there was $295 of money supply. Expansion and growth through new starts just cannot survive in this contracting environment. We are told that there is not enough money to meet the demands. Yet, the Federal Reserve board of governors, which control the money supply, refuse to take those measures which would expand the money supply. Again, we are told that this would be inflationary. Yet, the scarcity of money, we are told, increases the rental rate of dollars; Namely, the interest rates. This, in turn, is one of the most inflationary factors that is feeding the fire of inflation. If the interest rate of 5 percent is increased by 1 percent, this represents, in my arithmetic, to a 10 percent administered price increase, which is felt in the homes and business activities of every nook and cranny of this great Nation. Such increases strangle new starts on the public projects which are the lifeblood of this Nation.

Tight money, increasing interest rates, and unwillingness of the administration leaders to face the facts of the needs of a growing Nation and the threat of the Soviet-Sino challenge are the basic factors which will cause this administration to be recorded in history as the leadership which did not lead and which threatened to cause America to lose its opportunity to remain as the world's leader for centuries to come.

But, this can be changed. It can be changed if this session of the 86th Congress refuses to lift the 4½ percent ceiling on interest rate of long term bonds. At least, this must not be done until fiscal and monetary reforms are realized. To lift this ceiling, otherwise, will mean that a green light will be given to that school of thought which believes that money is a commodity rather than a medium of exchange; which believes that we can be prosperous and healthy without a restricted cost of money; that 7 percent money is not inconceivable in a healthy economy; that our taxpayers can meet an ever-increasing debt service charge on our public debt; that we can afford the continued strangulation of new starts in our program of public projects; that, in short, we can continue a policy of the rich getting richer and the poor getting poorer.

It is my feeling that we can do something about these dangerous policies. This session of Congress can refuse to lift the interest ceiling. It can direct the Fed to support all types of Government securities. It can direct the Fed to use its power to increase reserve requirements of member banks whenever necessary. In short, it can establish the same policy that was used to finance the war.

In other words, it can expand the money supply in terms of the needs of the people of this country. But, to be practical, it will probably do none of these things and America will be forced to wait until the next administration takes over to face up to the urgent needs of an economy which is already to go but which is being held in check by those who prefer to sit on the powder keg of conservative and orthodox policies which are not meeting, and will not meet, the unorthodox conditions which confront us.

Meanwhile, those of us in Maine who are first and always for a policy of action, rather than inaction and reaction; those of us who have supported and will always support "new starts"; those of us who know that America must process into use those natural resources which are its real wealth; and those of us who believe that dollars and credit are only mechanisms to make the economy grow rather than being a cushion upon which to sit call your attention to our "new start"; namely, the Passamaquoddy-St. John Power project, located in the international waters of Canada and the United States. We urgently solicit your wholehearted and active support of our efforts to realize this start and the completion of this project which can be the beginning of the great northeastern power grid, envisioned by that devoted crusader in power development, Leland Olds, who has already contributed in a substantial way to our cause.

In closing, let me say that it was been a real pleasure to have been invited to be with you in your deliberations. I assure you that the programs of your organizations, devoted to the best interests of the electric power consumers of America, always have had and always will have my enthusiastic and complete support. You are doing a great job and you deserve all possible support for the great battles which so obviously lie ahead.

Principal Draftsman of Smith-Hughes Act Presents Case for Federal Aid to Education

---

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include an article by my distinguished constituent, Dr. John A. Lapp, in the Chicago Schools Journal of November 1959, that I earnest recommend for the thoughtful reading by my colleagues.

Dr. Lapp was a member of the National Commission, appointed by President Woodrow Wilson, which in 1914 drew up the Smith-Hughes Act, a program of Federal aid to vocational education. Dr. Lapp was the principal draftsman of that act and he is the only member of the Commission appointed by President Wilson now alive. He long has been recognized as the foremost authority in America in a field to which he has contributed a long lifetime of outstanding leadership. He is a past president of the City Club in Chicago and of the citizens school committee. He has been a bulwark of strength for popular education in our city, and it has been largely due to his efforts that many reforms

have been instituted and the citizenry of Chicago roused to an awareness of school problems and brought closer in cooperative understanding with school administration than perhaps in any other large city in our country.

In a preface to Dr. Lapp's article, the Chicago Schools Journal says:

Congress, as it debates the Murray-Metcalf bill, will face another showdown on Federal aid to education. In this article, a distinguished proponent of such aid offers counterarguments to statements frequently advanced by opponents of such participation.

The article follows:

THE CASE FOR FEDERAL AID TO EDUCATION—HISTORY PROVIDES ANSWERS TO OPPONENTS

(By John A. Lapp)

Federal aid to the States for the promotion of education is an old and time-tried practice in our country. Scarcely had the Federal Government been established when grants of public lands were made to the States for promotion of common schools. A succession of grants of public lands, and later of money, for educational purposes followed, until today more than a score of educational projects managed by the States and local communities are aided with Federal money.

A mere recital of the projects for which State and local governments receive part of the cost from the National Treasury should be sufficient to show the vital role of Federal aid. Agricultural colleges; experimental stations; agricultural extension services; vocational education in agriculture, trades, and industries; homemaking and distributive occupations; school lunches; vocational rehabilitation of the handicapped; defense educational activities; library services; and school construction are among the educational activities aided by Federal funds.

OPPONENTS OF AID IGNORE HISTORY

The history of Federal aid for a century and three-quarters should be sufficient to silence the critics, but not so. In spite of the long, uninterrupted, and fruitful experience in the use of grants in aid of education from the Federal treasury, a hue and cry is raised every time a proposal is made to give Federal support to an educational project. The same statements are repeated over and over again, despite the fact that our history for 175 years has proven them to be baseless.

Three such statements form the stock in trade of opponents of Federal aid: (1) That the Constitution left the management of schools to the States with no power to aid education vested in the Federal Government; (2) that education is not a Federal matter but one solely for the States and local communities; and (3) that Federal aid means Federal control of the schools.

Anyone familiar with educational progress in this country knows that history does not sustain any of these statements; in fact history refutes every one of them. Let us look at the record.

FEDERAL POWERS IN EDUCATION

To say that there is no power to aid education vested in the Federal Government is to fly in the face of fact. There were no free public schools when the Constitution was adopted and apparently no one in the constitutional convention ever mentioned the subject of public schools or of education—the words do not appear in the records of the convention. A proposal that Congress should have power to establish a university was not pressed, because it appeared that the power to do that was given in the grant of power at the seat of government. It was more than half a century later before free schools were seriously promoted, and, even as late as 1875, President Grant was impelled to recommend a constitutional amendment "to require the States to establish and forever maintain free public schools adequate to the education of all the children in the rudimentary branches."

No one of the Founding Fathers proposed that the Federal Government should establish schools, but no one disagreed that it could help the schools. Even Jefferson, strict constructionist though he was, held that grants of land could be made to the States for education, and he desired a constitutional amendment to permit the Federal Government to play a role in education.

FEDERAL PARTICIPATION IN HIGHER EDUCATION

The idea that the Constitution did not permit Federal aid to education went out the window when President Lincoln, in 1862, signed the Morrill Act, which gave public lands to the States for colleges of agriculture and mechanic arts. Sixty-nine universities, which today enroll more than three-quarters of a million students, resulted from this act. For their support, the Federal Congress appropriates more than $80 million a year and turns over to the laboratories of the universities more than $200 million for research work.

No informed person today raises seriously the question of the constitutional right of Congress to grant aid to the States for educational purposes. If anyone does raise the question, it is certain that he does so without knowledge of the extent to which the Federal Government has long granted such aid.

ROLE OF EDUCATIONAL IN NATIONAL WELFARE

The statement that education is solely a local matter has never been made by serious statesmen or thinkers. It is too narrow a conception to be held seriously by any person who knows fully the functions of education in our national life. Jefferson expressed the national purpose when he said, "The nation that expects to be ignorant and free expects what never was and never will be."

Even a cursory view of our dependence upon education for national welfare and for national security makes clear that the nation has a responsibility to aid in the development of those agencies of education that will provide ways to develop the professional and technical skills which are needed to assure the welfare and safety of the whole Nation. Cooperation of the Federal, State, and local governments in support of education is a national policy which has deep roots in the past and which is evident in the many branches of education in which such cooperation exists in the present.

SMITH-HUGHES ACT AIDS VOCATIONAL TRAINING

Forty-two years ago, the Smith-Hughes Vocational Act was passed to meet a national need for skilled manpower. The Smith-Hughes Act was framed by the Commission on National Aid to Vocational Education and adopted by Congress with few dissenting votes. The writer of this article was a member of that Commission, the principal draftsman of the bill which became the Smith-Hughes Act, and is happy to record that it was the first Federal Act which spelled out a complete cooperative arrangement between the Federal Government and the States.

The report made by the Commission on National Aid to Vocational Education is a classic statement of the national dependence upon education for skilled workers in agriculture, the trades, and industry. It should be read as a sedative by those who wildly decry Federal aid to education. On almost every page of the report, the reliance of the nation upon education for economic survival in world competition is emphasized.

The Commission on National Aid to Vocational Education found that Federal grants to the States are justified:

1. By the urgency of the demand for effective training of our workers which the States cannot meet in time without Federal encouragement and aid.

2. By the interstate and national character of the problem, due to its nationwide interest and importance.

3. By abundant precedent in appropriations by Congress throughout our entire history for educational purposes and the cooperation between the Federal Government and the States where teamplay was necessary to handling matters that could not be handled well by the States alone.

4. By the successful results to the Nation as well as to the States of previous grants for educational purposes.

NATIONAL EMERGENCY CRYSTALLIZES OPINION

When the report of the Commission was submitted in June, 1914, there was no hint of war, but as soon as it became apparent that this country might be involved in war, the passage of the Smith-Hughes Act became imperative.

President Wilson declared to Congress in 1915 that "we should give intelligent Federal aid and stimulation to industrial and vocational education." In a later message he said, "We ought to have in this great country a system of industrial and vocational education under Federal guidance and with Federal aid." In a final appeal to Congress to pass the Smith-Hughes bill, he said that the bill "concerns a matter too long neglected upon which the thorough industrial preparation for the critical years ahead in very large meaasure depends. * * * It contains plans which affect all interests and all parts of the country, and I am sure that there is no legislation now pending before Congress whose passage the country awaits with more thoughtful approval or greater impatience to see a great and admirable thing set in the way of being done."

SMITH-HUGHES ACT NOT A WAR MEASURE

Statements that the Smith-Hughes Act was intended only for the national emergency of an expected war are entirely false. The Commission that framed the act never suspected the coming of a war in which this country would be involved. There is not a single word in the 300-page report even hinting of war. The law was framed to strengthen our hand in world economic competition and to buttress our lagging agriculture. Some persons, wholly uninformed of the history of the law, have stated that it was passed as a temporary measure. How they got that idea is a mystery. There is not a single word or even a hint implying a temporary purpose. This writer can testify that not once was it suggested by any member of the Commission, nor by any witness before the Commission.

The Smith-Hughes Act has been in force for 42 years. Three and a half million persons are this year taking work under it. Fully 60 million persons have been enrolled in one or more courses since it has been in force.

NATIONAL DEFENSE AND EDUCATION

Forty-one years after the passage of the Smith-Hughes Act, Congress, faced with a national crisis and recognizing that education is the great national hope, passed, in 1958, the National Defense Education Act, which appropriated more than $200 million a year for the next 5 years to bolster up the educational system.

Prefacing the act is a notable statement that "the Congress finds and declares that the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women."

While recognizing that the States and local governments should operate the schools—

"The national interest requires that the Federal Government give assistance to education for programs which are important to our defense. To meet the present emergency

requires additional efforts at all levels of government. It is therefore the purpose of this act to provide substantial assistance in various forms to individuals and to States and their subdivisions, in order to insure trained manpower of sufficient quantity and quality to meet the national defense needs of the United States."

CONGRESS APPROVES FEDERAL AID

Congress, in passing the National Defense Act, paid tribute to the Smith-Hughes Act in a preamble thus: "The Congress hereby finds that the excellent programs of vocational education, which States have established and are carrying on with assistance provided by the Federal Government under the Smith-Hughes Vocational Education Act and the Vocational Act of 1946, need extension to provide vocational education to residents of areas inadequately served, and also to meet national defense requirements for personnel equipped to render skilled assistance to fields particularly affected by scientific and technological developments."

In passing the National Defense Act, Congress showed its approval of the original principles of the Smith-Hughes Act by authorizing a national grant of $15 million a year to be expended by the States on plans approved by the State boards for vocational education "providing vocational and related technical training and retraining for youths, adults, and older persons, including related instruction for apprentices, designed to fit them for useful employment as technicians or skilled workers in scientific or technical fields."

FEDERAL PARTICIPATION AN ESTABLISHED FACT

The kind of cooperation between the Federal Government and the states which is exemplified in the Smith-Hughes Act and the National Defense Education Act has come to be the hallmark of American education. The states give guidance and financial aid to local communities and the Federal Government gives financial aid, stimulation, and research assistance to the states to promote kinds of education needed for national welfare and safety. Known as "grants-in-aid" such plans are found in all non-centralized governments. England was the originator of the grant-in-aid system many decades ago. England's Comonwealth nations subsequently adopted the system, and the United States followed by adopting the kind of cooperative arrangement which first found full expression in the Smith-Hughes Vocational Act in 1917. The passage of the National Defense Education Act in 1958 indicates clearly that our law makers believe that the Federal Government has a deep and serious concern in our education, a concern which the Congress could not have stated more clearly than it did in the passages from that Act quoted above.

AID AND CONTROL ARE NOT INSEPARABLE

The opponents of Federal aid to education advance frequently the sing-song slogan, "Federal aid means Federal control" of local schools. This statement is without basis in fact. A hundred and seventy-five years of national experience contradict and deflate the slogan. Federal, State, and local officials work cooperatively, with state acceptance, under the systems of Federal aid now in force. The history of the Smith-Hughes Act is a complete refutation of the charge of Federal interference. This law has been in effect since 1917, and, so far as is known schools are still under state and local control.

No one wants the Federal Government to operate the schools. Faced with national necessity, the Federal Government could establish Federal school of technology, science, and foreign languages; just as it has established the service academies for military, naval, air force, coast guard and merchant marine education. The cooperative arrangement between the Federal, State, and local governments has been proven to be the better way.

COORDINATED ACTION PRODUCES RESULTS

The national dependence upon education is seen plainly through the eyes of experience. For many purposes, we are a Nation, not an aggregation of separated, independent States without common objectives. The national need for specialized education, so apparent today, cannot be met by uncoordinated action of the separate States—certainly not by the uncoordinated action of local communities.

There are special conditions which support the above statement. These were outlined 45 years ago by the Federal Commission on National Aid to Vocational Education and have been clearly emphasized by experience ever since.

A UNITED EFFORT STRENGTHENS EDUCATION

The Commission summarized the reasons for national cooperation in the following six points:

1. To make the work of vocational training possible in those States and localities already burdened with the task of meeting the requirements for general education.

2. To help the States, with their widely varying resources, bear the burden of giving vocational education as a national service.

3. To equalize among the States the task of preparing workers whose tendency to move from place to place is increasing, making their training for a life work a national as well as a State duty and obligation.

4. To secure national assistance in solving a problem too large to be worked out extensively and permanently save by the whole Nation.

5. To give interest and prestige in the States to the work of preparing our youth for useful and productive service.

6. To secure expert information from the agencies of the National Government, bringing to bear a countrywide knowledge and viewpoint, which will put the work of the States on a scientific and businesslike basis.

The reasons for national participation so cogently stated by the National Commission are plainly seen by informed people as operative today, as our Nation girds to prepare itself for the scientific, technological, and technical competition ahead. The fate of the Nation rests on meeting the challenge through a united effort on the educational front.

What They Say About the Price Squeeze Down on the Farm

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. ANDERSEN of Minnesota. Mr. Speaker, under leave to extend my remarks in the Appendix, I am including a very timely article by Glenn Kreuscher, staff farm writer, which appeared in the Lincoln Sunday Journal and Star of December 20, 1959.

I am including this not only because it is an excellent factual presentation of the economic difficulties of rural people, but also because it typifies conditions which exist today in much of the agricultural Midwest. Lincoln, Nebr., is only about 200 miles from my home town of Tyler, Minn., and this could well be the story of our immediate area except for the fact that our problems have been made worse due to very poor crops last year. In the following story, for example, the writer refers to 88-cent corn while the corn produced on my farm has been valued at about 56 cents a bushel.

The article follows:

[From the Lincoln (Nebr.) Journal and Star, Dec. 20, 1959]

WHAT THEY SAY ABOUT THE PRICE SQUEEZE DOWN ON THE FARM

(By Glenn Kreuscher)

You may not believe it—but this story is true—and it could affect you.

Your paycheck has been cut 15 percent—there is another cut coming next year that will take another 10 percent and there is a good possibility the way you are now headed that additional reduction in income can be expected.

Your net income for 1960 will be the lowest since 1942.

Your expenses next year will reach a new peak after rising steadily for the fourth consecutive year and will undoubtedly match the alltime record.

Most readers will agree this forecast appears out of line with our general economy. But these are the actual facts now faced by farmers, and the prospect is just what you have already been thinking as you read the preview: How can they continue under an arrangement like this?

Interviews with farmers and businessmen who are closely connected to agriculture brings out this general feeling: The farmer is in a vicious "price squeeze" that is damaging our general economy. Some sample comments:

A 40-year-old Nebraska farmowner: "Today I went to town to pay up some of my bills. For an example of how my purchasing income has shrunk, look at my hog check.

"Last year I sold 60 hogs that averaged 205 lbs. for $19.60 per cwt. for a gross of over $2,400. Last week I sold 60 head at the lowest figure in 4 years, $12.50 per cwt., and for an almost identical group I got $1,500.

"The loss of $900 income on one group of hogs in the face of the highest operating expenses on record pretty well tells the story of why farmers can't meet their current expenses.

"Farmers are trying to compete with 1930 prices during 1960—It will not work."

A farmer who raised 120-bushel corn speaks: "The most misleading news in the world is the record corn crop that folks point to and say the "farmer is rolling in dough."

"Very few farmers selling corn from the new crop are getting over 90 cents per bushel. Our margin of profit was wiped out with the corn price 30 cents under last year.

"It is impossible for the farmer to go in and buy new equipment when his income is so drastically cut and what he buys continues to reach new levels."

A machinery, filling station and elevator operator: "We have a good opportunity to see many farming operations and in our estimation the farmer's buying power has dropped even more than the Government figures show. Lots of farmers would be making purchases but they can't see enough future to take on the burden or payment.

"Our business is hurt now—our accounts receivable are way out of sight."

From a banker with over 50 years serving a farm community: "I have gone through good and bad times. I am worried about the continual reduction in farm income and the steady rise in farm expenses. It is getting to be extremely difficult for many good operators to meet their obligations.

"The tight money situation has caused the refusal of many loans.

"The farm situation needs immediate attention—we cannot continue without serious results to our general economy."

From an implement dealer in business since 1936: "Our account receivable are the highest they have ever been and some farmers are having trouble meeting their payments.

"The machinery business is closely tied to the farmer's ability to buy—we must cut down on our orders at the factory unless a favorable farm program gives some stability to farm prices.

"Want a strong economy? Treat agriculture with a fair return and there is nothing wrong with the future. The farmers may only be 10 percent of our population but another 35 percent depend upon them."

A young veteran—farming since 1947: "The 300 laying hens I just showed you returned a net of $10 last month which is too close a margin when your laying production is at peak level.

"This past week I got grandfather's old diary out and found that the prices he received beat what I am getting now.

"I also found that today's farmer spends 15 to 20 times more than the generations before him in town."

A central Nebraska banker gives this report: "The farmers in our area had an excellent corn crop—but those wishing to sell now on the cash market are selling corn for 88 cents—those high yields that make news as record crops are expensive to raise. Many of my customers have nothing left after paying their operating expenses.

"Our note case is filled and we wonder where our customers can get the returns with declining livestock prices to meet their obligations."

An eastern Nebraska farmer: "How many folks are aware that in a time of mounting expenses and spiraling prices that hogs sold at the lowest price this week they have for 4 years?

"Many urban citizens who read the paper see only the prices quoted as the top figure for the day. Those figures only reach a small part of the farmer's products. For instance everyone thinks corn is worth $1.06 per bushel—ask the farmer selling. More are getting around 88 cents per bushel, or less than their grandfathers received many years ago when cost of production was in line with selling price."

A third generation farmer: "The best way I know to illustrate the farmer's price squeeze is to check the constant shrinking of the farmer's income. This is illustrated by the percentage the farmer receives of the consumer's food dollar. Recently that figure was quoted by the USDA as 38 cents, the lowest figure since 1934.

"To think that a farmer can operate on 1934 income in 1960 is unbelievable and the only way I can exist is to try this year to pay my current bills and cut out all additional expenditures."

A 57-year-old Nebraska farmer: "This year from the standpoint of meeting my expenses with what I have to sell is the toughest one I have had since I started farming in the 20's.

"Many folks look at the declining number of farmers and lose sight of the fact that today's farmer spends probably 20 times what his grandfather did in town and for products produced by others."

A dryland farmer: "Let's look at my records. My wheat acreage is so small that it offers little income. Corn was the largest crop on my farm and it was good this year but when I pay my operating expenses I will show about $6 per acre profit, which is too small to be effective purchasing power.

"The poultry and dairy operation just about broke even. Hogs, always a main income, dropped better than 40 percent from what I received a year ago. We always made a little on our beef cattle, they have been our surest income and will be the only thing on the place this year that will still show a profit.

"What can I do? I need a new truck and some more equipment but I cannot go out and contract to buy this equipment when the 1960 outlook says I can expect another 8-percent drop in prices."

A young veteran: "I believe that the drop in prices is far more than the 15 percent that the Government uses as a figure, as I know that my own loss has reached almost 25 percent."

Generally the farmers interviewed say they would like to see agriculture appropriation figures broken down to show the taxpayers how much goes for administration, inspection, storage, and many other figures that have no connection with what farmers realize from the farm program.

Businessmen and bankers say they already feel the pinch of reduced farm income. Many are disturbed about the accounts receivable from farmers who had no way to know that such a drastic income and price squeeze would be in store for them.

What part of the farm program meets with the most approval? Over 85 percent of the farmers questioned considered the conservation reserve as the best plan to control production and apply conservation measures to the land.

Farmers are hard workers, they have a lot of pride, most of them are hoping for some workable plan that will give equal purchasing power to agriculture—farmers want to remain the best customers of labor and industry.

The Pawn of Arab Power Politics

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I include an article which appeared in a magazine published by the Society for the Prevention of World War III which is appropriate even though the U.N. has voted the continuance of the program for the maintenance and support of the Arab refugees in the Middle East.

The article follows:

THE PAWN OF ARAB POWER POLITICS

Of all the issues which have plagued the Middle East, the plight of the Arab refugees seems to be the most colored by emotionalism.

The feelings of many Americans show understandable concern over the human suffering involved. Consequently, there is a widespread belief that works of charity and generosity alone can solve the problem. Leading Arab politicians also speak in highly emotional terms when referring to the refugees. However, their actions—or lack of action—cast the problem in an altogether different light.

In the fact of the miserable conditions under which the refugees live, it is difficult to speak in a matter of fact way about this subject without seeming to appear callous. Nevertheless, it is necessary in the interest of truth and for the cause of peace in the Middle East that the Arab refugee problem be reduced to its essentials.

ARAB RESPONSIBILITY

The refugee problem is the product of the Arab invasion of Israel in 1948. This willful aggression had its roots in the Arab decision to tear up the U.N. General Assembly resolution of November 29, 1947, calling for the partition of Palestine. Indeed, on the very same day the Arab Higher Committee declared that the U.N. partition plan was "null and void." The Committee warned that it would "not permit its implementation * * *." This brazen defiance of the United Nations signaled the Arab military attack which turned out to be one of the darkest days in the lives of Palestinian Arabs. The Arabs living in Israel at this time were encouraged and browbeaten to leave, despite the many pleas of Israeli authorities not to do so. In short, there would never have been a refugee problem in the first place had it not been for the aggressive and unscrupulous tactics of Arab leaders who, from the very beginning, regarded the unfortunate Arab refugees as pawns.

A REVEALING REPORT

Since then Arab policy has not changed one iota. No more authentic proof of this fact can be found than in the latest report of the Director of the United Nations Relief and Works Agency for Palestine Refugees (UNRWA) to the latest U.N. General Assembly. This report covers the period of July 1958 to June 1959.

The report itself, laden as it with technical data, will never become a bestseller. Yet, it is a most revealing document and would shock most people if its essential facts were presented in popular form.

Underlying the whole report is the implicit fact that the refugees are the real scapegoats of Arab power politics. Space does not allow us to deal with all of the many facets of the report, but certain facts must be recounted in the interest of obtaining a true perspective of the problem.

The report mentions the UNRWA has two basic tasks, i.e., to provide temporary care and help to the refugees, and long-term assistance so they will become self supporting. Yet, the report is obliged to admit that in spite of the hundreds of millions of dollars spent over the past decade, only temporary relief has been maintained, and that the "long-term task" of putting the refugees on their feet has never been implemented. Why this basic failure? In the words of the report itself, this is due to "a political climate both among the refugees themselves and in the host countries." (The "host countries" refer to the Arab States where the refugees are presently located.) What this means is simply that Arab leadership today does not want to solve the refugee problem on a long-term basis.

EGYPT'S ATTITUDE

The attitude of Egypt is most striking in this respect. According to the report, Egypt refused to recognize UNRWA as a subsidiary organ of the U.N. though the General Assembly on December 12, 1958, specifically resolved that the agency was an organ of the U.N. Moreover, Egypt persists in its refusal to apply the Convention on Privileges and Immunities of the United Nations" in the Gaza Strip where many of the refugees are located. This convention is vital for the independent functioning, judicial standing and prestige of UNRWA. Hence, the report charges that the Egyptian policy stands "in the way of the solution to many problems and presents serious obstacles to UNRWA's assistance to refugees."

Therefore, UNRWA's operations are under severe stress. For example, the Egyptian government has subjected UNRWA to taxes. The report indicates that total Agency claims, including tax refunds against the United Arab Republic, total $395,000. Despite the restrained language of the report in discussing Egypt's treatment of the Agency, one can easily see that this is a scandal that deserves far more exposure than it has received up to date.

Egypt tries to discredit UNRWA in every possible way. For example, at one time Cairo propaganda charged that UNRWA doctors were trying to kill off Palestine refugees in Gaza by fatal injections (see CONGRESSIONAL RECORD, 3–18–59, Remarks by Cong. FRANK THOMPSON, JR.). Staff members of this U.N. Agency are continually harassed. In Gaza, the report notes, there have been a number of instances "in which staff members were arrested, subjected to interrogation, or interfered with in connection with acts performed in an official capacity and in accordance with the Agency's instructions."

To further impede the work of the Agency, Egyptian authorities have "seriously hampered" the work of the Agency in Gaza by obstructing the movement of staff members and involving them in all sorts of bureaucratic procedures. In fact, in some instances UNRWA staff members have been refused admission into Gaza!

The deliberate effort by the Egyptians to cripple the work of UNRWA at Gaza and to squander UNRWA's energies in squabbles with government bureaucrats, is revealed by the following episode.

For a while, Egyptian officials at Gaza recognized the Agency's exemption from stamp taxes and even made a partial refund. Subsequently, these Egyptian officials arbitrarily reversed themselves. Not only have they halted further refunds "but have asked for the return of the payment already made." Therefore, UNRWA has been harassed at every turn, its officials badgered and abused, its limited funds unnecessarily exploited and its prestige seriously undermined in the eyes of the refugees.

TROUBLE IN SYRIA

In the Syrian region, the situation is hardly any better. Agency officials are prevented from traveling through the areas where the refugees are located. Indeed, there have been cases where staff members have been prevented from entering the refugee camps. On one occasion a staff member was seized on Agency premises "in disregard of his inviolability and was summarily expelled from the country without proper cause."

As at Gaza, the Agency in the Syrian region is enmeshed with all sorts of time consuming bureaucratic regulations.

JORDAN AND LEBANON

In Jordan, too, the work of UNRWA is hamstrung by a variety of impediments. Although the report notes that Jordan has finally recognized the Agency as a subsidiary organ of the UN. "There have been several instances in which lack of understanding of this status has been evidenced." In this connection, the report relates how the Agency's mail bags and premises last year were searched without permission and how Jordanian authorities arrested a staff member when he refused to deliver UNRWA'S records.

The Agency is confronted with similar situations and conditions in Lebanon. "Although the authorities (Lebanese) have shown goodwill and a desire to fulfill their obligations, the protection offered (to the Agency) has not always conformed with international law and practice."

According to the report, staff members have been attacked, Agency property damaged and/or looted while there has been persistent interference in the activities of the Agency, particularly in the refugee camp clinics. Concluding its comments on the Agency's position in Lebanon, the report states that while the Agency is recognized as a U.N. subsidiary "the problem of implementation throughout all ministries and governmental units, particularly at lower echelons, has not, however, been solved."

Can one draw a more astounding picture? Here we have an official Agency of the U.N. dedicated to the alleviation of the miserable conditions of the refugees, battered, insulted, and abused by the Arab governments who speak in the name of these refugees.

By insulting the U.N. flag through these contemptible tactics, these governments have intensified the problem and have increased the miseries of the refugees.

It should be borne in mind, too, that the Arab states do not contribute a penny to the Agency. (Neither does the Soviet Union or its satellites.) The lion's share (93 percent) of the contributions to UNRWA comes from the United States, Britain, and Canada. Yet, Cairo propaganda continues to scream how the Arab peoples are victimized and exploited by "Western imperialism."

FRAUD

On the other hand, the Arab states have not lifted a finger against the wholesale frauds perpetrated by certain Arabs who desire to get free hand-outs from the Agency at the expense of those who are in real need. The Agency Report reveals that "an appreciable proportion of ineligible beneficiaries" remain on certain ration rolls maintained by UNRWA. In the case of Jordan, ration rolls involving 150,000 persons require "rectification" in view of the fact that about half of this number are dead while the balance consist mostly of persons "earning enough money for self-support and those fraudulently registered from the beginning." It must be emphasized that the victims of this particular fraud are more than 100,000 children who are deprived of rations because the dead must eat. The government of Jordan has expressed the desire to "cooperate"—that is all.

The Report also mentions that a whole new group of "refugees" are trying to get into the act. These so-called refugees who, for the most part, are just poor people neglected by their own governments, do not come within the purview of UNRWA's tasks, but they are certainly working hard to get free handouts.

Whether their governments have egged them on, is not stated in the report itself. In any event, these wretched people, located primarily in Jordon and in Egypt, are the responsibility of their respective governments.

Unquestionably, these people should be fed. But why should the U.N. take on a responsibility which belongs to the Arab governments, especially since these governments refuse to contribute to the Agency's funds?

Admittedly, the Arab countries are not flowing over with gold, but if the will were there funds could be found. Let the Arab sheiks who are sitting on fortunes made from oil, show their brotherly love and make a small donation which would still allow them to purchase brand new Cadillacs every year. Mr. Nasser, too, whose portrait is found all over Gaza and other areas where the refugees are located, could make a small contribution instead of devoting so much of Egypt's resources to the building up of a war potential.

MISERY

The amount of money spent for each refugee, the report states, is "barely sufficient to meet his basic physical needs." Their opportunities for self-advancement are practically nonexistent.

As a result, they live a life of enforced idleness without morale, without hope. The young among the refugees are a particularly tragic lot. Their future is a blank. "The result is that every year some 30,000 young people reach maturity with little hope of earning a living or establishing homes in a normal way. This present lack of opportunity with its accompanying disappointments, frustrations and blighted hopes, is even more tragic in terms of human waste than is the need to improve food, shelter and clothing."

This is not a pretty picture, but it suits present Arab leadership. It not only keeps alive tensions in the Middle East, but more important, increases the degree of desperation of these people. Let them continue to stew so that they will make good, young cannon fodder. Thus Nasser's Deputy Foreign Minister recently urged the formation of a Palestine army to defend the right of the Palestinians.

FACTS TO CONSIDER

The Arab countries stand fast in their refusal to grant the refugees permanent homes. This is part of their policy of "brotherly" love. The United Arab Republic goes so far as to prevent refugees from immigrating to other lands, even when such opportunities are available. This is part and parcel of the Arab plan to maintain the Arab refugees in a constant state of excitement and desperation and thereby keep alive the idea that they will one day return to Israel.

The Arab refugees, thanks to the Arab host governments have been kept in ignorance as to the true state of affairs in the Middle East since 1948. They have not been told that Israel has borne the cost of absorbing over 450,000 Jewish refugees who fled from persecutions in their native Arab countries, in addition to integrating approximately 50,000 Palestinian refugees. They have not been told that it is physically, politically and economically impossible for Israel to absorb over an estimated 1 million refugees. Nor have they been told that Israel has taken in a number of these refugees, where possible, and has unfrozen millions of dollars of blocked refugee assets. As noted by the Catholic publication Commonweal "There is no conceivable way in which the refugee Palestinians could be restored to the life they led prior to 1948, short of the elimination of Israel—and the creation of still another mass of refugees."

On many occasions Israel has given clear indication of her willingness to sit down with the Arabs and solve this deplorable problem.

WHAT THE ARAB LEADERS WANT

Recently U.N. Secretary Dag Hammarskjold proposed a large scale development plan to resettle the refugees. There are vast areas in the Arab countries that could absorb these people and benefit considerably from their labors. The idea that refugees are a liability to a country is an historical myth. On the contrary, willing hands can always add to a country's resources and wealth. A recent example, of course, is the case of West Germany where millions of refugees have made a substantial contribution to the present prosperity of that country. However, the Arabs have consistently ignored Israel's pleas for a negotiation as they have now rejected the Hammarskjold plan.

The latest UNRWA's report answers the riddle of the Arab position on this issue. On page 6 of the report we are told "after nearly 10 years of operations, the Agency is still confronted with a residue of serious problems in its relations with host governments—problems which should have been solved in the earliest days of the Agency's existence but which in fact have become chronic and which handicap it in its work." This is the language of understatement. But what it tells is simply that Arab leadership has no interest in elevating these refugees to productive human beings. Thus the problem is not one of charity. It is, above all, an unscrupulous and coldblooded game of politics played by such men as Mr. Nasser to cover up plans for aggression.

Principles and Home Rule

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the January 18, 1960, issue of the Washington Evening Star.

PRINCIPLES AND HOME RULE

Three of the presidential candidates have issued statements supporting home rule for the District of Columbia and each contains one or more of those ambiguous generalities favored by political statement writers.

From Mr. NIXONS "The right to vote is a fundamental right in a free society * * *. Consistent with this principle the administration proposal, which would grant District residents the right to elect their own legislative assembly should have the support of both parties in this session of Congress."

What is this fundamental right as defined by the administration proposal? It is the right to vote for members of a local legislative assembly whose acts would be subject to vetoes from at least three sources—an appointed Governor, an elected President, and Members of an elected Congress—in the choice of whom the people of the District would have no vote whatsoever. The administration proposal was ditched before it even reached the Senate last year without protest from administration leaders. Senator MORSE denounced it as a compromise of principle, for the sake of expediency * * * which provides only a false front, facade of self-government, a political charade. The reasoning behind the compromise, produced by the Commissioners and the Budget Bureau, was that the form of home rule subsequently approved by the Senate could endanger the predominant interests of the National Government in this Federal city.

From Senator KENNEDY: "It is long past the time when home rule for the District is merely a subject of discussion. With statehood already a fact for Alaska and Hawaii, the major item of unfinished business becomes self-government for the District."

Is the Senator advocating statehood for the District of Columbia? We doubt it. Would so-called home rule give to the people of the District any semblance of the self-government attained by Alaska or Hawaii? Of course not. Some 26 years even before Hawaii became a territory in 1900, a version of the home rule advocated by the administration and not unlike the traditional territorial government from which Alaska and Hawaii have now emerged was tried and abolished in the District. Why does so progressive and forward-looking a young man as Senator KENNEDY now wish to turn the clock back 85 years and try it all over again, either in the form proposed by the administration or the more radical plan approved by the Senate?

From Senator HUMPHREY: Denial of self-government to the people of the District is "in direct conflict with our cherished principles of representative government." The people of any American city should "have the right to be governed by officials of their own choosing."

Would home rule remove the conflict with our cherished principles? It would not. It would magnify and more grossly distort them. Would the people of the District, under home rule, have the right to be governed by officials of their own choosing? They would not. They would continue to be governed by a President and a Congress, without a vote in the choice of either. Their elected puppet municipal government would lack even the degree of autonomy enjoyed by the Government of Hungary and would be saddled with a financial responsibility greater than the local resources available to meet it.

When Messrs. NIXON, KENNEDY and HUMPHREY begin advocating real voting rights for the residents of the American Capital—the right to vote for President, Vice President and representatives of their choice in Congress—we will then take off our hats and cheer. But not as long as they talk about noble principles not exemplified in the legislation they endorse.

Beware of the Medical Fallacies

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written in October 1950, by Alfred Rosskamm Ross, doctor of medicine, now a practicing physician in Deposit, N.Y.

I wish to emphasize that the opinions expressed are those of Dr. Ross, but believing that medical science benefits from the full circulation of all reasonable theories, I ask that Dr. Ross' article, now nearly 10 years old, be reprinted in the Appendix of the RECORD.

BEWARE OF THE MEDICAL FALLACIES

(By Alfred Rosskamm Ross)

OCTOBER 1950.

For times immemorial, mankind has lived on the produce of our good earth, has thrived, and multiplied. After Columbus had discovered that the ocean could be crossed, sailors found out during long voyages that it was not enough to get sufficient quantities of bread, sugar, fat, and preserved meat to keep in good health, but that they needed fresh vegetables, fresh fruit, and fresh meat from animals slaughtered aboard. About three and a half centuries later, Louis Pasteur discovered that several diseases were caused by microbes which could be killed by boiling. After fighting him to the utmost, the medical hierarchy went to the other extreme. They persuaded the public, especially the mothers of young children, that all food must be thoroughly cooked, and that little children in particular should never eat anything raw. There were some people, living close to nature who protested against this unnatural feeding; they were contemptuously called food-fads, and their opinion was ignored by the medical hierarchy. When the morbidity and mortality rates of these scientifically fed children alarmed the public, the hierarchy did not admit that the food-fads had been right all along in their demand for fresh food with its natural molecular structure that makes it biologically active. The medical hierarchy countered with the dogma that every food consists of the foodstuff itself and one or more so-called vitamins which are supposed to be necessary for life. Their vitamins are now manufactured in numerous factories and bring more money than all other medicines together.

The American Indians discovered many centuries ago that smoking tobacco, which contains nicotine, sooths the nerves. As the nerves of pellagra patients are also soothed by nicotonic acid, the medical hierarchy has concluded that pellagra is due to lack of nicotonic acid in the diet. With their logic, they could just as well argue that rheumatic fever is due to lack of salicylic acid in the diet, as salicylic acid and its derivatives relieve the signs and symptoms of rheumatic fever. To cover up, the medical hierarchy has changed the name of nicotinic acid into "Niacin, a vitamin." In my opinion, a poison does not lose its toxicity by being called a vitamin. They have inveigled upon our Government to have our daily bread "enriched" with nicotinic acid and other poisons. Our Government should allow us to say the old blessing over our bread in all honesty: "Blessed art Thou, Lord our God, King of the universe, who bringest forth bread from the earth." A favorite vitamin is activated ergosterol, which has been given in rheumatoid arthritis in large doses with resulting calcifications and ossifications of the soft tissue. It is given together with calcium to virtually all expecting mothers under prenatal care, preventing the physiological softening of the maternal pelvis and causing the premature hardening of the fetal bones with the result that between one quarter and one half of our young healthy women are no longer able to bear children by their own efforts but need instrumental deliveries. Expecting mothers are being frightened out of their wits with the tale that the blood of the child a mother bears under her heart might be incompatible with his own mother's blood. As a scapegoat, the medical hierarchy uses the innocent RHesus monkey. I wonder what is greater, the senselessness or godlessness of this absurdity.

When the childbearing stage draws to an end, women in their "change" get estrogen injections for years on end, thus prolonging indefinitely the period of life during which cancers and mental disturbances most frequently develop. How far carcinogens amongst the vitamins might be responsible for the increase of cancer, leukemia, and other blood dyscrasias in general needs unbiased investigation.

After the Thirty Years War, animal organs and excretions became so popular as medicines that a special "Dreckapotheke" dirt pharmacy was published. In our war-torn century, medicine has returned to dirt. Mold-extracts like penicillin, streptomycin, etc., are now called antibiotics and praised as wonder drugs. They certainly are potent medicines, but no miracle drugs. The public has not been told that these dirt extracts may cause severe damage to the skin, liver, and kidneys, and sometimes even mental derangements. In this antibiotic age, the mortality rate of pneumonia in New York City has been kept at over 12 percent.

Paracelsus von Hohenheim (1493–1541) introduced the elements antimony and silver into western medicine. For a hundred years to follow, every physician who dared to try antimony was excommunicated by the medical hierarchy. It was only after King Louis XIV of France had been cured by tartar emetic, an antimony preparation, that the ban was quietly forgotten. Their fight against silver is still on. The polio monopolists are experimenting on mice with artificial encephalitis to find a cure for human poliomyelitis. They have been and still are preventing a fair clinical trial of silver treatment of acute poliomyelitis, though very good results of silver treatment were observed in humans suffering from encephalitis; this silver treatment has not caused any harm whatsoever. They prefer arrow poison which cannot cure poliomyelitis but can increase its death rate.

The medical hierachy is now treating patients suffering from rheumatic fever with cortisone, an extract of the adrenal glands. Effective doses cause hypercortisonism, and

prolonged use may cause atrophy of the adrenal glands with ensuing death. Some years ago, Swedish physicians demonstrated that severe cases of rheumatic fever could be cured within a few days without any drugs whatsoever by keeping the patients in an air-conditioned room at a tropical temperature. These United States produce more air-conditioning units than the rest of the whole world, but I do not know of one American hospital where this poison-free, effective, and safe treatment is carried out.

Most of these medical fallacies have as their solid background the close cooperation between the medical hierachy and the pharmaceutical industry with their medical hucksters. In order to overcome them, we need the open school, the open shop, the open state (free movement of American physicians from one State to the other 47 States in accordance with article IV, section 1, of our Constitution), and last not least, an open mind.

The Full Potential of Educational Television Must Be Realized Without Prejudiced Obstruction

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COLLIER. Mr. Speaker, during the adjournment months of Congress several members of the Committee on Interstate and Foreign Commerce conducted an extensive field study on educational television and its present and future place in our American system of education. This study was done in western, middle-western and southern States and covered all phases of educational work now being done through the facilities of television on both an in-school and home study basis.

One of the principal benefits cited in favor of educational television and its expanded use is the opportunity offered to equalize educational opportunities between areas with scattered populations, limited financial resources and inadequate or smaller schools with the better resources of other larger and better equipped schools. A second major argument for the expansion of educational television is one which must be given conscientious and unbiased evaluation, namely its wider use of superior teaching skills in the sciences and foreign languages. Subjects such as Spanish, Russian, German, chemistry, biology, physics, and mathematics may now be included in school curriculums through the use of educational television by expert teachers who become a part of the daily schooling in several classrooms at the same time. The number of students who seek instruction in highly technical subjects, like advanced mathematics, physics and chemistry, is constantly increasing, thus opening the door to a greater use of superior teaching skills through the medium which can be made available in practically every village and hamlet across the country.

As in any other field where established and conventional methods are employed, a wider and more effectual use of educational television is likely to encounter initial opposition in some quarters because of the normal tendency to resist changes from that which is customary. Progressive educators in some areas have moved forward with enthusiasm in this field. One very interesting presentation which I heard personally during the field study came from Mr. Joseph Hall, superintendent of the Dade County Public Schools, who pointed to an actual savings of $3 million in capital outlay in classrooms. Most interesting in his testimony was the following statement:

By using the large groups (300–400 students) involved in the television program and the extended school day, we are able to accommodate 30 percent more pupils in a building than we can otherwise handle. It works in this manner: Approximately one-third of the pupils report to school at 7:30 a.m., another one-third at 8:30, and another one-third at 9:30 a.m. They leave school at 2:15, 3:15, and 4:15 p.m. This means that for four periods during the middle of the day, the entire group of students is present in the building. In this period, by utilizing our school auditoriums for the large groups, we are able to accommodate a much greater number of pupils within the same facility. With the program we now have involving only a limited number of our schools, we feel that we have saved at least $3 million in capital construction. To provide for the number of pupils in the established pattern for education that we now have in our buildings would require an immediate capital outlay program of at least $3 million. We believe as we involve other schools that the amount of capital savings will be increased far beyond this point.

Mr. Speaker, during the course of hearings in which I participated, I had an opportunity to go into several classrooms during the televizing of a variety of in-school programs. In a biology class, for example, we watched youngsters intently observing the disecting of small animal life which had been magnified to a greater degree than would ever be possible under a normal microscope. We saw fourth- and fifth-grade youngsters who had learned Spanish through daily in-school television instruction carry on classrom conversations fluently in that language. We spoke to both grade school and high school youngsters in schools to get their reaction to the value of learning through this medium. We saw the specialized teaching personnel of the stations which work in the ETV studios. We studied with them their financial problems and the potentiality of expansion.

The work of the committee and the statements of a parade of witnesses was far too vast and detailed to permit a complete presentation at this time. It will, of course, be available to every Member of Congress when the subcommittee report is issued in the near future.

However, there is one conclusion that must be recognized. In-school educational television has a tremendous potential. It is now and can become an effective tool for better education, particularly in specialized fields. Every obstacle of prejudice must be removed so that its full potential, its advantages and its disadvantages, can be fully realized.

Adlai: Delectable and Electable

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. PORTER. Mr. Speaker Adlai Stevenson is the best man by far for President, many a citizen says most sincerely. And then, like as not, he will add, just as sincerely, "But he cannot be elected"

And why can he not be elected? Well, he has been defeated twice and now the prestigious University of Michigan Research Center has determined, to its satisfaction anyway, that Adlai Stevenson is not electable.

Adlai, it seems, is delectable but not electable.

Such defeatism only incenses many Adlai supporters who feel much like William R. Allen of the University of California. Under a previous consent I am including both the story from the Washington Post—January 18, 1960—about the survey research center findings and Mr. Allen's effusion from the New Republic of January 18, 1960.

I know a better poll than the one done by our expert public opinion probers in Michigan. It is called a primary. We have one in Oregon on May 20. Its results, as pondered upon elsewhere and especially in Los Angeles on or about July 11, 1960, can give an authoritative answer to the question whether or not Adlai can be elected President of the United States.

Under a previous consent, I am including here the article from the Washington Post and the article from the New Republic:

[From the Washington Post, Jan. 18, 1960]

POLL VIEWS ADLAI AS NOT ELECTABLE

(By Earl Mazo)

There is a great danger threatening Adlai E. Stevenson's prospects of becoming the Democratc nominee again.

A poll by the University of Michigan Survey Research Center, scheduled for publication in May, could trigger the finish of Stevenson's candidacy.

The poll, part of a book reporting on Nationwide samplings of why Americans vote as they do, says, in effect, that Stevenson is not electable.

Being the work of eggheads popularly regarded as Stevenson devotees, the poll actually an exhaustive depth survey taken over a period of years—may well bolster the contention of former President Harry S. Truman and other anti-Stevenson Democrats that the former Illinois Governor has the mark of a loser.

The book is called "The American Voter." Stevenson's image as a vote getter is dissected in a chapter entitled, "Perceptions of the Parties and Candidates."

The image projected by President Eisenhower—a phenominally favorable one—is also discussed, but no potential candidate in 1960 other than Stevenson is analyzed.

A few mimeographed copies of the manuscript have been circulating among top-layer Democratic leaders here, and there already has been much tongue-clucking and head-shaking, in private, over findings such as these:

Stevenson dropped 30 spectacularly in public acceptance between his 1952 and 1956 campaigns that more than half the voters interviewed in the poll sample thought of him unfavorably.

Many were actually hostile to Stevenson's campaign performance in 1956, and there was a sharp increase in expressions of irritations with some blend of eloquence, wit and urbanity which characterized Stevenson as a campaigner.

Despite his expertness in foreign affairs, his extensive travels abroad and his concentration on the subject over the years, Stevenson has made no real impression on the electorate as a man equipped to handle the Nation's foreign relations.

Stevensonian eloquence notwithstanding, the public remains largely unaware of his positions on vital issues.

[From the New Republic, Jan. 18, 1960]

A STEVENSONIAN SPEAKS

Recently I told a friend that I would never quite recover from my disappointment if the Democrats fail to renominate Adlai Stevenson in 1960. The friend expressed the fear that he might never quite recover from a third Stevenson campaign, because of the feeling of personal involvement which Stevenson uniquely inspires and the consequent trauma one experiences while following Stevenson's struggles.

Since a Stevenson campaign is different, it cannot be conveniently taken in stride or ignored. How unusual to observe high mental competence and scholarly sensitivity on the political rostrum. Here is a man who is articulate and literate, amusing and inspiring. Here is a man with a genuine interest in public issues and a fundamental urge to analyze, with a willingness to struggle and to sacrifice for comprehension and a scorn for oversimplification. Here, in short, is a man.

Many of us tend to be more Stevensonian than Democratic. Indeed, in light of the party's position in such areas as agriculture, labor, and monetary management, a professional economist may well feel that he can support Stevenson only in spite of Stevenson being a Democrat. For us, Democratic victory as such is little to bleed for, if, indeed, it is to be welcomed at all. Democratic victory without Stevenson as the candidate could easily be only a minimization of loss, at best, and not a maximization of gain. In most elections, the choice of the lesser evil is the best that is possible; with a man of Stevenson's caliber on the ballot, there is available a very different sort of alternative. I want to have that alternative next November.

To those who are Stevensonians and who believe that something less than the fate of the Republic hinges on which party is victorious in 1960 (and probably most Stevensonians are too sophisticated to believe that a Republican triumph would be tantamount to national total calamity), it is not very persuasive to say simply that "Stevenson can't win." For one thing, it is scarcely self-evident, to say the least, that Stevenson would stand a poorer chance than any other obvious candidate. But, strange as it probably seems to most practical (or practicing) politicians, those of us who are vastly more intrigued by the qualities of an extraordinary man than by the prospects of party victory do not feel compelled to fight out the question of which Democrat is most salable. We do not feel obliged to argue, even if we believe that Stevenson would run the best race; we feel it sufficient to contend that Stevenson should be nominated.

Do not come to me with an alternative to Stevenson unless you are willing to state the criteria and standards by which you decided on your alternative. And if your criteria and standards are in terms of electability rather than excellence, of strategy rather than principle, do not bother to come to me at all.

The things which hurts most about the Stevenson defeats of 1952 and 1956 is not that so many preferred a fatherly hero with a Huckleberry Finn smile and who looks and speaks like an inarticulate Daddy Warbucks. This was easily predictable—and many Democrats would have loved having such a candidate on their own ticket. The really depressing thing is the frailty of the idealism of some earlier Stevenson supporters.

Alas, some of those splendid liberals who so proudly proclaimed their dedication to the grand and the noble in 1952, and who so joyously expressed their gratification that in Stevenson they had a man worthy of their pure and glowing faith, appear now to have been only summer patriots. It is not difficult to be brave in the absence of danger or dedicated to an apparently winning cause. But the exacting test is: Are you prepared to draw a line decreed by mind and conscience and to defend that line irrespective of the odds on victory?

May of us believe, with Stevenson, that it is "better to lose the election than mislead the people." Some, whose primary allegiance is to partisan expediency, accepted that principle only in form and not in substance, as if it were nothing but campaign oratory.

To express the basic case for Stevenson in terms other than the probability of his winning the election, if nominated, is not to concede that his chance of winning is lower than that of alternative nominees. (Indeed, purely on the basis of strategy, there would seem to be wisdom in nominating a man who has in the past so effectively crossed swords with that frightening individual who, it is now apparent, will lead the Republicans into battle.) But it is true—and this, also, was easily predictable—that Stevenson's very assets have plagued him in some circles. Some are uncomfortable with a clever, quick, witty, thoughtful and courageous man. It is tempting to conclude that Stevenson is too good to be President. Speaking literally, that is nonsense, for the job calls for the best. However, speaking practically, Stevenson may be too obviously good to be elected President. Perhaps, in the tradition of Lincoln (but not of Wilson—or of Jefferson and other giants), electability requires that a man's talents be camouflaged.

I am perfectly willing to negotiate with the former supporters of Stevenson, but only on these grounds: (a) bring me a man of Stevensonian quality who (b) stands a perceptibly better chance of winning. I suspect that few will meet condition (b) and still fewer condition (a). I will be astounded if I am presented with a man who meets both conditions.

WILLIAM R. ALLEN,
University of California, Los Angeles.

Pope Denounces Anti-Jewish Bias

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mrs. DWYER. Mr. Speaker, there is no doubt that intelligent, responsible, and morally sensitive people throughout the world deplore the recent rash of anti-Semitic manifestations wherever they appear, here in America or elsewhere.

The civilized world cannot afford to tolerate such fundamentally uncivilized behavior without risking a repetition of the horrors and degradation of past anti-Semitic displays. Anti-Semitism is evil. It must be condemned and relentlessly opposed, especially by persons in positions of authority and influence.

This is why it is gratifying, Mr. Speaker, to read of the strong and unqualified denunciation of anti-Semitism in all its forms which His Holiness, Pope John XXIII, has recently expressed.

The Rome correspondent of the New York Times, Mr. Arnaldo Cortesi, has reported the Pope's severe condemnation of all forms of persecution and discrimination in the January 19 issue of the Times. It is a story, too, of the great respect and mutual cooperation that exists between Catholics and Jews and their respective institutions and organizations throughout the world.

Under leave to extend my remarks in the RECORD, I include Mr. Cortesi's report of the meeting between the Pope and a delegation representing B'nai B'rith, the international Jewish service organization, and commend it to our colleagues as an example of religious friendship and understanding:

POPE DENOUNCES ANTI-JEWISH BIAS—TELLS LEADERS OF B'NAI B'RITH HE ABHORS DISCRIMINATION—THEY HAIL RELIGIOUS AMITY

(By Arnaldo Cortesi)

ROME, January 18.—Pope John XXIII severely condemned anti-Semitism today, expressing detestation and abhorrence of all forms of persecution and discrimination.

The Pope was replying to an address delivered by Label A. Katz of New Orleans; president of B'nai B'rith, the international Jewish service organization.

Mr. Katz and a small delegation were received in a private audience in the Pope's private study in the Vatican.

The delegation included Maurice Bisgyer of Washington, D.C., executive vice president of B'nai B'rith; Max J. Schneider of New York, a member of the organization's international board of governors; Benjamin R. Epstein of New York, national director of the Anti-Defamation League of B'nai B'rith, and Bernard Simon of Washington, D.C., information director.

COOPERATION MENTIONED

The audience lasted almost 20 minutes. Mr. Katz spoke of the excellent relations and constructive cooperation between B'nai B'rith and many Roman Catholic organizations and institutions.

He spoke also of B'nai B'rith's warm friendship with the clergy and scholars of the church and of the Pope's dedicated efforts to promote world peace and advance the well-being of men.

Mr. Katz expressed appreciation of the Pope's profound understanding and keen sensitivity in revising some passages of the Roman Catholic liturgy in such a way as to respect the sensibilities of the Jewish people.

This was a reference to the action taken by Pope John last March and October when he ordered the deletion in some prayers of passages making objectionable references to Jews and Moslems.

DESECRATIONS CALLED GRAVE

After remarking that the Pope, when he was Apostolic Nuncio, or Ambassador, in Istanbul, Turkey, had "eased the anguish and aided the rescue" of Jews, Mr. Katz said:

"We share the concern of Your Holiness over the eruptive struggles between good and evil that challenge our generation and that of our children. The desecration of synagogues and churches—whatever the stimulation and motivation that underlies this behavior—is a matter of grave import to all

who have a deep-rooted belief in the inviolability and dignity of man."

"The discordant events of these past weeks," Mr. Katz continued, "caution us that there is an urgency for men of goodwill and democratic spirit to continue to stand together more resolutely than ever in defense of justice, morality and universal peace."

"We are confident that righteousness shall prevail," he said.

POPE'S REPLY NOT RECORDED

It is a Vatican rule not to allow the Pope to be quoted when he speaks in a private audience, so there is no record of what the Pontiff said in reply.

After the audience, Mr. Katz limited himself to saying that it had been extremely satisfying and that the Pope's response had been gracious and very gratifying. Vatican sources said the Pope had been positive and outspoken in his condemnation of anti-Semitism in all its manifestations.

Mr. Katz and his delegation had paused in Rome on their way to Israel, where they will confer with Premier David Ben-Gurion and participate in laying the cornerstone of a B'nai B'rith house. Later Mr. Katz will join other B'nai B'rith leaders for a meeting of the organization's international council in Amsterdam, the Netherlands, on January 26 and 27.

Civil Rights Again

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following most interesting editorial on the civil rights issue which appeared in the Boston Herald on January 5, 1960:

CIVIL RIGHTS AGAIN

One of the hottest potatoes on the congressional griddle this session will be civil rights. Both parties are committed to some kind of action on the subject in 1960, and neither is particularly hopeful of the result.

What makes the issue particularly hot this session is the demand for an antilynching bill in addition to the more or less routine proposals on school desegregation, voting rights, and school and church bombings.

Antilynch legislation has come to the fore again as a result of the Mack Charles Parker lynching in Mississippi last spring. When a Mississippi grand jury failed to bring in any indictments, U.S. Attorney General Rogers called the State's handling of the case a travesty on justice and promised Federal action. A Federal grand jury is hearing evidence in the case now. A report is expected in about 2 weeks.

But the Federal prosecutors are handicapped by weak Federal laws. Although the FBI is said to have overwhelming evidence against the lynchers, the heaviest penalty any of them might draw under the Federal civil rights statutes would be 10 years in prison and a $5,000 fine for conspiracy to deprive the lynching victim of his civil rights. (A State or local official might get an additional year in prison and $1,000 fine for violating Federal rights under color of State law.)

So the principal effect of the grand jury action will presumably be to show up the weakness of present State and Federal enforcement and heighten the pressure for antilynching legislation.

But what sort of legislation? That's the question that will bedevil Congress. The legislators could pass a law making lynching a Federal crime. But would it be constitutitonal? Lynching is just another name for mass murder, and the punishment of murder (unless there is a special Federal angle) is a police power reserved to the States.

In any case, how much would be gained by federalizing this crime? The Mississippi grand jury didn't indict the Parker lynchers, because it knew petit jurors in Mississippi wouldn't convict. A Federal trial would still be before the jurors and presumably Mississippi jurors (although some in that case would be Negroes). Would a Federal label make them any more tolerant?

Perhaps some legal and useful way can be found to strengthen the law against lynching. We certainly hope so. But the problem is not a simple one, and Congress will sweat before it finds a solution.

Meanwhile civil righters in both parties might do well to ponder Justice Douglas' dictum:

"The strength and vitality of civil rights are not measured merely by judgments of courts or verdicts of jurors. Their greatest measure is * * * the tenacity with which the community defends them, the care with which local governments foster and protect them."

The urgent need is to make Mississippi and other States of the deep South believe in civil rights.

Wilkes-Barre's Wilkes College Honors Adm. Harold R. Stark, Native of Wilkes-Barre, and Former Chief of Naval Operations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory from the Wilkes-Barre Record of Thursday, January 7, 1960:

WILKES HONORS STARK ON BECOMING CHAIRMAN OF COLLEGE'S TRUSTEES

Adm. Harold R. Stark, newly elected chairman of the board of trustees of Wilkes College was honored last night at a dinner in the College Commons, attended by more than 250 friends, trustees, and faculty.

Frank Burnside, speaking on behalf of the board of trustees, welcomed Admiral Stark back to Wyoming Valley and to Wilkes. He spoke affectionately of Admiral Stark as the intimate of statesmen and sovereigns who came from retirement to take command in time of need. "A proven and experienced leader answers the unanimous call of associates, friends, and the community," Mr. Burnside said, "to lead Wilkes College in its second quarter-century of service."

He recalled the spirit and character of Admiral Stark in perpetuating the ideals and program of Wilkes College, and who now leaves retirement to carry on in the tradition of the late Gilbert S. McClintock, first chairman of the board.

"A beloved leader is lost," he said, "and a gap is created in the ranks. A man steps in to fill the gap, humbly and almost shyly, though he has already earned several times over the highest honors his Nation and community can conceive.

"This tribute to Admiral Stark expresses to him the profound respect of this community and the gratitude of all those people who are Wilkes College," he said. Mr. Burnside regarded the appointment of Admiral Stark to this position of leadership as a motivating force "which will further the cause of liberal education, the cause of the community college, the cause of Wilkes College."

He quoted the role of Wilkes, as of all liberal colleges, to be "the creation of unity among diversity, the subordination of special interests to the general. This has always been democratic society's most challenging task. It is esepcially so in a pure democracy, and the liberal college is perhaps our closest approximation to a pure democracy."

In conclusion, Mr. Burnside said, "Here is the cause, here is the motivating force to which all of us here tonight, all of our friends of Wilkes and liberal education everywhere are dedicated. On behalf of our associate trustees, the administration, faculty, and all of the people that are or will be a part of Wilkes College, it is wonderful to have you abroad, sir, and to welcome you to your latest command."

Dr. Eugene S. Farley, president of Wilkes College, drawing a verbal picture from the career of Admiral Stark, illustrated Stark's quiet simplicity, real dedication, and integrity. "It is these personal qualities," he said, "that inspire all of us as teachers, board members, and students. It is this man, as Winston Churchill said, whose dedicated leadership meant so much to the free world. This same devotion to his community permits us to enjoy his leadership today."

Dr. Farley referred to the serenity which comes to all associated with Admiral Stark, "a serenity which comes when we do the best we can, accept the results whatever they may be with the knowledge that what we have done was accomplished to the best of our ability," he said.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Let's Help the Small Tobacco Farmer: Statements of Representative Ken Hechler and Senator Randolph Emphasize West Virginia Problems

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 20, 1960

Mr. RANDOLPH. Mr. President, there are some 4,500 farmers in West Virginia who harvested tobacco in 1958. The growers in our State produce on a small scale.

My colleague from the Fourth District, Representative KEN HECHLER, has most of these farmers in the area he serves—and serves so well.

It is my privilege, Mr. President, to ask permission to have printed a recent statement by Representative HECHLER before the meeting within the U.S. Department of Agriculture, Tobacco Division, to discuss the outlook for supply and demand of burley tobacco.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S HELP THE SMALL TOBACCO FARMER

(Remarks of Hon. KEN HECHLER, Democrat, of West Virginia, before the Tobacco Division, U.S. Department of Agriculture, January 14, 1960)

Gentlemen, when I appeared before you last year, I urged the Tobacco Division to resist attempts to reduce quotas in burley tobacco which would have reduced further the small incomes earned by many of the Nation's small tobacco farmers.

I was delighted that the Department of Agriculture did indeed resist this unwise and unwarranted pressure and retained tobacco allotments for the 1959 crop year at their 1958 levels.

The visible proof that your decision was a wise one is contained in the projected figures for the 1959–60 marketing year, which show that total supply—instead of increasing disastrously, as some feared—actually has declined in the past year from about 1,750 million pounds to an estimated 1,735 million pounds. I also understand that disappearance will show an increase this year which, based on a reasonable projection of existing market trends, may be in the neighborhood of 12 million pounds, or from 515 million pounds in 1958–59 to possibly 526 to 528 million in 1959–60.

This is ample evidence to me that tobacco, under the wise guidance of your division and the cooperative spirit of the growers, remains our most intelligently marketed crop.

I believe both the farmers and the policymakers in the Tobacco Division deserve the commendation of all citizens.

Now I would like to speak for a moment on the 1960 crop year and the manner in which it relates to my district, which lies in the Ohio Valley and embraces the major tobacco-growing area of the State of West Virginia. In fact, 4,191 of the 4,565 tobacco allotments in West Virginia—or more than 91 percent, are in the Fourth District, which borders the Ohio River.

These 4,565 farmers in West Virginia harvested only 2,211 acres of tobacco in 1958. The small size of the average quota is obvious—it amounts to only forty-eight one hundredths of an acre. All West Virginia growers are raising tobacco on a very small scale.

I would like to bring you up to date on a few additional facts about the State of West Virginia.

The State's unemployment continues high, and the rate of unemployment is the highest in the Nation. Nearly one out of seven members of the work force is unemployed. And there is no relief in sight for the depressed condition of the State's economy.

Many of the quota-holders in West Virginia have, in the past, held part-time or full-time jobs, with the income from their farms supplementing these earnings. Today, many of these farmers have lost outside employment. There simply are no jobs to be had, and they are attempting to subsist entirely on the pitifully small income from tobacco farming.

For many of these farmers, the cash income from tobacco often provides the only dollars they see during an entire year. It is their only cash crop. Therefore, I cannot emphasize too strongly the importance of this crop ot these small landholders. It frequently marks the difference between proud, self-sufficient living and the dependence upon public assistance funds to keep body and soul together.

The economic situation in West Virginia has improved only slightly since I reported to you in January 1959. Therefore, it is still just as urgent that the small farmer be given every reasonable protection under the law.

I would also like to suggest that some consideration be given to trying to increase quotas for small tobacco farmers in areas which the Department of Labor rules as "chronically depressed areas," with persistently high rates of unemployment.

Last year I was happy to support a tobacco bill which retained the principle of quotas and marketing supports but corrected a flaw which has developed in the modernized parity formula. This was a step to preserve and protect our export markets for tobacco, and I voted for it because I knew that tobacco farmers all over the Nation—in the spirit of cooperation and responsible citizenship which has characterized their statesmanlike attitude to the tobacco problem for many years—would be behind me in this fight.

Unfortunately, this bill, like many other good measures in 1959, met with a poorly-explained and unjustified Presidential veto. Now I have been advised that a compromise measure has been evolved and again will be offered to the Congress. It is my hope that an effective and workable tobacco bill can be enacted into law this year.

Legislation is not the only item on the tobacco horizon at this time. I have been advised that there is a move under way to request a general raising of tobacco allotments for the 1960 growing season.

It seems to me that the matter of increasing tobacco quotas must be approached with greatest caution. This should not become a political football for profitable kicking around during an election year—with the tobacco farmer left to reap the horrible consequences after November 8.

The tobacco farmer does not want to sell his long-range, effective program down the river for a few short-range benefits, and I recommend that any decisions, to alter the allotment structure in any way be made with this thought firmly in mind.

But I believe that the time has come to raise quotas for those small tobacco farmers now growing less than six-tenths of an acre. There is ample authority for such preferred and just treatment under the law. The Secretary of Agriculture is specifically granted such authority, in fact.

May I cite section 313(c) of the Agriculture Adjustment Act of 1938, as amended, which provides:

"The Secretary shall provide * * * for the allotment not in excess of the national marketing quota * * * for further increase of allotments to small farmers."

I hope that under the terms of this section of the law which governs tobacco growing and marketing that the division could provide some relief for the struggling small farmer. I further respectfully submit that such a formula could be instrumented without creating undue hardship upon the larger farmer and without exceeding the provisions of section 313(c).

May I propose for your consideration the following program:

For each farmer presently assigned an allotment of less than 0.2 of 1 acre, an increase of a flat 0.2 additional acreage shall be granted.

For farmers now growing from 0.21 to 0.3 of an acre, a sliding scale of increases not less than 0.15 acre but not in excess of 0.2 acres shall be granted.

For farmers with allotments from 0.31 to 0.4, an increase not less than 0.1 and not in excess of 15 shall be granted, again on a sliding scale dependent on previous acreage.

For farmers with allotments from 0.41 to 5 acres, an increase not less than 0.05 acre and not in excess of 0.1 shall be granted on the same sliding scale.

For all farmers with allotments of more than 0.5 acre, a flat increase of 10 percent of the 1959 allotment.

This would be a workable plan, within the framework of a 10 percent increase which I understand may be under active consideration within the division.

This would be an altogether reasonable formula which would not deny deserved increases to the larger farmer, would not upset the marketing and support program, and would provide benefits where they are most needed.

In addition, it would not even require the Secretary of Agriculture to utilize the full 5 percent benefit provision contained in section 313(c).

Under my formula, slightly less than 3.5 percent of the total national marketing quota would be set aside to benefit the small farmer.

If a 10 percent increase should be feasible, this would mean that the present marketing quota of about 310,000 would rise to about 341,000 acres.

Now, if the Secretary should choose to utilize only seven-tenths of the 5 percent "increase of allotments to small farms" provided under the law, this 3.5 percent increase would provide for the distribution of an additional 11,935 acres in increased allotments.

Sharing in this increase would be 25,000 farmers across the Nation who now hold allotments of 0.2 acre or less. A flat 0.2 increase would add 5,000 acres to their present production of only 3,095 acres.

The 13,700 farmers now raising from 0.21 to 0.3 acre could add 2,408 acres to their present production total of 3,425, under the formula I have outlined here. The 14,100 farmers now raising 4,935 acres would increase their production by 1,763 acres. This is the number of farmers with allotments ranging from 0.31 to 0.4 acre.

The 27,900 farmers with 0.41 to 0.5 acre would add 2,093 acres to the 12,555 acres they now grow.

And how much would this increase the national marketing quota?

I am happy to say that it would amount to a total increase of 11,264 acres—less than 600 acres of the 11,935 acres which would be provided for the small farmer if the Secretary will use the authorization of section 313(c) to increase allotments for small farmers not 5, but only 3.5 percent.

I firmly am convinced that in this way allotment increases could be apportioned among farmers who need them most. Every dollar added to their income would go toward providing a more stable way of life for them—and coincidentally would be pumped immediately back into the Nation's economy as the purchasing power of these deserving farmers increases.

This would be a humanitarian approach to the problem, and would render the maximum good for the largest number of people.

This, I believe, should be the underlying motive and governing factor if it is deemed possible to increase 1960 quotas.

The tobacco farmer wants these increases, if they can be granted without damaging the program which has proved the most successful and effective of an otherwise dismal farm administration.

They want to increase production and earn more dollars, but they do not want to return to the roller-coaster days of tobacco marketing, when a year of boom was followed by several of inevitable bust. The present program was an outgrowth of the problems raised by this damaging cycle, and the tobacco farmer is determined that it shall never return again.

The tobacco farmers of West Virginia have shown their patriotism by their record. They have stood with other farmers in defending and protecting their program even when it meant drastic reduction of their allotments in the face of falling markets a few years ago.

Consequently, the tobacco industry today is sound. Export markets apparently are weathering a serious storm and have risen about 30 percent over 1958. Disappearance is increasing and we all hope that its steady upward curve will continue.

It is most heartening that an increase appears to be justified this year or in the near future. For this I am truly thankful.

We must, at all costs, preserve the tobacco program which has been proven so effective.

If it does prove feasible to raise quotas for 1960, we should consider it only a matter of simple justice to distribute the major portion of this increase among the small allotment holders who depend so strongly upon tobacco to provide them with life's necessities.

Mr. RANDOLPH. Mr. President, I ask further consent that there be printed in the Appendix of the RECORD correspondence between Director Joe R. Williams and myself in reference to the subject of Representative HECHLER's address.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
COMMODITY STABILIZATION SERVICE,
TOBACCO DIVISION,
Washington, D.C. December 18, 1959.

Hon. JENNINGS RANDOLPH,
U.S. Senate.

DEAR SENATOR RANDOLPH: A meeting will be held at 9:15 a.m., e.s.t., on Thursday, January 14, 1960, in the Jefferson Auditorium, South Building, U.S. Department of Agriculture, Washington, D.C., to discuss the supply and demand outlook for burley tobacco and to obtain views and recommendations on the amount of the 1960 national marketing quota.

We shall be pleased to have any comments which you may wish to give us either by letter or telephone or to have you attend the meeting.

Sincerely yours,
JOE R. WILLIAMS, *Director.*

BURLEY TOBACCO SUPPLY AND DEMAND SITUATION

The carryover of burley tobacco on October 1, 1959, beginning of the current marketing year, totaled 1,236 million pounds, farm sales weight basis. This represented a decrease of about 50 million pounds, or about 4 percent, from a year earlier.

The 1959 crop of burley tobacco was estimated as of December 1, 1959, to be 500 million pounds, about 35 million pounds, or 7 percent, larger than the 1958 crop.

The total supply of burley tobacco (i.e., carryover plus estimated production) for the current marketing year is 1,736 million pounds, down 15 million pounds from a year ago. For the fifth successive year, the total supply has declined. The total reduction from the 1954–55 peak supply of 1,866 million pounds has been 130 million pounds, or 7 percent. At the current level of disappearance, the present supply is sufficient for a duration of about 3.4 years, while a supply of about 2.8 years' duration is considered normal under the formula contained in the Agricultural Adjustment Act of 1938, as amended.

Domestic consumption of burley tobacco during the marketing year ending September 30, 1959, was 480 million pounds, a gain of about 6 million pounds, or 1½ percent, over the previous year.

Exports of burley tobacco during the marketing year ending September 30, 1959, totaled about 35 million pounds, farm weight. This was a gain of about 7 million pounds from the level of the past 2 years, but about the same as during the 1955–56 marketing year. For the calendar year 1959, burley exports are running about 1 percent below the same period of last year.

It is estimated that cigarette production during the calendar year 1959 will reach an alltime high of about 488 billion, or 3.8 percent more than in 1958 and 12 percent more than the previous high of 1952. The quantity of domestic tobacco utilized in cigarettes has gained little in the last few years despite this substantial increase in the number of cigarettes manufactured.

It is estimated that the production of smoking tobacco during the calendar year 1959 will total about 73 million pounds, about 3 million pounds, or nearly 4 percent, less than in 1958. The production of chewing tobacco in 1959 is expected to be about 1½ million pounds, or 2 percent, less than in 1958.

U.S. DEPARTMENT OF AGRICULTURE,
TOBACCO DIVISION, CSS.
DECEMBER 1959.

JANUARY 13, 1960.

Mr. JOE R. WILLIAMS,
Director, Tobacco Division, Community Stabilization Service, Department of Agriculture, Washington, D.C.

DEAR MR. WILLIAMS: Thanks very much for your letter and the enclosed analysis of the tobacco supply and demand situation. The comprehensive statistics included are informative and helpful.

To my regret, previous commitments will prevent my attendance at your meeting but I appreciate the opportunity to express my views concerning the tobacco program for 1960.

I wish to commend the Tobacco Division of the Commodity Stabilization Service for maintaining stable growing and marketing conditions in the tobacco industry during the past year. I shall hope that this stability can be maintained throughout 1960. In allocating quotas for the present year, it is my opinion that special consideration should be given to the small tobacco farmer whose allotment is less than half an acre, and I respectfully urge your Division to take this action. There is ample authority for such action under section 313(c) of the Agriculture Adjustment Act of 1949, as amended.

There are thousands of small tobacco farmers in our State of West Virginia whose average allotment is only 0.48 of an acre. Many of them depend on tobacco as their only cash crop and an acreage increase would be of genuine assistance to them. This adjustment would be particularly important because of the areas of unemployment in our State which significantly affect its economy.

I would not, however, advocate any increase which would impair the tobacco program administered by your Division. If it is feasible to grant increases for this year, I strongly recommend that they be distributed to the small farmer, including the constituents which I am privileged to represent.

With kind regards and best wishes, I am,
Sincerely,
JENNINGS RANDOLPH.

Address of Mrs. Frank Lloyd Wright at Dedication Services of the Beth Sholom Synagogue, Elkins Park, Pa.

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. TOLL. Mr. Speaker, on Sunday, September 20, 1959, the new Beth Sholom Synagogue, in Elkins Park, Pa., was dedicated. The original congregation started in the congressional district in Philadelphia which I am privileged to represent, and the original building still stands at Broad Street and Wyoming Avenue.

Six years ago Frank Lloyd Wright accepted the invitation of the distinguished leader of the Beth Sholom congregation, Rabbi Mortimer J. Cohen, to design a new synagogue. The new building in Elkins Park is the only synagogue ever designed by Wright.

At the impressive dedication day exercises, Mrs. Frank Lloyd Wright, widow of the great architect, was the principal speaker. I believe that Members of Congress and other readers of the CONGRES-

SIONAL RECORD will enjoy her inspiring message and am including it below:

GIVE US THE TEMPLE WHEREIN TO WORSHIP

(Address delivered by Mrs. Frank Lloyd Wright at the dedication services of the Beth Sholom Synagogue, Elkins Park, Pa., September 20, 1959)

What can be greater than faith? Faith in man, in God, and immortality of the human spirit? What can be greater than faith that is made manifest through man's thoughts, heart, and action? What can be greater than a place in which he can momentarily withdraw himself from the chores and drudgeries of his physical existence to partake of a meditation sacred to his spirit? And what can be greater than man's innermost fulfillment of an idea that he cherishes more highly than himself?

For thousands of years he has searched for it in loneliness and solitude. He came near it in the glory of nature, in fields and meadows, in hills and mountains; he has searched in the midst of multitudes where he yearned to feel himself a part of his world and his universe; and when life forced him to live in the city, he seldom experienced the desired union with God in the crowded streets and the crowded day of his work. So he built for himself temples of worship where he could withdraw within the realm of his inner world to be inspired and sustained by the expression of beauty that his temple might offer him.

And all of the millions of men on earth built themselves temples according to the tradition and heritage of their faith. And the truer the expression of man's heritage and his faith the more perfect was the joy in which he exulted in union with his Creator.

Among the oldest of religions is Judaism. This great ancient faith established the traditions, the laws, the ethical excellency of human conduct through the Torah, the Pentateuch, and sacred symbols. Eternal light and the seven-branched Menorah graced its temples. "And let them make me a sanctuary that I may dwell among them."

Judaism has flowed like a mighty river from generation to generation to extol man's deep communion with God, communion which was direct as man to man in its simple exposition of the profound significance of its faith.

The synagogue was the temple of worship of this ancient religion. But it never had an architectural expression of its own in the form appropriate to the principle of its faith. Through centuries of the alternating rise and fall of civilizations the temple underwent so many changes that its character, its power, and its inspiration were barely recognizable in architectural terms. The synagogue was subjected to many other influences: Assyrian, Babylonian, and the Greek. The architectural character that the faith might have found for itself was completely lost as the ages replaced one another.

The 20th century bore sterile impersonal architectural forms without the faintest semblance of the principle which held above all the majestic sense that man and God are one. Insignificant copies of copies were scattered through cities of the world. And the synagogue stood humble on the street in ignorance of its own inner power.

Then in this somber 20th century of ours there rose an architect—a man who daringly built a synagogue through which the voice of God and Moses were called again to life in visible form. The spirit of Mount Sinai grew on a street, independent, strong, declaring its original faith when man spoke directly to God and God answered man. Their voices ring through sheets of glass and plastic—through steel and concrete—through living forms of today, binding them with the power of their noble past, to seal their legacy to the future. The white light like the breath of God pours through these walls and descends from this high pyramidal dome embracing the Torah, the Eternal Light; the Menorahs, the voice of the cantor, the rabbi, and the throbbing silence of the congregation.

Rare among men, this creator of new forms, when he designed and built, gave to each great religious faith its own symbol. This synagogue is the symbol of victory over the destructive forces and the persecution of the Jewish faith. It is a new architectural expression whose roots are dipped into the long measures of time, and which has once more risen in the proud dignity and character of its faith. This temple fulfills the indestructible wish of the human soul to share in divine beauty and to feel the presence of God.

Frank Lloyd Wright built the synagogue on Old York Road in a section of a suburb called Elkins Park and in a city called Philadelphia. Whoever comes to this synagogue, to whatever faith he may belong, his heart will be purified and he will hear the voice of God in answer to his deep sorrow. For there is no one among us in this precarious age of nuclear menace that does not feel a deep sorrow within. There is no one among us who does not yearn for a higher force, divine in nature, to strengthen the love and understanding of his fellow man. This is our only weapon in the face of the newly risen enemy.

Many have come already as a pilgrimage to the Beth Sholom Synagogue—the living symbol of Mount Sinai—to refresh the spirit, to clarify the mind, and to purify the heart. And those whose heritage is the faith of Judaism will feel that once more they have come back home to their great religion to fortify their faith in man and God.

Reappraising the Goals of Public Education

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 20, 1960

Mr. KENNEDY. Mr. President, on December 1, 1959, Mr. Palmer Hoyt, editor and publisher of the Denver Post, addressed the California school administrators in San Francisco, Calif., upon the subject "Reappraising the Goals of Public Education." I believe this speech outlines very clearly the need for an accelerated program of Federal aid.

It is especially significant as a plea for a sense of urgency. Mr. Hoyt has called attention to the same problems for a number of years. It is my hope that this session of the Congress will result in some action.

I ask unanimous consent to have Mr. Hoyt's speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REAPPRAISING THE GOALS OF PUBLIC EDUCATION

(By Palmer Hoyt, California School Administrators, Dec. 1, 1959, San Francisco, Calif.)

Mr. Chairman, ladies, and gentlemen, thank you for according me the high privilege of talking to you who have the future of this country so much in your hands.

I am not here as an expert, but as a layman who is also a newspaper editor, and thus, to some degree, an educator, since newspapers are still considered to be the No. 1 medium of adult education.

I am here primarily, however, as an American citizen who is vitally and principally interested in preserving this Nation under God—and to help again test Abraham Lincoln's immortal question, "whether this Nation or any nation so conceived and so dedicated can long endure."

The fact that we are here today to discuss the problem of our continuation as a nation is significant; thus, I believe the problem half solved, because we recognize it.

And what is the problem?

The problem as I see it, my friends, can be simply stated:

It is survival.

And don't, if you please, just capitalize the "S"; capitalize all the letters.

To delineate your continuing responsibilities as educators, we should go back a little to October 4, 1957, when the Russians startled the world by launching Sputnik I. Never had anything so small upset so many.

The appearance of this tiny satellite in our skies shocked complacent America to the grassroots. The reverberations of this scientific earthquake rolled on into the high places of Government, the moneychanging temples of Wall Street, into the churches and cathedrals, into the halls of learning and into every American home.

The people asked: "What is wrong? We thought we were better than the Russians, and way ahead of them in all things."

Men in high official places replied reassuringly with such phrases as:

"A neat scientific trick."

"They shot a piece of iron into the sky, so what?"

"Sputnik has no military significance."

The President also attempted to give reassurance, but the people found scant comfort.

And then, someone came up with the answer: "Our schools have failed, our teaching system is inadequate. Education is responsible for our dilemma. We just don't have enough scientists. We don't have enough technologists."

Everybody, but everybody, bought that one. And, of course, everybody was very happy indeed; that is, everybody but the educators.

Crash programs were suggested, the debates in Congress rose to fever pitch, soul searching became a national pastime. The hue and cry to quickly turn us into a Nation of astro-physicists was in full flow.

The outcry was understandable—and it reflected a very real need—the need for more graduates with scientific training.

But largely neglected was an equally great need, which was indicated by the statements of our highest officials when sputnik went up. We got another clue to this equally great need when, about that time, someone reread the famous Smyth report, which, as you know, is the story of the Army atomic bomb project.

The clue was in one of the sidelights of the Smyth report. This was the revelation of the lack of interest shown by the Navy, which was first aproached on the possibilities of making military use of atomic fission. The Navy apparently saw no practical application in the breaking of the atom and said in effect:

"Don't call us; we'll call you."

The attitude of the Navy, and the ill-conceived statements in response to sputnik, might well be taken as proof that we need to educate not only scientists, but also all-around men and women who understand enough about science, and the humanities as well, to provide the leadership and judg-

ment that may prove more important to a nation in peril than either bombs or satellites.

Perhaps we should stop a moment to decide what education is, or should be.

As I see it, education is preparation for life.

Education is preparation for service to the Nation and to mankind.

The purposes and techniques of education generally are tempered by each nation to fit its national purposes.

Example: In Russia, education is shaped to carry out national objectives that include bringing the world into the fold of Russian communism.

In Russia, education is adjusted to the idea that the state is supreme.

In Russia, the state is supreme. In Russia, the individual is the servant of the state, and exists for no other purpose. The state is the master.

In this America of ours, it is different. Here education is and should be directed to the competence, dignity and freedom of the individual so that he, in turn, can better serve the State that has been formed and exists for his benefit.

Now, in time of vital crisis, it is all important that recognition by the American citizen of his responsibilities to destiny be clear cut and immediately implemented.

We properly consider ourselves more enlightened than the Russians, because we believe in freedom and they do not.

But it does not mean that we shouldn't recognize their superior practical adaptation of their educational system to their own philosophy.

We cannot brush aside the fact that they are substantially ahead of us in many things, from the production of space vehicles to the production of doctors in great numbers.

We should no longer cling to the mistaken idea that we are superior to everybody in everything—to do so is not only the path to destruction; it is destruction.

But in searching for an explanation for the successes of our principal rival, let's not make an equally grave mistake. Let us analyze the Soviet educational system for clues to their successes, without foolishly assuming that their system would be suitable for us.

So if, ignoring their achievements, and doing nothing about them invites destruction from without, adopting their system means destruction from within.

History offers us parallels, one of which is the rivalry between ancient Athens and Sparta.

I am going to quote a passage on the subject, from "A Study of History" by Arnold Toynbee, which is pertinent because, in the work, Toynbee is principally concerned with the reasons for the rise and fall of civilizations. He is describing the solutions offered by the Utopian philosophers of Athens after the Athenian society passed its Golden Age and had begun its decline. He says:

"The first concern of the Athenian postwar philosophers was to repudiate everything that for two centuries past had made Athens politically great. Hellas, they held, could only be saved by an alliance between Athenian philosophy and the Spartan social system. In Plato's Utopias and Aristotle's alike, the aim is not the happiness of the individual, but the stability of the community. Plato advocates a general censorship over 'dangerous thought' which has its latter-day parallels in the regulations of Communist Russia, National Socialist Germany, Fascist Italy, and Shintoist Japan. The Utopian program proved a forlorn hope for the salvation of Hellas. * * *"

I was thinking only recently of the glory that was Greece and the grandeur that was Rome and wondered, somewhat idly, what our opposite numbers were thinking about when Greece was about to become Glory and Rome about to become Grandeur. Apparently the Greeks realized in Athens that while the pursuit of knowledge is man's noblest aim, they did not realize that a practical application of that knowledge is a mighty handy thing to have around, what with the nearby barbarians getting more barbarous by the minute.

The Greeks in Athens, and the Romans in Rome, came to the end of an epoch apparently without much awareness of their fate. But whether they knew it or not, they didn't survive it.

Have we come to the end of an epoch? We have unless we have learned something from history.

We Americans are today on stage in the greatest of all dramas—the struggle of a civilization to survive. We hope the play will have a long run, and that we will take many curtain calls, not just for ourselves, but for the whole human race as well.

I mentioned earlier that the American people were happy to blame education for our falling behind the Russians. But the real blame belongs to the American people.

We have in education just what we asked for. If it isn't good enough, it is our fault; we the people can have better.

We need better—better educated men in all walks of life. The need is great.

An anonymous sage once said, "Great minds discuss ideas, average minds discuss events, and small minds discuss people".

In this complex age, we live or die by the greatness of our minds, our ability to understand, transmit and use ideas.

Unless our educational system is geared to the production of great minds, our chances for survival are severely limited.

You recall the line from Gilbert and Sullivan's Mikado, "Let the punishment fit the crime". So may I say, let education and the training of our young fit the need—and the need is for men to match the times.

And to me, this need adds up to a definite, specific and rapid step-up in quality and quantity of our educational processes.

It has been estimated that there is a shortage of 135,000 public school teachers at the present time. This much we need merely to meet the requirements of our expanding population, and doesn't begin to fill the bill that all-out competition with the Russians entails.

It would take a tremendous outlay just to hire these missing teachers at today's rates, assuming we could find qualified people.

If we found them, could we talk them into becoming teachers at present salaries?

Present salaries, of course, aren't enough to attract the minds we need.

So, if we want better minds—which we must have—to be attracted to the field of teaching, and if we want them to put in the extra preparation to enable them to really master the subjects they are going to teach, then we are going to have to offer commensurate salaries.

Obviously there is a special need for science teachers—and a great shortage exists—because potential science teachers are being constantly lured into private employment at high wages.

But what of the shortage of language teachers? It has been established on competent authority that of the 30,000 to 40,000 language teachers in the United States, only 200 are fully qualified to teach Russian.

This contrasts with the vast number of Russian teachers who are teaching 6.5 million Russians to speak English.

Are languages as important as science? They are and absolutely are. If Americans are to hope for world leadership, they've got to be able to speak the world's languages.

Example: Mr. Justice Douglas told me recently that when he was in Tehran, there were 55 people in the American Embassy, and only one could speak Persian. As far as the Justice could find out, the Russians had a comparable number in their embassy, and all could speak Persian. Unfortunately this sort of thing is more the rule than the exception.

It is not just the scientists and the linguists we need; we need everything that education can produce.

We need most urgently the kind of people who can think our problems through to possible and logical solutions.

These people are going to come from the 2 percent of superior minds and the 8 percent of above average minds.

And it is going to cost money to give the 2 percent and the 8 percent the kind of particular attention their potentials deserve. We can no longer afford to retard the superior for the benefit of the average and the subaverage. On the other hand, we can't afford to neglect the other 90 percent. Their adequate education is vital to the continuance of our type of civilization, for these are the ones who must make the ultimate decisions on which our existence will be based.

For what else do we need money? It is obvious that we are going to have to provide more teaching facilities—classrooms, laboratories, and textbooks—to take care of needed teachers and expected students.

Thus we are going to have to spend more money, and spend it more wisely than we have yet done.

We've got to get rid of our built-in and often unreasonable prejudice against Federal aid for education—and against State aid, too—too many small school districts with limited tax resources.

The positive case for Federal aid rests on two very simple facts:

The first is that only the Federal Government has the taxing power to give the big boost that our national educational drive needs.

The second is that unless our national leadership gives us a bold program, it is not likely that enough boldness will arise spontaneously from the States, school districts, and individual citizens.

But instead of a bold package to meet the crisis, we have had from Washington only a bundle of timidity in gaudy, deceptive wrappings.

The provisions of the National Defense Education Act of 1958—our only national legislation to meet the sputnik challenge—sound imposing. The act provided loans to students, fellowships and grants to State agencies to improve science and language teaching. In all, it has made about $125 million available thus far.

But it did nothing to help solve our two greatest problems, the classroom shortage and the teacher shortage.

Let's face it. This $125 million is only a drop in the bucket—not even a dollar a citizen. We will have to spend additional billions in education where we are now spending only millions.

We've been talking about billions since October 4, 1957. Now we've got to quit talking so much and do some acting instead.

I've made several references to the date of the launching of the first Soviet sputnik. I have, because I believe it to be one of the most important dates in American—yes, American—history.

For us it was, or should have been, what the bullfighters call the moment of truth, the decisive moment, if you please.

For us it was, or should have been, the turning point, the time when we awakened to the danger and decided what we should do to overcome it. On that date we became a second-rate Nation. We have successfully maintained that status since.

In those dark moments of realization, I recall many voices raised in warning and in promise about the effort we would have to make in public education.

I recall it well, because I happened to be one of those who spoke in this vein at the time.

In the reading I did in preparation for today's talk was a speech I made to the presidents of the land-grant colleges. The date

was November 14, 1957, 6 weeks after the sputnik launching.

The speech is significant now principally for one reason. So little has happened in America since that time that I could repeat that speech today virtually unchanged.

My theme then, as it must remain yet, was that we were in a bad fix; that we were doing precious little about it; and that we had better get busy doing a great deal about it or we were lost.

The pleas for urgent action are still needed—because we have taken so little action. It is almost as if we have been asleep these past 2 years, years in which, I guarantee you, the Rusians have not been asleep.

Rereading that speech has been a startling experience. The experience spells out for me this thought:

If we do not start making our supreme effort very soon, if we do not start providing the intelligent and tough-minded average American with some truly creative leadership very soon, it will very soon be too late.

I have mentioned the address I made before the land-grant presidents in November 1957. I would like to close this talk with the same words. And though few of you will recall it, they are the very same words with which I ended my address before this group in Long Beach on October 20, 1954.

I'll tell you why I want to restate these oft used phrases. So much is needed and so little has been done since 1954 and particularly since 1957, that these thoughts are perhaps more appropriate than when they were spoken before. These are the exact words:

"Every civilization thus far devised by man has written its own epitaph, and all men have had a part in that. I suppose it makes little difference to us what will be said of us in the year 3000, but we are proud enough, on the other hand, to want to pass on to the people of that time our worthiest contributions. You, I am sure, do not want to leave to posterity such a sorry picture of your service, such a monument to your efforts, as T. S. Eliot once penned about the British upper classes:

"'A cry from the north, from the west and from the south,
Whence thousands travel daily to the time-kept city;
In the lands of lobelias and tennis flannels
The rabbit shall burrow and the thorn revisit;
The nettles shall flourish on the gravel courts,
And the wind shall say: "Here were decent, Godless people;
Their only monument the asphalt road
And a thousand lost golf balls."'

"Americans, of course, would leave behind many more lost golf balls than that, without counting those that Mr. Eisenhower has driven out of bounds. They may, if they're not careful, leave a whole lost heritage of freedom, for their descendants to mourn.

"Freedom lives and thrives at the grassroots—among the men who work, the women who keep house, the children who go to the local school. And there freedom can die, as it has died in so many lands."

Progress and Prosperity in Formosa

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article by John O'Donnell, the eminent columnist, appeared in today's New York Daily News.

Mr. O'Donnell does well to call his readers' attention to the spectacular prosperity and progress of Formosa, or Taiwan, under the government of Generalissimo Chiang Kai-shek. We hear so much about the strides made in Communist-dominated lands, notably on the Chinese mainland, that we lose sight of the truly magnificent progress and prosperity that has developed on the island of Formosa.

When will we start praising and helping our friends instead of our enemies. We can and should all be proud of what the general has achieved, because we helped him to this great achievement.

PROGRESS AND PROSPERITY IN FORMOSA

(By John O'Donnell)

WASHINGTON, January 19.—In all the hoopla over the defense pact the United States signed with Japan today, we shouldn't lose sight of the fact that our strongest ally in the Far East—bar none—is still the Nationalist China of Chiang Kai-shek.

We're not just referring to the fact that Chiang has some 600,000 crack troops under arms, compared to a mere 200,000 or so for Japan. We're also thinking of the unpublicized but fantastic industrial development which has made Formosa the greatest model of progress-through-freedom in the whole of Asia.

The accomplishments of the Nationalists have been literally smothered under the myths and phony facts which Chiang's enemies have been spreading for years. Plenty has been written about the industrial gains in Communist China—so much so that there have been fears that the propaganda might lure some weak-sister Asian neutrals into the Red orbit. But nothing—or practically nothing—has been said about the much more spectacular economic and industrial feats of the Nationalists.

The actual fact is that Nationalist China is the fastest developing nation in the Far East. Although Japan is a bigger industrial power, Nationalist industry has been growing 16 times more rapidly in the last 8 years. Its agricultural efficiency also matches Japan's, which is considered a world model.

Communist China has used the full force of regimentation and brutal repression in its frantic drive to lift its economy into the 20th century. But U.S. experts said Formosa will make the grade first; its individual productivity is already running 30 to 40 percent ahead of the mainland's.

And the striking as well as significant thing about the Nationalist progress is that it has been achieved mostly through private enterprise rather than government action. In Red China, India, and the other underdeveloped countries of Asia, the great push toward industrialization has been through government planning and action.

THE FARMER'S LOT HAS IMPROVED

Another generally unrecognized fact is that Nationalist China has carried out the most effective land reform program in Asia. Some 80 percent of the farmers now own their land and the other 20 percent are charged only moderate rents. And their income has jumped more than 100 percent.

Nearly all of the farms now have bicycles, sewing machines, radio sets and other modern conveniences. Many of the girls are sporting beauty aids like lipstick and powder. And before long, every farm will have access to electrical service. Countries such as India, can't claim anything like this.

The United States has, of course, poured millions of aid into Formosa. This has certainly given its economy a boost, but the money has gone mainly toward shouldering some of the burden of the 600,000 troops. And American aid experts said that the Nationalist record of self-help is better than any other Asian country's, except perhaps Japan. In fact, it is now exporting more goods to other nations than it is importing.

It may not be surprising that Formosa is the second largest sugar supplier in the free world. But it may be an eyebrow-lifter to most people to realize that it ships aviation gasoline all the way to Australia, that it runs the largest oil refineries in Asia and has built two 35,000-ton supertankers, and sells machinery and other metal products all over the Far East.

ITS GOODS FLOW INTO WORLD

It makes first-rate sewing machines, electric fans that rotate a full 360 degrees, fluorescent tubes, cement, textiles, plastic goods, metal lathes, toys, and, under American guidance, jeeps. These goods are flowing into international trade, especially to Japan and southeast Asia, and they are more than holding their own with their competitors. Always a dominantly agricultural economy, Formosa is rapidly becoming widely diversified. And this is having a stimulating and healthy effect on the naton.

In terms of cold war politics, this economic phenomenon in Formosa is immensely significant, even though the facts have been largely ignored or distorted. And if the West did a better job of telling the story in India and the other free but neutral nations of south Asia, there might be fewer illusions about the accomplishments of Red China.

For reasons buried deep in China's recent tragic past, Chiang Kai-shek has never been popular among the so-called free nations of Asia. Even though he never resorted to the mass brutality of the Communists, he was accused of failing to give the Chinese people a fair deal.

THEY'LL SIT UP AND TAKE NOTICE

What has happened in Formosa is a ringing rebuttal to his critics. Under him, the island has shown incredible economic progress through great energy, private enterprise, little government interference, massive land reform, and a vigorous attack against disease.

More than anything else, underdeveloped countries are impressed by the economic progress shown by their neighbors. American authorities feel that as Formosa's accomplishments become better known, as more and more of its industrial products move into south and southeast Asia, these countries will sit up and take notice. Some of the old anti-Chiang prejudice will be reduced—and the achievements of a free economy recognized.

Helping this trend, of course, will be Communist China's own muscle flexing. The more it shows its real colors to its neighbors the more readily will they accept the example and the lesson of Nationalist China.

Role of American Labor in World Affairs

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 20, 1960

Mr. HUMPHREY. Mr. President, in a recent edition of the USIS Feature Service distributed by the U.S. Information Service, there appeared the text of a statement by Mr. Harry Pollak, AFL–CIO international representative. This splendid statement, called "The Role of American Labor in World Affairs," points out the practical activities of the

American labor movement both in attending international meetings and in aiding technical assistance programs in all areas of the world. We are indebted to our great free labor movement for its ceaseless fight for a better America and a strong free world.

I am pleased to call the attention of the Senate to this document. Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE ROLE OF AMERICAN LABOR IN WORLD AFFAIRS

(By Harry Pollak, AFL–CIO international representative)

The American Federation of Labor and Congress of Industrial Organizations spends nearly a million dollars per year of its sorely needed income for international work of one kind or another.

A trade-union school in Kenya has been constructed partly through funds from our labor movement. Plantation workers in Honduras and Guatemala have been getting technical help from an American trade-union organizer. An American trade-union representative will be loaned to the International Confederation of Free Trade Unions to help resolve an industrial-relations problem in the Far East.

This is the kind of practical assistance which the AFL–CIO believes is necessary in order to achieve a really stable world under conditions of social and economic justice.

U.S. labor's participation in international affairs is not of recent origin. Labor historians often note the role of Samuel Gompers at the Versailles Conference in 1919. It was Gompers who helped lay the foundation for the International Labor Organization—an intergovernmental structure, composed of representatives of government, labor, and management, which helps to set up improved labor standards as models for governments to follow.

Long before the existence of the AFL–CIO, individual trade-union representatives traveled to Western Europe to attend various trade-union congresses. But the real activity did not begin in earnest until after the Second World War.

American labor was ahead of many other groups in developing a genuine international concern. Both the AFL and CIO contributed generously to relief and rehabilitation work in Europe and the Far East after the war. Of the utmost importance for the future was the yeoman work which U.S. labor performed in helping to rebuild the shattered trade-union organizations so that they could perform their basic function and, at the same time, ward off Communist penetration.

In the office of the AFL–CIO's secretary-treasurer in Washington there is a painting of two workers clasping hands and underneath is the simple inscription, "Offering of thanks from the German people to the workers of America in gratitude for assistance in time of need."

Another phase in U.S. labor's international role was the establishment of a workers' U.N. In 1949 the AFL and CIO participated with representatives of almost 50 million workers from 53 countries to form the International Confederation of Free Trade Unions. For the first time, international labor was to look beyond Europe and North America to the newly emerging worker movements of Latin America, Africa, and Asia. The ICFTU chose as its slogan: "Bread, peace, freedom," and emphasized that they were indivisible.

American labor is working ceaselessly with other trade-union movements in the free world to make these aims a reality. More fortunate than many of its brethren throughout the world, it has provided the services of its representatives for special assignments in far-off places.

It is not unusual to see a veteran American steelworker like Nick Zonarick of Pittsburgh in McKenzie, a remote mining area of British Guiana, helping the workers strengthen their infant union; or Maida Springer, a garment worker from New York, doing educational work among women laborers of Nairobi, Kenya; or Kermit Mead of the United Automobile Workers lecturing to Italian and French metalworkers on time and motion study techniques.

Even closer to home, Bill Doherty, Jr. of the Letter Carriers and Ernie Lee of the Retail Clerks are helping to stimulate trade union development in Latin America. The names of these "labor missionaries" are legion. I have given only a sampling.

The struggle to establish and protect free and democratic trade unions is not an easy one. History has demonstrated that where totalitarianism comes into power, the first target for infiltration and destruction is the trade union movement. And conversely, when tyrannies become unbearable, among the first to raise the banner of revolt are the workers. Witness East Germany in 1953, and later Poland and Hungary.

I am proud to say that American workers responded generously in helping thousands upon thousands of Hungarian freedom fighters to reestablish themselves. They gave of their funds, their energies, and their moral and spiritual support in the herculean task of resettling these new immigrants on our shores.

Abroad, U.S. labor is helping to add a further dimension to the role of our country in international affairs. It has recommended many experienced trade unionists from its ranks for work with America's oversea embassies as labor advisers, labor attachés, and labor information officers; and as technical assistants in specialized fields of apprenticeship, safety and the like.

In many parts of the world, a union card is helping to open doors which are sometimes closed to the professional diplomat. In Japan a former shipbuilding union officer, a machinist union leader, and a labor newspaperman form an able team to assist U.S. policy in the labor field and interpret American labor to the Japanese worker. There are many others like them performing similar roles—a textile worker in Athens, a meat cutter in Brazil. The list is long.

At home, American labor has extended its hospitality to thousands of visiting trade unionists from other countries. We have opened our union offices, our homes, and our hearts to them. We have demonstrated that America is a land of many groups, many virtues and defects—and that these groups, including labor, all have a part to play in developing a meaningful and satisfying life.

Why are we interested in what happens to other workers? Why should we help other unions half way round the world? The answer is simple: humanitarianism and enlightened self-interest.

Whether it is Calcutta or Paris, London, or Accra, Buenos Aires, or Tokyo, we are all linked together. Bread, peace, and freedom in a shrinking world are indivisible.

Address by General Committee of Assembly of Captive European Nations Relating to Captive Nations

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 20, 1960

Mr. DOUGLAS. Mr. President, with the passage of the Captive Nations Week Resolution on July 17, 1959, Congress once again expressed its deep concern over the subjugation of the peoples of eastern Europe and in the Far East by the Soviet Union and Communist China and its support for those peoples in their aspirations for freedom and independence.

In the recent conferences of the leaders of the Western Powers and in their forthcoming meetings with the head of the Soviet Union, it continues to be a matter of first importance that the agreements of the Soviet Union for self-determination and free elections in those enslaved countries are not overlooked, ignored, or by an implication undermined.

One of the most timely and penetrating warnings against any retreat on this issue was on December 4, 1959, addressed to President Eisenhower, Prime Minister MacMillan, President De Gaulle, and Chancellor Adenauer by the General Committee of the Assembly of Captive Nations, of which the distinguished Dr. Peter Zenkl is chairman.

This appeal makes quite clear the necessity of maintaining our strong position in support of the freedom of these peoples, not only because it is their right, but also because it is a major factor deterring Communist aggressive thrusts against Western Europe.

For the information of Members, I ask unanimous consent that this significant address by the General Committee of the Assembly of Captive Nations be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY THE GENERAL COMMITTEE OF THE ASSEMBLY OF CAPTIVE EUROPEAN NATIONS, DATED DECEMBER 3, 1959, TO PRESIDENT EISENHOWER, PRIME MINISTER MACMILLAN, PRESIDENT DE GAULLE AND CHANCELLOR ADENAUER, IN CONNECTION WITH THEIR MEETING IN PARIS, ON DECEMBER 19, 1959

SIR: The silenced peoples of Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Romania are looking forward with hopeful anticipation to your forthcoming meeting with the heads of the British, French and German Governments. They enjoin us, their spokesmen in the free world, united in the Assembly of Captive European Nations, to impart to you their anxieties and their hopes at this critical juncture of your quest for a durable peace.

The messages reaching us from our homelands are disturbing. They advise that the Communist rulers, who usually mirror with accuracy the mood of their masters in the Kremlin, have never before displayed a more genuine self-confidence. They stress that, under the impact of recent international developments, discouragement is alarmingly spreading among the overwhelming majority of the people. And they warn that unless events will soon disprove the widespread feeling that Soviet power and communism are irresistibly on the march towards their goal of world conquest, resignation or worse would set in.

It is widely recognized in the West that the resistance of our peoples has been and is a major deterrent to further Soviet aggressive moves in Europe. It is widely accepted but equally true that their freedom and independence remains the very condition of a durable and secure European peace. If so, the West has a vital stake in keeping alive the spirit of resistance of our peoples and in working tirelessly for their release from their present bondage. This propostion, we submit, will be increasingly valid in the years ahead.

The approaching nuclear stalemate, far from diminishing Soviet pressure upon Western Europe, will only intensify it. The Berlin issue and other crises and showdowns will be used by the Soviet to demonstrate that the main element of American military power, nuclear retaliation, has been neutralized and that Western Europe has therefore been left defenseless. Intense political warfare will be waged to disrupt NATO and to lure the Western European nations into neutrality and ultimate absorption into the Communist orbit.

Soviet propaganda is already preparing the ground for the coming political offensive in Western Europe. It tries to condition the public to the idea that the balance of power has so decisively shifted in favor of the Soviet Union that peace on Soviet terms has become the only alternative to a cataclysmic war. It fosters wishful thinking and the search for "easy ways out" by nurturing undue reliance on such factors as the pressure of the Russian people for improved living standards, or Soviet-Chinese rifts. It carefully promotes artificial distinctions, such as the very strict ground rules, proposed by Premier Khrushchev, with regard to "relations between states", in contradistinction to a completely unregulated "ideological struggle". Thus, all Western political and propaganda activities would, perforce, come under the first heading while no hold would be barred for activities carried out throughout the world by the Soviet Union under Communist Party label.

We believe that, confronted with such a purposeful offensive, the West will come to share our conviction that it is no longer realistic to separate the struggle for the defense of freedom in Western Europe from that for the recovery of freedom in Eastern Europe. Without a strong and more self-reliant Western Europe the outlook for the captive countries is dim. Conversely, the transformation of the captive countries from liabilities to the Soviet Union into political and military assets for Soviet expansion would render the defense problem of Western Europe substantially more difficult if not unmanageable.

We are the last to question the widespread thesis that the most valuable contribution to a joint European freedom struggle would be, at this stage, a greater effort to expand the non-nuclear NATO forces in Western Europe and to accelerate the process of European integration. The Soviets now possess in their superior land forces a dangerous means of political pressure. We, therefore, realize that an adequate Western counterweight to these forces would not only neutralize this Soviet advantage and thus safeguard Western Europe against Soviet advances by political means, but would also assure the time required for long-range solutions in regard to captive Europe to develop. In our view, however, to render these long range solutions possible and to remedy the immediate problem of discouragement in our countries, further steps are required.

First, it is incumbent upon the Western Powers to refrain, in any conferences of negotiations with the Soviet Union, from entering into arangements, on issues of substance, participation or procedure, which would be incompatible with the legal and moral obligations of the great powers, and/or which would explicitly or implicitly confirm or prolong Soviet domination over the erstwhile free nations of Central and Eastern Europe. The recognition of the East German regime, for instance, would implicitly be tantamount to the sanctioning of the political status quo in Eastern Europe. And the insistence with which the Soviet rulers seek to obtain the stamp of legitimacy on this status quo makes it quite clear that they would like the Western abandonment of the east-central European countries to accomplish what neither Soviet terror nor Soviet lies had been able to achieve, namely, the resignation of our peoples to their present fate. Such recognition would not only deprive the West of an important element of its own security but would also severely undermine the faith of the smaller nations, committed and uncommitted, in the dependability of the Western Powers.

Secondly, the Western Powers should avail themselves of all international conferences and forums to urge the Soviet Union to comply with the wartime and postwar agreements to which she was a party, and which guaranteed both the independence of our countries and the right of our peoples to choose freely the institutions under which they would live. They should insist on the inscription of all the unresolved consequences, of World War II on the agenda of high-level international conferences, and of the U.N. General Assembly. They should ceaselessly call for the withdrawal of Soviet forces and agents, as well as for free elections under international supervision.

Thirdly, considering that the Soviet concepts of the cessation of the cold war, peaceful coexistence, and relaxation of tensions are designed to assure freedom of action for themselves in areas controlled by the free nations and a complete cessation of any Western concern for areas dominated by the Soviet Union, Western action should be guided by the realization that the acceptance of these concepts by the West only encourages the Soviet rulers and their puppets to revert to a hard course in the captive countries. Recent developments in Poland best illustrate this point.

It is our deep-seated conviction that in thus assuming the offensive in the most vulnerable part of the Soviet Empire pressures would be unleashed, which would eventually wear down even the most stubborn adversary. We are equally convinced that continued adherence to a purely defensive political policy would have very harmful consequences both in the free world and the enslaved parts of Europe. For the question is no longer whether Europe will be united or not. It is rather: Who will unite it; will it be united in freedom or slavery, and what will happen to the entire free world in the latter case?

With the people on our homelands we trust that the decisions the Western statesmen will take in their Paris meeting will bespeak of their determination to unite Europe in freedom. Specifically we trust that these decisions will reflect the determination of Western Powers (1) to raise the question of the captive countries at their projected conference with the head of the Soviet Government and press for a solution compatible with the right of self-determination and individual liberty, and (2) to remain faithful to the principle that, to become final, decisions which determine the fate of a nation require the consent of its freely elected representatives.

The peoples of our homeland regard the United States of America as the foremost repository of their hopes. We are confident that you, Mr. President, will use your unequalled authority as leader of the free world to bring about a decision of the Western governments in harmony with the stand you have so repeatedly taken in the past and which you have so forcefully expressed in your letter of January 1958 to the Chairman of the Council of Ministers of the Soviet Union.

The State of Outer Space

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. KOWALSKI. Mr. Speaker, under leave to extend my remarks, I call to the attention of my colleagues an editorial which appeared in the Meriden (Conn.) Record on Tuesday, January 19.

The editorial cites the importance to America of an adequate space program and urges the President to take strong, immediate action.

The Meriden Record is one of Connecticut's distinguished newspapers. Its thoughtful editorial analysis of the space crisis is worthy of study by all Members of the House.

[From the Meriden Record, Jan. 19, 1960]

THE STATE OF OUTER SPACE

The President's recently delivered state of the Union message reflected pretty fairly the man, his policies, and the state of mind of the country of which he is chief. It was confident but not cocky, strong in determination to maintain the strengths of the programs under way in the foreign field without dramatically expanding them, aware of the difficulties which we face at home but not disposed to take drastic steps to solve them, and in spite of all problems eternally and consistently optimistic.

It's a fair enough attitude to take and one which will carry us through well enough in every field but one. The crisis of our development in the exploration and capabilities in outer space does not disturb the President, seemingly, as much as it does a great many men of science and a great many thoughtful citizens who have been alerted to it. No great, grave concern is evinced by Mr. Eisenhower over our lag behind the Russians in the space race, and no large-scale, immediate measures are contemplated to help us catch up. All that is proposed is a shake-up in organization and an upping of the finances for the program from $500 millions to $800 millions.

This is not enough. The immediate probabilities of the next few years in the field of space exploration and control are the fantastic possibilities of a few years back. They range from space-spy satellites which can ferret out the atomic secrets of an unfriendly neighbor to manned rocket landings on the moon and other planets which will

bring about as yet hazy complications of claim, ownership, and use. And in spite of the President's observation that space exploration "is often mistakenly supposed to be an integral part of defense," they include the possibility of sky control of our country by unfriendly satellites or penetration of it by distantly launched rockets.

Russia believes in the importance of the space race to her safety and progress; it's certain that the men in the Kremlin aren't putting on a program of this cost and scope out of intellectual curiosity alone. In the interests of our own survival as a great power, fantastic as it seems, we must do likewise. We need more than another reorganization and a few extra millions to catch up, or even at present terms, to stay in the race for tomorrow. Mr. President, let's get to it.

Cutback of the Armed Forces in the Soviet Union

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. WILEY. Mr. President, the world has now had time to evaluate the move by Soviet Premier Khrushchev on the announced cutback of the armed forces in the Soviet Union.

The proposed cutback, I believe, is a "grandstand gesture toward—but no real contribution to—disarmament.

Mr. Khrushchev disqualified the announced cut in military manpower from the category of disarmament by bragging about increased striking power in rockets and missiles that could annihilate human life and destroy vast portions of the globe.

If this were truly a move toward reduction of forces—that threaten world peace—by the Soviet Union, the people of the globe, I believe, would welcome it with open arms.

The Kremlin leader, however, can hardly expect enthusiastic reception of an announced manpower cut by bragging—in self-contradiction—about greater striking power of the Communist armed forces.

Today, too, there exists no inspection agency to ascertain the reduction in manpower will be completed. This situation is one more example of the need for such inspection forces—as consistently emphasized by the U.S. Government.

Although there is a dearth of information from inside the U.S.S.R., the following factors may well have figured into the announced cut in military forces:

First. As Khrushchev says, Soviet progress in the development of missile power now enables the U.S.S.R. to cut back its military manpower, and yet retain its striking force;

Second. The move may be a shift in manpower, not a trend toward disarmament—as Khrushchev would imply—based on the needs (a) to reduce manpower costs in the military services; and (b) to augment the labor force in areas of shortages; and

Third. While such an act would somewhat reduce the armed forces, the militancy of the Soviet economy would make it possible for quick remobilization, at the beck and call of the Kremlin.

The world should not forget that the United States and its allies undertook similar reductions many years ago.

However, we must not underestimate the favorable psychological impact which Mr. Khrushchev's announcement will have on the world—an effect which the Communist propaganda machine performs the neat trick of maximizing.

Today, the production of missiles and other space weapons makes inevitable the reduction of mighty armies—except, insofar as these are deemed necessary for either, first, starting wars, including brushfire conflicts, by the Communists, or other troublemakers; or, second, putting out such wars by the peace-seeking nations of the world.

Overall, however, the move by Mr. Khrushchev cannot—by any stretch of the imagination—be interpreted as a step toward disarmament; rather, it is a disarmament gesture—aimed at maximum favorable psychological impact—while, at the same time, maintaining the striking potency of the Communist military machine—to utilize either for threats, blackmail or outright aggression—as these fit into the Communist plan of world conquest.

Recently, the Milwaukee Journal published an interpretive report by Mr. John M. Hightower entitled "Necessities Dictated Khrushchev's Move," containing some thoughtful comments on the motivation behind the Kremlin leader's gesture for a manpower cut.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERPRETIVE REPORT—NECESSITIES DICTATED KHRUSHCHEV'S MOVE—RUSS ARE REGROUPING TO EASE MANPOWER SHORTAGE, NOT DISARMING, WRITER SAYS

(By John M. Hightower)

WASHINGTON, D.C.—Soviet Premier Khrushchev is reorganizing rather than disarming.

His claims to disarmament, in fact, are substantially contradicted by his own words about the growth of Russia's nuclear weapons and rocket power.

These points highlighted initial reaction in official quarters here Thursday to Khrushchev's speech before the supreme Soviet.

His announcement of a manpower cut did not come as a surprise. Earlier remarks by Khrushchev—and the labor needs of Soviet industry and agriculture—had foreshadowed such a move.

Khrushchev told the Soviet legislative body that the nation's armed forces totaled 3,623,000 men and would be cut to 2,423,000. He also announced that production of bomber aircraft would be halted and that the air force would be equipped with rockets.

CONTRADICTS HIMSELF

Khrushchev claimed the manpower cut was a contribution to disarmament. In that section of his speech he said the great powers had failed to reach international agreement on lowered force levels so the Soviet Government decided to go ahead with a reduction on its own, without conditions.

But at another point in his speech, Khrushchev said that since no agreement had been reached with the Western Powers to stop production of nuclear weapons, "we are compelled to continue this production."

In a third section he argued that "the Soviet Army wields such means of warfare and such firepower as no other army has ever had."

In other words, the manpower cut by Khrushchev's own testimony does not mean a cut in striking power. What it obviously signifies, according to his speech, is a shift from reliance on masses of men to reliance on masses of machines and nuclear weapons.

NECESSITY DICTATES MOVE

It is the existence of such vastly destructive means of warfare which has come to be recognized in recent years as the central problem of disarmament.

Khrushchev's announcement Thursday has little bearing on this problem.

His emphasis on disarmament is considered rather as a means of making propaganda out of necessity.

The necessity, authorities here said, arises from the fact that as a result of the loss in birth rate in World War II, Russia is developing a manpower shortage.

Therefore the Soviet Government needs to switch men from the armed forces to industry and agriculture whenever it can do so without impairing security. At the same time it needs to use every device of propaganda to persuade the world at large that the Soviet Union is the most peaceful of nations and ready to make sacrifices in the interest of arms control.

ANNOUNCED CUTS BEFORE

Twice before in recent years the Soviet Government has announced manpower cuts totaling close to 2 million men. The criticism was made by the U.S. Government each time that there was no way to tell whether that many men acually were demobilized. From the Western point of view the most important element of any disarmament pact with the Soviets is the policing system.

A claimed cut in Soviet military strength under the conditions of secrecy which exist in the Soviet Union serves to emphasize the point.

Nevertheless Khrushchev stands to gain substantially if he can put across to the rest of the world his idea that even without agreement on arms control Russia is reducing its military establishment.

Appreciates Flag

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. WESTLAND. Mr. Speaker, one of the most cherished holiday greetings I received during the past season was from two West Germany youths who attended Everett (Wash.) High School in my congressional district as exchange students. Many of us sometimes take our flag for granted and often forget it represents a great nation and is the symbol of freedom and our way of life to other peoples of the world.

Under leave to extend my remarks I include in the RECORD the letter, written by Ratje and Claus Koser, because I believe it may renew our faith in our Republic.

The letter follows:

MONDHAGEN 61,
Celle, Germany, December 19, 1959.

Congressman JACK WESTLAND,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN WESTLAND: I hardly dare to think of the long period of time that has passed without sending you our thanks for having done that great favor for us. However, when the beautiful flag arrived, I was in the hospital for surgery, and that is the main reason for my belated answer.

I just cannot express how happy everybody in our family was at the arrival of this great souvenir that reminds my brother and me so truly of our year in the country that is represented by it, and of all the people whom we may call our friends today. This emblem will not only be a souvenir of 1 impressive year in your country, it also will remind us to strive more intensively for a better understanding of the people of our two nations.

Always thanking you for your kindness, we now would like to send you our best wishes for an especially merry Christmas and a very bright New Year.

Very sincerely yours,

RATJE AND CLAUS KOSER.

Saga of Capt. Henry T. Waskow: Immortal Texas National Guardsman

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. YARBOROUGH. Mr. President, it has been the good fortune of Texas and our Nation to have had great numbers of unflinchingly brave men who were completely dedicated to the ideal of human liberty. This has been true, otherwise freedoms as we know it and believe in it could not have survived.

One of the great war heroes of all history was Henry T. Waskow, a central Texas boy who enlisted in Company I of the 143d Infantry Regiment, 36th Infantry Division, at Belton, Tex., on June 3, 1935. His story, written by Ernie Pyle during the war, and by Woody Montgomery of the Temple Telegram, is one of the most stirring accounts of personal heroism ever written.

Mr. President, an excellent account of Captain Waskow's training and service is contained in an article entitled "Last Letter Revives Saga of the Immortal Captain," published on page 14 of the magazine National Guardsman for January 1960. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the National Guardsman, January 1960]

LAST LETTER REVIVES SAGA OF THE IMMORTAL CAPTAIN

Sixteen years after his death was immortalized in one of Ernie Pyle's best-remembered news dispatches, the spirit which brought immortality to Capt. Henry T. Waskow again has touched the hearts of his fellow countrymen and National Guardsmen.

This time, the qualities which Pyle described so movingly are brought back to life in the courageous National Guard captain's last will and testament, made public after all these years by members of his family.

"If you get to read this, I will have died in the defense of my country and all that it stands for—the most honorable and distinguished death a man can die," are the opening words of the document.

Those and the words that follow may explain why the soldiers in his company felt compelled to stand silently by the body of their dead captain, to hold his hand, for a moment and, as if he were still alive, to share with him a final few minutes.

"Through good fortune and the grace of God, I was chosen a leader * * * an honor that meant more to me than any of you will ever know. If I failed as a leader, and I pray God that I didn't, it was not because I did not try. God alone knows how I worked and slaved to make myself a worthy leader of these magnificent men."

In a story which later was printed in many books and magazines, and became the basis for the movie "GI Joe," Pyle told of the moonlight night when Captain Waskow was brought down a mountain trail in Italy, his body tied to the back of a mule. The soldiers stood around quietly, then one by one moved closer, "not so much to look, I think, as to say something in finality to him and to themselves," Pyle wrote.

"I'm sorry, old man," one of them said as he looked down into the face of the dead captain.

"Then," Pyle wrote, "the first man squatted down, and he reached down and took the captain's hand, and he sat there for a full 5 minutes holding the dead hand in his own * * * and he never uttered a sound all the time he sat there.

Captain Waskow's family withheld his last will and testament, according to a copyrighted story by Woody Montgomery in the Temple (Tex.) Telegram, because they regarded the cherished letter as so personal they vowed to keep it from the prying eyes of the public until it in itself might help some mother or her soldier son.

The family finally released the letter with that view in mind.

Captain Waskow was killed on December 14, 1943 at the age of 25. The War Department telegram reached his family on December 29 and less than 2 months later his mother, Mrs. Frank C. Waskow, died of of a broken heart."

A year ago, reports the Telegram story. Captain Waskow's father died, "not in such a brief time as the mother but just as surely of a broken heart . . ."

In the impersonal, formal terms of the military record, here's how Captain Waskow's service is described on the books of the Texas National Guard:

"Capt. Henry T. Waskow enlisted in Company I, 143d Infantry Regiment, 36th Infantry Division, at Belton on June 3, 1935, and was inducted into Federal service as a corporal on November 25, 1940. He was commissioned a second lieutenant March 14, 1941, at Camp Bowie * * * promoted to first lieutenant February 1, 1942, and captain, January 16, 1943, and was killed in action near San Pietro, Italy, December 14, 1943."

But in the warmer terms used by the Temple City newsman who wrote of his last letter, some of his devotion to duty, and his strict sense of responsibility emerges.

As a youth, the writer recalled, week after week Waskow hitch-hiked from Waxahachie, where he was attending college, to his home town of Belton to attend National Guard drills with Company I. He graduated with a teacher's credentials and was serving as a substitute teacher in his home town when Company I went into Federal service in 1940. He was Corporal Waskow then and his progress from that point on followed a path familiar to oldtime Guardsmen—training at Camp Bowie, a transfer to Company B, examinations for OCS, commissioned and returned to his old company at Camp Bowie—then overseas.

In Africa, he and other members of Co. B trained for the forthcoming invasion of Italy, and wrote letters home. He was homesick but seemed to understand better than most the meaning of the sacrifice he and his fellow soldiers were making. But let's go back to that last letter, the one which was to be given to his family only in the event of his death, and listen to him explain his feelings in his own words:

"Yes; I would like to have lived—to live and share the many blessings and good fortunes that my grandparents bestowed on me—a fellow never had a better family than mine, but, since God has willed otherwise, do not grieve too much, dear ones, for life in the other world must be beautiful, and I have lived a life with that in mind all along. I was not afraid to die, you can be assured of that. All along, I prayed that I and others could do our share to keep you safe until we returned. I pray again that you are safe, even though some of us do not return."

Or in an earlier letter:

"When you remember me in your prayers, * * * pray that I be given the strength, character, and courage to lead these magnificent Americans."

That his life had been patterned by the words he wrote was attested by the veneration shown by his soldiers when his body was brought down the rocky Italian mountain trail.

"In this war I have known a lot of officers who were loved and respected by the soldiers under them," wrote Pyle in that still-remembered news story, "but never have I crossed the trail of any man as beloved" as Captain Waskow.

Now, writing when he knew that death waited behind every rock and bush, Captain Waskow once again has reminded guardsmen of their legacy of gallantry and service.

In words which would have sounded trite and overdone had they been written by a lesser man, he reiterated a creed which has become the first article of guard faith:

"I thought that I might * * * do just a little bit to help this great country of ours in its hour of darkness and need—the country that means more to me than life itself—if I have done that then I can rest in peace, for I will have done my share to make this world a better place in which to live."

Decline of Politeness

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most enlightening article written by Bishop Sheen on the true worth of courtesy:

DECLINE OF POLITENESS
(By Bishop Sheen)

What has happened to politeness? One cynic said that it is "an acceptable hypoc-

risy." Another said that he would be so polite to his wife that she would think he was a perfect stranger.

Drivers of automobiles hidden behind the anonymity of a windshield, regard other motorists as trespassers; they also often hold as a fundamental creed that every year ought to be a "leap" year for the pedestrians.

Boys call girls by their last names; northerners criticize southerners for saying "you all" claiming that if they had manners they would say "youse guys." At parties during conversation, eyes roam around the room as if searching for a less boring conversationalist.

The passing of courtesy is one with the modern forgetfulness of the value of the individual person. The three totalitarian movements of the 20th century absorbed the person into either the class, the race, or the Nation. Furthermore, with the denial of the soul, no one has value within himself, but only because of his relation to something else.

Courtesy is paid to those who sell it at wholesale or to those who permit a sharing of their limelight. But courtesy is not of these things; it is the giving to everyone his human due as interpreted by love. It is not something that is learned at a charm school, but rather is the sister of charity which banishes hatred and cherishes love.

Courtesy is based upon the scriptural idea that everybody is better than we are. Cooks, housemaids, delivery boys, truck drivers are all men and women with joys and sorrows, hopes and aspirations, like our own. We cannot know them on the inside, but we can know ourselves on the inside.

Since there is so little commendable in the garden of our heart which we know is so full of weeds, then in the unknown garden of their hearts, we must believe that there may grow flowers which demand our reverence and respect. This is what is meant by "in honor preferring one another."

A false idea is abroad that the way to make oneself popular is to flatter everyone you meet: "I hear all the great things you are doing, Joe; keep up the good work." Though there are some men who like to be told what they think of themselves, the fact is the really lovable people are those who love others

In colleges, factories, in shops and in business houses, it is invariably true that he who thinks the least of himself and the most about others, is most popular. The whole world is like the miller, "who cared for nobody—no, not he—because nobody care for him."

Courtesy is kindness without parade of favors; it is tender and affectionate in looks and acts, always giving preference to others in every little enjoyment. Alexander the Great used to call his soldiers his "fellow footmen"; Aristotle never taught from a podium, but walked among his disciples to be one with them.

And Christ the Son of the living God washed the feet of His disciples saying: "You hail Me as the Master and the Lord and you are right; it is what I am. Why then, if I have washed your feet, I who am the Master and Lord, you in your turn, ought to wash each other's feet. I have been setting you an example which will teach you, in your turn, to do what I have done for you."

There was no sense of loss of dignity in this humble action, for twice He told them that He was their Lord. Making ourselves little for others, does not destroy true greatness. Nor is it to be forgotten that at the moment, when He girded Himself with the towel of a servant, the apostles were quarreling among themselves as to who should be the greatest among them.

True courtesy descended from heaven and dwelt amongst us, and is extended to those who are undeserving of it.

As St. Francis of Assisi said: "Know dearest brother, that courtesy is one of God's own properties, Who sendeth His rain and His sunshine upon the just and the unjust out of His great courtesy."

Washington Irving once warned against the sham courtesy in which the eye is taught to brighten, the lip to smile and the countenance to irradiate a semblance of friendly welcome, while the bosom is unwarmed by a single spark of genuine goodness

Just as an oily smoothness is the opposite of true charity in the soul, so is roughness and uncouthness in the soul that claims to be religious. Christianity, when practiced, is the etiquette of heaven.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proclamation by the Governor of Masachusetts designating Friday, January 22, 1960, as Ukrainian Independence Day, in commemoration of the 42d anniversary of the Ukrainian Declaration of Independence.

It is, I believe, most appropriate that those of us in the free world pause to mark this day in order to reaffirm our devotion to freedom and keep faith with the courageous people of captive nations.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

A PROCLAMATION

(By His Excellency Foster Furcolo, Governor, 1960)

"Whereas the 42d anniversary of the proclaiming of a free and independent Ukrainian Republic will be marked on January 22, 1960; and

"Whereas behind the Iron Curtain, there are more than 40 million Ukrainians who share the common desire of the captive and satellite peoples of Eastern Europe for freedom and self-determination; and

"Whereas the Ukrainians have presented strong opposition to communism, despite mass deportations and continuous destruction of their culture, and constitute the Achilles heel in Communist imperialism; and

"Whereas our Nation has always supported the causes of freedom loving people of the world, and the desire and love of freedom of the people of the Ukraine cannot be ignored and must not be denied; and

"Whereas, it is fitting to pay tribute to the heroic Ukrainian people whose will for national liberty and human dignity is indeed a source of inspiration to all free men: Now, therefore,

"I, Foster Furcolo, Governor of the Commonwealth of Massachusetts, commemorating the anniversary of the Ukrainian Declaration of Independence, do hereby designate Friday, January 22, 1960, as Ukrainian Independence Day in Massachusetts and urge the citizens of our Commonwealth to cooperate in its observance."

Given at the executive chamber in Boston, this 4th day of January, in the year of our Lord 1960 and of the Independence of the United States of America, the 184th.

By His Excellency the Governor:

FOSTER FURCOLO.
JOSEPH D. WARD,
Secretary of the Commonwealth.

The Principles for Which the South Fought

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. TUCK. Mr. Speaker, on yesterday, January 19, the Commonwealth of Virginia and many other States in the Union commemorated the birthday anniversary of Gen. R. E. Lee. The Richmond Times-Dispatch of that date has an editorial commenting on the principles for which Virginia fought during the War Between the States. It is an interesting editorial which I believe many of the Members of Congress would like to read. Under leave heretofore granted me to extend my remarks in the RECORD, I include the editorial which is as follows:

THE SOUTH FOUGHT FOR SLAVERY

Obviously, the American Civil War arose, at least in part, out of bitter arguments over slavery. This, however, is a very different thing from saying, as some still do, that the South fought to preserve slavery.

An appropriate time to emphasize this is today, when the birthdays of Lee and Jackson are observed.

As the war's centennial approaches, it should be useful and constructive in this connection to point out certain facts to our friends, and critics, in the North and West.

They may not be aware, for example, of how few people in the South owned slaves. In 1860, fewer than 1 southerner in 4 owned a single slave, and fewer than 3 percent had as many as 20.

Charles Francis Adams, the New England historian, was quoted in this place on January 2 as saying—correctly—that the South fought not for slavery, but because it denied, as a matter of firmly held principle, that the National Government had the right to coerce a sovereign State. Not until Lincoln called for 75,000 volunteers to coerce the 7 cotton States that had left the Union, did Virginia secede. That launched the war.

Was the average poor white in the Confederate army interested in preserving slavery? It is hard to believe. But it is also hard to believe that this large element of southerners was interested in constitutional doctrine. Why then did the poor whites fight so bravely? A northern soldier asked one of them during the war why he was fighting, and he replied, "Because y'all are down here." In other words, the South had been invaded.

But, you may ask, didn't the wealthy southern slaveowners drag the rest of the white South into war to save their slaves? Virginia's situation was much like that of the rest of the Confederacy. We quote again from that invaluable work, Virginia's

Attitude Toward Slavery and Secession, by the late Beverley B. Munsford, of Richmond. Mr. Munford says concerning Virginia's five most notable generals:

Robert E. Lee never owned a slave, except the few he inherited from his mother—all of whom he emancipated many years prior to the war * * *.

Stonewall Jackson never owned but two slaves, a man and a woman, both of whom he purchased at their own solicitation. He immediately accorded them the privilege of earning their freedom * * *.

Joseph E. Johnston never owned a slave and, like General Lee, regarded the institution with great disfavor.

A. P. Hill never owned a slave, and regarded slavery as an evil, much to be deplored.

J. E. B. Stuart inherited one slave from his father's estate; and while stationed * * * at Fort Leavenworth, Kans., purchased another. Both of these he disposed of some years prior to the war.

Given the foregoing indisputable facts, it's a bit difficult to understand how the argument can still be advanced that the South fought to preserve slavery. It did no such thing.

Hi-Interest and Housing

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. HUMPHREY. Mr. President, the fact that our high interest rates discourage housing starts is vividly described in an article entitled "Easier Money, Builders Cry," written by Paul Herron, a staff reporter of the Washington Post. On January 5, 1960, in this article, Mr. Herron showed that there will be a decline in the number of housing units being built after 1959, and that even in that year, the building starts were not adequate to meet our national housing needs.

Mr. Herron says:

The outlook for 1960 is that housing starts will show a moderate decline from the 1959 level—perhaps 10 to 15 percent—and the reason, a contracting supply of mortgage money.

Housing observers agree that the resulting 1.5 million-unit building rate will be inadequate and that 2 to 2.5 million units are necessary in 1960. Mr. Herron continues:

The problem of financing seems to begin at the consumer level.

Mr. President, I call the attention of the Senate to this discussion of the effect of our high interest rates on housing, and ask that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 5, 1960]

"EASIER MONEY," BUILDERS CRY

(By Paul Herron)

The Nation's homebuilders created approximately 1.3 million new homes in 1959 and became more firmly convinced than ever that record housing production is tied directly to easy home financing.

When the final statistics are tabulated, 1959 production may approximate the all-time high of 1.32 million houses in 1955. However, housing economists believe that had mortgage funds been ample, the 1959 figure would have been about 1.5 million units.

The outlook for 1960 is that housing starts will show a moderate decline from the 1959 level—perhaps 10 to 15 percent—and the reason, a contracting supply of mortgage money.

All housing observers agree that even a 1.5 million unit building rate will not be adequate for our rapidly increasing population. Federal Housing Administration Commissioner Julian H. Zimmerman believes that a rate of 2.5 million units per year will be necessary in the decades ahead. Senator JOHN SPARKMAN, Democrat, of Alabama, chairman of the Senate Housing Subcommittee, puts the figure at 2 million units per year by the end of the sixties.

DOWNPAYMENTS LACKING

The problem of financing seems to begin at the consumer level. A house is generally the biggest investment a family ever makes, a fact repeatedly pointed out. However, it is also the investment that the buyer seems least prepared to make. Builders are continually amazed at the number of prospects who are perfectly able to assume heavy monthly mortgages but who have little or no money set aside for downpayments.

The answer, as Senator SPARKMAN sees it, is to create some form of central mortgage facility that will provide a stable flow of mortgage funds to builders at all times. Higher and higher interest rates, he says, are not the solution. SPARKMAN is backed in this opinion by Raymond T. O'Keefe, head of the Chase Manhattan Bank, who avows it's not so much the psychology of tight money as it is the psychology of expensive money that discourages buyers.

"They know the difference between 5¾ and 6¼ percent," O'Keefe says, "and they aren't ready to pay it."

The remarkable reversal of the financing trend began soon after World War II. Prior to that time, many buyers paid all cash for their houses or assumed loans of short mortgage periods with second and third mortgages payable in lump sums at specified dates.

DOWNPAYMENT CUT ASKED

The National Association of Home Builders has successfully lobbied for legislation reducing the size of downpayments and extending mortgage repayment periods. In each instance, the new Housing Acts have increased Government participation in the housing field to the point where the Federal Government is able to manipulate the amount of new home construction almost at will.

The National Association of Real Estate Boards, on the other hand, declined to support the Housing Act of 1959 on the grounds that it was inflationary. NAREB believes that quality homes can be sold on more stringent buying terms.

As SPARKMAN and others have pointed out, general credit controls seem to have a disproportionately severe effect upon the housing industry—an effect created in part by easy buying terms. Commercial banks and other major lending institutions would like to have greater equity paid into the loans. They balk at the lack of liquidity associated with 30- and 40-year loans. In addition, the fixed interest rates of VA and FHA-insured mortgages often are not competitive with rates charged in the general money market.

Despite the handicap of an erratic supply of money, most builders are optimistic and believe they'll hit the "necessary" shelter figure of about two million units annually in the decade ahead. Miles L. Colean and other nationally-known economists told realtors at a recent convention in Toronto that by late spring mortgage money will be more plentiful.

In addition, there are several plans in the works aimed at easing the tight money situation. One would create a central mortgage bank—possibly with private funds. Another contemplates a Federal agency which would lend to middle income families. Also proposed are changes in the Federal National Mortgage Association to expand this agency's role in the secondary mortgage market.

At any rate, builders expect good business in 1960.

For the consumer, 1959 was a good year. Financing terms remained lenient, competition improved the quality of new homes and the minor increases in home prices were occasioned, primarily, by the increased cost of purchasing and developing new land. As a matter of fact, land scarcity, many builders predict, will soon cause difficulties that will overshadow financing problems.

Another portent is the continued swing to apartment construction in the close-in suburbs. The trend is being received with mixed reactions.

Urban renewal has been moderate. The United States entered the fifties with approximately 16½ million substandard dwellings. These have now been reduced to an estimated 12 million substandard.

Need for Revision of Status of Forces Treaties

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. RODINO. Mr. Speaker, I have today introduced a bill requesting the President to revise existing treaties to preclude foreign countries from taking jurisdiction over members of our Armed Forces stationed overseas.

This is hardly a new proposal in the Congress. I personally have been urging this resolution since 1955. Two years later the Girard case came to public attention and there was renewed support for a revision of our policy.

This is now 1960. Our boys are still subject to foreign jurisdiction under treaties which have remained the same despite congressional protest.

I feel very strongly that it is time we renewed that protest. The Girard case, which pointed up the problem so dramatically, was hardly an isolated incident. The list of less-publicized examples continues.

I am requesting the Department of Defense to supply me with date on the number of our servicemen who are currently serving jail terms in foreign countries, and I shall make that date available as soon as I receive it.

The reasons for my resolution have been too often described for me to discuss them in detail at this time. It remains basically unfair, regardless of constitutionality, to draft our young men into military service and then unceremoniously abandon them to the vagaries of

foreign jurisdictions, which may or may not adhere to our concepts of justice and fairplay.

I was personally familiar with a case of a young serviceman from my district who, several years ago, narrowly escaped British execution on evidence which turned out to be not only flimsy, but inaccurate. As I said in a statement at that time, the fact that this could happen in a judicial sysem so much like ours suggests strongly what coud happen, and does happen, under systems which are far more dissimilar.

Perhaps the greatest problem which the serviceman who is tried in a foreign court must face is the hostile sentiment which often makes conviction inevitable. Further, this conviction, which may be based as much on the hostile temper of the court as on available evidence, is frequently the basis for discharging that man from the service under less than honorable conditions.

I feel very strongly that we cannot, in all conscience, permit this situation to continue.

I do not believe that these treaties, as is frequently alleged, are necessary to the conduct of our foreign policy. To the contrary, I feel that the passions which are periodically aroused, whenever a foreign court tries a serviceman accused of a serious crime, do far more to strain our normal relations with our allies than would result were these cases turned over as a routine matter to our own military authorities.

Again, I want to emphasize that, although the Girard case is a thing of the past, this issue is as pressing today as it was in 1957. I therefore urge that this matter be given the serious and immediate attention it deserves.

New Honors for Ellsworth Tompkins

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey is proud of a new assignment to one of its hard-working citizens. Mr. Ellsworth Tompkins of Paterson has been named executive secretary of the National Association of Secondary School Principals. At a time when all Americans are vitally interested in the future of high schools in this Nation, Mr. Tompkins' new position is obviously an important one. I ask unanimous consent to insert in the appendix of the Record this proud, hometown editorial which appeared in the January 6 issue of the Morning Call in Paterson, N.J.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELLSWORTH TOMPKINS WEARS HIS HONORS WITH DIGNITY AND GRACE

Having been a classmate at Paterson High School of Ellsworth Tompkins, we were especially delighted to learn of the latest of a long line of honors that has deservedly been bestowed on him. Recognized for his brilliant achievements in education, he has been named executive secretary of the National Association of Secondary School Principals, a post which will afford him greater opportunity of advancing the educational standards of high schools throughout the Nation.

We recall Ellsworth Tompkins in the days when he was a staff member of former radio station WODA, a pioneer in broadcasting. He was an announcer and singer, his voice a rich baritone. And we saw his steady climb following graduation from college, first as an instructor, then vice principal and later principal of Eastside High School.

Realizing that in the service of the secondary school division of the Department of Health, Education and Welfare he could be more useful in his chosen profession, Ellsworth Tompkins went to Washington.

He wears his honors well, with dignity and grace. And Paterson is rightly proud of Ellsworth Tompkins. He is a worthy son of this city. Although there was regret when he retired as head of Eastside High in 1947, his friends and colleagues—aware of his tremendous capabilities and charming personality—knew he was destined to serve in a broader field of education and thus have been happy for his steady advancement.

A coauthor with Dr. Peter Sammartino, president of Fairleigh-Dickinson University, Tompkins and Sammartino published a book on "Community College in Action" in 1950. He has been a delegate to seminars on secondary education and has edited various educational publications.

In his new office we wish him every success, and congratulate the National Association on its splendid choice of Ellsworth Tompkins as executive secretary.

Revision of the Social Security Law

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. BLATNIK. Mr. Speaker, I think all my colleagues will agree with me when I say that one of the major, if not the major, issues facing the 2d session of the 86th Congress is revision of the social security law. Researches and on-the-scene surveys conducted throughout 1959 have demonstrated beyond question that our elderly citizens have suffered a steady deterioration so far as their income positions are concerned, and that this trend is certain to continue unless this Congress takes remedial steps.

In this connection, I should like to call my colleagues' attention to an anniversary that is being remembered and celebrated this month by millions of elderly citizens throughout the vast reaches of this great land.

Dr. Francis E. Townsend, who pioneered the pension movement in America, and still heads the organization he founded, was 93 years of age on January 13. Still hale and hearty despite his advanced years, the doctor is even at this moment engaged in a vigorous speaking tour on the west coast, urging upon his audiences the acceptance of the plan he fathered.

That plan is before this Congress in the form of my bill, H.R. 4000. It calls for universal retirement benefits to persons age 60 and older, and to certain other groups including the disabled and widows with dependent children.

This program, to be financed from the proceeds of a modest 2 percent tax on gross incomes, would result in monthly benefits of about $140, and would be paid as a matter of right. H.R. 4000, unlike the social security program, calls for genuine pay-as-we-go financing.

The genius of Dr. Townsend lies in the appeal of a dream which captured the imagination of millions of his fellow citizens some 25 years ago and today commands increased respect, not only among the aged people of this country, but now, too, among the students of the social security problem, and among those of us in this Chamber who have been elected to serve the best interests of our constituents.

It is fitting, therefore, that we pay tribute to Dr. Townsend on the occasion of his 93d birthday. It is given to few men to live so long and accomplish so much and earn the devotion of so many fervent followers. May he live to celebrate many another birthday—and to realize at long last the fruits of his efforts on behalf of his fellow Americans.

The Story of Project Talent

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. HUMPHREY. Mr. President, I was pleased to learn recently of "The Story of Project Talent," a survey of our aptitudes and abilities as a Nation to be undertaken by the University of Pittsburgh with the support of our administrative agencies. The bulletin of the project talent office describes the program that is being set up.

Certainly, at this time we must use all our available abilities and talents to aid our national security. I applaud this university scientific survey that will take a census of our scientific resources.

Mr. President, I ask unanimous consent that the bulletin explaining "The Story of Project Talent" be printed in the Appendix of the RECORD.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

THE STORY OF PROJECT TALENT—OUR COUNTRY NEEDS THE FULL USE OF ALL ITS TALENTS—THIS APTITUDE AND ABILITY CENSUS WILL TELL US WHAT IS AVAILABLE

Our country's continued growth and development require the identification, development, and utilization of all available talents. We cannot use all of these talents unless we know what is available. A national inventory of aptitudes and abilities will enable school personnel to assist their students in developing and making the most of their potential.

If we are to plan properly for meeting the increased needs for advanced education—if we are to know, for example, how many educators or physicians we may expect to educate and train in the years ahead—we need a better idea of how many of our young people have the aptitudes, the inclination, and the education for entrance into various careers. Everyone has his own special talents. But how many persons fail to receive proper encouragement and education?

There are many tests in standard subjects, and for some years it has been possible to test one person or a thousand persons for general intelligence, musical ability, or capability in languages. Project Talent may be an historic enterprise, for it is the first scientifically planned national inventory of human talents: the aptitudes and abilities of a people.

NINETEEN SIXTY IS A CENSUS YEAR—PROJECT TALENT IS A SCIENTIFIC CENSUS

This inventory will be conducted in March of 1960, in order to coincide with the 1960 population census. When the census taker comes to the door of a home, the householder does not feel the census is an examination which is to be passed or failed. The same is true of Project Talent. No special preparation is necessary for this examination. Other sets of tests search for certain abilities or superiority in selected subjects. Project Talent will report fully the unique potential and all the talents of all students tested.

A scientifically selected sample of half a million high school students will be given a 2-day series of examinations. These tests will measure many different kinds of things. Project Talent will be carried out through local school systems all over the Nation—in the country and the city, and in public, private, and parochial schools.

The scores from the tests will be made available to the individual school, to be used as the school wishes, but Project Talent will not evaluate specific schools, nor compare on student with another. The tests will be available only to those schools selected as a part of this scientific study. The tests are not intended as substitutes for present testing programs; they are special instruments scientifically designed for this particular purpose.

This project covers more than school activities; followup studies are planned. The project will seek to determine what these people are doing in their jobs or in higher education 1 year after graduation from high school. The first survey and later questionnaires also will ask about their interests or hobbies. A young person may have a hobby which involves a special talent in photography or music, for example, but that interest may not be revealed in ordinary school work. These examinations will be designed to measure potential aptitudes and abilities of a more general sort in addition to measuring what the student knows.

Most teachers are interested not merely in school grades, but in the student's potential, and what he eventually does. When Project Talent is completed schoolteachers will have much more definite information about the kinds of talents and potential they may reasonably expect to find in their classrooms. Educators will have realistic answers to some of their questions about how to guide and develop these talents.

PROGRESS IN EDUCATIONAL RESEARCH, TEST DEVELOPMENT, AND NEW COMPUTERS MAKES POSSIBLE THIS NATIONAL INVENTORY

This national inventory of human resources has long been needed for planning in education. The scientifically selected cross section of American youth to be tested is large enough that the findings will give educators important facts about the total student population. The goals outlined below indicate some of the ways this basic information may be used.

Educators have long known that a collection of smaller studies cannot be as definitive as a national study. There are several new factors which now make such a survey possible:

Fundamental tests of aptitudes and abilities have been developed.

New electronic scoring machines, coupled with high-speed electronic computers, make it possible to process thousands of test items in a small fraction of the time required in the past. Each of the 500,000 sets of student's answer sheets will contain about 2,000 items. These 1 billion bits of information will require 1,250 machine-hours for initial scoring, reporting to schools, and recording on magnetic tape for analysis and future followup studies. The analyses of these data on high-speed computers are expected to take less than 100 hours. This data processing would have required millions of man-hours of work as recently as 5 years ago.

The principal factor in the initiation of this project, however, is that the Nation has begun to appreciate the importance of assuring an educational system designed to offer proper training and opportunities to students having diverse aptitudes and developmental needs.

Thus, leading educational research institutions, agencies of the Federal Government, and representatives of professional, educational, and scientific associations have joined together to assist in guiding the study and interpreting the results from Project Talent.

FINANCIAL SUPPORT IS BEING PROVIDED BY THE OFFICE OF EDUCATION WITH ASSISTANCE FROM OTHER FEDERAL AGENCIES

Project Talent is financed for the most part by funds from the U.S. Office of Education through Commissioner of Education Lawrence G. Derthick. These funds came from the cooperative research program, directed by Assistant Commissioner of Education Roy M. Hall. The plan for the project, as developed by the University of Pittsburgh and the American Institute for Research was reviewed and recommended for approval by the advisory committee of the cooperative research program.

The chairman of this committee was Dr. Ralph W. Tyler, Center for Advanced Study in the Behavioral Sciences, Palo Alto, Calif. Other members of the committee were Dr. Finis E. Engleman, executive secretary, American Association of School Administrators; Dr. Chester W. Harris, professor of education, University of Wisconsin; Dr. Erick L. Lindman, professor of school administration, George Peabody College for Teachers; Dr. Henry J. Otto, professor of education, University of Texas; Dr. J. Cayce Morrison, assistant commissioner for research, New York State Education Department (retired); Dr. H. H. Remmers, director, division of educational reference, Purdue University; Dr. Dewey B. Stuit, dean, College of Liberal Arts, State University of Iowa; and Dr. Dorothy Adkins Wood, chairman, department of psychology, University of North Carolina.

Support for the project is provided also by the National Institute of Mental Health and the Office of Naval Research, with aid in the planning stages from the National Science Foundation.

Dr. John C. Flanagan, professor at the University of Pittsburgh and director of the American Institute for Research, prepared the initial proposals for the study and is the responsible investigator.

THE PLANNING AND ADMINISTRATION OF PROJECT TALENT IS UNDER THE GUIDANCE OF NATIONAL COMMITTEES AND COORDINATORS

Four panels of the Nation's leading specialists worked with the staff for more than a year planning the study. This staff included six full-time research workers headed by Dr. John T. Dailey. The overall chairman of the advisory panels during the planning phases was Dr. John H. Fischer, then superintendent of the Baltimore Public Schools. The present chairman is Dr. Kenneth E. Oberholtzer, superintendent of the Denver public schools. The chairman of the guidance and counseling panel is Dr. Edward Landy, director, division of counseling services, Newton (Mass.) public schools. The chairman of the educational research panel is Dr. Robert J. Keller, director, University High School, University of Minnesota. The chairman of the testing problems panel is Dr. Robert L. Thorndike, head, department of psychological foundations and services, Teachers College, Columbia University. The chairman of the manpower and sociology panel is Dr. Samuel A. Stouffer, director, laboratory of social relations, Harvard University.

The plans developed through these groups were reviewed by an advisory council composed principally of presidents and executive secretaries of the professional associations most interested in the findings from this study. These associations included the American Association of School Administrators, National Association of Secondary School Principals, Council of Chief of School Officers, National Catholic Education Association, National School Boards Association, American Association for the Advancment of Science, American Personnel and Guidance Association, and American Psychological Association.

Regional coordinators will administer the program locally. They will distribute tests, arrange for cooperation of schools, and serve as advisers on procedures. These local officials, familiar with the educational needs and resources of the local communities, will be the key representatives of one of the largest educational studies ever undertaken.

All results from the survey and the studies which follow will be published and will be freely available to educators and research specialists. Prior to publication, these studies will be reviewed by the panel of experts and the advisory council. Many educational and research groups have expressed keen interest in these studies and will be kept fully informed. A series of reports will be made to educational agencies throughout the country. These will go to school systems, to schools of education, to State departments of education, and to private educational associations as well as to the supporting agencies. Results will be of interest also to parents, to industry, to the military services, and to anyone concerned with planning for proper future use of manpower.

The responsibility for administering the tests and collecting the data about the students and their past experiences is placed directly in the hands of the selected schools. The scientific analysis of the original data and the collection of the follow-up data will be done under the direction of the program staff of the University of Pittsburgh with special assistance from the American Institute for Research.

The success of the survey phase depends upon the capability and effective assistance of local coordinators, principals, teachers, and others.

PROJECT TALENT IS A SCIENTIFIC STUDY USING ONLY TESTED TYPES OF INSTRUMENTS

It is expected that this historic national census and follow-up will give the Nation a great many new facts. Some will be surprising. Also, it is to be expected that administration of such a large program will produce new methods and new ideas in the field of educational research itself. This should be one of several important by-products from the study.

"Project Talent" is not an experiment to try out new theories. All the major components of this project have been tested and proven in previous studies. Systematic measurement and description of students is es-

sential to understanding and improvement. Educational leaders, teachers, colleges, school superintendents, and school boards will always be better able to apply educational theories when they have more facts. This is an attempt to carry out a detailed survey of human talents in a segment of the population with tested instruments.

BASIC GOAL: INFORMATION TO HELP AMERICAN YOUTH TO DEVELOP THEMSELVES AND THEIR NATION

In this kind of scientific study, it is possible to know in advance some of the major types of information which will be produced.

Some of the important results of this National Aptitude and Ability Census will be:

An inventory of human resources: Project Talent will be a tremendous inventory or stocktaking in which we find out the capabilities of our youth.

We also plan to study the relationships between one kind of ability and another, between one type of schol course and another, and between personal hobbies and the development of many types of competence.

A set of standards for educational and psychological measurement: When reliable measures have been obtained from thousands of persons in a systematically selected sample, it will be possible to provide a more accurate set of benchmarks or standards for test authors to use in standardizing tests so that scores indicate comparable levels of ability.

This may be roughly compared to the basic standards such as the marked bars for measuring length, or the standard weights which the National Bureau of Standards maintains.

A comprehensive counseling guide indicating the patterns of aptitude and ability which are predictive of success in various careers: In the followups after the national examinations and analysis, students who took the tests will be located and asked to report on educational and vocational experiences. A young girl may have become a secretary, or a housewife, or she may have gone to college. By studying thousands of student aptitude, interest, and ability patterns, and finding out the person's later activities and occupations, we will learn a great deal. This will help students by predicting more precisely what kinds of aptitudes and abilities, what kinds of courses, and what kinds of interests constitute the best basis for various kinds of careers. An artist needs good color sense, a scientist needs mathematical ability, but counselors and teachers know that many other factors enter into the qualifications for success in a career. Motivation is a necessary ingredient, but the best use of the student's special talents requires that he identify this talent early and obtain the education essential for the full development and effective use of his powers.

It is anticipated that Project Talent will make a significant contribution toward meeting this need: better prediction, based on actual followups, of a young person's chances for success in a given field. To some extent, this can be done today, and it has been an enormous incentive to teachers, young people, and parents to be told, for example, "This boy unquestionably has talent in a given direction. If he can continue his education, he may reasonably expect to master his chosen trade or profession."

A better understanding of how young people choose their life work: Many people follow their family trade or profession. They tend to think that people know quite early what their life work will be. Other people drift into an occupation and they tend to think that everyone else more or less drifts into a particular trade, business, or profession. Many people feel that they have very little choice.

However, many people today do have a choice, and the diversity of occupations and the need for special training continue to increase. We have begun to learn something about the processes by which a young person decides that he would like to be a teacher, a lawyer, or an apprentice for a trade. This study and others can help us understand at what ages certain lifetime careers tend to be chosen.

Naturally, high school seniors talk more about their future careers than do high school freshmen. Yet there are many indications that even younger children already have interests which are related to the fields in which they later work.

A better understanding of the educational experiences which prepare students for their life work: American education is noted for its diversity. Only through the analysis of detailed information about students, their educational experiences, and their subsequent successes or failures can we hope to make our educational system as flexible and responsive to the individual needs of its students as it must be if our Nation is to continue to develop and prosper.

Project Talent has been carefully designed to fill an important national need for facts regarding the identification, development, and utilization of our human resources. This information is intended as a basis for manpower policies and as a basic resource for the many individuals responsible for the education of our children.

Federal Trade Commission Conference on Public Deception

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement by Daniel J. Murphy, Assistant Director, Bureau of Litigation of the Federal Trade Commission, designed to protect the consumer from exploitation by salesmen who misrepresent their products.

The statement follows:

FEDERAL TRADE COMMISSION CONFERENCE ON PUBLIC DECEPTION, DECEMBER 21, 1959—DIRECT SELLING PRACTICES

(By Daniel J. Murphy, Assistant Director, Bureau of Litigation)

When a salesman rings your doorbell or telephones you, his motive is not to render a social service or to aid your economic welfare. The only thing he is concerned about is selling his product. He "sets his sights" for the consumer. He uses all the aids of pictorial presentation and emotional and glamorizing copy to accomplish his purpose. His object is not only to increase your existing demands, but to create continuously new wants. The luxuries of yesterday become the necessities of today.

Thus, there is in reality a contest between the salesman and his advertising, oral and written, on one side and the household consumer on the other. But it is a one-sided contest. Business plans the organized strategy and conducts the well-thought-out sales campaigns. The consumer, on the other hand, is unorganized and often apathetic about the abuses heaped upon him. It is to protect this huge ill-informed consumer army that Federal regulations have been developed.

In this uneven contest, knowledge is the best weapon of the consumer. To become aware of the abuse is to be on guard. This is the purpose of this conference.

Now, of course, the salesman has a right to push his own products. As a matter of commercial interest, we expect that; but he has no right to misrepresent them.

The distinction between "puffing" and "misleading representation" is often difficult to determine. The best distinction, determined by the U.S. Supreme Court, is that legitimate puffing is mere exaggeration of qualities the merchandise has and misleading representation is assigning to merchandise qualities it does not have.

Misleading representations may be divided into a number of methods, that is, affirmative misstatements, half-truths, literal truths, concealment, silence, improper emphasis, and in other ways. The misleading representation may apply to different subjects, such as the product itself, the origin of the product, the price, the business of the seller, the nature of the sale, guarantees, etc.

When a salesman comes to your door and tries to sell you a vacuum cleaner or a sewing machine, be sure the vacuum cleaner or the sewing machine is new and not repossessed nor used for rentals or for teaching purposes.

Watch out for the salesman who calls himself some fancy name, other than a salesman, and tells you that you have been selected to purchase new and revolutionary cooking utensils that will protect your health, save you on fuel and food bills, and that such utensils will come to you directly from the factory.

Be alert to the salesman with one foot in your door claiming to be a representative of the city government or some civic organization who claims his only desire is to make a fire prevention talk or demonstration but whose real purpose is to sell fire alarm systems. He informs you your home has been especially selected for demonstration purposes. Once in the home, he exhibits newspaper clippings and horror pictures of fire fatalities calculated to arouse parental emotions and representing this is what the prospective purchaser may expect if he does not purchase the product.

Don't be convinced by the salesman who claims your home has been selected in your particular neighborhood as a model or demonstration home to advertise and sell his products, whether it is siding material, a fancy roof job, an additional porch, a carport, etc., and that you will receive a special price and commissions or fees on other sales made in your vicinity.

Be very careful about signing contracts and promissory notes on purchasing products sold from door-to-door. Sometimes it is represented that you are signing documents for credit checking when in fact you are signing promissory notes, sometimes in blank, or other evidence of debt.

These negotiable promissory notes are subsequently transferred to bona fide purchasers for value without notice who then demand payment free from the agreements and obligations existing between the seller and the buyer.

Always ask for the credentials of salesmen who claim to represent some well-known and well-established business and check the credentials before doing business.

Be a little shy of a ready guarantee. Be sure the guarantee has validity and strength and that all its terms and conditions are clearly disclosed. Watch out for restric-

tions with respect to time, material, and services.

Don't be fooled by the storm door and window salesmen who represent a specific amount of savings in fuel bills will result from the installation of such doors and windows.

Be on guard against representatives of furnace manufacturers whose sales crews masquerade as city or business utility inspectors and under the guise of a safety campaign deliberately sabotage a householder's furnace in order to make a sale of a new furnace or extensive repairs on the old one. Many times the salesmen would dismantle a furnace and then refuse to reassemble the unit, misrepresenting that such a service would involve great danger of fire, explosion, or asphyxiation of the householder and her family.

The encyclopedia salesman is a frequent caller at the home. Don't be persuaded by representations that his books are the most authoritative, most complete, contain more articles, or are the official reference work of Government departments, educational institutions, or public libraries. Don't be misled by the production of a letter from sonny's teacher which indicates the purchase of the encyclopedia is necessary for sonny's education—a little payola may be involved.

When you buy carpets from a door-to-door salesman, be sure you are getting what is represented. At times the representation is made that the carpet is Acrilan or a fiber of the acrilan line when in fact it is composed of rayon and contains no Acrilan at all.

Don't be taken in by the phony promotional telephone quiz. Your phone may ring and after the preliminary representations of selection, you may be asked a very elementary question, such as "Who was buried in Grant's Tomb?" After exercising your profound erudition, you are advised you have won a contest and will be entitled to a very special deal. These promotional schemes are not bona fide quizzes or contests, but are merely gimmicks to sell merchandise.

Watch out for the perennial magazine solicitor who goes from door-to-door with his credentials and certificates of authorizations. Many times these solicitors sell subscriptions for magazines which are not on their authorized list of magazines and are undeliverable. In these instances, the solicitor or his company refuses to refund the customer's money and requires such customer to accept a substitute magazine from the authorized list which they would not have otherwise ordered or accepted.

Be on guard for the distributors of photograph albums, certificates for enlargement of snapshots or negatives of snapshots who want to beautify and color and frame Johnny's picture or make a handsome enlargement in oil painted by an artist, similar to the sample displayed. This salesman fails to disclose to customers at the time the enlargements are ordered that the finished enlargement, when delivered, will be so shaped that it can be used only in specially designed odd-styled frames that cannot be obtained in stores accessible to the purchasing public and that it will be difficult, if not impossible, to obtain frames to properly fit the enlargements from any source other than the salesman's company.

Don't be deceived by the door-to-door nurseryman with a beautiful, colorful catalog representing that your grass will be greener, and your roses redder—that this gorgeous galaxy of color is yours by the purchase of his stock, and especially his rapid fertilizer.

With this spread of fertilizer, I will close as "time runneth out." As you must perceive, the subject covers a big field. The products and practices are almost unlimited in their scope and variety.

My final admonition—always read the fine print and be skeptical of the fast-talking salesman who offers you a special deal.

Hate on the Prowl

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the acts of hate and prejudice which have broken out throughout the world in the past weeks have been roundly condemned by heads of state, community and religious leaders. Whether these represent a broad plan or are just scattered incidents, reasonable men must stand firmly against the continuation of these outbreaks and sweep out the causes. I think the editorial which recently appeared in the Trentonian of Trenton, N.J., vividly describes the outbreaks and presents an estimable approach to dealing with them.

Mr. President, I ask unanimous consent to have this fine editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HATE ON THE PROWL

Somewhere or other, the pied piper of hate has sounded his clarion call and the rats have scurried out of hiding to do his bidding. As a result, we see holy edifices desecrated; the final resting places of the honored and the honorable are marked with the symbol of intolerance and scourged with the blasphemous words of prejudiced minds; despicable hate sheets filled with the rantings of bigots come into renewed prominence.

The outbreak of swastika painting, cross burning, and door-to-door distribution of hate sheets in the Trenton area is far more serious than it might seem at first glance. It appears to be part of a calculated campaign of professional antagonism. If so, that is deplorable enough, but even more disturbing is the fact that those who act without thinking, particularly youngsters, can be swept up in such a floodtide as it feeds on itself.

It may well be, as the Reverend Garnett Phibbs, of the Greater Trenton Council of Churches, says, that youngsters fall easy prey to hate mongering because parents have failed to give them an adequate understanding of modern history. To that it can only be added that all parents should now stand alerted to the danger.

In Trenton and elsewhere law-enforcement agencies will do their utmost to apprehend perpetrators. Eventually, this spate of ugliness will be stamped out or run its evil course. Meanwhile, we may well remember that the swastika was damned by the late Pope Pius as being a cross which is not the cross of God; and we can remember, too, that in this great Nation of ours there is only one real minority group—that group which espouses hate, religious prejudice, and racial bigotry.

The Next Election Is Already Rigged

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard Lee Strout which appeared in Harper's magazine, November 1959:

THE NEXT ELECTION IS ALREADY RIGGED

(By Richard Lee Strout)

(Why a fair ballot has become impossible in most States, how one farmer often outvotes 500 city dwellers, and why our politicians refuse to fix the political breakdown which is crippling local governments.)

Consider, my friends, the case of Louis Cahoon. He represents the town of Victory in the Vermont Legislature. He also is the father of eight—four sons, four daughters—and a solid citizen. Formerly he was selectman and justice of the peace. Now he is a lister—the Vermont term for "appraiser"—tax collector, and constable. If you live in Victory, he can set your tax, send you the bill, and arrest you if you don't pay it.

If you are driving through Vermont, you may have a little trouble finding Victory. Before you get there, the power line stops and the telephone stops and the macadam gives out. Mr. and Mrs. Cahoon read by kerosene lamps. So do the 47 other inhabitants of Victory. But they have their own representative in the State legislature because Vermont gave each town a seat in the lower house in 1793—and hasn't changed the rules since.

When Mr. Cahoon is serving as a legislator, he sits not far from Joseph Moore, who represents the thriving city of Burlington. Its population is 33,000. Since Vermont is still operating under a system of apportionment set up 166 years ago, Victory and Burlington have equal representation. That means that one rural vote is equal to some 600 city votes. The people of Burlington are not merely second-class citizens; politically speaking, they are the poor relations of Mr. Cahoon and his Victorian neighbors. As everybody knows, the farmers run Vermont—and under this setup, it is easy to see how.

But Vermont, after all, is a notoriously conservative State. All over the country Americans are leaving the farms for the cities, taking with them their fond folk memories of country life. How fortunate for all of us, they are probably thinking, that Vermont, at least, keeps alive the quaint old custom of equating a tiny village with a thriving city.

So, by way of contrast, let's see how they do things in progressive, up-to-date California. A fairly typical California politician is Charles Brown. He runs the general store at Shoshone and serves as the representative in the State senate of the 14,014 residents of three cow counties—Inyo, Mono, and Alpine.

And there is Dick Richards, a prominent young lawyer with political aspirations. He sits in the senate too, representing the 38th district. The 38th—oh, that's the county of Los Angeles. It has a population of 4,151,687. It gets one senator, just like Inyo, Mono, and Alpine. One rural vote here is worth three hundred city votes—not quite as bad as Vermont, but hardly what we think of as democracy where every man's vote is supposed to be as good as any other's.

DISFRANCHISED AND SHORTCHANGED

This kind of political deck-stacking is not confined to the coasts. It is common all through the country, and it is distorting the whole political process. It is growing worse, as more and more people move to the cities. It has given the farmers vastly more than their fair share of political power. (A fact which helps explain why our ridiculous and costly scheme of farm subsidies can perist so long.) It has spread to the national House of Representatives, where farm areas now have from 20 to 30 more seats than their population entitles them to.

So long as we permit it to go uncured, this warping of our political system throws the fairness of every election in doubt. It rigs the results of the voting far more effectively than all the ballot-stuffing and bribery which went on in the bad old days of machine politics.

The most astonishing thing about it is that the cities do not revolt. What prevents them?—that is the mystery. Maybe the answer is that most city people simply don't know how badly they are being cheated.

The U.S. census next year will show 7 out of every 10 Americans living in urban areas—but the balance of political power still rests with the country districts and the small towns. In Kansas, for example, one-third of the population—the most rural part—can elect a majority of the State senate. In Maryland it is 16 percent. In Rhode Island it is 14 percent. Indiana has six counties which contain almost half of its population—yet get only a third of the seats in both houses. Michigan's voters are concentrated largely in Detroit and its suburbs, which means that two-fifths of them live in Wayne County; but they can elect only one-fifth of the State senate. This fact underlies most of the State's recent financial troubles. The upstate farmers with their bagful of representatives simply aren't willing to vote the tax money which the urban majority thinks it needs to run a modern community.

A similar situation is building up in Florida as it becomes increasingly urbanized. Two-thirds of its people live in nine counties; they can elect less than a quarter of the legislature.

Nearly every State constitution begins with a sonorous statement of the basic rule of democracy—one man equals one vote—and goes on to direct regular reapportionment of the legislative seats at stated intervals. But the record shows a disgraceful disregard of these constitutional directives. Only 16 States actually carried out their reallocation of seats and legislative redistricting on the last two occasions when they were required to do so by their own constitutions. And in some of these States the adjustments were minor. For example, the Illinois Legislature simply ignored the reapportionment clause in its constitution from 1901 to 1954—thus setting its people a bland example of lawlessness for half a century. Finally, in 1955, after suffering outrageous underrepresentation in both houses of the legislature for years, Chicago agreed to have this injustice frozen permanently in the senate in exchange for a fair allotment of seats in the lower house.

In much the same way New York City is hobbled in Albany. Eight million city people elect only 90 members of the assembly, while seven million upstaters have 118. The hostility that has resulted is one of the deep-seated aspects of Empire State politics. The city's budget is half a billion dollars larger than New York State's (and larger than any State's in the Union), but its officials must make annual trips to Albany hat in hand. There the metropolis is treated like a freckless stepchild which can be trusted to levy only certain taxes and only on a short-term basis, and is seldom, if ever, allocated its proportionate share of State revenues.

In Colorado, in the same fashion, the legislature doles out to Denver only $2.3 million a year in school aid for 90,000 children. But adjacent, semirural Jefferson County gets a generous $2.4 million for 18,000 pupils. In Pennsylvania the legislature pays $8 a day for the care of indigent patients to every nonsectarian hospital in the State—except Philadelphia's city-owned General Hospital. The exception costs the city $2.5 million a year.

"I think Philadelphia is even more disliked by our State legislature than New York City by the New York State Legislature," Mayor Richardson Dilworth blurted out at a recent Congressional hearing. "Every mayor of a city over half a million has reported the same condition."

Only a political innocent could miss the meaning of this nationwide feud. Outside of the South, the cities are generally Democratic while Republican strength tends to be concentrated in the rural areas. The latter, of course, gain from the imbalance in representation. In New York, Illinois, Michigan, and other important States, the upper chamber of the legislature has been given, virtually in perpetuity, to the Republicans. It has become a rural conservative fortress, a kind of petty House of Lords almost above the swings of majority rule.

What has happened to the normal process of democracy when Gov. Mennen Williams wins popular majorities for six successive terms in Michigan but has never yet won control of the legislature? When New Jersey shifts regularly between the parties in national and gubernatorial elections, but the State senate remains forever Republican? When Adlai Stevenson won the governorship of Illinois by 570,000 in 1948 but faced a Republican senate throughout his term of office? When there has been a Democratic Governor in Albany during 25 years since 1920, but the Republicans have held a majority of the senate in all but 8 of those years and lost control of both chambers in only 1?

BACK-SEAT DRIVERS FROM THE BACKWOODS

Our curious system of misrepresentation has its roots down in the counties which are the home bases of most State lawgivers. (In New England it is the township.) County government is in widespread decay; most counties are headless and disintegrating. This obsolete unit of government supports a variety of strange elective offices such as the sheriff (descended from the English shire-reeve who preserved the shire's peace) and the coroner (a Crown officer around 1194 who kept his eye on the shire-reeve). Today when the proud voter parades to the polling place in a county election, he takes his choice between a couple of seedy undertakers to determine whether there shall be Democratic or Republican autopsies in the next biennium. There are 3,057 counties and they are the dark continent of American government.

However, jobs on the county payroll and county construction contracts and purchases are an important source of nourishment to the rural grassroots of our political parties. State lawgivers are usually picked by the county organization and have a parochial outlook. State legislatures generally meet for only a few months and some convene only every other year. Many of the State assemblymen and senators are firstrate men. But inevitably they look askance at the teeming problems of the exigent cities.

This does not prevent them, however, from being invetrate back-seat drivers. A stop light at the corner of Main and Elm? Let the city fathers first consult State officials. A city tax on cigarettes? St. Paul and Minneapolis won permission for such a levy in 1949 from the State legislature, which then appropriated the money for the State budget.

But these are mosquito bites compared to the real problem. In the United States, great supercities are forming, not metropolises but megalopolises. Already, one vast urban region stretching 600 miles from New Hampshire to Washington, D.C., holds a fifth of the country's population. Similar agglomerations will run from Los Angeles to San Diego, from Cleveland to Pittsburgh, and among the cities along the St. Lawrence Seaway—Detroit and Toledo, Chicago and Milwaukee. How can rural lawmakers—men who never rode a subway—deal with the super-cities' staggering transportation, industrial, housing, and other social problems? In fact, they don't.

Back in 1953 President Eisenhower was determined to scale down centralized government by returning more functions to the States. So he set up a Commission on Intergovernment Relations headed by one of his special assistants, Meyer Kestnbaum, a much respected business magnate. The Kestnbaum report proclaimed facts which college professors had vainly tried to tell the Nation for years; cities are bringing problems to Washington because State legislatures won't handle them.

"In a majority of the States," said the report, "city-dwellers outnumber the citizens of rural areas. Yet in most States the rural voters are overwhelmingly in control of one legislative house and overweighted if not dominant in the other. * * * If the States do not give the cities their rightful allocation of seats in the legislature, the tendency will be toward direct Federal-municipal dealings."

This is why Senator JOSEPH S. CLARK of Pennsylvania last summer introduced a bill to set up a special Federal commission on metropolitan problems. Such a device might conceivably help the city voter to get a better shake in Washington, but the odds are heavily against them.

As we know, Nevada with 160,000 people has two U.S. Senators, just like New York with its 14.8 million. But the House was to be the "grand depository of the democratic principle" with membership determined proportionately by population. It has not worked out that way. Rurally biased State legislators draw the boundaries of congressional districts and have been most obliging in giving Representatives from the hinterland safe, sparsely populated fiefs. In Texas, for instance, SAM RAYBURN's district has a population of around 200,000 while the State's lone Republican, BRUCE ALGER of Dallas, has nearly three times as many constituents. Republican-dominated South Dakota, on the other hand, splits its two congressional seats so that the Democrat has 494,000 constituents, the Republican 159,000.

Some of the worst inequities result, not from positive acts of injustice but from no action whatever. The controlling faction in the State legislature simply does nothing while population within the States gravitates toward the cities. This is the "silent gerrymander" which has done much to devalue the city-dweller's vote. Partisanship is not always a factor. Thus in Ohio the 3d and 15th Districts are both Republican, but the 3d, which includes Dayton, has nearly double the population of the semi-rural 15th. This follows the political rule that Republicans where possible shortchange Democrats, and Democrats where possible shortchange Republicans, and both shortchange city-dwellers.

THE URBAN-MINDED SENATE

The irony of our present situation is that the Senate has become more urban-minded than the House, for in most States Senators can't win without city votes. Many Representatives, on the other hand, come from districts that don't even have a large town. After World War II the Senate passed public-

housing bills three times before one got through the rural-minded House and became law. Since then the House has repeatedly voted to reduce or eliminate public housing and similar appropriations needed by the cities. Slum clearance, urban renewal, city-health benefits all tend to fare better in the Senate than the House. In both Houses, the seniority system of picking committee chairmen also handicaps city-dwellers; congressmen from one-party districts are bound to outlast urban Representatives who often face fierce competition and must battle every 2 years for the votes of a huge, constantly changing constituency.

Rural overrepresentation involves one more thing—the Constitution. After Congress passes an amendment, it goes for ratification to the State legislatures. How representative is this jury? The fate of the 18th amendment might have been very different if it had been voted on by the people rather than by State legislatures fearful of Wayne B. Wheeler. The 22d amendment limiting the President to two terms (which has lost its glitter for some of its original backers) also had a peculiar charm for conservative rural legislators who chronically mistrust executive power, whether the Governor's or the President's.

Now the Nation faces the 1960 census. The scramble to reshuffle congressional seats will be the biggest in years. States expected to gain seats are: California, 7; Florida, 4; Michigan and Texas, 2 each; Arizona and Hawaii, 1 each.[1]

Probable losers are: New York and Pennsylvania, 3 each; Massachusetts and Arkansas, 2 each, and nine other States, 1 each.

WHAT MAKES A SAFE DISTRICT?

Up for grabs before the 1960 election is the juicy task of redrawing a couple of hundred congressional districts. Although the census will require the redistribution of only about three dozen seats, most of the other districts in the affected States must—or at least should be—remapped. For politicians this is a momentous matter, and all over the country they are laying their plans.

Suppose, for example, that a State which formerly had only 7 Congressmen will have 8 next year. If the two parties happen to be closely matched this is a particularly challenging opportunity for the dominant one which runs the State legislature. Subject only to the Governor's veto, it will try to slice up the total population into five or six safe districts for its side and leave its opponents only two or three. It will take care to give itself the sparsely inhabited safe areas and let the other side have the densely populous districts. The same game can be played in reverse if the State's representation is shrunken rather than increased by the census.

Most State legislatures go about redistricting as though they had "some sort of popular mandate directing the victor to monopolize the spoils," writes Dr. Gordon E. Baker of the University of California in his pamphlet "Rural Versus Urban Political Power." In fact, the dominant party can draw any boundaries it thinks the public will stand for without gagging. Few courts will interfere and there are few laws to restrain it.

From 1842 to 1920, a Federal statute did require State legislatures to make congressional districts compact, contiguous, and reasonably equal in population. After the 1920 census, the House and Senate couldn't agree on a new apportionment act. When one finally passed in 1929 it omitted the old fair-apportionment clause, although Congress lacked the effrontery to repeal it expressly. When the matter was brought to the Supreme Court by a Mississippi citizen in 1932, the Court dryly declined to intervene on the grounds that Congress deliberately intended to drop the voters' safeguard. President Truman asked Congress to restore it in a special message in January 1951. Almost certainly our next President, Republican or Democrat, will make the same appeal in January 1961. Will Congress heed? Not if the public reaction is no greater than that given to hearings called by Chairman EMANUEL CELLER of the House Judiciary Committee. He has been trying to rouse interest in a reform bill but has stirred hardly a ripple.

Even if Congress fails to act, the oppressed city dweller could—if he chose to do so—bring about some changes. The chief weapons at his disposal are these:

The courts: Until very recently the Supreme Court and State courts generally declined to intervene in redistricting questions. However, a three-judge Federal court in Minnesota, July 10, 1958, required the legislature to obey the State constitution and undertake reapportionment. An encouraging precedent has thus been set.

Pressure by civic groups: The League of Women Voters, long an active proponent of reform in several States, is now compiling a nationwide record from data collected by local chapters. Municipal organizations are also awakening to the problem. Many "greenbelt" suburbs (often Republican) are now growing faster than parent cities (usually Democratic). This gives a new, refreshingly bipartisan impetus to the drive for reform.

Initiative: The constitutions of 20 States make it possible to force legislative reforms by circulating petitions among the electorate. Initiative has been used, in recent years, to increase urban representation in four States: Washington, Colorado, Oregon, and Arkansas.

None of these remedies is easy to apply or certain of success. Attempts at reform have been known to backfire for there is a powerful vested interest in preserving malapportionment. Strong groups within the cities themselves which are content with the status quo make common cause with conservative rural lawgivers—they are, perhaps, easier to manipulate than city types.

Consider what happened in California in 1948. A bipartisan group with labor support initiated a petition for reapportionment. There was little doubt as to the need: the four million residents of Los Angeles then—as now—had only a single senator in Sacramento.

But the reform was fought tooth and nail by—of all people—the Los Angeles Chamber of Commerce (which had backed reapportionment a few years earlier). Other business groups denounced it and so did the metropolitan press almost without exception. (Less surprisingly, the Farm Bureau and the Grange were opposed.) In a frenzied attack, the petition was called "a labor plot," "a Communist plot," "un-American," an effort by "crackpots" to impose ruinous taxation on "city homeowners and wealth-producing farm areas." The project was overwhelmed; it didn't carry a single county. Even the under-represented cities voted against it.

All of which brings us back to our original question: How long will 115 million city suckers stay under the green thumb of 57 million country slickers?

Maybe the urban voter needs a psychiatrist. Floating before his inner eye is the image of a trim white farmhouse—a purity symbol. Next door, in his subconscious, is the guilty, haunting memory of ancient American municipal corruption labeled Tammany Hall. The psychiatrist might try to explain why the obsession lingers on, even though the reform of so many city governments is one of the inspiring developments of the past 25 years.

Yet the buttercup myth of rural superiority survives. It sprouts in every American when he goes to school and reads "The Village Blacksmith" and "Snowbound." Along with Jefferson he learns to mistrust men who don't till the soil. And he cherishes the lost simplicity of a Vermont farmhouse with pump, and flakes floating down that are either apple petals or snow. Here is the true America of Longfellow, Whittier, and Robert Frost. A lovely image. The only trouble with it is that it stands between the city dweller and the city's new sewage disposal plant.

[1] Hawaii elected one Representative this fall and will gain another by the census. Alaska will not be affected by the census. Unless new legislation is passed there will be a total of 435 House seats after 1960.

Economics for the Voter

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Dr. Charles L. Jamison, professor emeritus of business policy, which appeared in the Autumn 1959 Quarterly of the Michigan Alumnus. Dr. Jamison, in his excellent article, warns that many citizens with little knowledge of the basic rules of economics can be bamboozled by vote seekers who promise prosperity for everyone with schemes that are completely unworkable and unsound.

The article follows:

ECONOMICS FOR THE VOTER

(By Charles L. Jamison)

Amid the clamor for more and better-trained scientists, little heed is given to the muffled protests that too few colleges and university students take even a cursory interest in the science of economics. This is a serious neglect, because most of the major domestic issues of Government have an economic overtone. An economically illiterate electorate cannot possibly understand the import of unsound public policies. People can be easily swayed by misinformation given out by propagandists who are promoting the selfish interests of one or another pressure group. A current example is the campaign to curb inflation, which seems to be shaping into a major political issue. For years a bundle of complex economic forces has been contributing to the instability of the dollar as a measure of value. Symptoms of the disease of inflation are plain enough, but the causes are beyond the comprehension of the average citizen.

It is not surprising that there is confusion in the public mind as to what can be done about inflation. Professional economists today do not agree, nor have they been in agreement at any time throughout a century and a half of economic controversy. A political leader can pick the economic philosophy that best suits his purpose and can find authoritative backing for the theory that he wants the public to believe.

The man on the street may not be able to understand the technical language of the

science of economics, but any intelligent person can understand simple rules of logic. If asked the straightforward question, "Do you want the dollars you have saved to be worth less at the end of this year than they were worth at the beginning of the year?" the answer without doubt would be negative. But if asked, "Would you like to have twice as many dollars in your pay envelope?" the answer would be a vehement "Yes," with no questions asked as to how the magic is to be brought about. It was Aristotle who propounded the obvious law that every man must, in the last analysis, fend for himself. Aristotle merely restated for human beings what all animal life knows through instinct—that self-interest is the supreme compelling force in life. Too many people, however, find that the easiest way to fend for oneself is to cast a ballot for a politician who promises to do all the fending for them.

In any case, most people wish to improve their own economic well-being and will lend an eager ear to the blandishments of the proponents of any scheme that is represented to guarantee prosperity for everyone. That is why a clear understanding of a few basic economic truths would deter citizens from giving support to unworkable panaceas for economic ills.

The most visionary schemes are born in depressions such as that of the early 1930's. In February 1936, Virgil Jordan wrote: "The number and variety of schemes * * * is vast, and the exploitation of them is limited only by the energy of their promoters and the credulity and endurance of their devotees and victims. * * * They are the product solely of a hypothetical, uninformed and unrealistic conception of the nature and operation of the enterprise system of production, and result from incompetent and careless use of synthetic pseudostatistical estimates constructed out of fragmentary and inaccurate records."

The particular scheme that called forth this rather emphatic denunciation was known as the Townsend plan. The plan was discarded long ago as a political issue, but the basic belief still lingers that "free issuance, wide distribution, and rapid circulation of money will automatically assure prosperity and security." Current application of the doctrine is more subtle than the Townsend plan and is supported by arguments that are so plausible that fallacies are not readily detected. It may be worthwhile to review the palpably unworkable Townsend plan as an example of the way people can be gulled by unsound economic doctrine.

The Townsend plan proposed to pay a pension sufficient to provide a total income of $200 a month to all citizens of the United States who were at least 60 years of age, and who were not habitual criminals; who would "solemnly promise" to spend the entire amount of the pension during the month in which it was received; and who retired and abstained from all productive and gainful occupation or labor. Persons with private incomes from any source other than payment for services, if such incomes were less than $2,400, were eligible to receive whatever sum would bring their incomes up to $2,400 a year, but had to promise not to save a single dollar.

The cost was to be met by a tax of 2 percent on all gross business transactions. The following were regarded as "transactions":

1. The sale, barter, or exchange of real and personal property.

2. Interest, rent, concessions, fees, and other pecuniary benefits derived from any loan, deposit, rental, lease, pledge, or other use or forbearance of money or property.

3. Personal services of all kinds.

4. Public utilities services.

5. Transportation and communication services.

6. Amusements, recreation, and education.

A few limited exemptions from the tax were provided, chiefly all banking transactions.

It was estimated that between 8 million and 10 million elderly persons would come under the plan. The annual cost would have been upwards of $20 billion. It was claimed that the plan would sustain itself by a 2-percent transactions tax without further Government aid. It was claimed further that trade would be accelerated tenfold by the spending of the money—$1 released into the channels of trade would soon liberate 10 credit dollars during a period of financial confidence. Demand for goods would be increased and thus provide new employment to supply an increasing demand for goods. Indeed the demand for goods would be expected to test our capacity to produce as never before experienced within this Nation. The list of imaginary advantages of the plan embraced enough benefits to cure almost all of the Nation's economic ills.

Conservative political leaders loudly derided the plan. Among the objections were the enormous cost and difficulty of collecting the tax, the inadequacy of the income that might be produced, and the certainty that the tax would be added to prices and in the end would increase the cost of living, thereby contributing to inflation. The plan lacked widespread political appeal, although a few million elderly people were enthusiastically in favor of it. Congressman Clarence E. Lea, of California, in an interview published in the Wall Street Journal, February 1, 1936, stated that the annual tax burden imposed by the plan would amount to about $190 for each man, woman, and child in the United States. The per capita tax at that time for all purposes—district, municipal, county, State, and Federal—was estimated at $122. Thus, the Townsend plan would more than double each person's tax. Congressman Lea made this wise observation, "Taxes must be paid out of earnings and savings of the industrious and frugal. The buying power of the aged is increased but only to the extent that the buying power of the taxpayers is decreased."

The Townsend plan was not the only reform scheme hailed by visionaries as a way to insure prosperity. Subsidies to farmers were claimed to perform the same wizardry. An editorial in the Commercial and Financial Chronicle of January 11, 1936, pointed to an apparent fallacy in that reasoning. "It has become customary to speak of the immense purchasing power which has been placed in the hands of the farmers in the form of benefit payments. * * * Let it be carefully noted, however, that this purchasing power was not created from thin air. It was taken in the form of processing taxes from the general population. What the farmer gained accordingly was lost to those who had to provide funds for the payments. * * * The assertion is made that farmers are more in need of purchasing power and more likely to make prompt and effective use of it than other sections of the population."

"These schemes," wrote Virgil Jordan in 1936, "are all expressions of the consumption theory of prosperity. They all rest upon the assumption that depression, unemployment, and old age dependency are the result of the inherent capacity and persistent tendency of modern industry to produce more goods and services than can be consumed; that failure to consume them is due partly to displacement of labor by machinery and partly to insufficient income among employed workers; that both of these factors of inadequate purchasing power arise from an improper distribution of the national income among the population."

During World War II full employment and austerity silenced the protectors of purchasing power. But at the termination of the war the issue once more was brought forward. At this time pesrons in Government and labor circles were "convinced that demobilization would bring deflation and acute depression." This conclusion was based on the assumption that the elimination of overtime work at time-and-a-half rates of pay, together with the reduction of the labor force as demobilization proceeded, would involve a quick shrinkage in aggregate purchasing power. "To this group a price and business debacle appeared inevitable unless the prospective deficiency in purchasing power was promptly made good. They urged a twofold program: first, an increase in standard wage rates to offset the loss of overtime pay, and second, a public works program to sustain employment at or near wartime levels."[1]

Prices and wages had been frozen for the duration of the war, but the Director of the Office of War Mobilization and Reconversion announced; "We must be prepared to make some upward adjustments [in wage rates] to compensate for the severe decline in take-home pay."

President Truman, in a nationwide radio address on October 30, 1945, said: "Workers have been receiving time-and-a-half for overtime—for all hours they worked over 40 hours. That overtime pay is now gone in the change to the 40-hour week. The result has been a decrease of almost one-quarter of the workers' weekly pay. Wage increases are therefore imperative to cushion the shock of our workers, to sustain adequate purchasing power, and to raise the national income. There are many people who have said to me that industry cannot afford to grant any wage increases without obtaining a corresponding increase in the price of its products. And they have urged me to use the machinery of Government to raise both. This proposal cannot be accepted under any circumstances. To accept it would mean but one thing—inflation. There are several reasons why I believe that industry as a whole can afford substantial wage increases without raising prices."

The reasons referred to were five in number. Two of them were expressed in the belief that employers would save money by eliminating overtime work and the time-and-a-half penalty for the extra hours, and through the downgrading of workers to lower rated jobs. Two more of the reasons were that employers would transfer to workers money that otherwise would be paid to someone else—excess profits taxes that no longer would be assessed, and profits that otherwise would be paid to stockholders or reinvested. The final reason for believing that employers could increase wages without increasing prices was that increased productivity per man-hour could be expected from technological improvements that had been adopted during the war.

A careful examination of the foregoing reasoning reveals the sort of error that many well-intentioned persons have committed. Transfer of income from one group to another does not increase material wealth; it merely effects a redistribution. It does not forestall depression or increase prosperity. Of the five reasons why prosperity could be expanded by increasing wages, the only realistic argument was increased output per man-hour.

With the encouragement given by the Government in setting aside wage controls, unions demanded and, after a rash of strikes, got substantial wage increases in 1946. It was then that the expectation was born that each renewal of a wage contract must embody a new round of wage increases. In

[1] Harold G. Moulton, "Can Inflation be Controlled," Anderson Kramer Associates, Washington, D.C., 1958, p. 158.

addition to negotiated rate increases, many contracts contain escalator clauses which provide for automatic increases as the cost of living rises. A supplementary provision in some contracts adds a percentage to wage rates each year known as the productivity factor.

The pressure on wages has been effective insofar as it has, from 1946 to the close of 1958, brought about an increase of about 87 percent in the weekly earnings of factory workers. In the same period the cost of living has risen about 49 percent. Transfer of purchasing power from other groups to factory workers has kept them well ahead of the rising cost of living. Pensioners and persons on fixed incomes have been contributors to the prosperity of factory workers.

Persons of all classes who save money know that the erosion of the dollar robs them of eventual purchasing power. Hence the public interest in the controversy over what has been causing prices to rise. Is it deficit financing by the Government, or the increasing cost of productive labor? A well-known economist (Schumpeter, History of Economic Analysis, pp. 109–110) has said: "There is not much more sense in quarreling over the question whether it is the increased quantity of money or increased payroll that causes inflation than there would be in quarreling over the question whether it is the bullet or the murderer's intention that causes the death of the victim."

Stabilization of prices will stop inflation. Government control of prices, of course, would solve the problem, but that remedy is abhorrent to most people. Those who believe that the wage push is responsible demand that labor costs be stabilized, since about 75 percent of the final cost of products in retail stores is wages paid somewhere along the line. Consumption theorists, on the other hand, maintain that increasing purchasing power is the basis of national economic growth. Increased wages create more purchasing power, which stimulates production, which gives employment to more people, whose purchasing power is added to the stream of consumer income, and so on and on. A typical proponent of this theory is the president of one of the large labor unions. He said in a hearing before the Joint Economic Committee of Congress in February 1959: "A boost in consumer buying power is needed in 1959. It is unrealistic to expect a substantial rise in consumer spending—particularly for hard goods and homes—while the buying power of per capita after-tax income is less than it was more than 2 years ago. Wage and salary increases and a reasonably stable price level are essential in 1959. With profits rising rapidly from the recession low point in recent months, there can be no rational reason why substantial wage and salary increases cannot be granted without raising living costs."

The foregoing proposal assumes that production costs can be increased without a compensating increase in prices. The added cost must come from some source. The unionist implies that it can come out of profits. Of course, a reasonable source would be increased productivity per man-hour. But many unions already have tapped that source of funds by contract provision for an annual increase in pay equivalent to a productivity factor of a percentage that absorbs all, if not more than, any gain from production efficiency.

Saving in production costs would benefit all consumers if passed on as a reduction in selling prices. But when all the saving goes to factory workers they are the only persons who benefit. The buying power of a few is increased at the expense of the many. Three increments are embodied in rising labor costs—hourly rate increases with each contract renewal, cost-of-living adjustments, and the productivity factor. The question now is whether all this added cost can be taken from profits without completely destroying profits.

Statistics in the following tabulation indicate that in the period from January 1, 1946, to December 31, 1958, wages and salaries have increased at a greater rate than the national income, and at a rate almost five times the rate of increase in business profits:

	1946 (millions)	1958 (millions in 1946 dollars)	Percent increase
National income	$180,879	$260,500	48
Wages and salaries	91,241	139,500	53
Business profits before taxes (corporations and unincorporated business)	43,872	49,500	13

In the above statistics the effect of inflation has been removed by deflating the 1958 figures to the value of the 1946 dollars. In other words, if prices had not increased, the situation would have been as shown in the 1958 column.

The economic growth of the country is reflected in the 48-percent increase in national income. If all the sharers in the national income had received the same proportionate share in 1958 as in 1946, each group—wage earners and investors in private business—would have had a 48-percent increase in purchasing power. But in 1958 wage earners received 5 percent more than the share they received in 1946, and investors in business had a 35-percent reduction in their share.

A case can be made for the contention that transfer of purchasing power from investor to wage earner, instead of stimulating the rate of increase in industrial expansion, tends to retard it. The wage earner generally spends most of his income for consumption goods; the investor reinvests a considerable proportion of his in new factories, new communication and transportation facilities, and the like. The idea seems to prevail in the minds of some that invested money is diverted from the stream of spending. On the contrary, the building of machines and structures of any kind creates jobs, channels money into payrolls, and thus into the buying of consumption goods. Dividends to stockholders likewise are spent.

Many short-term forces, when at work, can influence a ries in prices; when the influence is withdrawn, prices will recede to their former level. But forces that persist year after year will not allow prices to recede. Two conspicuous examples are (1) persistent deficit financing by the Government, and (2) unremitting pressure of labor unions for annual wage increases. Government fiscal policy can cause inflation when the Government spends more money than it collects in taxes. Money flows into the pockets of potential spenders in excess of the production of goods and services for which the money may be spent. Not many years ago such an excess was regarded as serious and was called the inflation gap. It is illustrated by the following figures from Survey of Current Business, September 1943, page 5:

[In billions of dollars]

	1942	1943
Income payments to individuals	115.5	142
Less personal taxes and nontax payments	6.6	16
Disposable income of individuals	108.9	126
Less consumer expenditures	78.2	88
Gross inflation gap	30.7	38

In the year 1958 defense expenditures of about $30 billion had released purchasing power, much of which had gone to individuals as disposable income; yet persons receiving that income had produced no goods for which the money might be spent. The difference between the situation today and that which prevailed in 1943 is that there is not now a shortage of civilian goods as there was during the war. Buyers do not bid against each other for a short supply, as they would have done in wartime, when they were restrained by rationing and price controls. There is little evidence that price increases during the past few years have resulted from demand pull. Indeed the cost push is regarded by some economists as the primary cause of rising prices.

As long ago as 1941 Bernard M. Baruch, wise counselor of men in high places, is quoted as having told a congressional committee on the prevention of inflation: "Wages form the biggest component of all price structures. To attempt to fix price levels without thorough consideration of this element would be as abortive as to try to cure a sick man of all his ailments except the one that is most dangerous—the one that is likely to be fatal to him."

Prof. Jules Bachman recently expressed the belief that creeping inflation will prove disastrous unless checked. "Increases in money wages and nonwage benefits have been exceeding gains in output per man-hour by some 2 percent or 3 percent a year. The net impact on prices has been called creeping inflation. While price increases of 2 percent or 3 percent a year seem small, they aggregate into a major erosion of purchasing power over a period of years. Thus, an annual rate of increase of 3 percent a year would double the price level in a quarter of a century. The prospect that half the purchasing power of the dollar would be wiped out in a generation is certainly no ground for complacency"

From another economist, Harold G. Moulton, comes this statement: "The crucial question now to be considered is whether the primary motivating force in price advances proceeds from the cost side or the demand side. When costs of production rise in consequence of an increase in wage rates (without compensating changes in production efficiency) the business enterpriser has no alternative except to recoup the added costs by raising selling prices or retire from business. The pressure from the cost side, is real, insistent and inescapable."

Criticism is heard of companies which raise prices as soon as a new wage contract goes into effect. It is contended that they should wait to see if they can afford it before raising prices. Moulton justifies the manufacturers' practice. "Wage increases nowadays commonly appear as costs before they become available as purchasing power. A wage contract to extend over a year or more instantly creates a new cost level which quickly becomes a basis for new price quotations. On the other hand, some time may elapse before the increased money wages become available for expenditure. Meanwhile prices will already have been

marked up because of the push from the cost side."

The current controversy over inflation is summarized by Dr. Neil H. Jacoby: "Despite general agreement that a stable price level fosters economic growth and should, along with full employment and free markets, be an accepted goal of public policy, surprisingly little has been written on ways and means of achieving this end. There is even much dissension over the causes of inflation. The popular view is that creeping inflation arises from excessive Federal spending. * * * Although systematic control of Federal expenditures is important, they cannot be the salient cause of inflation because they form only about 15 percent of aggregate demand. * * * Granted that the upward push of wages on prices has played an important role in inflation, experience has shown that the admonition to use restraint is not very effective. Let us view creeping inflation in a long perspective, develop a theory to account for it, and then deduce from this theory a feasible program of public policies to prevent it in the future. What they—advocates of creeping inflation—fail to understand is that even more rapid growth would be possible under a reasonably stable average of prices, if the price and resource structure were sufficiently flexible."

Although the subject of economics is elusive, application of its principles is vital in formulating rational public policy. One fact is clear to the majority of citizens—the dollar has lost more than half of its value in the past 20 years. One segment of the population has been able to keep its income abreast, or a little ahead, of rising prices; many others have been much less fortunate. But almost everyone would like to see the erosion of the dollar stopped. Differing ideas are advanced for effecting a remedy and are leading to sharp controversy. The argument is spreading over into politics. Voters are asked to support candidates representing one school of thought or another. Confusion because of lack of understanding of fundamental economics might conceivably lead voters to support a political scheme that would destroy the private enterprise system.

Economic education for each voter is much to be desired. At least, each one should have enough understanding to be able to distinguish flagrantly unsound proposals. A program that would accomplish that end would have to be introduced in the high schools. But if only college students were exposed to such training, the competence of the electorate would receive a great uplift.

Do You Sleep Well?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. VAN ZANDT. Mr. Speaker, on January 14, 1960, Maj. Gen. I. S. Morris, U.S. Army, addressed the 36th annual and 110th regular meeting of the Atlantic States Shippers Advisory Board in Washington, D.C. General Morris' statement, which follows, was based to some extent on the Kilday subcommittee inquiry of the House Armed Services Committee conducted during the 1st session of the 86th Congress and reveals the additional need of congressional action in providing adequate transportation systems in support of the national defense effort in the event of mobilization. The address follows:

DO YOU SLEEP WELL?

(Address by I. Sewell Morris, major general, U.S. Army, to 36th annual and 110th regular meeting, Atlantic States Shippers Advisory Board, Washington, D.C., January 14, 1960)

Good afternoon, ladies and gentlemen.

Just recently I was able to prevail upon the generosity of Dr. Paul Beall to come over to our agency headquarters and talk for an hour or so to my staff on a subject on which he is an expert. When I use the word "expert" I fancy I see faint grins flicker across a few of your faces, because you are recalling several of the facetious definitions of the word "expert." Dr. Beall is a real, honest-to-God expert who is widely sought as a consultant in the preparation and delivery of what we call "decision briefings." I have decided that my talk to you today is a "decision briefing" because I am going to urge you to make a decision concerning a need that I see.

One of Dr. Beall's first rules is, "Capture their interest," and he goes on to explain that interest is much different from attention. Attention is a fickle little elf that can be captured for varying periods of time by gimmicks and can be lost by any one of a thousand distractions—if that light went out, or if someone spilled a drink at your table, your attention would flit to that point. Interest, on the other hand, is wrapped up in substance; it runs much deeper than attention. Interest is a personalized thing. Interest concerns me—and you.

Today I am seeking your interest. I am competing with something much more profound and more elusive than the distraction of a spilled drink. I am reaching and hoping to pry loose from your thoughts of affairs which are subjectively vital to you—your inner concerns, your business worries, your special ambitions. As most of you have learned when you have been called on to speak, this is no easy trick.

I am not going to take the time to talk about the aims and objectives of our agency, the Military Traffic Management Agency. I think this alone may begin to catch the interest of some of you, for MTMA, being new, has had a good many speeches made about it, and quite a few have been—understandably—braggadocious. I will say that I believe that I have the best job in the Army, and I am proud of our agency with its four colors of uniforms and its dedicated staff. But that is not today's subject.

My discussion today is much more vital than any agency—MTMA or any other. It is vital to our country, and it is vital to each of you. I want to talk about "Traffic citizenship"—for you and for me—and what we can do about it in behalf of the defense posture of our country. Probably you could take my topic and make a better speech. I believe this because the very nature of shippers advisory boards means that they are composed of good traffic citizens. I observed that the purpose of this organization is to promote adequate and efficient transportation service to meet the requirements of industry by the interchange of ideas and information as it relates to one of our great modes—the railroads—through the Car Service Division of the Association of American Railroads. It means that here are people who are smart enough to have had their interest captured by the need for traffic planning. You are people who are motivated by an understanding of the importance of a marriage between transportation capabilities and transportation requirements, particularly to meet emergency situations.

We in MTMA share that understanding. We have been doing something about it. So, too, has Congress. On the 15th of July 1959, a congressional subcommittee commenced an inquiry into the adequacy of transportation systems in support of national defense in the event of mobilization. This subcommittee was chaired by the Honorable PAUL J. KILDAY, of Texas, and its parent committee is the House Committee on Armed Services, of which the Honorable CARL VINSON is chairman. Before it began the 10 days of hearings, the committee submitted 12 questions to the Department of Defense directly related to this important inquiry. Department of Defense witnesses, including myself, answered these 12 questions in statements during the hearings held by the committee. The committee took a lot of pains with this inquiry and I believe it rendered a good service to the country.

Part of my testimony, which you can read on pages 149 through 167 of the printed hearings, sets forth the very best analysis we could make of national transportation capabilities as compared with military—I repeat, military—requirements. I should say that not all the details are included in the printed hearings, because certain graphs and statements dealt with classified matters. Nevertheless, I believe you will have no trouble getting the important gist of our findings.

The scope of our study included only military requirements, although in dealing with capabilities we did something that has not been done before. We went to the several transportation industries, worked closely with them in establishing criteria for developing capabilities, and came up with national transportation capabilities by rail, motor, and air, for both passenger and freight transportation. This was subdivided into a number of useful categories. We received fine cooperation from the respective carrier industries in doing this, as well as from all of the military departments who submitted their prospective requirements to us. As you can imagine, all of this demanded a good deal of backing and filling so as to get requirements and capabilities stated in terms which could be matched and compared.

This is not just a one-time effort on our part. We have been continuously updating our studies as criteria and conditions change. We have been furnishing appropriate industry associations the impact data of these studies so that they may be kept posted as our findings cocerning military requirements are determined. Being essentially first-time efforts we recognize that shortcomings exist in some of our calculations. We are aggressively refining our planning to minimize these discrepancies. One thing is certain—our planning today for emergency situations is aggressive, finite, well conceived and is turned to the varying conditions of this nuclear age.

In answer to a specific question from the committee, we expressed the conclusion that sufficient capability does exist in the transportation system to meet military requirements. Once more, I must repeat, this included military traffic only. Military traffic, as I use it, embraces the flow of men and material within this country moving by Government transportation request or Government bill of lading. That flow, of course, does not include the enormous volume of first destination traffic of materials, such as raw materials and subassemblies, not immediately identified as military equipment, supplies or stocks. The Office of Civil and Defense Mobilization has set in motion the machinery to compute the requirements for essential civilian activities and for the war-supporting industries.

Consider the magnitude of this task with all its implications and ramifications. Would

you say it can be carried out successfully without the utmost of cooperation from good traffic citizens like yourselves? Certainly not.

To me this is not wholly a task for a few. Transportation preparedness is everybody's business. For you who represent the traffic "know how" it is a challenge you cannot shuck off. A vital ingredient in national transportation preparedness is to know what is to be expected of our transportation systems, large though they may be. To predict what the military requirements may be is not enough. We must calculate the predictable demands to support the civilian economy and our war supporting industries. For us to achieve true readiness we must then continuously update our national calculations, both from the requirements side and from the capabilities viewpoint. We must crank in varying conditions of emergency so as to provide for multiple contingencies. Only when we have accomplished these things on a national scale can we talk from facts.

Your support of OCDM, the ICC, and other Government agencies in this vital task is a way you can literally contribute to transportation preparedness. It is not a glamorous role but one of great importance.

I make so much of this point because transportation serves everyone. We in the military rely upon commercial systems to transport our traffic within this country. We rely upon the same systems as do you—the shippers in this audience—and as ordinary citizens. We must know what the total load might be. To have enough for the military is in fact not enough. Believe me, we know that our strength comes from the total national life of this country.

One thought is particularly important in considering this subject of transportation adequacy against contingent events: The nature of planning against adverse contingencies is such that is is necessarily directed at relatively few of the possibilities. Just to calculate against one of these imaginary conditions is a rather monstrous job. What this means is that we must be flexible in our thinking about these calculations, for other imaginable sets of circumstances could produce worse results, especially in spot situations. For instance, there is a fairly widespread view that railroad motive power can be considered adequate for national emergencies. But could you not visualize certain sets of conditions wherein motive power itself might be deficient? What about fuel supply? Under certain conditions it could be the limiting factor.

This certainly is not a group which needs anyone to belabor the theme that total number of units of equipment is only part of the true measure of capability. Although the Army has done some pioneering in large-scale containerization, I think you are better versed than I in the advantages not only of containers, but of the other instruments of integration, such as piggyback, fishyback, through billing, interchange of equipment, interline accounting, and so forth. I notice that the forwarders seem to be providing some of the impetus for a portion of the progress in these matters.

You have probably noticed the announcement that the Army is testing prototypes of the new universal size metal container which has been recommended as apparently the best suited to interchangeability among the various modes of transportation. This recommendation came just last fall from a National Defense Transportation Association committee which is doing some vigorous thinking on this subject.

In the report by the Kilday subcommittee on its inquiry, recommendation No. 4 is important enough to you that I hope you will suffer my reading it to you verbatim:

"There was demonstrated in these hearings an obvious urgent need for a national traffic control system, in being, staffed by officials in Government and in the transportation industry, who will work together and be ready to operate in time of emergency on a national and regional level. The Military Traffic Management Agency advised that it has the machinery for such an organization in the realm of its responsibility and that it has been tested. The OCDM has such a plan in its executive reserve but this plan, on a national and regional level, has not been fully implemented or tested. It is the recommendation of this committee that a national traffic control system be established on a civilian level, that it be implemented on a permanent basis by the OCDM, tested and in a position to be augmented by its executive reserve plan in event of an emergency."

To me, the challenge is clear. Simply stated, it means that we as a nation must be able to employ effectively our transport resources to our national needs, under any conditions. This makes sense. How to do it cannot be left to chance or improvisation. That machinery should be oiled and ready to go. In that effort you are all involved, for you are either users or providers.

No one will dispute the great importance of techniques of manipulation and utilization of equipment in stretching the supply of equipment. We seize upon equipment units as a measuring device because that is purely arithmetical—something finite; something we can get our calculators working on. But less finite factors, like quality of management, affect the situation much more definitively.

Utilization of equipment capacity, for instance, can completely change the picture of adequacy. Let me mention here parenthetically in passing what most of you already know—that military carloads and truckloads average over 25 percent heavier than carloads and truckloads generally. I am not implying that this is all attributable to good management; there are many factors which contribute to it.

Among improvements in these manipulative techniques that must be considered—very importantly—are the movements underway to reduce the specialized restrictions of freight equipment. One of these which Morris Forgash showed me is a combination of universal-type trailer bodies and flexible bags for carrying liquids. With this combination, bulk liquids can be carried in one direction and dry freight in the other. There are scores of other innovations under study or consideration.

One of the unfortunate developments in our high-speed, sophisticated, modern world is that some of the most basic truths have become labeled "square," "corny," and "trite." But it is not for fear of being labeled "square" that I do not remind you that "no man is an island." It is because I feel that it is totally unnecessary. If you who are shippers didn't believe that "no man is an island" you wouldn't be here with other shippers and with the representatives of the railroad industry. The same thing is true of you who are railroad officials. In fact, I believe it was you who originally pressed for the organization of shippers' advisory boards.

In recent years all of us have read and heard a great deal about "traffic statesmanship." Without decrying the need for traffic statesmanship, I should like to put in a plug for something which seems to me much broader and perhaps more valuable in the long run.

This is "traffic citizenship."

You will remember that Lincoln was one who was a strong exponent of the theory that all apparently altruistic actions are subjectively motivated. Lincoln, of course, wouldn't have said it in such big words. He would perhaps have said, "A man helps another because by that act he helps himself." Perhaps you remember the celebrated story about Lincoln's riding back along his route one stormy night to release an animal caught in a fence. His companion said, "Abe, that was an unselfish act." Lincoln said, "No; I did it because it helps me; I can sleep better tonight."

This same theme of subjective orientation was expressed by Dr. John Donne, the same poet who said that, "No man is an island." He went on further to say, "Therefore, never send to know for whom the bell tolls; it tolls for thee." Why am I stressing transportation adequacy with you? Because if transportation fails in an emergency, I, in my present assignment, will be one of the first ones for whom that bell tolls.

Another trite thing I can say that bears on this whole subject of transportation adequacy is that public opinion is important. It is becoming more and more apparent that public opinion is the most important force in the world. We must never underestimate the power or basic wisdom of public opinion, even in our business.

I believe this completely and sincerely. In the long run, nothing will do more to assure adequacy of transportation in this country than a great body of understanding and thoughtful people being truly concerned with the subject. This means informed public opinion. If this comes about, the stupendous task of Congress, OCDM, and other governmental bodies in dealing with this subject will become vastly easier.

Here then, is a place for traffic citizenship. Traffic citizenship does not imply that everyone must be a leader. Traditionally, our citizens outnumber our statesmen many, many times. It can be just that way in our field—the job of traffic citizenship is for everyone.

For these reasons, I believe this talk should be classified as a decision briefing. There is, indeed, something for you to decide to do. It is easy, and it is small enough not to be a big burden on anybody. Simply this: Get this book (indicating committee hearings), or at least go back and dig out the published accounts of the Kilday committee's report. Devote, say, 1 hour of your time—which I know is valuable—to studying what you find. Encourage your staff to do the same. Perhaps devote a small staff meeting to the subject of "Adequacy of Transportation for National Defense."

After you have done this, do everything you can to support OCDM in accomplishing its transportation mission. You will do both your country and yourself a vital service if, as an organization or as individuals, you provide moral and mental assistance in developing an understanding of the need for machinery to determine transportation requirements and capability, and to plan and provide for effective transport control in emergencies.

I believe this would be a priceless exercise of traffic citizenship. And as Lincoln might have said, I think we'd all sleep better.

Amusing Utterances

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. DERWINSKI. Mr. Speaker, since this is an election year, the public's interest is being stimulated by political statements, many of which are of very educational value. This thought is contained in an editorial of January 14 appearing in the Harvey Tribune, a com-

munity newspaper in my district. I should like to include it in the RECORD for the consideration of my colleagues:

[From the Harvey (Ill.) Tribune, Jan. 14, 1960]

AMUSING UTTERANCES

We were amused the other day to note where Gov. Nelson Rockefeller was quoted as having said that "the chief problem of the low-income farmers is poverty." Other editors have commented on that, and possibly better than we, and this is reminiscent of Calvin Coolidge's gems of wisdom.

For example, one editor recalled that Calvin Coolidge had once said: "When people are out of work, unemployment results." Needless to say, this was not the most profound statement of the century.

All of which brings us around to the plain fact that 1960 is a presidential election year. As a result, we can expect a constant blast of political gobbledygook, and even some significant political pronouncements. In fact, many of the speeches by certain individuals in Congress will be edited for public consumption, to a greater degree than usual, because of the presidential race this year.

Who's Fooling Whom?

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I include an article which appeared in a magazine published by the Society for the Prevention of World War III. I believe that this article is interesting in view of the World Bank's voting a loan of $56 million to Egypt's Nasser for the widening of the Suez Canal despite the fact that he is committing acts of piracy against cargoes of members of the United Nations who seek to use the Suez Canal, an international waterway, all in violation of the Constantinople Convention of 1888, the armistice signed between Israel and Egypt in 1949, and the resolution of the United Nations Security Council of 1951.

The article follows:

WHO'S FOOLING WHOM?

Writing from Jordan in the spring of 1959, the Associated Press analyst William L. Ryan reported that qualified observers in the Middle East were convinced that President Nasser's leadership in the Arab world was on the decline. Even Cairo's propaganda mills were losing their punch, Mr. Ryan observed. The deterioration in Nasser's political fortunes could turn out to be "one of the most important developments in the Arab world."

President Nasser's political difficulties did not subside during last summer. On the contrary, his efforts to maintain unrivaled leadership were plagued on all sides by growing distrust of his intentions and the determined efforts of other Arab states to keep him at arms length. This was noted by the Middle East reporter for the Manchester Guardian, Michael Adams (Sept. 17, 1959). Mr. Adams has been reporting on the Middle East for some time and is conversant with the explosive stuation there. His report lends further credence to Mr. Ryan's earlier observations.

The Arab world, Mr. Adams states, is in disarray. Its apparent cohesiveness, brought about by a certain attraction to the Nasser leadership, no longer exists. A year ago, Mr. Adams writes, refusal to cheer Nasser in countries like Jordan, Iraq or Syria would court lynching. "Today the story is very different."

One of the rocks against which Nasser's leadership has floundered, is the bold resistance put up by the Iraqis who refuse to bow to Nasser's commands. The fact that Nasser's conspiracies in Iraq have been unmasked and defeated, has turned out to be a severe blow to his prestige. The daring resistance of the Iraqis has been most upsetting and its reverberations throughout the Arab world should not be underestimated. The idea that Nasser was a sort of superhuman hero has lost all of its glamor. Resistance by Sudan, Jordan, Tunisia, and Lebanon have detracted still further from the Nasser myth of invincibility. Nasser is in trouble and he knows it. In this connection Mr. Adams feels that Nasser's scope for maneuvering has progressively narrowed. The road ahead is strewn with treacherous rocks. Mr. Adams writes: "It is a gloomy prospect for President Nasser's government, with the Egyptians themselves audibly asking how much longer they must wait for the fruits of the revolution; with the Syrians growing nostalgic for the old days, and the Arab peoples losing their enthusiasm for the modern Saladin."

It is significant, too, that alongside of the growing political isolation surrounding Nasser, events in his own backyard are none too promising. Already in the latter part of 1958 the Egyptian economy was facing trouble. Since then the situation has not changed significantly although Nasser continues to pile promise upon promise of better things to come. During last summer, Nasser took to the stump assuring his listeners that his United Arab Republic was moving ahead. He painted the most inviting picture concerning Egypt's future. The fact that he had to spend so much time whipping up public enthusiasm is at least indirect evidence that many of the citizens of his country are beginning to question. However, Nasser knows this much, that if the Egyptian fellahin does not eat enough, at least their leader dares not stop talking about pie in the sky.

If we dispense with Nasser's oratory and take a hard look at the present state of the Egyptian economy, we cannot help but come to the conclusion that things are going from bad to worse. Nasser promised radical agricultural reforms to elevate the miserable lot of the peasantry. Yet, comparing the conditions in the Egyptian cotton fields of today with those which obtained, let us say, 20 years ago, it is hard to find important differences. The same archaic techniques are employed involving the same kind of back-breaking labor. Child labor is also a feature just as it was 20 years ago.

Nasser trumpeted a great deal about his land reforms. The landless were to receive a bit of land. But what good is the land when the peasants are still at the mercy of loan sharks? This has increased the debt burden of the Egyptian peasantry to a point where their labor is virtually owned by these usurers. Even the so-called cooperatives widely advertised by the Cairo regime, have become instruments of ruthless exploitation, dominated by Nasser's local henchmen. In short, the peasants are both economically and politically strapped by the bureaucrats who really run the local agricultural communities. This deplorable situation has been aggravated by black-marketeering which has raised still higher the cost of working the land while the market price for Egypt's main cotton crops are at the lowest levels since the end of the war. The agricultural crisis has forced many peasants to sell their animals and has increased the number of the landless.

In the cities the industrial and white-collar workers, as well as the lower middle classes, have also been squeezed by Nasser's economic reforms. In 1952, the average industrial wage was estimated to be approximately E£2 a week. There has been virtually no improvement since then. Meanwhile, the inflationary price structure and the backward tax system have dug deeper into the pocketbooks of the average city dweller.

Nasser frequently boasts about his intentions to do away with the city slums and to construct mass-housing projects that would make Egypt the envy of all the Arab world. Cairo cites statistics to prove that progress has been made in that direction. The picture appears altogether in a different light when one examines the categories of progress in construction. First of all, there has been an extensive building program for military barracks. Recently, the Cairo Government built a stadium with a seating capacity of 100,000. Obviously such construction can hardly be used by the ordinary worker. Furthermore, much of the actual residential building has gone to house Nasser's swollen bureaucracy. Today, one will find in Cairo new luxury hotels and expensive Government buildings. But what about the availability of housing for the vast majority of city dwellers? Most of them continue to live in the same slums that were flourishing even before Nasser seized power. It is estimated that in the cities and towns alone close to 35,000 housing units a year are needed just to replace those which are falling apart. Another 40,000 units are necessary merely to keep up with the growing population. Nasser, of course, has proclaimed that his Government would embark on vast low-cost housing construction. Yet, these slums seem to grow all the time.

The failures in Nasser's economic programs have created unrest and disillusionment. The people of Syria are restless and their protests mount against arbitrary and imperialistic policies of the Cairo regime. It is obvious that Nasser's attitude toward Syria is not one of equality. It is the attitude of an exploiter. Syrians of all classes are finding it most difficult to pursue their work under the oppressive policies and regulations of the Egyptian regime. Of course, he has tried to mollify the Syrians with speeches but their protests continue and thousands of Syrians have been imprisoned because they dared to speak up. The crisis in Syria has now reached a point where Nasser hurriedly called upon his closest collaborator Field Marshal Amer to take over Syrian affairs. Amer is now dictator of Syria and all Syrian leaders who displayed even the slightest independent attitude have been sacked.

Thus, Nasser is confronted with an internal and external crisis which finds its roots in his militaristic policies. Nasser has desperately tried to conceal the facts by suddenly switching to an anti-Communist line and by professing his love for the West. This is a familiar tactic used by dictators in the past. Unfortunately, it appears that some State Department policymakers have been impressed by Nasser's conversion.

Precisely at this time when Nasser finds himself in a profound economic and political crisis, have reports begun to circulate concerning improved relations with Egypt. The Wall Street Journal's Middle Eastern reporter James N. Wallace (September 9, 1959) filed an enthusiastic report about the new Egypt under caption "Foreign Policy Success." To what does he attribute the improved relations between the Cairo regime and the United States? Our policymakers, Mr. Wallace writes, have learned to deal with Nasser in terms of patience, quiet diplomacy,

selective economic assistance, and limited goals. Thus, by refraining to antagonize Egypt and by sweetening relations behind the scenes, Nasser has finally come around. Nasser's attack against the Communist, Mr. Wallace informs his readers, is now regarded by our policymakers as "a great gain for American policy." Such reports make good copy so far as Cairo is concerned but they do not present a realistic picture. Indeed, they serve as a blind which can only result in further disappointments and defeats for the U.S. position in the Middle East.

Nasser is nobody's fool. He has turned to the West because he is in trouble and needs money—huge amounts to bail him out. Mr. Nasser admits that he needs at least $2 billion in the next 10 years for his grandiose schemes. It goes without saying that he is banking on the U.S. Treasury for help.

Reports from Cairo tell us that the Egyptians would prefer to deal with the West. On the other hand, if the necessary moneys are not forthcoming from the West, then the Nasser regime may have to turn to the Russians again. It does not take much to recognize the blackmail strategy in these officially inspired reports. Time and again Egyptian propaganda throws out this alternative to the West. A typical example can be found in a letter published in the New York Times September 8, 1959, by an Arab spokesman on the question of a World Bank loan to improve the Suez Canal. "Of course," he wrote, "financing for the project can be found, but the UAR would like to do business with the World Bank and the West. We all know the inconvenience which arises when the UAR is forced to seek funds elsewhere."

Nasser's blockade tactics at Suez is a concrete example of the way this blackmail works. On the one hand the Suez blockade threatens all maritime nations including the United States. On the other hand, Nasser demands a multimillion-dollar subsidy from the West, threatening to turn to the Russians if it is not forthcoming. This is the extent of Nasser's conversion and the so-called success story of our policies in Egypt.

The notion that Nasser is now our great shield against Soviet imperialist designs in the Middle East does not correspond to the facts. Nasser is as dedicated an enemy of the West including the United States as he was in those halcyon days when he joined toasts with Khrushchev in the Kremlin. Egyptian propaganda still defames the United States although the frequency has admittedly decreased for the time being while negotiations on loans are pending.

One month before Mr. Wallace's success story the Egyptian radio sneered at the United States condemning it as the supreme troublemaker in the Middle East. The Cairo radio heaped scorn on the U.S. Congress describing Israel as "an American imperialist toy." It cast aspersions at what it called the "alleged democracy" of the United States. The Cairo radio warned Congress not to interfere in the question of granting loans for improving the Suez Canal. It reminded Congress "to peruse carefully the story of the High Dam." Here again is the implicit threat to do business with the Soviets if the United States should question Nasser's right to arbitrarily use the Suez for political purposes.

It should also be noted that during the same month that Mr. Wallace hailed the success of U.S. policy in Egypt, the Cairo radio launched new attacks against the United States. The United States was accused of betraying not only its own principles but those of the U.N. Charter. This particular attack insulted former President Truman and used a terminology that was reminiscent of Goebbels'.

These flashes of anti-Western and anti-U.S. propaganda are a reminder that Mr. Nasser's awakening is purely a tactical maneuver. His leadership is thoroughly discredited, his economy in desperate straits. As of October 1959, for example, foreign exchange reserves were only $200 million, even below the end 1956 (London Financial Times, October 28, 1959). Why, then, should the United States rush to his rescue precisely at this moment? Is it in our national interest that the chief trouble maker in the Middle East be the recipient of multimillion-dollar handouts? When will we learn to distinguish between our friends and enemies in the Middle East—or, for that matter, in other parts of the world?

It seems to us that the time has come when we ought to fashion our policies on positive programs rather than on the very tattered banner of anticommunism. The record shows that the United States has been fully aware of the Communist challenge in the Middle East and in other parts of the world long before the appearance of Mr. Nasser and company. We certainly do not need his advice in this respect. We should not have to pay for the privilege of hearing him tell us how to oppose Communist penetration—for, as he extends one hand to the United States, the palm of the other is always ready to receive Moscow gold.

Resolution in Favor of the GI Cold War Bill Passed by the University of Miami Veterans' Association

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. YARBOROUGH. Mr. President, the cold war veterans' GI educational bill, which was passed by the Senate 57 to 31 last session and is now awaiting House action, is continuing to gain national support.

As an example of this, I ask unanimous consent to have printed in the RECORD a resolution adopted by the University of Miami Veterans' Association.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF MIAMI,
Miami, Fla., December 23, 1959.

Hon. RALPH YARBOROUGH,
U.S. Senate, Washington, D.C.

MY DEAR SENATOR YARBOROUGH: The XI Gamma Iota fraternity (University of Miami Veterans' Association) in meeting duly assembled on December 16, 1959, passed unanimously the following resolution and requested that copies be made available to all who have interest in this matter:

"Whereas S. 1138 provides educational and other readjustment assistance to veterans serving in the Armed Forces after January 31, 1955, and before July 1, 1963, and provides for extension of veterans' benefits, the guarantee of home-loan provisions, and a mustering-out pay of $100 for certain honorably discharged veterans, the following resolution was adopted:

"*Resolved*, That XI Gamma Iota believes that the continuation of benefits now being considered will greatly assist veterans in their adjustment to civilian life, serve to provide educational opportunities which will be of value to our country as well as to these citizens who have served in its Armed Forces, and will offer the same reasonable benefits as provided to previously discharged veterans.

"*Further resolved*, That all interested parties be given a copy of this resolution with the endorsement of this fraternity approving such legislation."

Very truly yours,

WILLIAM LOCHER,
President, XGI Chapter.

Certified correct.
Date: DECEMBER 25, 1959.

The Intellectual Returns

SPEECH
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the January 14 edition of the Des Plaines Valley News, a community newspaper in my district, is, I believe, a most thought-provoking commentary on a topic of interest to all of us:

THE INTELLECTUAL RETURNS

One of the greatest blows to intellectual standing within American life and attitudes was launched in the latter period of the Franklin D. Roosevelt administration by daily newspapers and radio commentators on the policy of hiring experts, usually professors in their field, as Government project workers at $1 per year.

Lampooning cartoons, humorous stories, and unfavorable comments on the governmental policy were of such nature that somehow the entire attitude of Americans toward the intellectual was switched from esteem of the person with a degree to contempt.

World War II years and the wide availability of employment at high premium pay, even for unschooled occupations, further deteriorated the attitude toward intellectual standing.

The emphasis of many schools on glorifying the football hero or the basketball star, in that period, pushed scholarship into the background in the newspaper headlines.

As a result, the genius or those intellectually gifted were regarded as queer and ignored by society.

The pressure of extra income due to the increasing inflation, plus the desire for flashy articles such as expensive homes, autos, and other luxury items to display lavishly contributed to many talented persons failing to develop their capacities and being content to follow the neighborhood pattern of working in a factory assembly line.

INTELLECTUAL REDISCOVERED

Since the advent of the Russian jump into space and their lead in planetary rocket research, the gifted or intellectually superior student has once more been rediscovered within our culture.

At this moment, many schools are awarding letters for intellectual standing in the same manner as awarding letters for outstanding football prowess. The honor roll is returning to its proper esteem.

Both business and industry have joined the project of improving the quality of learning by contributing scholarships, their talented personnel, and technical apparatus to schools.

IT IS NOW THE LAW

Public attention has turned to schools. Legislatures have felt the pressure of groups

to the extent of requiring schools to teach constitutional history to grades eight and nine, and the dangers of alcoholic drinks to grades four through nine.

Humane treatment of animals must be taught not less than one-half hour per day; safety for one class period. Recess became directed recreation periods, and all pupils are required to take music.

Best of all, people are beginning to place the intellectual person on the proper plane. It is no longer a social disease to be smart.

One may discount the achievements of the Russians, but their accomplishments have shown that American schools or American superiority is just as subject to criticism as other things.

Every American genius or talented scholar can thank the Russians for helping to return the esteem of learning to its proper place in American culture.

Application of State Antidiscrimination Law—The Issue of Federal-State Relationships

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. BARTLETT. Mr. President, on several occasions in the 1st session of the 86th Congress I expressed concern that the Department of State was represented as having advised the New York State Commission Against Discrimination that a ruling by the commission applying the fair employment law of New York to the hiring policies of the Arabian American Oil Co. in New York State would adversely affect U.S. interests abroad. My concern was for the maintenance of appropriate Federal-State relationships and for the human rights aspects of the matter. Accordingly, I initiated correspondence with the Department of State. Thereafter, and expressly in the light of this correspondence, a New York judge decided that New York fair employment law should be applied, holding that the Department of State had taken no stand on the case. To complete the story, Mr. President, I ask unanimous consent that three letters not previously published in the RECORD, which are an intrinsic part of the correspondence to which I have referred, be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JULY 3, 1959.

The Honorable E. L. BARTLETT,
U.S. Senate.

DEAR SENATOR BARTLETT: I have for reply your further letter of June 29 on the subject of the case of the *American Jewish Congress v. The Arabian American Oil Company* which has been under consideration before the New York State Commission Against Discrimination.

I appreciate the interest you have shown in discussing the Department's role in this matter during the course of our recent correspondence. As Mr. Josephson of your staff has undoubtedly informed you, he and representatives of the American Jewish Congress also examined the question in some detail in a meeting with Deputy Assistant Secretary Parker T. Hart on June 30.

It is my understanding that the matter will be heard before the Supreme Court of the State of New York on July 6. It is our feeling in the Department that it would not be appropriate for us to comment further on this case when a hearing of it before the New York courts is thus imminent. I am certain from your letter that you appreciate our position in this mater.

I assure you, however, that it is our desire to be appropriately helpful in resolving problems which arise out of actions by foreign governments which appear to discriminate against U.S. citizens. We shall, of course, be prepared to provide any further information on these problems which the commission or the court in New York may seek. I personally would also be prepared and pleased to discuss the Department's role in this case, as well as the general problem, directly with you at any time at your convenience.

Sincerely yours,
WILLIAM B. MACOMBER, JR.,
Assistant Secretary.

JULY 20, 1959.

Mr. WILLIAM B. MACOMBER, JR.,
Assistant Secretary of State, Department of State, Washington, D.C.

DEAR MR. MACOMBER: Thank you for your letter of July 3, to which I have withheld my response pending a decision in the New York litigation. Now that the court has held Aramco's questioning of job applicants in the city of New York about their religious beliefs to be a violation of the State law, it would seem that a personal conference between us on this subject would be unnecessary. Perhaps, indeed, the question of the Department's role has been rendered moot.

The opinion by the New York Supreme Court demonstrated the distinction between an order forbidding religious questioning and an order requiring the employment of Jews in Saudi Arabia. This distinction, which I sought to make in my correspondence with you, is essential. An order of the latter type was not sought in the New York litigation. The order of the former type, which was sought and granted, presented no conceivable damage to U.S. interests in the Middle East.

If the Department had not been involved deeply in the New York litigation, by reason of correspondence to the New York commissioner, your statement in your letter of July 3 that comment by the Department on the case "would not be appropriate" would have been unassailable. But because of the Department's involvement, I was seeking disengagement by the Department from the position in which it had been cast. Although I recognized the fact that the Department has never expressed itself on the precise issues involved in the New York litigation, I was aware that the Department had appeared to some to have assumed a policy position in the matter.

Sincerely yours,

E. L. BARTLETT.

DEPARTMENT OF STATE,
Washington, July 29, 1959.

Hon. E. L. BARTLETT,
U.S. Senate.

DEAR MR. BARTLETT: I thank you for your letter of July 20 discussing the findings of the Supreme Court of the State of New York in the case brought by the American Jewish Congress against the Arabian American Oil Co. and the New York State Commission Against Discrimination. The Department has throughout the hearing of this case been appreciative of your comments and concern, particularly since we share your conviction that the proper policy of our Government must be to work for the elimination of any procedures adopted by foreign states which tend to discriminate against our citizens in any way, including discrimination on the basis of race or religion.

As stated in our earlier correspondence, this Department has consistently maintained the position that it would not be proper for it to comment on a case being heard in a State court. We did not do so in this case. Nor did we assume a policy position in the matter, our only connection having been to reply in a general sense, as we consider ourselves properly obliged to do, to a request for information received from the authorities of the State of New York.

Sincerely yours,
WILLIAM B. MACOMBER, JR.,
Assistant Secretary.

Resolutions Praying That the Government of the United States Be Memorialized by the General Court of Massachusetts for Redress of Certain Historical Grievances

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of John Beresford Hatch, of 15 Harbor Street, Salem, Mass., as the petitioner for house bill No. 91 filed in the Massachusetts Legislature for the adoption of resolutions memorializing the Government of the United States for redress of certain grievances by reason of the illegal arrest, jailing, and execution of persons suspected of witchcraft in the year 1692 and 1693. This bill is scheduled for a hearing today before the committee on constitutional law at the statehouse in Boston.

I wish also to include a copy of the house bill No. 91 with the knowledge that many of the Members of the Congress have had some interest in this subject matter.

BRIEF TO BE ATTACHED TO HOUSE BILL NO. 91, PETITION FILED BY REPRESENTATIVE BUCKO OF SALEM IN BEHALF OF JOHN BERESFORD HATCH (COMMITTEE ON CONSTITUTIONAL LAW)

Two hundred and sixty-eight years ago, according to our most eminent antiquaries and distinguished chroniclers of early New England times, Salem, Mass., between 1692 and 1693 suffered one of the worst witch hunts in the history of Anglo-American jurisprudence.

It was in the beginning a Salem affair but before its ending it had a far-reaching effect covering most of Massachusetts.

Before its climax more than 1,000 early residents here were imprisoned, charged with the crime of practicing witchcraft.

Nineteen innocent men and women were hanged at Salem. Two Salem matrons, both octogenarians died on the floor of their death cells at Salem jail. And one silvery haired Irishman, 80-year-old Salem farmer, Giles Corey, was tortured and pressed to death. He had bravely refused to plead and accepted its awful alternative, a form of

British barbarity known as "peine forte etdure."

Here at Salem, which was the storm center of the emotional hurricane, an entire community was stricken, and not by the terror of witches or witchcraft, but by a royal transgression and unprecedented assault against a settlement of English people, in an historic transgression which was a gross violation of every legal right these people had inherited by the Magna Carta of 1215 and the Bill of Rights of 1641.

On the crimson worksheet of the Crown's terrible day of infamy at Salem, the record of its Court of Oyer and Terminer stands out glaringly as one of the most lawless tribunals in the history of British jurisprudence.

Here was a court with not one acquittal to its credit, a court allowed none of the defendants to be represented by an attorney, a court wherein not one of the jurists was a lawyer. Here was a court that said: "If you wasn't guilty you wouldn't be here." It turned deaf ears to some of the most pathetic and tearful pleas for justice and mercy.

The above is only a brief outline of the Salem court functioning under the aegis of the British crown circa 1692. Its acts of brutish inquisitions, orders for false arrest, false imprisonment, unlawful seizure, embezzlement, manslaughter, and murder—still nags the conscience of civilized peoples all over the world.

But let us not go further into the details of the atrocious Salem witchcraft trials.

Here, today before the 1960 session of the General Court of Massachusetts, we are chiefly concerned with legal ways and means of restoring the honor and blood of an innocent people, and likewise we are concerned and greatly distressed by an inherited stigma that still clings to the great seal of this, one of the oldest States in the Union.

As a long time student of the Salem witchcraft trials and the fractured attempts to pardon the Salem "witches"—I find that since the year of 1703 and up through the years to as recent as 1957, there have been several abortive attempts made to reverse the Salem witchcraft attainders. All of them were either illegal or incomplete.

In the year of 1711 an act by the Province Bay General Court for a time was thought to have reversed witchcraft attainders on some of the victims, but I find that act turns out to be nothing less than a fraud. At most it offered nothing but a quietus of protection for the perpetrators of the crown's day of infamy at Salem.

A searching of the British archives reveals no official or royal exoneration of the Salem witches.

The only truly legal reversal of attainders in the New World was for the benefit of Jackob Liesler and his son-in-law and Gerradus Beekman, all of whom were hanged for treason at New York 1691, on the very eve of the Salem atrocity, but in 1694 Liesler and associates were duly exonerated and a reversal of their attainders was properly achieved by an act of the British Parliament. That made sense, legal sense.

I cite the New York reversal as a case in point, and for the historic facts I am indebted to Dr. Lawrence Leder's thesis published in the 1952 Quarterly Review of the New York Historical Society. I am also greatly indebted to Prof. George H. Moore, LL.D., of New York, a rare legal antiquary whose important findings has gone unnoticed for almost three-quarters of a century.

Since the crime of witchcraft, as was charged against the Salem people, is a violation of canon or ecclesiastic law, rather than civil * * * in this case only the Queen of England is empowered to reverse witchcraft attainders. It is strictly a royal prerogative. Hasset's Precedents in this matter clearly defines the niceties and refinements of British parliamentary law.

Therefore, since the innocence of condemned and executed Salemites has long been established by signed and public confessions of the accusers, and by the repentent judges and jury of 1692 and 1693, and since none of the attained victims have been duly exonerated by the British crown, either before or since the establishment of the United States, it is requested that the General Court of Massachusetts petition the U.S. Congress, requesting that honorable body to take all necessary and proper steps to petition Elizabeth, II, the Queen of the British Commonwealth of Nations * * * requesting that all witchcraft attainders be legally reversed at once and for all time.

With a swift stroke of her pen Queen Elizabeth II, could write a historic finis to a long and fictionalized story of Salem witches, erase the blot on the honor and reputation of our New England ancestors, and at the same stroke vindicate Salem and the Commonwealth of Massachusetts.

Salem as we all know has a remarkable history; its notable sons and daughters have contributed much indeed to the growth and expansion of the New World, and in many important fields of achievement, and yet over the years Salem's great accomplishments has been largely overshadowed by a fictionalized image of witches and wizards. Maritime Salem, industrious Salem, certainly after all these years is justified in asking for removal of its old witchcraft tie.

Respectfully submitted.

JOHN BERESFORD HATCH.

SALEM, MASS., 1960.

RESOLUTIONS PRAYING THAT THE GOVERNMENT OF THE UNITED STATES BE MEMORIALIZED BY THE GENERAL COURT OF MASSACHUSETTS FOR REDRESS OF CERTAIN HISTORICAL GRIEVANCES

Whereas, in the years of our Lord 1692 and 1693, some 700 honest, respectable and law-abiding citizens and inhabitants of Salem and other Essex County communities were wantonly accused, publicly humiliated, and insultingly examined for allegedly committing hypothetical crimes of witchcraft and wizardry; and

Whereas wild accusations and hysterical prosecutions for these imaginary crimes were not uncommon to the country, the world, or the times, none-the-less, the incidents at Salem, Mass., were so foul and illegal as to nag the conscience of civilized people everywhere ever since; and

Whereas before arraignment and trial in a scandalously illegitimate Pontius Pilate court, the Salem victims were summarily stripped of good name and earthly estate; their good names being forfeit to the devil, their poor estates being confiscated by his political helpers in the service of crown and province; and

Whereas before arraignment and trial in puted without due legal process, and largely on the say-so of a diabolic and unconstitutional star chamber of political witch finders, and thereby denied the birthright that was the heritage of all Englishmen; and

Whereas following the most irregular and inhuman inquisitions the victims were damned at travesty trials, and barbarically imprisoned, or judiciously murdered, by duly accredited representatives of the British crown and the Massachusetts province government; and

Whereas, contrary to all civilized law, before or since, guilt was established by spectral, or make-believe, evidence, and on the hysterical testimony of confessed liars, some witty, some witless; and

Whereas the costs of arrest, confinement, trial, and execution of sentence were almost entirely assessed on the witches, or their estates, payable in advance, and in some instances, at the impoverishment of family, friends, or neighbors; and

Whereas the insult of imputed guilt was aggravated by the imposition of added injury to the witches in the form of unprecedented indignities, in the name of crown and province; and

Whereas court fees and costs were arbitrarily and excessively increased for the so-called witch trials, there is basis for belief that the purpose of the prosecution was to exploit the prisoners rather than weigh their guilt or innocence; and

Whereas the black attainder of witchcraft, illegally imposed on the witches, was, through a diabolical philosophy of guilt by association, imputed to their kith and kin, presumably forever; and

Whereas thus pronounced civiliter mortuus, or legally dead, the witches and their kith and kin were subject to loss of all civil, political, and property rights for the remainder of their natural lives, and placed at the untender mercies of avaricious adventurers; and

Whereas the crime of witchcraft was a heretical sin against canon law its prosecution was normally the province of the established church, rather than civil authorities; and

Whereas at that sad time, and in all British domain the prosecuting authority of the established church was vested personally and exclusively in the British Crown, not in royal governors, or colonial legislatures, or even the British Parliament; and

Whereas since the illegal witch courts at Salem and elsewhere were created by royal Governor Phips, on his own initiative, without consent of the legislature, or pursuant to the royal charter, or British civil or canon law, the trespass on royal prerogative is further accentuated; and

Whereas, in any event, neither the province governor nor the province legislature was empowered to establish special courts, unless specifically authorized by Crown or charter, condemnation or exoneration of the witches was clearly beyond the scope of delegated powers; and

Whereas only the crown could deal with such presumptive challenge or transgressions on royal prerogative, as witchcraft, neither the province governor nor the province legislature was competent to sit in judgment on cases which only the crown could properly adjudicate; and

Whereas there is considerable affirmative evidence, and none known contrary, that no proper accounting of confiscated witch estates was ever made to crown or province authorities; and

Whereas this lack of proper accounting to anyone by the witch persecutors would seem to compound their villainy, since it indicates that the forfeitures and seizures were political embezzlement, or worse; and

Whereas this knowing injustice done the witches in the name and under the aegis of the British crown and the Massachusetts province government is without legal sanction or legislative precedent in British or colonial jurisprudence, and the wrong has never been vindicated; and

Whereas the brutal treatment accorded prisoners in Massachusetts witch trials was contrary to all Anglo-Saxon law, custom, or tradition, and seemingly a callous crime; and

Whereas it is an ancient accepted maxim of universal law and equity that masters are accountable for flagrantly illegal acts done by servants in the normal course of employment; the more so when said unlawful acts are done with the masters' tacit knowledge and consent; and

Whereas neither the British nor succeeding American Government can avoid a por-

tion of the increasing degradation which results from suppressing, or permitting to be suppressed, the full story of the 264-year-old crime committed against the witches in Massachusetts; and

Whereas since justice is, or should be, the proper concern of all men on earth, and since knowledge implies consent, neither Britain nor the United States can escape shame for the unabsolved, unexpiated, therefore continuing, crime against common decency; and

Whereas the wanton and flagrant illegality of the infamous Massachusetts witch courts is conceded and abhorred by the peoples of Britain and the United States, but this concession and abhorring are not reflected in the government policies of either country; and

Whereas a great moral principle has gone begging in the political tumult and confusion, each government contending that the other has exclusive responsibility and jurisdiction to right the wrong done the witches, with the ironical result that nothing concrete is done by either; and

Whereas some sporadic attempts have been made by several Massachusetts legislatures since 1700 to exonerate certain selected witches, these efforts are so obviously inadequate and authorized as to suggest political facesaving, or worse; and

Whereas British lawmakers maintain that final responsibility has rested with the Massachusetts Commonwealth, or the U.S. Government, since 1783, if not earlier; and

Whereas Massachusetts legislators retort that only the British Crown could, or can, properly exonerate the witches, since illegality of the witch courts was a violation of British royal prerogative rather than colonial legislative authority; and

Whereas the illegal persecution of the witches in Massachusetts was primarily a trespass on royal prerogative, by virtue of religious implications, and only secondarily a transgression on civil authority, British or American; and

Whereas the doctrine of prior jurisdiction is almost universally accepted as good law, it follows that lesser courts cannot infringe on the jurisdiction of greater courts, and that the Massachusetts witch court findings could not be validated or annulled by any other tribunal than the British Crown itself; and

Whereas there was no validation or annulment of the witch court findings by the British crown up to establishment of the United States, or since, no corrective action enacted by any colonial or Commonwealth legislature could conceivably have any force or effect, or be absorbed legally into American jurisprudence; and

Whereas all previous attempts by Massachusetts legislators to undo, entirely or in part, the iniquitous injustice of the bestial witch courts, or elsewhere in Massachusetts, have foundered on these legal reefs; namely, conflicting claims of authority, or lack thereof; and

Whereas human nature is such that neither Britain nor the United States can be expected, unilaterally, to claim the shameful glory of having defiled and desecrated the torn and bleeding carcass of justice, through illegal persecution of the witches; and

Whereas unless decisive and appropriate action is taken here and now to loosen or slice the Gordian knot of continuing persecution of witches in Massachusetts, the aimless babble of legalistic gobbledygookians may prevail ad infinitum, and shame us forever; and

Whereas unless justice is done in our day, when a spirit of neighborly understanding encompasses the earth, the witches may have to wait on judgment day for liberation from their illegal limbo of the illegally damned; and

Whereas the moving spirit of British and American jurisprudence, and the inherent desire for fair play by both nations, require that speedy justice be done, to the end that right shall prevail; and

Whereas each additional instant of delay adds infinitely to the eternal shame of both countries, for justice delayed is justice denied, and where the law loses face, the people lose liberty; and

Whereas continued mutual blindness in high places to the cause of the murdered Massachusetts people tends to disperage and degrade both Britain and the United States; and

Whereas justice late is better than justice never, and since all the world, in these trying times of global disquiet and mistrust, needs sorely the stimulating tonic of international good example, it behooves us all now to translate noble thoughts to noble deeds; and

Whereas Britons and Americans are reasonable beings, and the soul of honor, this whole matter could, and should be deliberated intelligently and resolved fairly, possibly at the foreign minister level, or through United Nations auspices; and

Whereas justice is, or should be, one of man's greatest concerns on earth, the collaboration of her majesty's British Government and the Government of the United States to liberate the Massachusetts witches from the illegal limbo of unjust damnation would be a worthy project and saintly ambition; and be it further

Resolved, That the great and General Court of Massachusetts take official cognizance of the great injustice done the witches in 1692 and 1693; and be it further

Resolved, That all necessary and possible legislative steps be taken to liberate the State's "witch" dead from their illegal limbo; and be it further

Resolved, That, to this purpose, the assembled general court of Massachusetts memorialize the Government of the United States for such action, legal or diplomatic, as may be necessary to promote an international meeting of minds on this subject too long delayed; and be it further

Resolved, That the Government of the United States be memorialized by proper petition to the Congress of the United States; and be it further

Resolved, That copies of any resolution so enacted be forwarded by the secretary of the Commonwealth to the British consul at Boston; the British ambassador at Washington; the leaders of the British and American delegations to the United Nations organization; the Secretary General of the United Nations organization; and the Congress of the United States; and be it further

Resolved, That the blessings of the Almighty befall those who join me in this good fight, and inspire them to advocate the cause of the murdered Massachusetts "witches" in accents of irresistible eloquence and syllables of unassailable logic, to the end that sufficient justice be done to appease, in some measure, the nagging conscience of civilized peoples everywhere.

The Lone Star State Has a New Star: Bruce Alger

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. MASON. Mr. Speaker, in January of 1959 an able young American from Dallas was appointed to the Republican membership of the important House Committee on Ways and Means. That American, the Honorable BRUCE ALGER, has since that time distinguished himself as a member of our committee by the hard work he has done to master the complicated subject matter with which our committee deals and by the integrity and very great ability he has brought to his new responsibilities. To BRUCE ALGER principle is more important than political expediency; to BRUCE ALGER the good of all our citizens and the national interest are more important than the demands of special privilege-seeking pressure groups.

A few years ago it was my privilege to address a group of outstanding citizens in Dallas and I became well acquainted with the high caliber of Americans who reside in that great area of our Nation. My friend and colleague, BRUCE ALGER, is in my judgment one of the finest of these fine Americans. I am pleased to notice in the current issue of Newsweek magazine that the able and perceptive political writer, Dr. Raymond Moley, has devoted a column to BRUCE ALGER entitled "Revolution in Dallas." I will, Mr. Speaker, as a part of my remarks, include Mr. Moley's column:

REVOLUTION IN DALLAS

(By Raymond Moley)

The U.S. House of Representatives is a large complex of committees and subcommittees whose labors, generally thorough and sincere, are shrouded from public sight and lost to public interest. Seniority is sovereign. Power is exercised by the hoary veterans of 30 years of Democratic control, broken only twice. Young members are admonished, in the crisp aphorism of that Nestor of them all, SAM RAYBURN, that the way to get along is to go along. The House is no forum for forensic prowess; minority reports are buried in thick books, and only in extensions in the Appendix of the CONGRESSIONAL RECORD may the green shoots of statesmanship have a partial say.

But among these young members are many who will ultimately reach high office. This is especially true of young Republicans, who can only work and wait. They are the hope of a revived Republicanism.

Notable among them is BRUCE ALGER, of Dallas. He appeared in politics in 1954 as a candidate for a seat held for time immemorial by Democrats and distinguished for many years by Hatton Sumners, sagacious, learned statesman who found his inspiration in the word of God, in the Constitution, and, like St. Francis, in the language of birds during his early morning walks. Dallas has preferred such conservatives. But to break its allegiance to the Democratic Party required something most unusual.

UNREVISED REPUBLICAN

The Alger campaign offered just that unusual inducement. For it provided a very attractive candidate and a strong volunteer organization. ALGER never emasculated his Republicanism with such qualifying adjetives as modern or progressive or liberal. Dallas liked that. He was a successful businessman. Dallas is notable for its young self-made businessmen. ALGER had also made a name for himself in civic affairs unrelated to politics.

But his cause had to be brought to the attention of voters by an organization suited to the candidate and his principles. The germ of this organization had been created in the Eisenhower campaign in 1952. It was developed in behalf of ALGER in 1954. It was headed and directed by able young business executives who mobilized vigorous volunteer workers in considerable numbers. A

"Couples Canvass" was carried on by men and women volunteers from house to house. There was a "Yard Sign" drive to put the Alger name wherever the property owners permitted it. Then there was a "BRUCE ALGER Day," when 90 attractive and colorfully garbed young women invaded downtown Dallas attaching campaign tags to good-natured citizens. Now there is a full-time organization headquarters to keep interest in ALGER and his policies before the voters between elections.

TOIL, SWEAT, VOLUNTEERS

In 1954, despite a nationwide Democratic tide, ALGER won with 28,000 votes and a 3,000 margin. He repeated in 1956. In 1958, despite another Democratic trend, he doubled his 1954 vote and majority.

In Congress ALGER has supported economy, sound money, and freedom of enterprise. He has voted to keep government out of business activities which would best be left to private efforts. Even on measures which would provide Federal money for Dallas, he has braved the "let's-get-our-slice" people at home and has voted to protect the national interest.

There is a profoundly important lesson in the Dallas revolution for many other urban, suburban, and sub-suburban communities. There is where the destiny of the Republican Party must be determined. While the farm population is slipping away, the greatest growth in the population is in the newly opened areas in the suburbs and in the areas beyond the suburbs. There, living side by side, owning their homes, and running their common community affairs are junior executives, well-paid industrial workers, tradesmen, retired people, and others. These people have a vital community of interest in less wasteful government, better schools supported and controlled locally, and economic freedom. The political allegiances of these people are not yet ingrained. They will support candidates and a party which consider their interests. They hold the balance of national power. But they must be organized.

League of Women Voters Aids Public Understanding of Economic Aid Program

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 20, 1960

Mr. NEUBERGER. Mr. President, in the January 14, 1960, issue of the Astorian Budget, published daily in Astoria, Oreg., there appeared an excellent discussion of the objectives and operations of our economic-aid program.

The article—written by Mrs. Elizabeth A. Neikes, President of the Astoria League of Women Voters—outlines the goals which should be considered in any comprehensive effort to provide economic aid to underdeveloped nations. Her comments provide a valuable background for consideration of the mutual security appropriation bill which will be before the Congress in the next few months. I commend Mrs. Neikes' remarks to my colleagues.

Mr. President, the League of Women Voters has long been an active force in educating citizens, so that when they visit the polls they may cast their ballots more intelligently. In the field of foreign aid, the League has carried out a broad-based informational campaign to acquaint people with the aim of our economic-aid program. Recently, the League published a fine study, entitled "World Economic Development: Our Part in a Common Effort."

Foreign economic aid is frequently the subject of political attacks. It has no constituency of its own. Those who would reduce Federal expenditures view it as an ideal target. But as Mrs. Neikes, of Astona, Oreg., states so cogently, economic aid "is a first step in the creation and perpetuation of stable, effective, democratic societies."

Mr. President, I ask unanimous consent that Mrs. Neikes' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD ECONOMIC DEVELOPMENT

(The League of Women Voters is making the United States foreign aid the major subject of its studies this year. In the following guest editorial the president of the local chapter discusses the subject.)

(By Mrs. Elizabeth A. Neikes, president, Astoria League of Women Voters)

Many people think that the time has come to move forward into a long range, adequate, comprehensive program of development assistance. Is it in the interest of Americans to help the developing countries help themselves? In the interest of the American worker, whose livlihood depends upon the availability of jobs? Of the American industries who must have overseas markets as well as domestic markets in order to be prosperous? Of American consumers of imported foodstuffs such as coffee, and raw materials not available here?

Special interests, of course, do not add up to the total national interest of these United States, which has to be seen in terms of what it will contribute to the security, freedom, and economic well-being of all Americans. And the surest way to guarantee these for ourselves is to assure that other members of the world community are also free, secure, and prosperous.

What is economic development? This is a question whose answers must be sought by the developed rich countries in consultation with the newly developing poor countries cooperatively. There efforts should be based on objective standards for development established by disinterested experts in the field of economic theory.

Perhaps the key question is whether the nations that are able to provide assistance can succeed in demonstrating their genuine commitment to long-range goals. The developing countries want to know why we give aid: Is it primarily a weapon of the cold war? Is it charity? Is it given grudgingly? Or is it a sincere effort to join with all peoples as partners in progress?

The most important problems confronting the underdeveloped countries are low income, undernourishment, and overpopulation. Yet the function of economic development is something more than improving living conditions; it is a first step in the creation and perpetuation of stable, effective, democratic societies. The objective is not to redistribute income that is not to share the wealth of the industrialized with the underdeveloped; but to help the rest of the world into a stage of self-sustaining economic growth so that there will be an increase and expansion of wealth.

Of course the developing countries themselves must make an indispensable contribution toward their own development. The primary responsibility for their economic development rests with them.

They should be expected to adopt programs of maximum self-help, within which they commit their own resources—facilities, materials, manpower, government organization—to the fullest degree practicable. Economic aid, technical assistance, and investment from the industrial societies can be effective only if fitted into sound internal programs. Also, we must make certain that the asperations of the leaders of a developing country are consistent with the common good of the peoples of the country. With reference to "the revolution of rising expectations" among the people of the poverty stricken nations, Mr. Eugene Black, World Bank president, says, "Revolution upon revolution is still needed in people's habits and attitudes toward life before there can be an escape from poverty."

What are some of the criticisms of foreign aid today? The friends of foreign aid are concerned about the combining of military and economic aid in the same program and the relatively small amount provided for development assistance. They emphasize the lack of long-range planning and financing; they deplore undue preoccupation with cold-war motives. The foes of foreign aid concentrate upon the financial burden of the program and upon the alleged injury to American business, labor, and the United States economy generally. Are the criticisms based upon facts? Are they explicit? Are they documented? Or are they simply sweeping generalizations? What are the assumptions that underlie the criticisms? Are they based on a belief in economic self-sufficiency and isolation? Or do they accept interdependence among nations as a primary fact of the modern world?

The conclusions of recent studies seem to suggest that an adequate, total program should be:

1. Long range enough to provide continuity in planning within both the administering agency and the recipient country; permit recruitment, training, and retention of desirable personnel. This makes possible a sustained partnership between developed and developing countries.

2. Large enough in size to be comprehensive in meeting various needs through appropriate financial means.

3. Multilateral enough to spread the costs and responsibility among many developed countries, not just the United States. Create wide variety of trained personnel with knowledge and skills drawn from the world community.

4. Coordinated enough to provide consistent policy direction for the total program; decentralized and flexible enough to allow joint planning within the developing country.

5. Well enough administered to assure: economical use of funds; integrity of performance; steady pursuit of clearly defined goals; employment of qualified and dedicated personnel.

Can such a program evolve out of the present mutual security program? Or will we have to start from scratch? One thing seems indispensable to either course of action: a clearcut, coherent picture of what the ideal economic assistance program should be.

How Shall We Deal With Strikes?

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a very interesting

and thought-provoking address made a few days ago by Mr. Louis Waldman, the well-known labor attorney and former president of the Brooklyn Bar Association.

Mr. Waldman's address discusses the subject: "How Shall We Deal With Strikes Which Imperil National Health and Safety?" He has some very interesting views and proposals which, I believe, deserve serious consideration. It is for this reason that I bring it to the attention of my colleagues.

The address was delivered before the Brooklyn Bar Association on January 13, 1960, and reads as follows:

HOW SHALL WE DEAL WITH STRIKES WHICH IMPERIL NATIONAL HEALTH AND SAFETY?

(Address by Louis Waldman)

The answer to the question, "How shall we deal with strikes which imperil national health and safety?" is not an easy one. What we do know is that we must find a better way than what we now have to deal with this problem. In my opinion a sensible answer to the question calls for some steps to be taken by labor and management on a voluntary basis; while others require changes in the Taft-Hartley law.

The national emergency disputes provisions of the Taft-Hartley law have recently been severely tested in the long and costly steel strike and have been found wanting. Action by Congress to amend that portion of the Taft-Hartley law has been strongly urged by many thoughful people.

It is unwise to wait until an emergency is again actually upon us to ask for congressional action. Government by crisis is bad in principle and often disastrous in practice. For in times of crisis Congress usually thinks in terms of punitive legislation.

Some alarmists have taken the view that the steel strike has proved that the principle of collective bargaining itself was at the crossroads. And Adlai Stevenson, no enemy of labor, went so far as to say in an address on December 8, 1959: "The steel strike has dramatized the fact that we are at the end of an era. Everybody is agreed that this cannot happen again."

But how can we prevent it from ever happening again?

Commonsense tells us that collective bargaining as such is not in issue. Collective bargaining is now rooted in the life of our Nation. It is the best possible way we have thus far devised under a system of democracy and freedom of promoting industrial peace and stability with justice.

The simple facts are that since the enactment of the Taft-Hartley law in 1947 there have been only 15 national emergency strikes which called for Presidential action. In this period of 13 years some 700,000 collective bargaining agreements have been reached, the greatest number of which, perhaps more than 90 percent, were arrived at by the collective bargaining process and involved no strikes or lockouts at all. In some cases there were strikes or lockouts but they did not involve national emergencies. And the right to strike or to lockout must remain unimpaired so that collective bargaining can work. This is certain: Collective bargaining has not lost any of its power or usefulness.

As to the 15 national emergency strikes, the breakdown of these is interesting. Four involved the International Longshoremen's Association; one, the Bridges' International Longshoremen's and Warehousemen's Union; two involved the United Steelworkers of America; two, the National Maritime Union of America; two, the United Mineworkers of America; two, the United Gas Coke and Chemical Workers; one, the International Union of Mine, Mill, and Smelter Workers; and one the Goodyear Atomic Corp.

The steel strike does not dramatize the end of an era. It does dramatize the inadequacy of the national emergency provisions of the Taft-Hartley law. Many of us held that view in 1947 and said so. Adlai Stevenson himself, at Detroit in 1952, almost 7 years ago, in his address from which he quoted on December 8, 1958, pointed out the inadequacies of the emergency strike provisions of the Taft-Hartley law. At that time, in a letter dated December 2, 1952, I wrote to Governor Stevenson applauding his speech and endorsing his proposals. I wrote:

"Permit me to congratulate you on your Labor Day address delivered in Cadillac Square, Detroit. No intelligent labor man could fail to appreciate its good sense and forthrightness. I was happy you did not stoop to conquer.

"I am also happy that you are living up to the statement made by you in your acceptance speech that the function of a presidential campaign is not only to win the office but also to educate the American people on the cause one represents."

The deficiencies of the Taft-Hartley law must be corrected not because we are at the end of an era but because they were not sufficient in the first place. In my opinion if we had an intelligent program of action under the law, the President would have had to act, and the steel strike with the loss of billions of dollars could have been avoided.

Under the law as it now stands, when a strike occurs or is threatening in an entire industry, the President of the United States, upon a finding that the strike or its continuance would imperil the national health or safety, can take the following steps:

1. He may appoint a board of inquiry to "inquire into the issues involved in the dispute and to make a written report to him within such time as he shall prescribe" (sec. 206).

2. Upon the receipt of the report from the board of inquiry, the President may direct the Attorney General to apply to any district court of the United States having jurisdiction to enjoin the strike or lockout.

3. If the court finds that the actual or threatened strike or lockout affects an entire industry or a substantial part of it and that if permitted to occur or continue it will imperil the national health or safety; then it may enjoin such strike or lockout, or the continuing of it. The court may also "make such other orders as may be appropriate" (sec. 208).

4. The board of inquiry appointed by the President, under the law, cannot make "any recommendations."

5. The injunction is good for 80 days and at the expiration of the injunction the strike or lockout may be resumed.

6. At the end of 60 days of the injunction a vote is taken by the NLRB among the strikers on the employer's last offer of settlement.

This program has never prevented a national emergency strike, either before the 80-day injunction or after it expires. There is an awful lot of make believe and of meaningless mechanical motion in its operation. One example of this is the hearing before the board of inquiry preceding the President's direction to the Attorney General to apply for an injunction. No one takes those hearings seriously and they serve no legal purpose for the Government to make out a case for an injunction. Another bit of futile make believe is the NLRB election on the employer's last offer. In all the last-offer votes taken during the 13 years of the law's existence, the strikers have almost unanimously voted "no" on the employer's offer. The realities of the situation, including the existence of the injunction itself, make such result inevitable.

Nor is the 80-day injunction of much help in "cooling off" of the parties. More often it has "heated them up," and caused a settlement to be postponed until after the strike was resumed at the end of the 80 days.

In the last two cases, the steel and longshore injunctions, it was not the injunction that helped in the settlements. In steel, powerful political factors were primarily responsible; in longshore the strong will to settle on both sides and the reluctance to strike existed before the injunction. Those were the principle factors in the settlement made long before the 80 days expired.

On the basis of a careful study of the 15 national emergency strikes and injunctions, with some of which I have had personal knowledge and experience, I urge the following program in utilities and basic industries:

1. There should be created a national basic industries panel, appointed by the President and consisting of an equal number of top level labor representatives and top level employer representatives.

2. Legislation should provide that when it appears, 30 days before the end of a contract, that there is a stalemate in negotiations which may lead to a work stoppage in a utility or basic industry, the President should select a four-man board of an equal number of union and employer representatives. The four-man board should then promptly meet with both sides in such industry and seek to bring about a settlement as representatives of the public. If they cannot, then a fifth man should be selected, and the five-man board should ascertain the facts in the dispute and report back to the President, no later than 10 days before the end of the contract, the positions of the parties along with the board's recommendations.

3. The legislation should also give the President several choices of remedies rather than the one remedy of injunction provided for in Taft-Hartley. Thus the actual remedy used could be tailored to meet any situation. Some of the possible remedies would be:

(a) Seizure of the industry.
(b) An injunction.
(c) Voluntary arbitration of the issues in dispute.

In all cases, the retroactivity of money matters to the date of expiration of the old contract should be provided for.

4. By voluntary action of labor and industry, stimulated and encouraged by Government, there should be created, industry-by-industry, industrial labor councils on a national, regional, and local basis, on which labor and industry would be represented in equal numbers. Such councils would have a continuing life. They would be concerned with solutions to vexing industrial and social problems, such as, for example, the role of foreign markets and competition, automation, inflation, the geographical relocation of industry—matters which cannot be adequately dealt with in collective bargaining and in which labor and management have an interest.

This then is my suggested program. It is no panacea for the solution of all labor-management ills in basic industries and utilities. With fair, honest and courageous administration, however, it should go a long way toward correcting the futile and unworkable Taft-Hartley provisions.

True Conservation

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. WESTLAND. Mr. Speaker, at the 50th Western Forestry Conference in

Spokane, Wash., Virlis L. Fischer, a mountain climber, hiker, and wilderness traveler, spoke on "What Conservation Means to Me."

Mr. Fischer is a true conservationist, whose statement before the conference set out principles to which all persons really interested in conservation can adhere.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include Mr. Fischer's statement. I hope the Congress will follow his suggestion by waiting until the National Outdoor Recreation Resources Review Commission makes its report before acting on any wilderness legislation.

The statement follows:

WHAT CONSERVATION MEANS TO ME

(By Virlis L. Fischer, Las Vegas, Nev.)

Four years ago, as a representative of the Sierra Club, I had the distinction of appearing on a panel at one of your conventions, and I must say you are a courageous group to extend a second invitation. Since that time, however, the Sierra Club has soared into the stratosphere, and as an old first-baseman I like to keep one foot somewhere near the bag. For the last 8 years I have served on the conservation committee of the Mazamas, one of the few outdoor clubs which so far has not succumbed to infiltration from within and the barbs from without.

This committee is made up of some solid citizens who make it their business to be informed conservationists. We think the public agencies (i.e., the Park Service, Forest Service, Fish and Wildlife Service, et al.) are made up for the most part of sincere, dedicated professionals in their fields who are trying to do a first-rate job and have a pretty sound working knowledge of how to go about it. Therefore, instead of dancing to the tom-toms, we prefer to do our own looking, gather our own information, and draw our own conclusions. We like to sift the facts from the propaganda—and this isn't hard because some of it is quite crude. We have learned to make a distinction between conservationists, dividing them into two groups—the emancipated and the brainwashed. The emancipated might be defined as those who are willing to admit that even a lumberman might be right once in a while.

Dr. McArdle once told a group of the more avid who were attempting to apply the squeeze for their particular version of Three Sisters Wilderness Area boundaries, "The trouble is that some of you people are too greedy." It will be remembered that when bag limits were first suggested as a wildlife conservation measure, what a howl of protest went up from some of the hunters. These people were called game hogs. I wonder if this isn't somewhat analogous to the situation today where we have a relatively small, but organized, group seeking to expropriate a vast empire for a single use—to the exclusion of all other values including other forms of recreation? Greed, it seems, is not always of the pocketbook.

It is noteworthy to me that the other two members of this panel, Mr. McKee and Mr. Miles, are from British Columbia and California. Being keenly interested in the coming "war of the wilderness," it is significant that British Columbia has some huge reserves of wilderness in its provincial park system and that California is the home State of the largest pressure group seeking an expanded wilderness system. Since only 2 percent of British Columbia is arable land (the rest being mountain, glacier, forest, water and muskeg), and without implicating Mr. Miles in any way, this data had better be kept to ourselves lest British Columbia be added to the grandiose scheme for the abolishment of multiple use in northern Washington.

In any discussion of "What Conservation Means to Me," I should explain that I like both trees and foresters. A friend of mine made the statement that he has yet to see a forester who didn't have a keen appreciation of the out-of-doors. I agree with that appraisal. As a citizen, I am interested in, and have come to expect, a high standard of good land management practices on our public lands. I am also interested in the same high standard of management on private forest lands. This is not only sound business for the private forester, but helps preserve the intangible values so dear to the heart by reducing the pressure on the public lands.

I also endorse the principle of multiple-use. The many years of experience by the Forest Service in multiple-use land management have demonstrated the wisdom of this policy to such an extent as to be virtually self-evident. I am pleased to observe, too, that many private foresters, especially those operating on a sustained yield basis, are engaged in multiple-use land management, even contributing to public recreation. I appreciate the recreational opportunities that multiple-use makes possible, as well as the access it provides to the back country, which I and my fellow hikers have never been known to refuse. I regard multiple-use as applied by the trained professional land manager as wise use of our natural resources. I would say, further, that the multiple-use concept is the keynote of public land management, except where preservation of all values is paramount as in parks, wilderness areas, and certain other categories.

This brings me to the second phase—the preservation phase—of "What Conservation Means to Me." I am an enthusiastic defender, and supporter, and user of parks and wilderness areas. I consider their scenic and inspiration value as priceless. We may have some difference of opinion on boundary lines here and there, but few would want to see them abolished. As between the extremists who want to save everything and those who impishly suggest that all parks should be limited in size to 5 acres (both viewpoints being guaranteed to make the hackles rise), there is, I think, a middle ground in terms of the greatest public interest. This implies a studied balance between use and preservation. In addition, the public interest suggests another kind of balance—a balance between the various kinds of recreational opportunities—a balance, for instance, between wilderness and roadside recreation. We have had a recent illustration in the case of the proposed Glacier Peak Wilderness Area. The Forest Service made a very generous wilderness proposal, while at the same time making provision for the roadside recreationist by use of access corridors.

Last summer while in Montana for the purpose of claiming Granite Peak, I said to a filling station operator, "Well, how's everything in the land of the shining mountains?" And he replied, "Oh, we've changed that to the 'land of the shining beer cans.'" The crude and disgusting outdoor manners of the American people are often advanced as an argument against better access to the back country. It is said, "Why build a road into this beautiful spot for the benefit of those who don't place enough value on it to even keep it clean?" And while I am not making any briefs for such repulsive habits, I am forced to recognize, however, that this is only an alibi—the real aim being solitude.

By the very nature of our national parks, which present a backdrop of unspoiled natural beauty to the hordes of visitors, the wilderness lover is the recipient of a bountiful added gift. While the parks are necessarily managed for the benefit of all, he is the beneficiary of an extra dividend—the bonus of solitude in a setting of scenic splendor. To the extent that this has not been deliberately planned for his special benefit, he is getting a free ride.

By the very nature of the rugged terrain of our western national forests, again the wilderness lover is the recipient of a bountiful gift. In this case, it was deliberately planned for him and bestowed upon him, voluntarily, by far-sighted foresters who loved and wanted to preserve the best of the scenic beauty at their disposal. Again the wilderness lover is reaping the dividend.

Between the wilderness portions of the national parks and the wilderness system of the national forests, I would say that no other segment of the American public is receiving so much for so little. The biggest bargain in the Nation today is wilderness recreation. No other group has been treated so lavishly. And no other group is showing less gratitude.

Sometimes I marvel at the patience the Forest Service displays with those opposing recreational development in areas where it is obvious to almost any reasonable person to be in the public interest. Two such areas as Waldo Lake, Oreg., and the Kern Plateau in California. As Dean Vaux so ably points out, future preservation of the nearby wilderness areas could easily depend on safety valves such as this. While recreational development has been bitterly assailed in both cases, failure of the Forest Service, on the other hand, to proceed with its plans for development would sooner or later be used as fuel for the propaganda that the Forest Service is incapable of coping with the recreation problem.

Any discussion of "What conservation means to me" would hardly be complete without some mention of the wilderness bill. Two things, I think, contributed heavily to create the atmosphere for this piece of legislation. First, at the public hearing on the Three Sisters Wilderness Area, by far the most effective argument for the elimination of the controversial western part was presented by the Oregon State College School of Forestry. This served to focus attention on a weakness in the curriculum of most forestry schools which seem to place the emphasis on timber management and neglect the recreational instruction. This raised the question as to the future chances of wilderness preservation 20 years from now, if left entirely in the hands of timber management.

The second thing that happened was the victory won by the conservation forces in the Echo Park dam controversy. This was a great victory, an amazing victory over almost impossible odds, and served to lift these conservation organizations out of nowhere into national prominence. They found out that it is possible, not every day—but on occasion, to whip up enough public support to win. After basking in the glory of the big leagues, it is understandably hard to settle back into quiet oblivion. Besides, it's easy to raise money for worthy causes. Someone once chided these people about always being on the defense—all they were doing was waging a war of attrition, etc., and why didn't they take the offensive for a change? With the wilderness bill they have succeeded in doing just that, and now you are on the defensive.

The original version was unfurled in March 1956, at a wilderness conference in Portland, by Howard Zahniser of the Wilderness Society. He explained that wilderness was like motherhood—everybody was in favor of it. He didn't mention that he had in his possession an adverse report from the National Park Service, although it is only fair to note that this was later withdrawn. He told some of us that he thought it would

take four sessions of Congress to put the bill across. Since Mr. Zahniser is a particularly able and talented lobbyist who loves this type of work, it has been jokingly called "Zahniser's 8-year boondoggle."

Now it appears that Mr. Zahniser may work himself out of a job in half that time. A watered-down bill and complacency on your part may do the trick. Despite being a wilderness lover myself, I objected to the bill on the grounds that it was unnecessary legislation, too all-inclusive, and should await the research called for in the Dana report. Essentially, it is an attempt to perpetuate the status quo. I am always suspicious of status quo legislation, and therefore like to see what's under the woodpile. In spite of the present watered-down form of the bill which seems to have met the objections of many and led others to believe it harmless, there are two things in the woodpile worth considering before you allow its enactment by default.

The first of these is the Dana research which, to be of the value I am sure Dean Dana visualized, should shed some light on the place of wilderness area recreation in relation to the overall outdoor recreation picture; how much of this type do we have now; how much do we need; how much will we need in the future; how much will we be able to spare for this purpose; where should it be located; who uses it; how many; how many in the future; how can the desire for solitude be adjusted to the realities of geographical limitations; and how can wilderness areas be managed to serve many more people than at present? Shouldn't any wilderness legislation await this basic research? And do you honestly think the wilderness is going to disappear in the meantime under its present protection?

The second item in the woodpile consists of 41 primitive areas totaling 8 million acres awaiting study and reclassification as wilderness. These areas were set up many years ago under the old regulations, and are being studied now for the purpose of ascertaining the predominant wilderness values. The Forest Service has recommended an amendment to the bill giving them 15 years to complete the work. If the bill passes without the amendment, any eliminations (and there are bound to be some desirable ones) will be virtually impossible because no Congressman will want to stab his own mother. If the bill passes with the amendment giving the Forest Service authority over the final boundaries, you will see each and every elimination made into a political football regardless, and a new bill to nullify the amendment.

But this is child's play compared to the fantastic scheme for the wholesale dismemberment of the national forests. This plan involves a land transfer study aimed at taking away from the Forest Service all lands having a high recreational potential (and some not so high) and turning them over to the Park Service. The plan was instigated by the Sierra Club and approved unquestioningly by the Federation of Western Outdoor Clubs, with the exception of the Mazamas. It calls for a moratorium in the meantime on all management decisions affecting these lands. The slogan of the promotors of this scheme is, "What we save in the next 10 years is all that will ever be saved." As you might expect, the principle of multiple use is excluded from their definition of saving.

They started with a long list of specific areas, as examples, and are now clothing the bones with additional lists. The original list includes all limited areas in Oregon and Washington (some 18 of them), all 41 primitive areas previously mentioned, plus a list of other areas and features throughout the Western States and Alaska. It includes some of the wildest and most irresponsible suggestions and demands ever to come to the regional forester's attention, I am sure. It almost makes me wonder whether I'm in the conservation movement or the bughouse.

In conversation, an aura of respectability is sought by mentioning the Hoover Commission report on governmental reorganization. Not so subtle is the whispering campaign to the effect that the Forest Service doesn't know anything about recreation, its only concern being timber sales; therefore, it should all be turned over to the Park Service. This multiple-use concept being the foundation of national forest management, it is under attack. The attack features the use of pictures and captions to give a false and misleading impression of the work of the Forest Service. For instance, a close-up picture is printed of Mount Jefferson with scattered alpine trees in the foreground. The caption reads, "The chainsaws roar ever closer, in land they need never enter in order to supply man's need for timber and pulp. When the loggers have felled the trees and silence comes again to the places where the great trees were, there will never again be the miracle of unspoiled forest floor, wonder of the cool green world, that could build, renew and renew again—but not if men take the trees out." Not mentioned is the fact that this picture is in the Mount Jefferson wild area, fully and completely protected by the Forest Service, without the semblance of a threat of commercial invasion. Yet the impression is given that the chainsaws are imminent, and that the only way to prevent this catastrophe is to turn it over to the Park Service. This is not the work of babes-in-the-woods; it is being done deliberately by a tax-exempt organization with the full knowledge of its board of directors. A more unscrupulous method of operation to gain an end has never come to my attention in the conservation movement. The chairman of the Mazama conservation committee, in discussing this matter, said, "I will never knowingly be guilty of such a practice." That, ladies and gentlemen, is an ethical standard worth emulating.

I cite one other example of the breakdown in ethical standards of this empire-seeking group: A certain individual, whose identity is known, composed a letter containing 19 loaded questions and a request that the Forest Service consent to a Park Service study of the north Cascades. Congressman PELLY was persuaded to sign the letter on the theory that what harm can there be in simply asking for a study. The questions were designed to make a sucker of anyone answering them, but I doubt if Congressman PELLY realized the questions were loaded. Dr. McArdle did the only thing he could do—he answered the letter, but not the questions. His reply to what is now heralded as the Pelly letter is being circulated to prove the "arrogance" of the Forest Service. Unfortunately, these things always attract a certain following.

In conclusion, my discussion of "What Conservation Means To Me" has, because of unusual and disturbing circumstances, emphasized the national forests. Multiple-use and your national forests, both, are in danger and need your help. I do not want to witness the dismemberment of the national forest system, either piecemeal or wholesale to satisfy the greed of any one group. I think forestry is an honorable profession, and I deplore that its leaders, men of unquestioned integrity, are being subjected to this kind of abuse. I think unscrupulous methods are inconsistent with the lofty purposes of a nonprofit, tax-exempt, scientific, literary, and educational organization. I, therefore, hope for a return to the high ethical standards on which its previous reputation was earned, and, lastly, may there be a full exposure of this latest plot for just what it is—a colossal land grab for a single-use empire.

Views of the American Legion National Commander, Martin B. McKneally, on the National Defense Education Act Loyalty Oath

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, as the controversy surrounding the National Defense Education Act and its loyalty provision has intensified, I have received an increased amount of mail and statements, pro and con, about the merits of the loyalty provision of the act.

I have recently read the remarks of the American Legion national commander, Martin B. McKneally, on this subject and wish to commend the national commander for his forthright analysis of the implications of the loyalty oath. I find myself in agreement with the views expressed by Commander McKneally and believe that Members of the House will find them of interest. Therefore, under permission granted, I include them as part of my remarks, as follows:

A question of much moment before the American people is the one concerning what is called the loyalty oath.

The American Legion, by resolution of its 1959 convention, supports the loyalty oath provision of the National Defense Education Act. It does so on this theory: The National Defense Education Act is a part of the enactments of Congress providing for the security of the United States and as such those receiving benefits under it are special persons, they are singled out as special beneficiaries for a special reason and as such their loyalty to the United States and their freedom from the taint of disloyalty is properly an issue.

To read the debate on the Kennedy-Clark bill which sought, at the last session of Congress, to repeal the section of the act which required every student-beneficiary to sign an affidavit to the effect that he does not believe in and is not a member of and does not support any organization that believes in or teaches the overthrow of the United States Government by force or violence or by any illegal or unconstitutional means is to take an exercise, a lengthy exercise in evasion, begging the question and missing the point. One would think that loyalty to the sovereign State is the exaction of an onerous, burdensome thing to the average American. One would think that subversion was not the Communist business. One would think that freedom, in this desolate age, was not dying all over the world. One would have to conclude that the great states that have been overthrown, since 1945, were not helped to disaster by certain disloyal citizens within their boundaries. The fact of the matter is that loyalty is an issue and the United States must be protected against disloyalty.

The fact of the matter is that those of us who support this affidavit, and have ourselves taken such an oath gladly, find in it no reflection on our integrity and our loyalty. When we insist upon our position we are disdained as anti-intellectual and as descendants of those who called for a religious test in the Middle Ages. This is specious nonsense.

A man's traffic with his God is a personal affair and is answerable in a forum over

which we have no control. Treason to one's country is another story. A tightly organized society such as our own exists by virtue of certain understandings, certain compacts—man to man. We are all participants in it and every man is affected by the deeds of his fellows. This principle is, indeed, part of the tradition of the common law. For instance, I must so use my property that it does not do injury to my neighbor. I may speak freely, but I may not expect my freedom to extend to me the right to shout fire in a theater and thereby cause panic and injury to my fellows. Freedom, indeed, is a qualified thing. I cannot in any case commit injury to my fellow citizens without penalty. This is purely a social responsibility and its violation throws me out of step.

Treason or betrayal of the common good as constituted in a duly authorized way is an act which violates the responsibility of one citizen to another. The average American is unable to follow the tenuous reasoning which identifies a religious test in the Middle Ages with a loyalty affidavit of today, except insofar as it identifies the loyalty oath with something admittedly bad for the purpose of destroying it.

I have said to you that around the world in this age of brainwashing technique and indoctrination loyalty is in issue. "With every dawn," Camus tells us of our time, "masked assassins slip into some cell." "Murder is the question before us." This is the solemn keynote of our time. Shall we fail to heed it? According to the overanxious reasoning of certain college presidents? And in this connection it is worth noting that the hearings in the Senate catered to the opponents of the loyalty oath and entertained not a voice in support of it. It is interesting to further note that not one student voice was heard. After all, this bill provides for a relationship between Government and student, and those university boards and presidents who have withdrawn their institutions from it have deprived thousands of American youths of the personal benefits of this program and the benefits to the Nation, by summary action based upon unsubstantial reasoning, may charge us with anti-intellectualism (and I am not sure what that term really means), but I do know this: They inspire me with no great admiration for their position.

The battle against communism is a struggle for men's minds, and in this struggle we shall not win by the mounting confusion of words that surround great issues. It has been argued that if the loyalty oath is to be included in a security measure, then it should also be included in a farm-subsidy law. This is, in effect, to say that a farmer raising corn is in the same position as a man working in the field of molding men's minds. Let us recognize that teachers and intellectuals occupy an exalted place in our society. They are the ones to whom we look for leadership and for light in this complex world. In short, it may be said that they are the ones upon whom we ordinary people must ultimately depend. Are we asking more than they are willing to give in requiring this simple affirmation of loyalty to our country? Surely no one in his right mind interprets this as a slander or a reflection upon them as a practical proposition. Teachers operating under the New York school system have been taking such an oath for years. No one has thought less of them for taking it.

Now the subject of this discourse has been in defense of the loyalty affidavit and opposed to the reasoning used in an effort to defeat it. I would give the opponents of the loyalty oath a large measure of credit if they would base their case on the fact that the oath has little practical use in protecting the nation against subversion instead of trailing off into vaporish, thin skinned expressions of injured pride. Perhaps it is nothing more than a symbol of loyalty. Is symbolism bad? When a man tips his hat to a lady, he uses a symbol of respect; his head bowed in prayer is a symbol of his reverence. His use of the term His Excellency, to a Governor, is a symbol of his submission to the authority of the law. Are these bad? Do we think more of a man if he fails to observe them? The loyalty oath is probably nothing but an expression of devotion to one's country in this day of its darkest peril. But even if this is all that it is, who can deny that such an expression does some good? I have said to you that the battle of communism is one for the minds of men. It must be fought in the classroom.

But the battle against communism must also be fought on the level of faith, not only across the plains of economic and scientific achievements. Communism proposes that life is material and a man is a product of nature with no purpose, no will, and no soul. This is a harsh doctrine but because they have succeeded in dressing it up with appeals to ideals and equality, they have succeeded in winning in many instances, the battle for the heart and the minds of men. Ours is a society and a system based upon ideals. Our job as Legionnaires is to keep the eyes of all Americans focused on the ideals of our country and our job as Americans is constantly to translate the image of America abroad in terms of its ideals.

We as members of the American Legion must keep alive the spirit of patriotism, love of country. This is our challenge. To those who have grown listless in their appreciation of individual freedom and the great gift of citizenship in this country let us constantly recount their blessings. They are neatly summed up in a passage written by a refugee—one who came to these shores from Herr Hitler's concentration camps and eventually became a citizen of these United States. He wrote:

"'I am an American citizen * * * a member of the greatest fraternity on earth * * * The brotherhood of free men because a million American citizens have died and millions have suffered in the wars of our Republic. I have greater freedom than any other citizen of any other nation in any other period of mankind. I have greater freedom to work, to worship, to love, to learn and to play. Mine is the freedom to compete, to invent, to save, to invest, to create, to promote, to own. I have freedom to choose, to join, to vote, to speak, to travel, and to walk erect with head high. I am free to be my own self as an individual human soul. I am free to glorify God'."

An Eastern Big City Congressman Looks at Resource Development

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. SANTANGELO. Mr. Speaker, on January 19 I had the privilege of speaking before the Electric Consumers Information Committee at the Hotel Willard in Washington, D.C. I am thankful to Jack Curran, a member of the ECIC executive committee, who extended to me an invitation to participate in a luncheon session of a legislative workshop with people from all over the United States who are interested in the problem of power and our natural resources. Mr. John Edelman, legislative representative of the Textile Workers, was the chairman.

The subject of my talk was "An Eastern Big City Congressman Looks at Resource Development." In view of the erroneous impression that a conflict exists between the interests of the farm people and the city dwellers, I believe that my talk might eliminate some of the erroneous impressions held by many people.

I found the question and answer period after the speech very stimulating and the comments reaffirmed my deep-rooted feeling that whether we live on the farms or dwell in the cities that we are Americans all and that our natural resources have been granted to us for the benefit of all mankind, and not for the aggrandizement of power by a monolithic state or for the financial benefit of a select few.

The text of my speech follows:

SPEECH OF CONGRESSMAN ALFRED E. SANTANGELO BEFORE ELECTRIC CONSUMERS INFORMATION COMMITTEE, TUESDAY, JANUARY 19, 1960

Mr. Chairman, Mr. Ellis, Jack Curran, members of the Electric Consumers Information Committee, and ladies and gentlemen, I have been asked today to speak to you on the subject of how "An Eastern, Big City Congressman Looks at Resource Development." I am happy to participate in this workshop program.

When one talks about resource development, a person, whether he comes from the city, such as I, or from the farm belt, one immediately thinks of natural resources, farms, forests, fish and wildlife, minerals and sources of energy. Some city dwellers think of hunting, fishing and swimming. The thought that comes to me, and which is sometimes overlooked, is the world's greatest natural resource—its population. This is so whether it be where population is exploding or where it is controlled by natural or artificial means. When I talked of natural resources, I mean both groups—the animate and the inanimate and the relationship between them.

As a human being and as a Catholic, I believe in the dignity of the individual and in his inherent worth. Just as I believe governments are created for the protection of the individual and the development of a spiritual, economic and political being, so do I believe that our natural resources have been placed on earth for the benefit of all peoples, all human beings, and not for the aggrandizement of power of a state or the financial benefit of a select few.

I am not a hedonist who believes that pleasure is the primary objective of life or summum bonum, but sometimes when we attend congressional parties, labor luncheons, or house parties, one can validly draw the inference that the guests believe in the mammalian philosophy—live for today for there is no tomorrow.

As a member of the Appropriations Subcommittee on Agriculture, I have been compelled to think about the soil, the trees, our streams, electric power, and their use, their development and their preservation. I have been extremely interested in these resources because I know that they affect my life, my constituency, and my Nation.

We all know that no nation is any stronger than its resources permit it to be. Because America has been fortunate in the

blessings of nature bestowed upon it in the shape of all varieties of natural resources we have become strong. We have attained our preeminent position in the world today because we have had the energy, the ingenuity, and the purpose with which to convert natural resources in their many aspects to useful products. In the process, we have been shamefully prodigal as well as admirably efficient. Some nations have not been blessed with nature's bounty and consequently look to us with pitiful glances for help or with green eyes in envy.

Of all the natural resources needed to support even so complex an industrial structure and sophisticated a society as ours is today, there are only a very few which we do not possess in some quantity. Those few which we may need we have, of course, been able to secure elsewhere by exchange for others of which we have a surplus or for products made from them. And so we have our exports and imports and our trade agreements.

The first of the natural resources we come to is water. Certain elementary facts must be recognized. Water is vital to every form of life. We have a fixed or finite quantity of water in this world. Some have too much for their needs, such as Siam, Panama, and other countries in the Far East, which I have had the extreme pleasure of visiting within the past several months. Other areas have too little, such as Hong Kong, where running water is used only for several hours a day, or in parts of southern Italy, which suffers from the lack of water. Certain areas which have sufficient for their needs, do not have it at the time when they need it. So for them, it is a problem of storage and use in time of need. Then it becomes a matter of distribution. We have seen such conservation in the Tennessee Valley, in the far West at the Columbia River, or at the Wilson Dam.

I understand that Russia is developing the largest water dam in the world which will provide electric power and irrigation. This damsite is located at Bratsk north of Lake Baikal on the Angara River, and when completed will be more than 40 times as large as our largest reservoir at Hoover Dam. We almost had a war because the present administration withdrew its support to Egypt in the building of the Aswan Dam. I was pleased to see that Formosa with the help of our government is building the first multipurpose water resources development undertaken by the Republic of China as part of an overall program to make Chiang Kai-shek's country self-sufficient. Its purposes are irrigation power, flood control, and public water supply.

Some areas have sufficient for their needs, but people in the use of it pollute, contaminate, or waste it, so that others cannot use it sufficiently or profitably. Riding across the 14th Street Bridge in Washington over the Potomac River, you will see this river being contaminated by industrial useage and those who live downstream are denied a proper use.

Water serves mankind in many ways. It helps provide food from the soil or from gravel as I saw in the hydroponic systems in Japan. It turns the turbines which furnish hydroelectric power and provides cheap electricity, as in the hills of Puerto Rico where the Rural Electrification Administration has brought light to darkness and bearable living conditions to the denizens of the hills.

When I first came to Congress I did not know what the words "Rural Electrification Administration" meant, and I had no conception of the kind of work it was accomplishing or the scope of its activities. The first real understanding I had of the REA's accomplishments was during my visit to Puerto Rico where I met Clyde Ellis and participated in a week's seminar conducted by the Puerto Rican Water Resources Authority. I traveled into the hills and inspected the powerplants and saw with my own eyes the wires leading to the shacks and hovels which some of the Puerto Ricans call their homes. In some instances the cost of the installation of the electricity was greater than the value of these homes. More than 50,000 families enjoyed for the first time the use of electricity and the darkness of the hills was illuminated. Refrigeration, preservation of food, electrical appliances, and modern conveniences were theirs for the asking by reason of the inspiration of a far-sighted Governor, Muñoz-Marín. Without the REA loans at 2-percent interest, these people would have remained in darkness, relegated to misery. Their health and their way of life were greatly improved.

Today we see an administration seeking to raise the interest rates to be paid by the REA from 2 percent to the going rate of interest paid by Government bonds. This means that the rate of interest would reach 5 percent and higher. This means that backward areas could not avail themselves of the great opportunities afforded by a program initiated under Franklin Delano Roosevelt which has brought electricity to 98 percent of the farm families throughout the United States and telephones to 90 percent of the people on the farms.

I, for one, will oppose a program which will grant 3½ percent additional interest to financial institutions to the detriment of the people and the destruction of one of the greatest programs our country has ever adopted.

Water serves as drink for man or beast, either in its pure state as H_2O or in its mixed state as in hooch. It also has less utilitarian purposes, such as perhaps for sartorial perfection as in washing and bathing or as a locus near the sands, attracting either a sunburn or the opposite sex.

As dependent as we are upon water then, we must learn to keep our demands within the available gallonage which is not infinite. As we approach the absolute limits we must learn to utilize it in the most efficient manner possible.

Wherever possible it must be used over and over. The same water that generates hydroelectric power can be used again. None is lost in the process. Wherever possible arid lands lying waste and unproductive should be given an opportunity to produce food and other products of the land. This will become more and more necessary as our population continues to grow.

Since the finite limits of water are known, at least in approximation, it is up to someone to take the lead in seeing that the available supply is most efficiently utilized. That someone could very well be the Federal Government. By that I do not necessarily mean that every drop should be nationalized and every bucketfull be doled out by a more or less benevolent Federal Government upon sufficient justification by potential consumers or users. I do mean that it would probably be a good thing that the utmost protection be given to the Nation's watersheds, that soil erosion be eliminated insofar as possible, that water pollution be prevented, or corrected when it occurs unavoidably.

I mean that potential hydroelectric power sites should be determined and the right to develop them be in the hands of those who can do so at the least cost, most efficiently and for the benefit of the most people. If these potential power sites are located where no one can or wants to undertake the job the Federal Government might undertake them. Not, however, unless there is at least a potential need for them.

As we well know, it would be a wasteful practice to build large power dams just for power. It is also possible to upset the natural regime of a stream and disorganize the economies of communities downstream dependent upon the water about to be impounded for domestic and industrial use, and possibly irrigation. The modern-day multiple-purpose planning for a coordinated development for all purposes is infinitely more desirable.

Yesterday our President forwarded to the Congress his budget message. In it he recommended $1,938,000 to be spent in fiscal year 1961 for natural resources, more than has been spent for this purpose in any previous year.

We have before Congress, apart from his recommendations, a measure which would establish a Council of Natural Resources and Conservation Advisers. The purpose of this council is to study the current status of natural resource conservation and development and to develop, in terms of national policy for the President and the Congress, a program which will best meet the human, economic, and National defense requirements of the Nation and the enhancement of the National heritage for future generations.

A truly comprehensive program should encompass, each in its proper relationship to the other and to the whole program, all natural resources. These would include soil, water, timber, grazing land, fisheries, minerals, wildlife and, not to be neglected at all costs, recreational, scenic, and scientific values. The assistance and cooperation of all responsible parties should be enlisted. This I think should include industry, agriculture, government on all levels as well as individuals. Only thus could the interests of all citizens be given the proper consideration. That is the democratic way.

It would be well to have a central clearinghouse of information concerning the current status of our storehouse of nature's bounty. We should know of what plans there may be for its conservation, development, and utilization. If there are dangerous trends apparent, steps may be taken in time to arrest them. If there are forseen shortages developing, steps may be taken to head them off.

As a member of the Agriculture Subcommittee of the Appropriations Committee of the House of Representatives, I am acutely aware of the accomplishments of the Rural Electrification Administration. I believe that some of my listeners may have some small interest in that program. That governmental undertaking is illustrative of the good that can be accomplished by the Government when others cannot or will not undertake the job.

Several other measures which protect our resources are such projects as the TVA, Bonneville Power Administration, marketing system, in the Pacific Northwest, other Federal power projects in various sections of the country and the rural electrification program. They have stimulated higher consumption of power at low wholesale rates. The results of this policy, which has its roots in the Reclamation Act amendments of 1906, have not only aided the ultimate power consumer in the regions affected, but have had an effect toward decreasing power rates in areas not in the watershed effected by the project even in large cities. (This is the F.D.R. yardstick of public power against which to measure rates of private utilities.) For example, the 1958 average annual domestic use of electricity in the TVA region was 7,800 kilowatt-hours, about double the national figure. The cost per kilowatt-hour of power among TVA distributors is about 60 percent of the average for the Nation. As a result the purchase of electrical appliances in

the home and on the farm in the TVA is the highest in the Nation.

Since 1945 citizens of this region have purchased $2.5 billion worth of appliances and the same is true in the Pacific Northwest although adequate statistics are not available. Rural electric cooperatives, more than 900 in number throughout the country, form a $1 billion annual market for 20-odd household electrical appliances. These data were obtained from a study conducted by the National Rural Electric Cooperative Association in 1959. It is obvious that low-cost power contributed to increasing usage which in turn contributed to purchase of more electrical appliances which help keep industries producing goods and workers employed.

From the standpoint of the national interest, I, as a big city Congressman, approve of the role that has been played during World War II, during the Korean crisis and by the TVA and Bonneville Power Administration in supplying power for defense during the present program of protecting the United States against aggression. Aluminum for the planes that helped to defeat the axis in World War II was produced by industries located in the TVA and on the Columbia. Only in those areas were there supplies of low-cost power available for the process of aluminum and other electro-process industries important to the war effort. As of now, more than half of TVA total power production goes to service the Atomic Energy Commission's facilities in that area. A substantial proportion of power generated by the Columbia River Basin dams is used to service the AEC facilities at Hanford, Wash.

The success of the programs that have been here described have stimulated areas elsewhere to look at their resources situation, particularly in the eastern part of the country where I live, in relation to meeting the problems of water pollution abatement, water supply navigation, and other uses of rivers.

The League of Women Voters, which enjoys respectability in the East, and perhaps is in disfavor in Louisiana, has set up as its goal the conservation of natural resources and the elimination of pollution. Whatever success they might achieve, of one thing you can be sure—that with such support, we will find this topic kept alive and legislators informed of its need and its importance.

I, for one, have supported the rural electrification program with vigor because I see its benefits and I recognize that all in our country, whether it be on the farm or in the city, have common interests. I have supported with pleasure the expansion of the Tennessee Valley Authority's jurisdiction because I believe that the people of that area are entitled to cheap power and a right to receive the benefits which hydroelectric power provides for the residents in the area. If we in the city support programs which farmers feel are their private domain, we do so because we recognize their intimate relationship with us. We, on the other hand, have high hopes and confidence that the farmer be aware of and sympathetic to the problems which we cliffdwellers face in our urban centers. Newspaper reporters call this mutual assistance—"I scratch your back; you scratch my back theory of politics."

Our problems in the city are legion. We desperately need decent housing, and we would like to enjoy the fresh air which the farmers receive in their daily lives. We clamor for minimum wages because we feel that we should have the wherewithal to purchase the necessities of life and obtain those foods which we cannot abstract from the soil. If we recognize that we are our brothers' keepers and that there is no class warfare between the farmer and the city dweller, if we appreciate that education is the common concern of all, that decent housing, good health, are rights of mankind, then we have recognized the truth which has come down from all religions. When we recognize that truth, that Nature's bounty were planned for the benefit of mankind, then we can live as human beings and be proud of our way of life.

Tribute to George E. Clark, of Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include two letters which pay just tribute to Mr. George E. Clark on the occasion of his retirement from service as a bridge tender at the Duck Bridge in Lawrence, Mass.

The letters follows:

COUNTY COMMISSIONERS,
COUNTY OF ESSEX,
Salem, Mass., November 2, 1959.

To Whom it May Concern:

Mr. George C. Clark, 118 Brookfield Street, Lawrence, Mass., was employed by the County of Essex for a period of 35 years. During all those years he was found to be an honest, sincere, hardworking man. He served the county as a bridge tender at the Duck Bridge in Lawrence for the past 29 years.

During this period of time he has proven to be a very colorful figure and has shown himself to be an alert and on several occasions a very courageous man.

A tribute has been paid to him by the Honorable THOMAS J. LANE, and it appears in the CONGRESSIONAL RECORD, volume 105, dated Tuesday, September 15, 1959.

The Lawrence Eagle-Tribune on September 12, 1959, printed a glowing account of his colorful record during his years as a bridge tender.

The city of Lawrence, the towns of Andover, North Andover, and Methuen have paid tribute to Mr. Clark for his many long years of service to the public.

The county of Essex accepted with regret his resignation of October 1, 1959.

Very truly yours,
EDWARD H. CAHILL,
C. F. NELSON PRATT,
County Commissioners.

LAWRENCE, MASS.

GEORGE E. CLARK,
Governor's Office,
State House, Boston:

As mayor of the city of Lawrence I join with its citizens in congratulating you upon the auspicious occasion of your audience with His Excellency Foster W. Furcolo, Governor of Massachusetts.

JOHN J. BUCKLEY,
Mayor of Lawrence, Mass.

THE COMMONWEALTH
OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT,
State House, Boston, October 1, 1959.

Mr. GEORGE E. CLARK,
Lawrence, Mass.

DEAR MR. CLARK: It is an official honor and a personal pleasure to extend the greetings of all the people of Massachusetts together with my own salute to you tonight on the occasion of your retirement from public service after more than 35 years.

Not only the city of Lawrence, the county of Essex, and the State of Massachusetts, but the entire Nation record their grateful recognition of your heroic deeds well done.

Your loyalty, your devotion, and your daily work to aid your fellow man will always be remembered. Your 33 years as a bridge tender in Essex County are a living memorial to your heroism in saving many lives during emergencies.

Certainly, citizens of your caliber and dedication are the strength behind our Government and constitute the bedrock upon which our democracy has been built, improved, and expanded for the benefit of all the people.

I join with your multitude of friends and admirers in expressing the hope that during the years ahead you may find joy and satisfaction in all your activities.

Sincerely yours,
FOSTER FURCOLO,
Governor.

Senator Symington's Views on U.S. Preparedness

EXTENSION OF REMARKS
OF
HON. DANIEL B. BREWSTER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. BREWSTER. Mr. Speaker, the safety and survival of the United States and its friends and allies in the non-Communist world surely overrides all other issues facing the 2d session of this 86th Congress.

I share the concern of many of our colleagues over the adequacy and wisdom of our present defense policies. We are all concerned over the extent of the lag in missile production and space technology. Certainly we must continue to work for an enforceable disarmament agreement, but in the interim—the United States must remain strong.

Senator STUART SYMINGTON, of Missouri, has dedicated much of his time to the study and evaluation of our defense posture. He is one of our country's outstanding experts in this field. Recently, on January 10, 1960, Senator SYMINGTON appeared on the "Meet the Press" program. Much of the program was devoted to exploration of the Senator's views on the state of U.S. preparedness. I am pleased to commend to our colleagues the transcript of that interview by a panel of veteran Washington correspondents.

Under permission to extend my remarks, I submit the transcript of the Sunday, January 10, 1960, "Meet the Press" television program. It is my hope that we will be able to approach this all-important issue without resort to partisan recrimination and with the emphasis on how best to keep America strong and free.

"MEET THE PRESS," SUNDAY, JANUARY 10, 1960

(Moderator, Ned Brooks; guest, Senator STUART SYMINGTON, Democrat, of Missouri; panel, Roscoe Drummond, New York Herald-Tribune; May Craig, Portland (Maine) Press Herald; Marquis Childs, St. Louis Post Dispatch; Lawrence E. Spivak, regular panel member.)

The ANNOUNCER. Ladies and gentlemen, we invite you to "Meet the Press," the unrehearsed program which has won every major award in its field.

Our guest today is Senator STUART SYMINGTON, of Missouri, chairman of the Special

Agriculture Investigating Subcommittee which begins hearings early this week.

In just a moment Senator SYMINGTON will meet the press.

Now "Meet the Press," produced by LAWRENCE E. SPIVAK.

Remember that the questions asked by the members of the panel do not necessarily reflect their point of view. It is their way of getting the story for you.

Now here is the moderator of "Meet the Press," Mr. Ned Brooks.

Mr. BROOKS. Welcome once again to "Meet the Press."

Our guest today is Senator STUART SYMINGTON, of Missouri. He is one of the five Democrats most frequently mentioned as possible nominees for President.

In the new session of Congress, Senator SYMINGTON will play an important role. He has earned a reputation as a critic of administration defense policies and he is now proposing a program for reorganizing the Defense Department.

He is the chairman of an investigating committee which on Tuesday will begin a far-reaching examination into the operations of the Government's farm program.

Senator SYMINGTON was appointed as the first Secretary of the Air Force when that position was created in 1947. He was first elected to the Senate in 1952. Senator SYMINGTON recently returned from an extensive trip which included Africa and the Middle East.

And now seated around the press table ready to interview Senator SYMINGTON are Marquis Childs of the St. Louis Post-Dispatch, May Craig of the Portland (Maine) Press-Herald, Roscoe Drummond of the New York Herald Tribune, and Lawrence E. Spivak, our regular member of the "Meet the Press" panel.

Now, Senator, if you are ready, we will start the questions with Mr. Spivak.

Mr. SPIVAK. Senator, I would like to assume what everyone else in the political know takes for granted, and that is that you are being seriously advanced for the Democratic presidential nomination, and I would like to ask you some questions on some of the major issues that face us. First, the question of disarmament. While the rest of the world is talking about and hoping for disarmament, you keep hammering away on the question of armament.

Will you tell us where you stand on the question of disarmament?

Senator SYMINGTON. Mr. Spivak, in 1955 I introduced a resolution which was passed unanimously by the Senate, and the resolution was one of universal disarmament. Nobody can be more for disarmament than I am. On the other hand, I believe it would be wrong and not in the best interests of my country to disarm unilaterally in the face of growing Communist strength.

Mr. SPIVAK. Senator, do you think we can make any kind of disarmament agreement with the Soviet Union today that would be safe for the free world?

Senator SYMINGTON. Well, I would hope that we could, and I think that it is important that we continue to try. But on the other hand, I think that we have to do two things: First, work for general disarmament, and secondly, be careful that in our desire to obtain a real disarmament agreement we don't sign one that might leave us in a position where it could be violated without our knowing it.

Mr. SPIVAK. Senator, specifically on nuclear weapons testing we have carried on negotiations now for over a year and the Russians seem to be getting exactly what they want and that is a test ban without inspection.

How long would you continue these negotiations if they continue in this present vein?

Senator SYMINGTON. For 14 months we haven't been testing and for 14 months the Russians have not been testing. It worries me a great deal because as the months go by our experts say continuously that we cannot tell increased sized tests on their part if they want to cheat.

I am willing to leave this matter in the hands of the President who says that he has now abandoned the idea of just agreeing to an indefinite extension.

I would hope that we reach an agreement soon, because the American people should realize that the longer it is that we have no agreement and yet do not test, the longer, provided the Russians are cheating, the longer we are giving up and therefore in effect disarming unilaterally.

Mr. SPIVAK. You think, then, if we don't get an agreement soon we ought to go back at least to underground testing?

Senator SYMINGTON. I do think we ought to go back to underground testing, yes; provided in the reasonably distant future we don't get an agreemeent that we consider the right agreement.

Mr. DRUMMOND. To touch on one more aspect of the test ban thing, in your judgment and in your knowledge, is there any method of verification that would be adequate to detecting underground testing?

Senator SYMINGTON. Mr. Drummond, the amount of blast that could not be detected has increased to my certain knowledge in the minds of the experts, 20 times in the last year. Now we are talking "underground," in addition to which there is a great new field of testing in which there is a growing apprehension that we would not be able to detect and that is the field of space. For example, something that was tested halfway to the moon.

Therefore, again I say that all of us are looking toward peace and believe that the best way to get peace is through some form of agreement in this field and all the fields of armament. On the other hand I do think that based on the record we have to proceed with care.

Mr. DRUMMOND. Speaking of space, former President Truman and Senator MANSFIELD this afternoon said that they thought that the Soviet use of the Pacific for rocket testing was an act of arrogance.

Now I'd like to ask whether you think the Pacific is a proper area for rocket launching and what do you believe is the purpose of the proposed Soviet rocket test?

Senator SYMINGTON. Without getting too much into possibly classified territory, I think it shows that fairly soon, based on the orbit they get in the place that they now plan to test, fairly soon they plan to put a man in space. Where they plan to throw these missiles, now, is about 1,100 miles from Pearl Harbor. They are getting closer in their relationships in the space field to our newest State. They are not, however, nearly as close, perhaps, as they are in some other places in the world where the governments appear to be leaning their way.

Mrs. CRAIG. Senator, the President gave us a rather optimistic picture of our defense in his state of the Union message. Does that agree with your knowledge of our own military position?

Senator SYMINGTON. No, Mrs. Craig. I think the President was misinformed in some of the things he told the American people with respect to our defenses.

Mrs. CRAIG. For instance he spoke of our Atlas situation. How much ready intercontinental missiles do we have, do you know?

Senator SYMINGTON. Yes; I do know, but I don't think I should say so on this program. I do think, however, that his statement as to what our position was was oversanguine.

Mrs. CRAIG. Could you give us some idea then perhaps in relation to what you know the Russians have?

Senator SYMINGTON. It has been acknowledged by this administration a year ago, after we corrected some of the statements that were made by some officials, it was acknowledged, admitted that the plan was to allow the Russians to get a lead of 3 to 1. That is what they said the lead would be. Personally I feel that the plans mean that their lead will be greater than 3 to 1. Inasmuch as we have not deviated from our announced plans by the Secretary of Defense at that time, it should be clear to all Americans that we are further behind than we were a year ago in the defense missile field.

Mrs. CRAIG. The President was rather optimistic about the Polaris nuclear subs. How many of them do we have ready?

Senator SYMINGTON. Again I wouldn't want to give the exact figures but I do agree with you that he was misinformed with respect to the statements he made about that weapon also.

Mrs. CRAIG. Well, if he isn't informed, who misinformed him?

Senator SYMINGTON If I was in his position I would be interested in finding out.

Mrs. CRAIG. Well, Senator, that is an extraordinary statement to say the President the Commander in Chief, is misinformed and doesn't know what he is talking about.

Senator SYMINGTON. I didn't say the latter; you did. I did say that I was sure he had been misinformed in some of the statements that he had made in his talk.

Mrs. CRAIG. Does it not follow if he is misinformed, that he doesn't know what he is talking about?

Senator SYMINGTON. You made that statement, not I.

Mr. BROOKS. Senator, could you cite a specific example of where he was misinformed?

Senator SYMINGTON. Well, Mrs. Craig brought up two. One was in what he said about the missiles and the other was what he said about the Polaris submarines

Mr. CHILDS. Well, just to push that a moment further, Senator, how long can the American public take this screen of security—I know you referred to classified information. Shouldn't the public know if the President is misinformed and isn't it your duty to tell us?

Senator SYMINGTON. Well, Mr. Childs, in our form of government, one in a position like mine—a Senator from Missouri—has to be very careful about releasing classified information.

However, I want to say this: The American people now know from this administration that we are well behind in the missile field, even further behind in the space field, and that our plans are to remain that way and get worse.

Now I am amazed that the President in his statement points out that we are going to have the most prosperous year in our history next year, that we are going to have a $4½ billion surplus and at the same time these plans to let the Russians continue their relative growing strength against ours continue. And I'd like to just also say that I don't argue about the fact that under our form of government they have the right to consider the balancing of the budget more important than national security, but I do think that it is unfortunate that the people are not given the facts as to the nature of their actions to that end and the degree that we are falling behind.

Mr. CHILDS. I would like to ask you about that surplus, too, Senator. I gather you would not use that to reduce the national debt, that $4.2 billion, if such a surplus does materialize, is that right?

Senator SYMINGTON. I don't think there is anything more important in the world today than this country, the last great bastion against communism, keeping equal in strength with the Russians. Physically, economically, technologically, psychologically—of course spiritually where we already have a great advantage. Therefore unless they want to reorganize the Department of Defense, to wring out the waste over there that everybody knows is there, and get a new setup, which I am introducing a bill on as soon as I can get the floor, you might say, and unless they want to correct some of the other places in government where we are not having good administration and get the money that way, I most certainly would take that excess the President talks of, that surplus that he talks of, and put it into increasing our defenses.

Mr. CHILDS. Don't you then lay yourself open to the charge of being a spender and willing to unbalance the budget and contributing to our inflation?

Senator SYMINGTON. I don't think that whether we balance the budget, or many of our other plans, will mean much in this world unless we maintain our guard. Nobody wants peace in the world more than I do. Nobody wants peace more than any citizen with common sense. Your only problem is as we move to the summit next May, for example, with the great psychological, technological and physical accomplishments recently of the Soviet, do you have a better chance to negotiate that just and lasting peace we hope for at the summit for example, if you negotiate from a position of relative weakness or one of relative strength. To me that is the most important avenue to peace that we have in the world today.

Mr. SPIVAK. Senator, you have said there is a great deal of waste in the Defense Department. Am I to understand, then, that if you were President of the United States you wouldn't spend more for defense, that you really would spend less for defense?

Senator SYMINGTON. I would spend more for defense right now. But on the other hand, I would have a single war plan. I'd try to eliminate the constant bickering and arguing and differences between the services by having a single Chief of Staff. I'd have a single war plan, I'd change the service secretaries to under secretaries under the Secretary of Defense so as to build up the latter's authority and I would have a personnel transfer in grade. In other words, I would run the situation on the basis of good business practice instead of letting it drift the way it is today, in tradition.

Mr. SPIVAK. Senator, when you speak of waste in the Defense Department, is that just a generalized charge or do you know pretty specifically that there is sizable waste and that something could be done about it?

Senator SYMINGTON. Well, Mr. Spivak, you know that. You could name item after item, that because of the disagreements, has been canceled or held back, started and stopped. Things like the Bomarc, things like the Seamaster, the Navaho—here we are today canceling hundreds and hundreds of millions of dollars of development and research items because each service is being allowed to try to fight the next war by itself.

Mr. SPIVAK. Well, Senator, in fact isn't the whole Defense Department a wasteful Defense Department as long as it keeps this in peace—isn't there constant obsolescence? I mean don't you have to research and maybe waste money in research?

Senator SYMINGTON. That is true, that is true, of course. On the other hand, there is no reason why the organizational setup shouldn't be on a basis where the taxpayer gets the most return for his dollar. And in answer to the way you asked the question in the beginning, I would immediately start spending more, for example, in the space field. The degree that we are behind in thrust is almost incredible and yet last year we cut by tens of millions of dollars the one big thrust program we had, the Saturn. I would spend money quick there and I would accelerate these important programs and I'd modernize SAC.

On the other hand, I also would attempt to streamline that Department so that as soon as possible you are beginning to get true defense for your dollar.

Mr. SPIVAK. Senator, you have spent a great many years studying defense. Do you have any idea how much you could save and how much you would spend if you were the President?

Senator SYMINGTON. Well, I think you could save—and I am on the record as having said I thought you could save 30 percent of the budget. That was when I was pretty close to the Department. If that was only half right today you would save $100 million a week.

Mr. DRUMMOND. Senator, on this program last Sunday, Senator KENNEDY said that if any Democratic leader was unwilling to submit his candidacy to the test of a representative primary, that that Democratic leader would not deserve well of the next national convention.

I'd like to ask whether you share that view.

Senator SYMINGTON. Mr. Drummond, some time back when some of my friends in New Hampshire asked me if I would go into that primary, I had to make a decision: namely, would I go into primaries or would I not.

Now I know something about primaries. When I first ran for the Senate I was in a primary for 7 months, I believe, and I was in it 7 days a week. My State doesn't have presidential primaries. Only about a third of the States do have these presidential primaries, and less than 10 percent of the States have presidential primaries that are binding.

Anybody can have their own ideas as to the importance of primaries. I have decided not to go into any primaries, at least at this time. And as to whether they should be abolished or not, I wouldn't want to criticize anything that another State had set up. In my State we don't happen to have it and in two-thirds of the States they don't happen to have primaries.

Mrs. CRAIG. Senator, Cuba is only 90 miles from Florida. Do you think that the present Government of Cuba is under Communist influence, dangerous to us?

Senator SYMINGTON. Mrs. Craig, I have it on good authority that Communist influence in Cuba is growing steadily and I know that those people in our Government who should be worrying about it are very worried indeed. As you say it is 90 miles from the United States and that is getting pretty close. It also has one of the world's greatest naval bases at Guantanamo and of course anything that they are doing there could be supplied by submarines anyway.

Mrs. CRAIG. Yes. I wanted to ask you about that. Do you believe that there are submarines hiding on the Cuban coast now?

Senator SYMINGTON. I have heard that but I haven't heard it from such source that I could answer your question formally.

Mrs. CRAIG. Do you think there are missile bases there?

Senator SYMINGTON. I would rather not comment on that question, frankly.

Mr. CHILDS. Senator, getting back to this matter of politics, I checked up a few figures and found you traveled in the fall 32,000 miles and spoke in 22 States. I wonder if it would be fair to call you an active but unavowed candidate. Could that be?

Senator SYMINGTON. First let me answer this way, if I might. In 1958 I had another decision to make also and that was did I speak out of my State or did I not, and I decided not to go out of Missouri, and I didn't during the entire year.

Many of my colleagues and many other good Democrats came in to help me. Therefore when I am asked to go around and help the Democratic Party at fund raising dinners and others, why I do.

Now specifically answering your question, I am not actively seeking delegates at this time. I am interested in the general subject.

Mr. CHILDS. I would like to ask you about another unavowed candidate, if I may use that phrase. When we had Governor Brown on this program, he was asked about Senator LYNDON JOHNSON. He said he thought he would have a handicap in the North because of oil and gas and the integration issue.

I wonder if you would agree with that?

Senator SYMINGTON. I think that a man can only speak for his own State. In my State where Senator JOHNSON talked recently and met with the leaders, he had a great deal of support.

Mr. CHILDS. You believe he could carry Missouri?

Senator SYMINGTON. Well, he can certainly carry Missouri over any Republican.

Mr. CHILDS. Does this mean, Senator, that you don't think the North-South division in your party is important and you could nominate a southerner to run for President of the United States?

Senator SYMINGTON. I don't think there is a North-South division in my party. Only once has the South left the party since I have been reasonably active in politics. In that case President Truman still won the nomination and the election and I would hope that geography wouldn't play too prominent a part or be a decisive matter in the choosing of a President. I would hope the way the world is today that the United States as a country will stay together and that we will pick the best man for the job regardless of where he lives. I think never more true was this statement of Benjamin Franklin's as we watch this situation, as I have noticed it over the world in recent weeks: "If we don't all hang together now we are going to hang separately."

Mr. CHILDS. Wasn't that Patrick Henry?

Senator SYMINGTON. I think it was Benjamin Franklin.

Mr. SPIVAK. You have said you are not a candidate for the Presidential nomination. Would you tell us whether you would like to be President in 1960?

Senator SYMINGTON. I certainly would like to be President in 1960. I think anybody in politics would like to be President in 1960. It is going to be a rough job but the way things are going now I would hope we could put a brake and turn this country on the right keel from the standpoint of making us strong so that we can stay free.

Let me emphasize by strength I don't mean just physical strength, I mean all the other strengths.

I believe the one way that we can assure peace in the world is for the United States and its allies to get together and remain strong.

Mr. SPIVAK. Senator, I would like to ask you another question, which I hope you won't consider a too personal question, but your critics are saying that you are all things to all men and are able therefore to get equally strong support in groups in sharp controversy with each other: the segregationists and the anti-segregationists; labor and capital; conservatives and liberals. How do you answer that charge that has been made against you, and it has been made as a charge against you?

Senator SYMINGTON. First, Mr. Spivak, they don't say it to me and secondly, I know of no issue that I haven't voted on and

taken a position on and I think the charge is totally unwarranted. My voting record I believe proves it and I naturally am sorry that people say it. There is no justification, no proof of any kind for it. I regret that some people have said it.

Mr. SPIVAK. Well, Senator, do you think that it is necessarily bad for you to be endorsed by the ADA and to be a favorite of the Chamber of Commerce, for example? This is for example from Harpers: "He is at home with the ADA and is far from unwelcome at the same table at the luncheon of the Chamber of Commerce."

Another one from the New York Post: "He can also apparently persuade liberals that he is a chip off the New Deal block and conservatives that he is as solid as a Hoover dollar."

Senator SYMINGTON. One of the last things my father-in-law said to me before he died, and he was a great American as well as a great Senator, was that politics was not a science, it was an art. It was the art of getting along with people. I do my best to get along with as many people as I can. Never once has that changed my convictions on an issue.

Mr. DRUMMOND. Senator, recently two political people, Governor Rockefeller and Senaotr Kennedy, have made it clear that they simply wouldn't consider, have anything to do with the Vice Presidential nomination. I am not going to ask whether you would accept the Vice Presidential nomination because I think nearly everybody could know the answer.

What I want to ask you is, do you think that either party ought to nominate a Vice Presidential candidate who is not qualified to be the Presidential nominee?

Senator SYMINGTON. I do not.

Mr. DRUMMOND. Do you think that there is much prospect that either party will do that?

Senator SYMINGTON. I would not, Mr. Drummond. Naturally as you know, the Vice Presidential decision is one that is generally made, you might say "at the last minute."

On the other hand I would hope that the Vice President of the United States next time is a man who is fully capable, the way the world is, of being a good President.

Mr. BROOKS. I think with that future in mind, Senator, I will have to call a halt to the proceedings. I am sorry to interrupt but I see that our time is up.

Thank you very much, Senator Symington, for being with us. We will be back with Meet the Press in just a moment. First this message.

The ANNOUNCER. Meet the Press brings you leading world figures at a time when what they say or do is important in the news.

Next week only, meet the press will be seen over many of these stations at one p.m. Eastern Standard Time because of the pro ball game. Consult your local TV listings for exact time in your area. Our guest will be the Secretary of Agriculture, Ezra Taft Benson, the most controversial member of the Eisenhower cabinet.

If you have enjoyed today's program, you may wish to receive a printed copy of the questions and answers. In just one minute, we will tell you how you may get your transcript.

For a printed copy of today's discussion send ten cents in coin and a stamped, self-addressed envelope to Merkle Press, 801 Rhode Island Avenue, Northeast, Washington 18, D.C.

And now goodby for Senator STUART SYMINGTON and Meet the Press.

Meet the Press was produced by Lawrence E. Spivak; directed by Frank Slingland; associate producer, Betty Cole; technical director, Leon Chromak; production supervisor, Doris Corwith.

This is Lee Dayton speaking.

Nineteen Hundred and Fifty-nine: A Year of Progress in the 11th District of Illinois

---

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. PUCINSKI. Mr. Speaker, the 11th Congressional District on Chicago's Northwest Side has undergone great changes during the past decade and has every reason to look forward to even more progress during the 1960's.

In order to have a better understanding of the 11th District, which I have the honor of representing in Congress, it gives me great pleasure today to call the attention of my colleagues to a most interesting resume of the last 10 years—with special emphasis on 1959—prepared by Miss Sally Swanson and published by the Northwest Side Press. I believe that Mr. Mort Steinman, publisher of the Northwest Side Press, and his very able reporter, Miss Swanson, have made a significant contribution to the people of my district by preparing this comprehensive report on the last 10 years and how they have affected our community.

Because most Americans are so busy earning a living and following other pursuits, we frequently have a tendency to minimize or fail to appreciate the significant changes that occur within our immediate environment.

Miss Swanson is to be congratulated for digesting into relatively few words a most interesting decade. She has shown a unique ability to blend into one article the industrial growth of my district; the educational growth; the spiritual development. And to this impressive resume, she has very succinctly added the great contributions of our civic and social organizations, which play such an important part in the progress of any community.

In this very well written article, we see a panorama of the 11th Congressional District on Chicago's Northwest Side. I am most happy to have been able to play a significant part in this progress, both as a private citizen and, during the last year, as the representative in Congress of the 11th District.

Miss Swanson's article follows:

[From the Northwest Side Press, Dec. 30, 1959]

1950's WERE YEARS OF PROGRESS HERE—NORTHWEST SIDE PROSPERS, GROWS DURING MID-CENTURY DECADE—REVIEW HIGHLIGHTS OF 1959

(By Sally Swanson)

Early Friday the mid-century decade becomes history.

It was a vibrant 10 years, interesting, fast-paced, and frightening.

This passing decade saw man's first tottering steps into outer space, development of great labor-saving power, the conquering of polio.

At also brought weapons capable of annihilating all life on earth.

During the fifties the world teetered from prospects of peace to threats of a catastrophic war. Deep currents of hate, fear, and hope undergirded the Nation's struggle against communism.

Eras of turbulent emotion emerged and passed, leaving their trails in new phraseology. "Korean-type war," "brainwash," "McCarthyism," "sputnik," newcomers to national vernacular, chronicle the history of the decade.

In spite of national and international tension, locally the 1950's were years of growth and prosperity and achievement.

As the decade began, Northwest Siders faced one crucial problem: providing facilities for an increased and increasing population.

New streets were needed. Children attended classes in crowded schools; in some areas double shifts were necessary. Church, hospital, and recreational facilities were inadequate.

Thus the fifties were busy years for Northwest Siders; and by the end of the decade, streets were improved, the area was largely lighted by modern street lamps, a new hospital had been built and expanded, there were more public and parochial schools, new play areas, and millions of dollars had been invested in church buildings.

As the 1960's approached, so did the time when the area's O'Hare International airport would be the largest in the world. Powerful jetliners began using the field, and work was stepped-up on an expressway that would soon link O'Hare field and the Northwest Side with Chicago's loop.

In annual reviews of each year in the 1950's, the Press reported growth, progress, and bright hopes for the future.

Nineteen hundred and fifty-nine is no different.

Look back with us and see.

NORTHWEST EXPRESSWAY STRIP OPENS

The year began with the optimistic announcement by Governor Stratton that projects costing $24,212,000 were programed for the Northwest Expressway in 1959.

And the last month of the year brought the opening of the first major section of the expressway. High ranking county, State, and city officials attended ribbon cutting ceremonies December 15, marking the opening of the six-lane strip from Foster near Central Avenue to the State toll road system West or East River Road.

Completion date anticipated for the 21-mile expressway from the loop to O'Hare Field is late 1960, also the target date for the tri-level project in Jefferson Park, considered the most complicated construction job on the expressway.

EDENS HIGHWAY EXTENDED

Congestion of traffic leaving Edens Highway at Cicero and Catalpa Avenues was relieved in the fall when a 3½-mile, $2,800,000 exclusion of Edens to Kostner Avenue near Berteau was opened.

And the Lawrence Avenue bridge over Edens was cited in November as one of the country's most beautiful steel bridges in competition sponsored by the American Institute of Steel Construction, Inc. It was built by the Cook County government.

Area streets were better lighted due to thousands of dollars worth of mercury vapor lamps which were installed and placed in service.

BUSINESS CHANGES

Appearance of business sections changed through the year.

Gronau Pharmacy moved from 4959 Milwaukee to 4913 Milwaukee in January. The move was necessitated by Northwest Expressway work.

More parking facilities were made for shoppers in Jefferson Park last March when Wolke & Kotler Department store enlarged its lot by razing a house at 4826 Lipps.

A Jefferson Park dairy products plant was nearly destroyed by an explosion May 23.

The blast of gas used to aerate whipped cream in Brook Hill Farms Dairy, 5230 Milwaukee, showered a wide area and smashed windows in the surrounding block. Several persons were hurt.

A new Kroger supermart opened at 6200 West Higgins in August.

More radical changes are in the offing.

Brykowski Drugstore and two apparel shops in the building at the northeast corner of Ainslee and Milwaukee Avenues closed during the fall, giving way to Walgreen Drug Co., which signed a long-term lease for approximately 15,000 square feet in the building.

Following extensive remodeling, Walgreen plans to occupy the store next year; the present Walgreen's store at Milwaukee and Lawrence Avenues will close.

A DEMOCRATIC YEAR

Democratic candidates were elected by all three Northwest Side wards in February aldermanic voting.

Harry Bell emerged victorious in a field of seven candidates who sought the 41st ward council post. Bell's strongest threat came from GOP-endorsed Aloysius Mazewski.

Philip A. Shapiro, the 39th ward's Democratic committeeman, unseated the ward's incumbent alderman, George L. Buckley, who shared Republican endorsement with four other candidates.

Democrat William Cullerton was elected alderman of the 38th ward, where three ran for office.

Timothy P. Sheehan, 41st ward GOP committeeman and former Congressman from the 11th District, was the Republican nominee for mayor. As was expected, Sheehan was overwhelmed by Democratic Mayor Daley, but he carried his own 41st ward by over 5,000 votes.

Judge Joseph P. Immel, former 41st ward alderman, lost his superior court judgeship in the November judicial election. Immel resigned his council seat in November 1958, and was appointed to fill the court vacancy the following month.

In response to fierce debates in Congress on proposed labor-management reform legislation, Congressman PUCINSKI last summer returned from Washington to interview about 2,000 of his constituents at local shopping centers. He reported that a vast majority of Northwest Siders favored some form of legislative curb to abuses in labor and management fields. PUCINSKI voted for the reform bill subsequently passed by Congress.

NEWCOMERS

There were administrative changes in key spots throughout the community.

The Jefferson Park police district, 5430 Gale, was under the command of three captains during 1959.

Capt. Russell Corcoran, who had been at Jefferson Park since October 1955, was transferred on January 31. His successor, Capt. William Szarat, a former park district police captain, remained at the local station until May.

Lt. Ellsworth Erickson was acting captain for a few weeks until Capt. Patrick Deeley, acting chief of detectives, was transferred to Jefferson Park.

The Jefferson Park branch post office, 5401 Lawrence, got a new superintendent on July 31, when on the retirement of Leroy Zoerner, John Bach, 57, was promoted from assistant superintendent to fill the position.

The death of Bjarne Dahl, president of Jefferson State Bank, 5301 Lawrence, on September 8, resulted in the election later that month of Bernard Feinberg as president. Feinberg, 34, also chairman of the bank's board of directors, became the youngest bank president as well as bank board chairman in Chicago.

THREE TIMES THREE

Although we have no statistics on the subject, we believe a record number of triplets were born to Northwest Side families during 1959.

On May 10, appropriately Mother's Day, Mr. and Mrs. Louis Coconate, 5554 West Leland, became the parents of three.

Another set of triplets was born on June 2 to Mr. and Mrs. Robert Kramer, 5031 Northwest Highway.

And Mr. and Mrs. Ronald Maloney, 6094 North Odell, had triplets just in time for Christmas.

Odds against an expectant mother having triplets are about 9,129 to 1.

DEATHS

Among the Northwest Side's prominent citizens who passed away during the year were:

Stanley R. Koskinski, 70, of 5544 Leland, State representative from the area, 1938 to 1956, who died in March.

Frank T. Rounds, 5016 North Lowell, a Mayfair civic leader for 40 years, who died in June.

Frank Kalteux, 75, of 5409 North New England, former Republican committeeman of the 38th ward, who passed away in July.

Robert E. Welling, 67, of 5347 North Melvina, a retired police captain, who once commanded the Jefferson Park district; he died in November.

CAFE OWNER MURDERED

Peter Houvouras, 67, of 5005 West Sunnyside, was found dead, apparently murdered, on the lawn in front of his home early one April morning. He owned restaurants at 5117 Milwaukee and at 6221 Milwaukee.

POLICEMAN SLAIN

Tragedy struck a Jefferson Park family in April. Policeman Mitchell Stone, 38, of 5239 North Malvina, was shot and killed while stalking a fugitive in a lot at 1241 South Michigan. Ironically, his widow, Ethel, 30, gave birth to a 7-pound son the day her husband was buried.

CLUB ACTIVITIES

Area clubs continued their work for general welfare of the community.

In an effort to reduce the high accident rate on local streets, the Greater Northwest Citizens Traffic Safety Council conducted a safe and courteous driving contest. Valuable prizes and recognition were given to weekly winners of the competition.

Due to a possibility of a polio epidemic, the Jefferson Park Lions Club last summer sponsored a Salk vaccine program at two local park fieldhouses. Free inoculations were administered by doctors and nurses from the board of health.

A Jefferson Park lawyer was elected commander of the Illinois Amvets organization. Attorney Edwin P. Fifielski, 43, of 5662 Higgins, assumed the State commander's post in June.

FIRE DESTROYS SCHOOL

The 170 pupils of St. Paul's Lutheran school, 5680 North Canfield, attended classes in Norwegian Lutheran Children's Home, 6000 Canfield, throughout 1959. Their school was destroyed by fire early one January morning. A new building has been constructed and will be ready for occupancy next month.

More public school facilities were added for the rapidly growing residential area in the far west section of the community.

Dedication ceremonies were held in May for Daniel Carter Beard School, 6445 West Strong, which had been used since December 1958, and construction began for a Garvy Branch Elementary school, 6918 Strong. At yearend, the $240,000 Garvy branch, which will accommodate 240 pupils, is 25 percent complete.

NEW RECREATIONAL FACILITIES

Olympic swimming and diving pools were built at Portage Park, 4100 North Long, in time for the 1959 pan-American games. All aquatic events of the games were held here.

A new outdoor pool also was constructed at Norwood Park, 5801 North Natoma. The $327,000 pool is 50 by 150 feet, and has 30-foot-wide sundecks on all sides.

The board of education last summer ordered construction of new playgrounds at three local schoolyards: Prussing, 4650 North Menard; Onahan, 6600 Raven, and Mayfair, 4626 North Knox.

CHURCH EXPANSION

Thousands of dollars were invested in beautiful new church buildings throughout the Northwest Side.

Dedication of a $75,000 Gladstone Park Lutheran Church edifice at 6200 West Foster, climaxed a 22-year-old dream for the 200-member congregation, who had suffered through several unsuccessful attempts to build.

On March 15, Elston Avenue Methodists worshiped for the first time in their new church, 5850 Elston; consecration ceremonies for the building were conducted in June.

Dedication services for the new Faith Lutheran Church, 6201 West Peterson, were held in April.

A new sanctuary and Sunday school area for Forest Glen Baptist Church, 4920 Foster, were consecrated in October.

Jefferson Park Lutherans dedicated a $125,000 addition to their church at Northwest Highway and Long, and a $200,000 addition to St. Andrew Presbyterian Church, Berwyn and Oleander, was dedicated in November.

Ground was broken in September for a $125,000 sanctuary for Norwood Park Lutheran Church, 5917 North Nina.

U.S. Policy in the Middle East

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. ANFUSO. Mr. Speaker, I was one of 65 Members of the House of Representatives who joined in sending a telegram on December 21, 1959, to the president of the World Bank and to Under Secretary of State Douglas Dillon urging that the loan of $56 million to the United Arab Republic be deferred until a commitment is obtained from the UAR guaranteeing the freedom of transit for the shipping of all nations through the Suez Canal, including Israeli shipping.

Several days earlier I had written a personal letter to the president of the World Bank stressing that many of us in Congress are strongly opposed to the loan, unless definite assurances are obtained from UAR President Nasser that he will discontinue his illegal blockade against Israel in the Suez Canal.

Despite these protests, our State Department supported the granting of the loan and the World Bank approved it. Only a few days ago we learned that Nasser has been negotiating with the

Russians whereby the Soviet Union will finance the second stage of the Aswan Dam, just as it is now doing on the first stage. Thus, Mr. Nasser is working both sides of the street, getting financial aid from us and from the Communists.

Those in the State Department who have new hopes of winning over Mr. Nasser through appeasement will eventually discover that they have been sadly mistaken. Such policy is nothing more than wishful thinking, but it may do untold harm to our interests in the Middle East and to the cause of world peace.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a statement by the board of directors of the Society for the Prevention of World War II on the subject of U.S. policy in the Middle East. The statement concludes with a request for a thorough examination of our policy in the Middle East, and I strongly support such request as most timely and urgent in the light of the World Bank loan to Nasser and the State Department's attitude in the matter. The statement is as follows:

A POLICY OF WISHFUL THINKING

(Statement by the board of directors of the Society for the Prevention of World War III, Inc., on U.S. policy in the Middle East)

Despite the opposition of wide sections of the American people and their representatives in Congress, the State Department approved a $56 million World Bank loan to President Nasser for improving the Suez Canal. Americans recognized that Nasser's illegal blockade of Israel shipping at Suez was a threat to all maritime countries including the United States of America. Nevertheless, the State Department overrode public opinion and, in effect, gave a green light to Nasser's piratical policies. This astonishing reversal of America's traditional position on the freedom of the seas and of all international waterways raises fundamental questions in the minds of all security-minded Americans.

(a) Does the World Bank loan to Nasser, which could not have been granted without the decisive consent of the U.S. Government, further the national interests of our country and enhance the prestige of the United States?

(b) Does the World Bank loan enhance the authority and prestige of the U.N.?

(c) Does the World Bank loan contribute to stability and peace in the Middle East?

An evaluation of Nasser's basic policy toward the United States and our Western allies will answer the first question. From the very beginning of Nasser's rule in Egypt, the United States and our Western allies have been the prime target of a concerted smear and hate campaign. Its main objective has been to discredit the United States in the eyes of the Arab masses and to undermine the general Western position in the Middle East and throughout Africa.

Cairo's collaboration with the Soviet Union has been a major weapon in Nasser's strategy. It has enabled him to inject blackmail in his dealings with the West. While proclaiming anti-Communist sentiments to Western audiences, Nasser, more than any other Arab leader, has made it possible for Moscow to obtain a solid foothold in the Middle East. He has welcomed Soviet arms and military personnel. He has permitted the Egyptian economy to fall under Soviet influence. Together with Moscow, Nasser, has worked ceaselessly to destroy Western security arrangements in the Middle East. Cairo is the headquarters of anti-Western and anti-American elements. Moreover, it is from Cairo that all sorts of plots are hatched to discredit and/or to destroy Arabs who seek sincere friendship and cooperation with the West.

A sampling of Cairo's controlled propaganda, beamed to the Arab world over the past 2 years, reveals the fanatical hatred upon the United States. Parenthetically, it should be noted that German Nazis, led by Johannes Von Leers, play a key role in Egypt's propaganda operations directed against the West. Johannes Von Leers was a right-hand man for Hitler's propaganda minister Goebbels and still signs his private letters with "Heil Hitler."

1. "America has now become the enemy of peace, the enemy of security and the enemy of the peoples who are fighting for world peace and for the peace of America itself" (Egyptian newspaper Al-Ahram, January 20, 1958).

2. "It appears that America will never keep still. Imperialism is still seeking to tamper with the structure and independence of small countries. America either tries to dominate their economies and markets after having been expelled from the markets of countries which freed themselves from imperialist domination and exploitation, or it attempts to snatch air and naval bases from these countries in order to be able to shift the battlefield from is own territory to the small countries and use the people of these countries—to spill their blood and that of their children instead of the blood of people of the imperialistic countries. Often America seeks to tie these countries to imperialist military alliances and control their military and economic resources so that in the event of a third war, the people of these countries would be forced into the holocaust. Events which attest to these facts take place every day" (Egyptian newspaper Ash-Shab, March 13, 1958).

3. On March 22, 1958, Ash-Shab turned its attack on the Arab collaborators of "Western imperialism." These people, the paper declared, "march behind Britain and America. Their interests are the same and they have a mutual aim, that is, to subjugate the Arab people, exploit them, and drain their resources."

4. On May 6, 1958, American aid was blasted by Nasser's radio setup in Damascus: "The aim of U.S. aid is to obstruct progress in various fields in other countries and to keep them always dependent on aid, and consequently subject to American influence."

5. On May 20, 1958, Radio Damascus told its listeners, "The United States wishes to dominate various parts of the world. It considers as enemies those nations which refuse to pursue policies identical to American policy and carry out its orders. The United States favors division of the world into two groups, continuation of crises arising from the cold war, and perpetuation of the threat of atomic war."

6. The Wall Street Journal, August 14, 1958, quoted the Egyptian radio commentator Mohammad Sahaf: "Since the end of World War II, the policy of the American Government turned against all liberation movements in all parts of the world, fighting against the free leaders of oppressed nations and killing those who showed a tendency of being a headache to the plans of American imperialism."

7. Another Cairo commentator, Mohammad Abdel Kader, described the United States as being "made of the refuse of all nations of the world molded together into a solid mass of crime, and graft, and corruption." He described U.S. Middle Eastern policy as "the policy of political prostitution and vagrancy of those gathered in America from the scum of the earth" (Wall Street Journal, August 14, 1958).

8. "If we review the steps taken by Washington—namely, enabling CARE to offer meals to Egyptian students and resuming participation in the program to improve rural services—and also review the steps which we are supposed to take in return, we realize that these ridiculous moves should not be cited as a means of rectifying the many wrongs committed by the United States which has caused aggression, war, bloodshed, and world tension." (Radio Cairo, December 11, 1958.)

9. On March 29, 1959, one of Nasser's propagandists told his radio listeners, "There is no difference between dollar and ruble slavery."

10. On August 8, 1959, the Cairo Radio sneered at American democratic institutions. The democracy of the U.S. Congress "is false and flimsy and means serving and looking after certain interests and buying and selling one's conscience." The same broadcast spoke of Israel as "an American imperialist toy."

11. On September 10, 1959, the Cairo Radio accused the United States of betraying the U.N. Charter. This particular attack insulted former President Truman and employed a terminology reminscent of Goebbels.

12. On December 17, 1959, the Communist Chinese radio gleefully quoted the Cairo newspaper Al Massa which cast aspersions on Eisenhower's peace mission to India. Al Massa accused the President of "supplying weapons to France and his other imperialist allies to kill the Algerian and other African peoples."

The many voices of Cairo are not confined to the Middle East. Nasser has built up a huge propaganda apparatus which has paid particular attention to the peoples of Africa. As in the Middle East, the United States has become a special target in Africa for Nasser's hate-inciting propaganda. His aim is clear, i.e., to destroy the good will and friendship enjoyed by the United States among the peoples of Africa.

1. On March 25, 1958, the Cairo newspaper Ash-Shab lashed out against the United States on the Algerian question. It accused the United States of being the ringleader of the conspiracy to subjugate the Algerian peoples and to bring them under the yoke of Western colonialism: "We see imperialist forces grouping under the leadership of America and mobilizing reactionary elements, traitors, conspirators, and collaborators in North Africa to end the liberation struggle in Algeria in order to maintain North Africa and the African Continent under imperialist domination."

2. "The European imperialist states have found that there is no way to repay their wealthy colleague, America, but to lower their poverty-stricken buckets down the African wells of riches and plenty. America is a real Jew in matters of lending and extorting usurious interest, and as the debt owed it by European states mounts daily and repayment prospects are slender, it has become necessary to make room for America in those parts of Africa dominated by European states which are indebted to America, so that Americans can take a hand in the companies' and governments' plans aimed at squeezing the wealth from Africa at the price of poverty to us Africans" (Radio Cairo, February 2, 1958).

3. In a broadcast in Arabic to the Middle East (December 1, 1958), Cairo propaganda contrasted the roles of the Soviet Union and Red China and that of the United States in Africa: "The events in the Congo should be an eye opener to other imperialists dominating the African countries. The outcome is known to these imperialist dogs who are always blaming communism to conceal their own domination.

"Peoples of Africa, open your eyes, wake up, be united, make a joint step forward,

wage war on the imperialists and wage war on the dogs who are sucking your blood and squeezing your wealth. Do not give in before the aggression of the white dog."

4. In another broadcast December 8, 1958, the United States was denounced as the spearhead of imperialism. Discussing the African liberation movement, this broadcast said: "American imperialism has in fact begun to make serious attempts to dominate this ancient continent. For this purpose it has established war bases in many African countries and concluded agreements with its imperialist allies through which it will exploit the abundant oil wealth in the Algerian desert."

5. "Regardless of the consequences and of what the imperialist dog may do, the time has come when the African natives should wage war against the savage imperialism of the white dogs of the European countries" (Voice of Free Africa, from Egypt, October 21, 1959).

The aim and activities of Nasser have aroused concern among African leaders. The Premier of Western Nigeria, Obafemi Awolowo, declared: "President Nasser's undisguised totalitarianism and territorial ambitions in Africa and the Muslim world made effective cooperation with him in any sphere unfeasible" (London Times, September 14, 1959). Mr. Awolowo's observations confirm the fact that Cairo's defamatory campaign against the United States in Africa is but a coverup for Nasser's own imperialist designs.

From time to time, Cairo propagandists dwell on alleged exploitation in South America at the hands of the "Yankee imperialists." When Vice President NIXON was stoned by mobs during his South American tour, the Cairo propagandists could hardly conceal their joy. When disturbances broke out in Bolivia recently, the Cairo newspaper Ash-Shab (March 5, 1959) said: "The people of Bolivia revolt in order to get rid of slavery, domination and American exploitation. In fact, the revolution of the Bolivian people is a part of the comprehensive revolution of all the states of Latin America, aimed at ridding themselves of the domination and exploitation of the United States. The Bolivian people will undoubtedly attain their aim. Neither America's military base nor its monopolizing domination will be of use to it."

Perhaps one of the most sinister aspects of Nasser's recent activities in South America relates to the Panama Canal. During the period when mobs were demonstrating at the Panama Canal, Nasser's embassy was most active. The U.S. News & World Report, December 14, 1959, reported: "Agents of Egypt's Nasser have been in Panama advising the politicians of that country on the moves to make to get eventual control over the Panama Canal away from the United States. Nasser is able to pose as an expert, having taken the Suez Canal from its owners."

Besides the subversive operations of Nasser's agents in Panama, the Cairo Radio was whipping up hatred among Panamanians toward the United States: "Two broadcasts are beamed nightly from Cario to Panama, dedicated almost wholly to the alleged unfair treatment the nation is receiving from the United States in respect to the canal. Cairo's motives for this activity are obscure" (New York Times, December 2, 1959).

Thus, at the very time when U.S. officials were hurriedly rushing to conclusion the World Bank negotiations on the loan to Nasser (presumably to avoid congressional examination), the agents of the Cairo dictator were inciting anti-American elements at the Panama Canal.

Can there be a more definitive answer to the crucial question as to whether the World Bank loan is in the national interest?

Nasser's propaganda apparatus has developed tactical flexibility. It can be turned on the West with a venom reminiscent of Hitler's propaganda ministry—or it can muffle anti-westernism and talk about "mutual understanding," "peace," etc. One must, therefore, beware of confusing the "lulls" in Nasser's anti-Western drive with his long-range aims. In this connection it would be well to heed the voice of a prominent Arab journal, the Tunisian Government Party newspaper El-Amal (December 26, 1959): "Colonel Nasser's 'words of peace' can by no means be reconciled with the arrogance, incitement and plotting published daily over Cairo radio and the UAR press. Nasser's words of peace have one aim and one aim alone: to get more dollars from the United States."

As regards the future of the United Nations, let us recall some recent history. Twenty-five years ago, Emperor Haile Selassie of Ethiopia ascended the rostrum of the League of Nations Assembly to warn the world that the League's very existence stood in grave jeopardy. Selassie made this perceptive observation while pleading the cause of his country—a victim of a coldly calculated, brutal attack by the Fascist legions of Mussolini. Selassie's words fell on deaf ears.

In retrospect, it is clear that Selassie was the true defender of the League, while the diplomats at Geneva, who resorted to double dealing and delaying tacts, helped to bury it (and world peace).

Like the ill-fated League, the United Nations is now faced with an immediate issue involving Egyptian interference in the shipment of Israel cargo through the Suez Canal. President Nasser's illegal blockade is more than a threat to Israel. It is a challenge to the United Nations. As early as September 1, 1951, the U.N. Security Council ordered Egypt "to terminate the restrictions on the passage of international shipping and goods through the Suez Canal wherever bound." In October 1956, the U.N. Security Council adopted six principles which opposed any kind of discrimination of shipping through the canal and emphasized "that operation of the canal should be insulated from the politics of any country." Through the Egyptian Government committed itself to these U.N. principles, it continues to violate them as well as the Constantinople Convention of 1888 regulating passage through the Suez. If the United Nations resolutions can be flouted with impunity by Nasser's warlike provocations at Suez, then what becomes of the principles which are the foundations of the United Nations?

There can be no double standard in applying United Nations principles—one for Soviet brutalities in Hungary and the other for Nasser's aggressive actions at Suez. The United Nations, to paraphrase Lincoln's immortal phrase, cannot stand against itself. It cannot remain silent in the Middle East and expect its authority to be respected elsewhere. Since the World Bank is a specialized agency of the United Nations, the loan to Egypt is all the more damaging to the world organization.

It is worth noting that in July 1959 Nasser gave assurances to the Secretary General of the U.N. that he would permit disputed cargoes through the canal if they were under foreign ownership when they reached the Suez. Nasser did not keep faith with his own declared policy when he seized a Greek ship with a cargo of Israeli cement on December 17, 1959. Obviously, one can hardly rely on the Egyptian Government's word. Nasser's arbitrary and high-handed tactics are sufficient proof that, like the Fascist dictators of another era, Nasser regards previous commitments as mere scraps of paper. Egypt's brazen violation of the U.N. Charter was summed up by one of Nasser's closest collaborators, Aly Sabri, Minister of State, who announced that the blockade would continue regardless of "any actions taken by the United Nations." Thus, the Danish ship *Inge Toft*, which was detained at Suez in May 1959, continues to be held captive by the Cairo regime. In this connection it should be noted that such examples of piracy and gross violation of international law were condemned by the spokesmen of 28 nations at the recent session of the U.N. General Assembly.

On September 17, 1959, Secretary of State Herter said, "The United States continues to support the principle of freedom of passage, as endorsed by the United Nations." However, is it not clear that by granting the loan, the World Bank is undermining the prestige and authority of the United Nations? Must we repeat the tragedy of the League of Nations? Must the United Nations' influence for peace be chipped away until naked aggression confronts us?

From the foregoing it follows that the World Bank loan cannot contribute to stability and peace in the Middle East. On the contrary, it gives aid and comfort to Nasser's predatory policies, thus heightening tensions and creating grave dangers to the security of neighboring states. These countries are fully aware of Nasser's ambitions, for his propagandists do not conceal them: "The U.A.R. was born as a great liberated Arab State of the Arab East in order to be the axis around which all the Arab countries will join in a great unified Arab State from the ocean to the Persian Gulf" (Damascus Radio, Oct. 28, 1959).

The very core of Nasser's dream of empire is the Suez Canal itself. The strangle hold which he now exercises over this international waterway has now been further strengthened by the World Bank loan. In effect, Nasser has been told, "Go ahead, use the Suez Canal as you see fit; if you wish to employ it as an instrument of blackmail or as a weapon in your drive for empire, that is entirely your own affair. In any event, the World Bank will back you up." Seen in the light of the great political and strategic stakes involved, how can Secretary Herter support the World Bank loan on the grounds that it had no significant bearing on political factors? Even Nasser himself has boasted that the canal will be regulated solely according to the best interests of his regime.

Obviously, there can be no peace or stability in the Middle East while a power hungry dictator is appeased. The view that the Egyptian leadership which has shown such deep-rooted enmity toward the United States since it seized power, will change its basic feelings through dollar handouts, is plain wishful thinking.

It is, therefore, the considered judgment of the Society for the Prevention of World War III that the fundamental questions raised by the World Bank loan, fall within the purview of Congress. We therefore call upon the Senate Foreign Relations Committee to take up the State Department's attitude and the World Bank loan as a point of departure for a thorough examination of the present course of our Middle East policy.

Chiang Kai-shek, an Ally of Freedom

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. SANTANGELO. Mr. Speaker, last November I had the opportunity of

visiting the Far East, including Taiwan, popularly known as Formosa. With two of my colleagues, Congressman SILVIO CONTE, of Massachusetts, and Congressman BOB MICHEL, of Illinois, I had the privilege of a 1½-hour interview with the President of the Republic of China, Chiang Kai-shek. The Generalissimo was enthusiastic in his report to us of the development of the island of Formosa and the aspirations and hopes of himself and his people to return to the mainland. The Generalissimo was particularly proud of the land reform program which he had initiated on the island, which permitted farmers to operate their own little farms and he contrasted the effectiveness of his program with the collectivization of farms of Communist China and the destruction of individual and personal rights. The Generalissimo reaffirmed his appreciation for what the United States has done and is doing to preserve the independence of the island of Formosa in the face of overwhelming odds and numbers of Communist Chinese and pledged his continued loyalty and devotion to democratic principles in the Far East.

I was pleased to read an article by the newspaper columnist, John O'Donnell, of the Daily News of January 20, 1960, which sets forth the conditions in Formosa and his reaction to the political situation in Taiwan. I believe it is an informative and detailed statement clarifying what exists in the Far East and would prove informative and interesting reading. The article follows:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, January 19.—In all the hoopla over the defense pact the United States signed with Japan today, we shouldn't lose sight of the fact that our strongest ally in tre Far East—bar none—is still the Nationalist China of Chiang Kai-shek.

We're not just referring to the fact that Chiang has some 600,000 crack troops under arms, compared to a mere 200,000 or so for Japan. We're also thinking of the unpublicized but fantastic industrial development which has made Formosa the greatest model of progress-through-freedom in the whole of Asia.

The accomplishments of the Nationalists have been literally smothered under the myths and phony "facts" which Chiang's enemies have been spreading for years. Plenty has been written about the industrial gains in Communist China—so much so that there have been fears that the propaganda might lure some weak-sister Asian neutrals into the Red orbit. But nothing—or practically nothing—has been said about the much more spectacular economic and industrial feats of the Nationalists.

The actual fact is that Nationalist China is the fastest developing nation in the Far East. Although Japan is a bigger industrial power, Nationalist industry has been growing 16 times more rapidly in the last 8 years. Its agricultural efficiency also matches Japan's, which is considered a world model.

Communist China has used the full force of regimentation and brutal repression in its frantic drive to lift its economy into the 20th century. But U.S. experts said Formosa will make the grade first; its individual productivity is already running 30 to 40 percent ahead of the mainland's.

And the striking as well as significant thing about the Nationalist progress is that it has been achieved mostly through private enterprise rather than government action. In Red China, India, and the other underdeveloped countries of Asia, the great push toward industrialization has been through government planning and action.

THE FARMER'S LOT HAS IMPROVED

Another generally unrecognized fact is that Nationalist China has carried out the most effective land reform program in Asia. Some 90 percent of the farmers now own their land and the other 20 percent are charged only moderate rents. And their income has jumped more than 100 percent.

Nearly all of the farms now have bicycles, sewing machines, radio sets and other modern conveniences. Many of the girls are sporting beauty aids like lipstick and powder. And before long, every farm will have access to electrical service. Countries such as India can't claim anything like this.

The United States has, of course, poured millions of aid into Formosa. This has certainly given its economy a boost, but the money has gone mainly toward shouldering some of the burden of the 600,000 troops. And American aid experts said that the Nationalist record of self-help is better than any other Asian country's, except perhaps Japan. In fact, it is now exporting more goods to other nations than it is importing.

It may not be surprising that Formosa is the the second largest sugar supplier in the free world. But it may be an eyebrow-lifter to most people to realize that it ships aviation gasoline all the way to Australia, that it runs the largest oil refineries in Asia and has built two 35,000-ton supertankers, and sells machinery and other metal products all over the Far East.

ITS GOODS FLOW INTO WORLD

It makes first-rate sewing machines, electric fans that rotate a full 360 degrees, fluorescent tubes, cement, textiles, plastic goods, metal lathes, toys, and, under American guidance, jeeps. These goods are flowing into international trade, especially to Japan and southeast Asia, and they are more than holding their own with their competitors. Always a dominantly agricultural economy, Formosa is rapidly becoming widely diversified. And this is having a stimulating and healthy effect on the nation.

In terms of cold war politics, this economic phenomenon in Formosa is immensely significant, even though the facts have been largely ignored or distorted. And if the West did a better job of telling the story in India and the other free but neutral nations of south Asia, there might be fewer illusions about the accomplishments of Red China.

For reasons buried deep in China's recent tragic past, Chiang Kai-shek has never been popular among the so-called free nations of Asia. Even though he never resorted to the mass brutality of the Communists, he was accused of failing to give the Chinese people a fair deal.

THEY'LL SIT UP AND TAKE NOTICE

What has happened in Formosa is a ringing rebuttal to his critics. Under him, the island has shown incredible economic progress through great energy, private enterprise, little government interference, massive land reform, and a vigorous attack against disease.

More than enything else, underdeveloped countries are impressed by the economic progress shown by their neighbors. American authorities feel that as Formosa's accomplishments become better known, as more and more of its industrial products move into south and southeast Asia, these countries will sit up and take notice. Some of the old anti-Chiang prejudice will be reduced—and the achievements of a free economy recognized.

Helping this trend, of course, will be Communist China's own muscle flexing. The more it shows its real colors to its neighbors the more readily will they accept the example and the lesson of Nationalist China.

Teenagers Can Be Safe Drivers—Part II

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. PUCINSKI. Mr. Speaker, one of the great problems confronting America today is the growing number of teenage automobile drivers and their general conduct behind the wheel. Many people feel that greater controls should be placed on teenage drivers, while others feel that the situation among youthful drivers is not quite as bad as it might appear.

It gives me great pleasure today to include in the Appendix of the CONGRESSIONAL RECORD an essay written by one of my constituents, Donald Kusterer, of 6615 North Ottawa, which was awarded second place in a contest about teenage drivers, sponsored by the Edison Park Community Council of Chicago.

I believe Donald Kusterer has made a very significant contribution toward a better understanding of this entire problem, and I am particularly impressed with the depth of his own understanding of this problem involving teenage drivers.

Both Mr. Kusterer and his parents deserve the highest commendation for their worthwhile contribution to this subject.

Mr. Kusterer's essay follows:

TEENAGERS CAN BE SAFE DRIVERS

(By Donald Kusterer)

There has been, for some years now, a generally unfavorable attitude of adults toward teenage drivers. The accidents teenagers have had has caused this feeling, which in turn has led to insurance increases. There is also a lot of criticism on teenage driving habits.

Because of the few irresponsible drivers in the teenage group, today's adult feels a sense of resentment toward the teenage driver. As the old saying goes, "One bad apple can spoil the barrell." This one outcast, so to speak, is usually the boy who dominates and overrules his parents. His father and mother sign for his first car and what happens. He goes out every night and gets his buddies to go for a ride. These rides may result in disaster. Who is to blame? The teenager, of course, for the accident, but more so his parents for giving him the ownership of the car.

It is the dream of every boy to one day have, for his own, a car. A car of his own is more than a means of transportation, it gives him prestige. Word gets around that so-and-so has a car, and immediately he is a very popular young man. Everyone wants to ride with him. He takes a few fellows and a few girls out for a drive some evening, and gets into an accident. The next morning "splash" all over the front page of the newspapers, "Teenage Hoodlums Wild Midnight Ride, One Killed, Three Injured."

This is the main reason for the feeling of resentment on the part of adults. The one "Cool Guy" spoils it for the rest of the fellows. The majority of teenagers do feel a sense of responsibility when they are behind the wheel of a car.

If we could straighten out the few irresponsible teenage drivers we might be able to change the unfavorable feeling toward us. If the fellows who drive cars would quit

"showing off" there might be an entirely different feeling toward us all.

We, as teenagers, should not try to show the other fellow who has the better car and who is the better "jockey." I sincerely believe that if all teenage drivers, fellows and girls alike, would drive safely, the whole outlook would change and look better for everyone.

The teenager can be a safe driver if he obeys all traffic rules and uses commonsense. Stop trying to be a "big deal," and above all remember God's commandment, "Thou shalt not kill."

On the Religious Proscription of Catholics

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following item which appeared in the American Jewish Archives, October 1959 issue. It is most apropos to today's political scene:

ON THE RELIGIOUS PROSCRIPTION OF CATHOLICS

(By Philip Phillips)

By 1855 the American Party, an anti-Catholic and anti-immigrant political organization, had achieved considerable power in this country. In less than a decade the party, which had begun as a secret patriotic order, was so successful that it confidently hoped to capture the Presidency in 1856.

It was at this moment, when the followers of this party, popularly known as Know-Nothings, were blatant in their attacks on Catholics and immigrants, that Philip Phillips (1807–84) raised his voice against them in a letter to the Mobile Register.

Phillips, a Charleston Jew, had been a Congressman from Alabama during the years 1853 to 1855, and had remained in Washington to practice law, primarily before the U.S. Supreme Court. He was one of the greatest lawyers of his time. In 1876, during a period when the Supreme Court was not in session, Phillips wrote an autobiography which has been published in part in Jacob R. Marcus' Memoirs of American Jews, 1775–1865, III, 135–60. Although once secretary of the short-lived Reformed Society of Israelites, a liberal religious group in Charleston, Phillips had little, if any, interest in Jewish life.

John Forsyth, editor of the Mobile Register, to whom Phillips addressed himself, was the son of that John Forsyth who, as Secretary of State, had intervened with the Sultan of Turkey, in 1840, on behalf of oppressed Damascus Jewry.

The following article is reprinted from a brochure found in the Phillips Collection in the Division of Manuscripts, Library of Congress.

WASHINGTON, *July 4, 1855.*

MY DEAR SIR: I readily comply with your request to give you my impressions of the last development of political events. Nothing appears to me more interesting to the country than the recent demonstrations of the "Know-Nothings," at Philadelphia and Montgomery, against the Catholics. In their national platform they (the Know-Nothings) declare that "Christianity, by the constitutions of nearly all the States, by the decisions of the most eminent judicial authorities, and by the consent of the people of America, is considered an element of our political system." The application of this is not very apparent. But if it was intended to assert, as I presume it was, that in the Federal Constitution, which forms the bond of our Union and constitutes the political system of the United States, there is any such element incorporated, either by expression or necessary implication, then I deny the truth of the proposition. There is nothing clearer than that in the formation of the Constitution it was intended emphatically to exclude all connection with any religious faith whatever.

Separation of church and state, eternal divorce between civil and ecclesiastical jurisdiction, were cardinal principles with the sages and patriots to whom not only we, but all mankind, are indebted for this model of a republican government. No, my friend; they possessed too much wisdom and practical good sense to be content with a mere feeble imitation of the existing order of things. They distinctly saw the evil fruits which the conjunction of political and religious power had everywhere produced, and in the discharge of the high duty entrusted to them—the highest that man could be charged with—they determined to profit by the example, and inaugurate a political system whose dominion should be exclusively confined to the political relations of its constituents, acknowledging in the eyes of the law the perfect equality of all sects and faiths, and leaving the whole subject of religion, and its requirements, to the dominion of that Higher Tribunal which alone can search the hearts and judge the motives of men.

The Constitution itself gives evidence of the solicitude felt upon this subject, and the debates which led to its adoption show the high tone of feeling that existed in the convention. When Mr. [Charles C.] Pinckney reported to that body his proviso, "that no religious test shall ever be required as a qualification to any office or public trust under the authority of the United States," the only opposition he met with was from Mr. [Roger] Sherman, who declared it as "unnecessary, the prevailing liberality being a sufficient guarantee against such test." But notwithstanding the adoption of this emphatic declaration, so jealous were the people at that time of any governmental interference or connection with religion, that the first amendment to the Constitution proposed and adopted was the additional guarantee that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

In those countries where Christianity avowedly forms a part of their political system, there also the laws define the particular form of faith to which the Government attaches itself, and denounce the penalties for nonconformity. Let us once admit that it forms "an element of our political system," and we should soon be called upon to submit our consciences to congressional dictation. The argument would then be not too remote that the Christianity intended was that professed by the great majority of the people at the formation and adoption of the Constitution, and that this was not only a Christian but an anti-Catholic government.

It is in your remembrance that many years ago a large and respectable body of citizens petitioned against Sunday mails.[1] They evidently proceeded upon the idea that this was a Christian government, and that the violation of the Christian Sabbath was a sacrilege the government was bound to put an end to. Congress rejected the petition, and their action was approved by the country. Now, this approval could only rest upon the denial of the proposition that "Christianity was an element of our political system." But, my dear sir, whether right or wrong on this head, it must be evident that the assertion of this principle in a political platform, preluded by a solemn "acknowledgment of that Almighty Being who rules over the universe, and presides over the councils of nations," was a mere self-sanctification, intended to appeal to the religious feelings of the country, that they might the more easily be drawn into the vortex of political strife, and combined for what is declared to be one of the great objects of the movement—"resistance to the aggressive policy and corrupting tendencies of the Roman Catholic Church in our country by the advancement to all political stations—executive, legislative, judicial, or diplomatic—of those only who do not hold civil allegiance, directly or indirectly, to any foreign power, whether civil or ecclesiastical, and who are Americans by birth, education, and training."[2]

Having first asserted that Christianity was "an element of our political system," do you not preceive how smoothly the inference is drawn that a pure Christianity requires the exclusion of Catholics from the rights of citizenship? I know that upon a mere quibble, it may be denied that this inference is justified; but the quotation means this or nothing. The circumstances which surround this declaration have written upon it its true scope and character. No great change in government was ever accomplished by the full development of its principles in the inception of the movement. Our own Revolution rested for a period upon a redress of grievances, accompanied with an earnest protestation of continued loyalty to the British Crown.

The change now aimed at for excluding Catholics from their share in the government of the country, like all radical and revolutionary movements, must be effected, if effected, at all, by gradual stages of progress, which inure us to the journey, and accustom us to the road. Let those who may be unwilling to admit that my inference is just read attentively the events which are transpiring around us. The sentiment of the Philadelphia convention [June, 1855] is repeated at every assembly of the party. Its echo at Montgomery, in our State, proclaims "opposition to the election to office of every man who recognizes the right of any religious denomination to political power, or the authority of any higher law than the Constitution of the United States." The country is flooded with a spurious literature,[3] in which the imagination of its authors has been stimulated into activity to portray the fancied horrors of cloister and cell, and describe the Catholic priesthood as clothed in the garments of every crime. In many parts of the country the pulpit is fulminating doctrinary essays to prove the Catholic Church corrupt, and its adherents unfit depositaries of the rights of citizenship. If a Catholic citizen, however capable and honest, be appointed to political position, a howl is heard throughout the land, and denunciation follows the appointment.

---

[1] For the agitation for the suppression of Sunday mails, see American State Papers and Related Documents on Freedom in Religion, 4th edition, Washington, D.C., 1949, pp. 205 ff.

[2] This phrase is taken from the political platform adopted by the American Party in Philadelphia in June 1855 (Gustavus Myers, History of Bigotry in the United States, New York, 1943, p. 202).

[3] For the anti-Catholic literature of this period, see Myers, op. cit., pp. 148 ff.; R. A. Billington, "The Protestant Crusade, 1800–1860," pp. 193 ff., 345 ff., 445 ff.

What is the meaning of all this? I cannot be deceived by any "set phrase of speech." I tear off the flimsy disguise of words, and I behold the naked and hideous truth: religious intolerance. Party assemblies have met ere this; declarations of political principles have been common in our practice; new parties have been formed; old ones have been modified; but when before in our history has it been considered necessary to anathematize "the aggressive policy and corrupting tendencies of the Roman Catholic Church"? When before has it been found proper to introduce religion into our political organizations? When before was the fitness for political office tested not by the honesty or capability of the candidate, but by the religious faith he professed? Times have, indeed, changed, and we have changed with them. When the venerable Carroll [4] took up the pen to affix his name to the immortal "Declaration," no man cried, "Hold! you are a Catholic."

If a new necessity has sprung up justifying a new law, then, I ask, where does it exist, and in what form does it appear? Surely Protestantism has not become so weak as to require protection from the arm of a political party. Having entertained no fears of the Pope of Rome when [he was] in power, does it fear his dominion in this country now that he is dependent on foreign bayonets to preserve his dominion in Rome itself? [5] It would be unjust to construe these resolutions as vague generalities, having no application to any existing evil—the remedy for which was to be found in this new party organization. What, then, is their application? Do "the aggressive policy and corrupting tendencies of the Roman Catholic Church" point to a condition of things existing among us? Do there exist among us, in the language of the Montgomery resolutions, a body of men "who recognize the right of a religious denomination to political power, or the authority of any higher law than the Constitution of the United States"? Against whom is the new law to be enforced? It is vain to attempt disguise or prevarication. The alleged evil is declared to exist here, and the new rule is to find its justification in the religious faith of our Catholic citizens—citizens secured in their faith not only by the written stipulations of our Federal and State constitutions, but, as with us, by a solemn treaty stipulation "that the inhabitants of the ceded territory shall be incorporated in the union of the United States, and admitted as soon as possible, according to the principles of the Federal Constitution, to the enjoyment of all the rights, advantages, and immunities of citizens of the United States; and in the meantime shall be maintained, and protected, in the free enjoyment of their liberty, property, and the religion they profess." [6]

Let these questions be answered, not by mere speculation, much less in the spirit of captiousness, but by the solemn acts and declarations of the most authoritative assembly. When before the grand council or convention at Philadelphia the delegation from Louisiana presented their party credentials—a delegation composed of men whose respectability was not questioned, whose good faith was not suspected—they were spurned from the council, as unfit for the political brotherhood, because the lodge they represented held political communion with Catholics. It was in vain that the odious doctrine was denounced by them [as being] of an allegiance superior to the Constitution, or inconsistent with the highest discharge of political duties. It was in vain that the fact was recognized that the delegation contained but one Catholic (Gayarré, the distinguished historian). [7] There was no virtue, no party affinity, that could redeem their error, or "wash out the damned spot." In the judgment of this tribunal, no one could be a "true American" and a Catholic. Here, then, we have the new "American doctrine," explained by the "true Americans" themselves, and a practical application and development of their ambiguous resolves.

Odious as all this appears, it must not be supposed that this party has originated any new element of power; religious intolerance is as old as the history of man. In this country, where freedom and equality, under the shadow of the law, walk hand in hand throughout the land, intolerance lies dormant in the breast, or, when excited into action, shrinks from the public eye. It is, however, fully entitled to the "bad eminence" of being the first in the history of our country which has dared openly to stimulate this feeling for political objects: thus, in the name of Christianity itself, laying the train to light the torch of religious persecution.

If the leaders in this crusade were religious fanatics, we might respect their sincerity, though we denounced their action. But who are they? The Whig and Democratic Parties are said to have become corrupt. But this new party, as you see, is very much controlled by the scum which the agitation of the old ones has thrown off. Look around, my dear sir, and inquire how many of those leaders have been noted for their piety, or characterized by devotional feeling, who now flaunt their religious robes in the face of every passerby. How appropriately may they be described—

"With smooth dissimulation skilled to grace,
A devil's purpose, with an angel's face."

I do not doubt the sincerity of the great mass of those who have been deluded into these lodges. I believe the mass of all parties to be honest; but I also believe that the great majority of their leaders are impelled by the hope of obtaining from a new organization the political promotion which they despaired of receiving from the old ones. What faith can we have in the sincerity of the men, now so zealous in their anti-Catholic professions, who but a few months ago made the air redolent with their cries against our present worthy executive [President Pierce], because the constitution of New Hampshire excluded Catholics from office? [8]

You perceive, I have treated the movement of the "Know-Nothings" as a direct attack upon the Constitution itself, because I really regard the plea which acknowledges that the Catholics are to be excluded by voluntary associations bound by oaths, but denies that any "legislative enactment" is to be resorted to for that purpose, as beneath criticism. Why, my dear sir, if the exclusion be justifiable and necessary, should it not be engrafted upon our Constitution? If the people of these States should ever receive this bastard "Americanism" as true republicanism, what should prevent that opinion from being organized into law? Is law in this country anything else but organized public opinion? It is a weak and miserable design which seeks by indirection to effect the disfranchisement of a portion of our citizens, while it cowardly admits that the law which denounces this disfranchisement should be preserved unaltered.

I confess to you, my friend, that a few months ago I looked with feelings almost of despair upon the downward course of our political affairs. My confidence, however, is restored; the South, always conservative, always jealous of power, and comparatively free from those sudden excitements to which the denser populations of the North are subject, will vindicate the character which she has nobly earned. Virginia, the oldest of the sisters, has led the way to triumph; [9] and Alabama, one of the youngest and fairest, will come out of her impending struggle radiant in victory, and with garments undefiled.

Let, however, the result be what it may, if the present brings no thanks to you and others, who have stood by the principle of religious equality and freedom, the future, the not distant future, will be yours.

Yours, most truly,

P. PHILLIPS.

JNO. FORSYTH, Esq.,
Editor of Register, Mobile, Ala.

[4] Charles Carroll of Carrollton (1737–1832), a signer of the Declaration of Independence from Maryland, was the most distinguished American Catholic of his day.

[5] At this period, Pope Pius IX was in power in Rome largely by the armed forces of Napoleon III.

[6] This provision is from the French Cession of Louisiana to the United States, April 30, 1803, art. III (H.S. Commager, "Documents of American History," 4th ed., New York, 1948, p. 191).

[7] Charles Étiene Arthur Gayarré (1805–95) wrote several books on the history of Louisiana. He was Louisiana's outstanding littérateur in the days before and after the Civil War.

[8] Franklin Pierce, of New Hampshire, was attacked by his political enemies because the constitution of New Hampshire excluded Catholics from office. Pierce, however, had denounced this clause in the State constitution (Myers, op. cit., p. 189).

[9] In the Virginia election of May 1855, the Know-Nothings were defeated (J. F. Rhodes, "History of the United States, etc.," II, 88–89).

The High Cost of Crazy Quilts

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, I have today reintroduced by bill, H.R. 7692, which would have ended the farm subsidy insanity as of January 1, 1960, in an updated form so that, if enacted, such termination date would be January 1, 1961. Of course, I am not optimistic enough to suppose that my proposal has any chance of enactment, or even of consideration at this time, but I do think it important that those million of Americans, from farm as well as city, who believe we have traveled far enough down this endless and aimless road should have some legislative proposal to rally around. As some further evidence of the growing support for my suggestion, I include the following editorial from the Wall Street Journal of January 20, 1960:

THE HIGH COST OF CRAZY QUILTS

In his 1961 budget, President Eisenhower estimates spending for agricultural programs at close to $6 billion, of which the biggest category is price-support operations. It could run higher, depending on weather and other circumstances; the President ruefully remarked that under present laws, "price support expenditures cannot be controlled through regular budgetary processes."

Now some $6 billion a year for agriculture is fantastic enough. But even that is not the whole of the cost. Lamar Fleming, Jr., head of the cotton firm of Anderson, Clayton & Co., figures that Americans are actually paying around $10 billion a year more than would be necessary if farm prices were not artificially supported. To the $6 billion taken directly out of the taxpayers' pockets must be added at least $4 billion in the higher prices caused by the props.

There are still other hidden costs. For example, Mr. Fleming says the Government controls 70 percent of the buying and selling in the cotton market. This hampers market operations—the cotton "is tangled up in redtape which delays its availability for use"—and is drying up the cotton futures trade. Bureaucracy indeed never comes cheap.

Farm programs designed to restore normal market forces would certainly justify reasonable expenditures for a time. Instead we are spending these staggering billions, year after year, on programs to make the problems worse. No possible excuse can be found in politics or sanity for Congress' continued refusal to unravel this costly crazy quilt.

Re H.R. 9378, Requiring a Fair Return on Veterans' Insurance Trust Funds

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, I recently introduced H.R. 9378, which seeks to provide for the investment of the national service life insurance trust fund and the U.S. Government life insurance trust fund in obligations bearing current rates of interest. The rates presently are set at 3 percent for the national service life insurance fund and 3½ percent for the U.S. Government life insurance trust fund, even though there is no statutory requirement that such rates cannot be higher or the going market rate.

Hearings are to be held on this subject by the full Committee on Veterans' Affairs on February 2, 1960. I recently had an interesting discussion with the Under Secretary of the Treasury, Mr. Julian B. Baird, and Mr. William T. Heffelfinger, Fiscal Assistant Secretary. At that time I was furnished with the minutes of the meeting of the Treasury Department Committee on Investment Policy held January 13, 1960, as well as a memorandum concerning interest rates on investment of the OASI trust fund. I believe both of these documents will be helpful to the consideration and understanding of this question and, under permission granted, include them as part of my remarks:

MINUTES OF MEETING OF THE TREASURY DEPARTMENT COMMITTEE ON INVESTMENT POLICY—JANUARY 13, 1960

The Treasury Department Committee on Investment Policy for Trust Funds met in the office of the Under Secretary for Monetary Affairs January 13, 1960. The Under Secretary, Mr. Baird, presided as chairman of the meeting and Mr. William T. Heffelfinger, Fiscal Assistant Secretary, acted as secretary. Mr. Robert P. Mayo, Assistant to the Secretary, was invited to sit with the committee.

Mr. Baird stated that, in line with the committee's practice of reviewing the investment policies governing the trust funds administered by the Treasury, the purpose of the meeting was to consider the veterans' insurance funds. Mr. Baird pointed out that the Treasury should follow insofar as possible a consistent investment policy with respect to all of its trust-fund operations.

Mr. Baird called attention to the fact that the committee, in its meeting of June 29, 1959, decided to recommend to the Secretary that steps be taken with the objective of lengthening the maturities of special issues in the Federal Old-Age and Survivors Insurance Trust Fund, and the Federal Disability Insurance Trust Fund by rearranging investments of the special issues with equal maturities ranging over a period of from 1 to 15 years. This action was taken in anticipation of the approval by Congress of the recommendation by the Board of Trustees (the Secretary of the Treasury, the Secretary of Health, Education, and Welfare, and the Secretary of Labor) that the present statutory formula for fixing interest rates on special obligations issued to these funds be changed to a formula based upon current market yields rather than coupon rates, as recommended by the Advisory Council on Social Security Financing. A bill to give effect to this recommendation is currently pending before the House Committee on Ways and Means.

The Independent Offices Appropriation Bill for 1959 contains a provision requiring the Civil Service Commission and the Bureau of the Budget to submit recommendations to the Legislative and Appropriation Committees of the House and Senate for keeping the Civil Service Retirement Fund current and for providing on a sound basis for the future liabilities of the Government to the beneficiaries of that fund. The report submitted by the Chairman of the Civil Service Commission and the Director of the Bureau of the Budget, pursuant to this requirement, contains a recommendation that the interest rate on special Treasury obligations issued to this fund be based upon a formula similar to that recommended for the Federal Old-Age and Survivors Insurance Trust Fund, namely, that the rate be equal to the average market yields on outstanding issues not due or callable until after the expiration of 3 years from the date of issue of such special obligations. In anticipation of congressional approval of this recommendation, the special obligations held by the Civil Service Retirement Fund were recently replaced with special issues having equal maturities ranging over a period of from 1 to 15 years.

Mr. Baird stated he had also discussed a few months ago with the members of the Railroad Retirement Board the question of increasing the interest rate now payable pursuant to law on the special obligations issued by the Treasury to the railroad retirement account. The Commissioners pointed out that the present 3-percent statutory rate has been substantially lower than market yields on Treasury obligations for sometime and they thought some change should be made to bring their earnings more in line with the present market rates. As a result of these discussions the Treasury has notified the Director of the Bureau of the Budget that it would have no objection to a change in the law to base the interest rate on special obligations issued to the railroad retirement account on a formula similar to that proposed for the Federal old-age account and the civil service retirement fund. The Commissioners were also advised of the Treasury's position in the matter.

Mr. Baird stated that the principal remaining long-term trust funds, similar to the foregoing, which require attention are the two veterans' insurance funds—the Government life insurance fund and the national service life insurance fund.

The Government life insurance fund was established in connection with life insurance policies issued to veterans during World War I. Prior to 1944, the Government life insurance fund was invested in marketable Treasury obligations and 4½ percent special adjusted service bonds. At that time the average interest rate on all securities in the Government life insurance fund was 3.61 percent and the Administrator of Veterans' Affairs was concerned with the impact on the fund which the reinvestments of $500 million of the 4½-percent bonds maturing in 1946 at the prevailing 2½-percent rate would have on interest earnings. At that time the President approved a recommendation of the Secretary of the Treasury that the special obligations issued to this fund bear interest at the rate of 3½ percent. The World War Veterans' Act specifies that the basis of calculation of the reserves and all other values under the Government life insurance policies issued to veterans of World War I shall be the American Experience Table of Mortality and interest at 3½ percent. This provision of law was used as a guide for fixing a 3½-percent interest rate on the special obligations.

The special obligations issued to the Government life insurance fund have been in the form of 1-year certificates of indebtedness. This fund does not hold any marketable Treasury obligations and the total holdings of special 3½-percent certificates, as of December 31, 1959, amount to $1,100,235,000. This fund will continue at somewhat near its present level for many years in the future before it is substantially reduced as its insurance obligations are eventually extinguished.

The national service life insurance fund was established in 1941 in connection with the insurance policies issued to military personnel during World War II. For many years prior thereto outstanding bonds and notes of the United States were selling in the market at substantial premiums and in February 1941 were yielding investors from one-eighth percent to a maximum of approximately 2¼ percent, depending upon maturity. In view of the fact that the National Service Life Insurance Act provides that the premium rates for insurance shall be the net rates based upon the American Experience Table of Mortality and interest at the rate of 3 percent per annum, the Secretary of the Treasury, with the approval of the President, on February 11, 1941, determined to have the investments of this fund made in special series of Treasury obligations and bear interest at the rate of 3 percent. In fixing a 3-percent interest rate, the Secretary of the Treasury stated:

"It is therefore proposed to make investments on account of the national service life insurance fund in special series of 3 percent certificates of indebtedness and Treasury notes until such time as, in the discretion of the Secretary of the Treasury, investments for the fund can be made more advantageously in the interest of the Government by the purchase of obligations in the market or on direct subscription to new issues of public debt obligations."

The national service life insurance fund is entirely invested in 5-year special 3-percent Treasury notes. At December 31, 1959, the fund held these notes maturing annually from 1960 to 1964 and in an aggregate amount of $5,691,548,000. This fund will also continue for many years in the future.

Mr. Baird stated that although yields on marketable obligations have been in excess of 3 percent in recent years, it would not have been in the interest of the Government to invest all its trust funds in marketable obligations. However, to the extent possible, there have been substantial market purchases for certain accounts.

It was the consensus of the committee that no one can determine how long the present market yields on Government securities will continue or at what level market yields may ultimately adjust to during the foreseeable future.

In view of the fact that the laws governing these two veterans' insurance funds place full responsibility for the investment of such funds in the Secretary of the Treasury, the committee agreed to recommend the adoption of a formula for fixing interest rates on the special obligations issued to these funds based upon current market yields rather than coupon rates and that the transition to the new rate follow the pattern adopted in connection with the Federal old-age and survivors insurance trust fund and the civil service retirement fund.

Under the formula recommended, the special obligations would bear interest at a rate of one-half of 1 percent lower than a rate equal to the average market yield computed as of the end of the calendar month next preceding the date of issue, borne by all marketable interest-bearing obligations of the United States then forming a part of the public debt that are not due or callable until after the expiration of 3 years from the end of such calendar month, except that where such average market yield is not a multiple of one-eighth of 1 per centum, the rate shall be the multiple of one-eighth of 1 per centum nearest such average, provided, that special obligations issued to the Government life insurance fund shall be at rates not less than 3½ percent and that obligations issued to the national service life insurance fund shall be at rates not less than 3 percent. However, unless the Congress removes the 4¼ percent interest ceiling on Treasury bonds, it will not be possible to use rates in excess of 4¼ percent on the special obligations having maturities beyond 5 years.

The committee recommends, in view of the historic basis used for establishing rates of interest of 3½ percent and 3 percent on special obligations issued to these two funds, which takes into consideration the rates established by the Congress for fixing premiums and for use in other calculations in connection with such insurance, that these present rates be considered as a floor for the rates on such special obligations, to protect the funds against any subsequent drop in market yields below these rates. In consideration of this guarantee against such contingency the rates based upon current market yields would be reduced by one-half of 1 percent. This formula will provide a substantial improvement in rates for current investments in these two funds. If current market rates continue at levels in excess of 3 percent or 3½ percent, the earnings of the funds will increase from year to year during a long future period.

The committee recommends that the transition to the new formula should be made gradually, and that before the new formula becomes effective the present maturity distribution of the special obligations held in the funds be rearranged in accordance with the needs of the funds and the principles of sound and equitable trust fund management. This objective can be accomplished by rearranging investments of the special issues presently held with securities having equal maturities, ranging over a period of from 1 to 15 years. This will result in an average maturity of about 7½ years for investments in these funds, compared to an average maturity of about 20 years for bond investments held by American life insurance companies.

It is also recommended that at the end of each year beginning with the fiscal year 1960, the amount of special issues maturing will be refunded with new special issues so arranged as to maintain approximate equal maturities of the funds from 1 to 15 years. The new securities would carry rates of interest based upon the new formula, subject to a maximum of 4¼ percent so long as the present interest rate ceiling is in effect. It is proposed that current receipts not needed for current payments be invested in special issues maturing on June 30 of each year. Whenever it is necessary to redeem securities to cover current benefit or other payments from the funds, this will be accomplished by redeeming obligations maturing within the year beginning with those bearing the lowest rate of interest.

There being no further business, the meeting adjourned.

W. T. HEEFELFINGER,
Secretary of the Committee.
JULIAN B. BAIRD,
Chairman.
LAURENCE B. ROBBINS,
DAVID A. LINDSAY.

Approved:

ROBERT B. ANDERSON,
Secretary of the Treasury.

MEMORANDUM CONCERNING INTEREST RATES ON INVESTMENTS OF FEDERAL OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

Under the law it is the duty of the Secretary of the Treasury, as managing trustee of the Federal old-age and survivors insurance trust fund, to invest that portion of the trust fund not needed for current benefit payments and administrative expenses in U.S. securities or in securities guaranteed as to principal and interest by the United States. Because for many years only a very small amount of guaranteed securities have been issued, the fund's invetsments consist entirely of direct public debt obligations.

Obligations may be acquired on original issue or by purchase in the market. Also, the law authorizes the Secretary of the Treasury to issue special public debt obligations to the fund. The law, as amended in 1956, provides that the special issues shall have maturities fixed with due regard for the needs of the fund and shall bear interest at a rate equal to the average rate of interest, rounded to the nearest one-eighth of 1 percent, computed as of the end of the month preceding the date of issue, on all outstanding marketable interest-bearing pubilc debt obligations that are not due or callable until after the expiration of 5 years from date of original issue.

Marketable issues acquired by the fund may be sold at any time at their market price. Special issues held by the fund may be redeemed at par plus accrued interest.

The greater part of the investments of the old-age trust fund, as well as for other Government trust funds and investment accounts, are made in special public debt obligations. There are important advantages in following this practice rather than investing the trust funds entirely through open market purchases of Government obligations, as follows: (1) The Government securities market is not disturbed periodically by purchases and sales of large blocks of securities; (2) the trust funds are provided with a ready avenue of investment and no attention need be given to short-term fluctuations in market prices, and (3) savings can be effected because of the smaller number of securities to administer, and commissions to brokers on purchases and sales are eliminated.

On December 31, 1959, the old-age trust fund held $19,158 million of public debt securities, consisting of $15,863 million of special issues and $3,295 million of public issues. The interest rate on current special issue investments is 2⅝ percent, based on the formula provided in the law. The public issues held by the fund bear interest at rates ranging from 2¼ to 5 percent, with maturities from near term out to 1995.

The 1956 amendments to the Social Security Act provided for an Advisory Council on Social Security Financing to be appointed by the Secretary of Health, Education and Welfare. This Council, composed of the Commissioner of Social Security and twelve members not connected with the Government, representing labor organizations, insurance companies, and the public, in its report transmitted to the Congress last January, endorsed the policy in present law which relates the interest rate on special obligations to the interest rate on long-term marketable obligations.. The Council, however, recommended two changes in the law so that the rate of return on special issues acquired by the Old-Age Trust Fund and the Disability Insurance Trust Fund be as nearly as possible equal to the rate being realized by investors who purchase long-term Government securities in the open market. These recommendations were as follows:

1. The rate on each special obligation should be made equal to the average market yield on long-term marketable Federal obligations outstanding when the special obligation is issued, rather than to the average coupon rate of such marketable obligations.

2. The interest rate fixed for a special obligation should be based on the average rate of return on all outstanding marketable Federal obligations that will mature more than, say, five years after the date of the special issue, rather than on all bonds that are not due or callable until after five years from the date when they were originally issued.

The Advisory Council felt that in adjusting to the proposed new statutory formula a gradual and orderly transition over a period of several years would be desirable. They recommended, therefore, that before the new formula becomes effective the present maturity distribution of the special obligations be reviewed and, if need be, adjusted to carry out this broad objective.

Prior to the time the Advisory Council on social security financing was appointed the Treasury had been working on a plan to ultimately spread maturities of old-age trust fund special issues over a period of 20 years. In considering how best to carry this out information was obtained on investment practices of life insurance companies. It was found that the larger companies' investment holdings averaged around 20 years to maturity. The trustees then decided we shouldn't extend maturities as far as insurance company holdings and it was determined that a spread covering a period of 1 to 15 years (an average of about 8 years) would be reasonable. By action of the managing trustee, with concurrence of the other trustees, maturities have been rearranged on that basis.

The Advisory Council's recommendation as to a change in the interest rate formula for special issues was given consideration. The Council had suggested two rates, a long-term rate to apply to the major part of the funds and a short-term rate to apply to a minor portion to meet current and short-range needs. The trustees[1] agreed that the short-term needs of the fund should be recognized, but for reasons of simplicity, ease of administration and elimination of the necessity for arbitrary judgment, they recommended that there should be one interest rate reflecting the short-term as well as the long-term requirements of the fund. Recommendations were made in the last annual report of the Board of Trustees and a draft of bill was sent to the Congress to carry out the recommendation. This bill is now

---

[1] The Board of Trustees consists of the Secretary of the Treasury, as managing trustee, and the Secretaries of Health, Education and Welfare and Labor.

pending before the House Ways and Means Committee for consideration.

The proposed bill provides that special obligations issued for purchase by the old-age and disability insurance trust funds shall bear interest at a rate equal to the average market yield rounded to the nearest one-eighth of 1 percent, computed as of the end of the calendar month next preceding date of issue, on all marketable interest-bearing public debt obligations which are not due or callable until after the expiration of 3 years from the end of such calendar month. If this formula were now in effect, current special issue investments of the funds would carry an interest rate of 4⅞ percent, based on average of market yields as of December 31, 1959.

Who's Really To Blame for the New Labor Law?

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include a very interesting editorial which was published in the October 23 edition of the Oregon Labor Press.

It is entitled "Who's Really To Blame for the New Labor Law?" and I urge every Member to read it.

The article follows:

WHO'S REALLY TO BLAME FOR THE NEW LABOR LAW?

A new game called who's to blame for the new labor law? is sweeping the country.

Any number can play, and almost everyone seems to be playing. A lot of good people are getting chopped up in the process.

In recent weeks we've heard the blame placed variously on George Meany, on AFL–CIO lobbyists in Washington, on Senator John Kennedy, of Massachusetts, on Senator Hubert Humphrey, of Minnesota, on Congresswoman Edith Green, of Oregon, and on all of the other liberals in Congress who voted for the bill.

A total of 95 Senators and 355 Congressmen voted for the labor law. Whether or not you approve of their vote, you cannot say that all of them are enemies of labor. Many of these Congressmen and Senators have proved, by their voting records over the years, that they are sincere liberals and friends of the labor movement.

We want to ask a question:

Why is it that only liberal legislators and decent union leaders are getting flayed and divided in the who's to blame game?

Why doesn't someone have enough sense to place the blame where it really belongs—on Dave Beck, James Hoffa, Frank Brewster and Bert Brennan of the Teamsters; on Eugene C. (Jimmy) James of the Laundry Workers; on James G. Cross of the Bakery and Confectionery Workers?

These men and other apostles of the evil doctrine of "business unionism" are really to blame for the labor law. It was these men and their ilk who sold out the labor movement.

The McClellan hearings gave the anti-unionists the opening they wanted, and they took it. But the McClellan hearings would have been a flop if these few men had not supplied plenty of sickening grist for their mill.

Why are the corrupt union officials and business unionists forgotten when the who's to blame game is played?

The Teamsters' national magazine is having a field day, blaming the new labor law on George Meany, on AFL–CIO lobbyists, on Senator KENNEDY and other Members of Congress. Why don't the Teamster editors look inside their own marble palace in Washington to find the persons who are basically responsible for the new law?

We hear chuckles from the "business unionists" and from the anti-union lobbyists and legislators while the rest of us flay each other's hides, playing the who's to blame game.

The Twisted Cross

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. FRIEDEL. Mr. Speaker, last week I introduced a resolution expressing the profound indignation of the Members of Congress at the epidemic of acts of desecration of our houses of worship. Many of my colleagues have spoken out against these vile acts. We all realize these deplorable demonstrations must be stopped in the interest of freedom guaranteed us by the Constitution.

One of the best means of fighting this menace to our society is to bring these un-American acts to the attention of all our citizens so that they can exert their energies to stop these shameful acts of desecration.

In this connection, I would like to call to the attention of my colleagues a very fine TV editorial broadcast which was presented by Mr. John L. McClay, the general manager of WJZ–TV in Baltimore. This editorial was presented as part of the company's policy of contributing to the public betterment by keeping Marylanders informed on issues which vitally concern all of us.

The editorial entitled "The Twisted Cross" follows:

Fifteen years ago, American soldiers were dying in Europe because of an evil ideology that threatened to engulf the Western World. No one who lived through that era can forget Adolf Hitler and his Nazis. Nor can we forget their sign, the dreaded swastika. It has come to symbolize everything that is rotten in the human race.

But the swastikas you are looking at are not those that were displayed in Germany during the Nazi era. Unbelievable as it may seem, they were painted on Jewish institutions in Baltimore only 3 days ago. Fifteen years after it was crushed in Europe, the swastika has returned to haunt our own city.

I would think that no Jew could look upon this defacement without a twinge of anger or bitterness. I hope that anyone who is not a Jew looks upon it with a feeling of shame and guilt. For the real danger of prejudice is that to some extent it exists in all of us. Every one of us instinctively feels close to his own kind, and is sometimes suspicious of those of another race, religion, or nationality.

For reasons that none of us can explain, there is always a small minority of people whose suspicions and hates are uncontrollable. For their own twisted reasons these people fan the smoldering sparks of hate and cruelty. If they are allowed to carry their mischief too far, they attract followers. The ultimate result can be—as it was in Germany under the Nazis—a reign of terror. Decent people are afraid to speak out, or sometimes they just don't bother to speak out.

We are not comparing Baltimore with Germany under Hitler. The anti-Jewish incidents here are thus far not widespread. But let's not you and I salve our consciences with the thought that this was the work of young pranksters.

This much is certain: A decent community just does not permit such things to be repeated. If any of us heard of a plan to set fire to a church or synagogue, we would instantly summon the police. We would not tolerate such outrages because we are decent citizens. We should be just as aroused over these swastika smearings. The people who did this are just as dangerous as those who set fires, and we should treat these incidents in the same manner. It is the duty of everyone who knows anything about these desecrations of the past few days to call the police. It is that simple. To tolerate this in our city would be a mockery of every ideal that we, as Americans, profess to believe in.

What a great thing it would be if the world looked to Baltimore as the city where the fires of anti-Semitism were stamped out without a moment's hesitation because Baltimoreans just wouldn't let it happen.

Anti-Semitism Outbreaks

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. DERWINSKI. Mr. Speaker, all of us have been concerned with the outbreak of anti-Semitic incidents throughout the world. Numerous explanations have been forthcoming in order to trace the origin of these incidents.

The Chicago Daily Calumet, a community newspaper in my district, on January 14 wrote a most interesting and enlightening editorial on the subject, and I am including it in the RECORD for the consideration of the Members of the House:

[From the Chicago Daily Calumet, Jan. 14, 1960]

ANTI-SEMITISM OUTBREAKS

The unfortunate and damnable incidents of anti-Semitism that have sprung up in West Germany, England, United States, and other parts of the world are being hailed by some of our leftwing press and liberals as a spontaneous worldwide rise in Nazism or Fascism.

Don't be fooled.

This is the work of world communism. Who else has a worldwide network to set in simultaneous motion incidents of anti-semitism in such widely separated areas as Finland, Australia, United States, and West Germany? Only the Communists. Certainly not West Germany.

The Communists would have you believe that fascism is behind these incidents in order to hide their own attempts to sow suspicion on West Germany and to isolate

Chancellor Adenauer and separate him from his allies on the eve of the the East-West meeting.

True, there are undoubtedly undercurrents of Hitler's fascism in Germany. But the Communists overplayed their hand when they set in motion an international wave of anti-Semitism with the appearance of the swastikas and anti-Jewish slogans in countries all around the world.

Any thinking man will quickly realize that worldwide orders do not today originate in West Germany. The fast reaction to the incidents by Adenauer and his government indicates their concern. They realize the damage that has been done to the new democratic Germany that is rising.

Too often we are prone to forget that it was Russia that collaborated with Hitler during the awful pogroms of the thirties and forties and also we forget that within Communist Russia there is and always has been a constant campaign of vilification and persecution of Jews.

It is gratifying to see how Americans are alarmed over the possible rise of a new Hitler and fascism.

We only wish that the same Americans would show the same concern over the ever-present Communists in our midst and the increasing rise of power of world communism.

Big Man With a Big Heart

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial about Officer Philip Spelman of the Chelsea police force, which appeared in the Chelsea Record on December 3, 1959.

The editorial follows:

BIG MAN WITH A BIG HEART

Officer Philip Spelman, the huskiest man on the police force, probably has the biggest heart when it comes to helping others, especially those in trouble and youngsters.

The sparkplug of the current Espinola Fund, to which has been contributed nearly $32,000, Officer Spelman was one of the first on the scene following the tragedy that snuffed out the lives of a father and his five children.

His routine work on the case completed, he devoted all of his own time for days and days and days, organizing, collecting, soliciting, arranging for money-raising events to help the surviving widow and her only surviving child.

Those who had occasion to watch his zeal in behalf of this cause attribute to his efforts the very great success that the fund attained.

A World War II marine, he has used his training on numerous occasions to save lives. He was commended by the city several times for saving the life of children by breathing into their little mouths as they were being rushed to the hospital.

A devoted father and husband he has found time to do a great deal of work in behalf of the Little League and was rewarded a month ago by election as its president. His wife served as secretary.

With Officer Ralph Briggs, Spelman captured two youths who had broken into a score of homes in the Bellingham area, and passed it off as routine police work.

Unassuming and modest, he is a fearless police officer, an efficient and popular member of the department and credit to it and to the city.

The Record joins with hundreds of others throughout the city in a salute to Officer Philip Spelman for his fine police work and exemplary civic interest.

The Loyal Oath Problem

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. ROBISON. Mr. Speaker, all Members of this body are well aware of the concern with which the administrators of our leading educational institutions have viewed the loyalty oath and disclaimer affadavit requirements which the Senate inserted in the National Defense Education Act.

This is a question which may be presented to us for further consideration later this year. It is a complex question, involving opposing philosophical approaches. Without attempting to take sides, at this time, but in order to give my colleagues the benefit of two excellent summaries of the opposing positions, I herewith include a resolution recently received by me from the president of Harpur College, at Endicott, N.Y., in behalf of his faculty, and a letter to the editor of the Binghamton (N.Y.) Press of December 29, 1959, by Mr. Ford M. Sperry, of Binghamton:

JANUARY 7, 1960.

RESOLUTION 1

Resolved, That the faculty of Harpur College, State University of New York, hereby records its strong opposition to the disclaimer affidavit requirement of the National Defense Education Act (title X, sec. 1001(f)(1)). This provision of the act requires that any individual, including a student obtaining a loan, who benefits under the National Defense Education Act, shall be denied payment unless he has executed and filed with the Commissioner (of Education) an affidavit that he does not believe in, and is not a member of, and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods." We oppose this affidavit for the following reasons:

(1) It undermines freedom of belief and conscience, specifically denying funds on the basis of belief.

(2) It suggests that the loyalty of needy students is questionable, and that we can no longer assume that an individual is loyal unless he takes an oath to that effect.

(3) It sets a dangerous precedent for requiring similar affidavits of farmers, dependent persons, or in fact any recipients of Federal funds.

(4) It represents Government intervention in the affairs of colleges and universities, such affidavits not ordinarily being required in the granting of student loans.

(5) It will not achieve its apparent objective, for the disloyal or subversive individual would not likely feel bound by such an affidavit.

As a part of this resolution, the faculty urges the president of State University of New York to use all appropriate means to secure the elimination of the disclaimer affidavit now required by the National Defense Education Act. Furthermore, the faculty directs its representative in the faculty senate of State University of New York to place this matter on the agenda of that body as soon as possible, that other units of State University of New York may have an opportunity to join the Harpur faculty in this protest. Finally, the faculty directs that the text of this resolution be sent to the members of the New York State congressional delegation.

RESOLUTION 2

Resolved, That the faculty of Harpur College, State University of New York, also questions the necessity or wisdom of requiring the oath of allegiance under the National Defense Education Act (title X, section 1001(f)(2)). The form of this oath is as follows: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States of America against all its enemies, foreign and domestic." This is in effect the customary oath of office taken by officers and employees of the Federal Government. If it is desirable that this oath be taken by persons receiving aid or subsidy from the Government, then the requirement should be applied to all such persons. Certainly needy students should not be required to testify to their allegiance any more than other recipients of Federal assistance. However, we believe it would be more in keeping with the spirit of this country for the Government to assume the loyalty and allegiance of its citizens in such matters. The widespread taking of such an oath dilutes the significance of the oath of allegiance on occasions where it is clearly warranted.

This resolution is to be directed to the president of State University of New York, the faculty senate, and the members of the New York State congressional delegation.

FACULTY LOYALTY—OATH VIEW HIT

(By Ford M. Sperry)

BINGHAMTON.—The attitudes of the presidents and faculty members, followed by the me-too attitudes of some of their students in a few of our colleges and universities, regarding students signing an affidavit stating that they are not members of any subversive group or organization in order to receive Federal loans is very interesting; as is also the statement reported to have been made by the faculty of the Albany College of Education that "It exposes those signing the affidavit to the possibility of perjury prosecutions, resting on vague allegations or improper and intimidating inquiries about their conduct and beliefs."

How could they be prosecuted for perjury if they had told the truth when they signed the affidavit? Who told them that the non-Communist affidavit singles out persons in education as objects of suspicion?

Since when has it been an act to be afraid to commit or to be ashamed of instead of an act to be proud of for a U.S. citizen of any age to declare he has no association with any group affiliated with the Communist conspiracy, if he is telling the truth; and if he is not telling the truth, by what right does he expect to be granted a loan?

It causes one to wonder whether they (presidents and faculty members included) should be pitied and sent back to the grade schools to learn something about our American traditions and freedoms and the advantage of being a citizen of this glorious Republic; or censored because they, taking their attitudes at face value, apparently feel

that they are superior to or are on some plane of citizenship different from the hundreds of thousands who are members of our Armed Forces—the Army, Navy, Air Force, and Marines—and the more than 2,700,000 members of the American Legion, all of whom offered their lives and their many thousands of buddies who gave their lives, to insure that there would continue to be colleges and universities for those faculty members to teach in. And that the students would continue to have the God-given freedom and right of choice (as guaranteed by our Bill of Rights) to decide, each for himself, which college or university he will attend.

Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. DORN of South Carolina. Mr. Speaker, we must not be misled by these Russian Communists who visit the United States. The best way to prevent some of our people being fooled by their superb salesmanship is not to invite them here. We should never have invited Khrushchev, Mikoyan, and Koslov to the United States. These bloody gangsters have greatly helped by visits, the cause of communism here and throughout the free world. The following news story should awaken all of us.

[From the Washington Post, Jan. 17, 1960]

HOOVER SEES GREATER U.S. RED PERIL

(By William J. Theis)

FBI Director J. Edgar Hoover said yesterday the Communist Party in America, aided by the recent visit of Soviet Premier Nikita Khrushchev, is now "more powerful, more unified, and even more of a menace to our Republic."

He gave his views in a written statement to the Senate Internal Security Subcommittee. In it he appraised the December 10–13 Communist convention in New York.

Hoover said the "most significant achievement" of that convention was "the welding of the Communist Party, U.S.A., into a solidly unified, aggressive force behind the militant, devious, and ruthless leadership of Gus Hall, ex-convict and avowed arch-enemy of the American way of life."

Hall was elected general secretary. Hoover said he is the "No. 1 man in the party." He recalled that the late Josef Stalin served as general secretary of the Russian Communist Party before becoming dictator.

Senator JAMES O. EASTLAND (Democrat of Mississippi), chairman of the subcommittee which printed Hoover's statement as a public document, said the FBI chief has "put America on notice."

"By revealing Communist aims," EASTLAND said, "Mr. Hoover has partially disarmed the conspiracy, but only partially."

Hoover said the Communists' optimism about the future in this country springs from the fact that "the recent visit of Khrushchev has done much to create an atmosphere favorable to communism among Americans."

He said that to Communist Party leaders, "Khrushchev's presence has eased the way for party activities." He added that two important conclusions can be drawn from the Communist's leadership decisions:

1. The party will remain in the future—as it has been in the past—an obedient slave of Moscow.

2. The elimination of factionalism, making the party a more unified and more compact organization.

The 17th national convention of the Communists was held in a Harlem hotel and Hoover said, "adjourned in a state of jubilance."

Anti-Semitic Vandalism

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. ANFUSO. Mr. Speaker, the wave of anti-Semitism which has swept over Germany in recent weeks is most deplorable. Perhaps the most unfortunate thing is its spread to various lands in Europe, the Americas and elsewhere, where irresponsible young people and lunatic fringe followers are defacing synagogues, churches, institutions and private homes with swastikas and other symbols of hatred.

These anti-Jewish and antireligious demonstrations have occurred in various places and communities in this country and abroad where this form of social virulence has never before been a serious factor. I have no way of knowing whether these demonstrations have been organized by certain rightist or leftist elements for political or other purposes. I have no way of knowing whether they are being financed by certain elements in Communist or Arab countries, or by Nazi remnants still operating abroad, as is being suspected by many people.

One thing I do know, and that is: The free world, America included, has been dealt a heavy blow in the eyes of upright, liberty-loving and peace-loving people everywhere. In the midst of a great ideological struggle, when the nations of the free world are actually fighting for freedom and survival, our attention is diverted to acts of prejudice and intolerance which only tend to divide our forces and to sap our strength. The smearing of swastikas on houses of worship is not the path to survival in the struggle against communism, as some blind fanatics and cranks may believe, but is the road to ruin and destruction of our civilization, our common heritage and our very freedom.

Attacks on houses of worship are direct attacks upon freedom itself. Those who hate one religion, hate all religions. They also hate everyone whose beliefs may differ from theirs, whose national origin may be different, whose color of skin is different, whose political or social views are different. They prefer totalitarianism of one kind or another, based on hatred against all those who disagree with them. We fought World War II to eradicate this dangerous concept which brought so much misery upon humanity and resulted in the death of millions of innocent people.

Now, we are witnessing a resurgence of these evil forces. If left to pursue their evil deeds, we shall sooner or later be faced with a new world tragedy. This is a warning which should not be ignored. There is no room in American life for these demented fanatics who let themselves become tools of others who seek to destroy us. Similarly, there should be no room for them in Germany if the German people and their leaders are earnestly interested in casting their lot with the free world.

We should make it clear to the German people that we expect them to adopt the strongest measures to eradicate these fanatics. We should also make it clear to them that if there is a revival or resurgence of nazism there, they should understand that the free world, America included, will be forced to renounce its alliance and support of a German state which tolerates or encourages neonazism in any form. At the same time, let us give the German people every assurance of support if they show a genuine desire and effort to uproot anti-Semitism and those preaching bigotry and intolerance.

Federal Water Pollution Control Act

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. BLATNIK. Mr. Speaker, 4 years ago the Congress began consideration of legislative proposals which culminated in the passage of the Federal Water Pollution Control Act of 1956. At about the same time the League of Women Voters of the United States began a study of our national water management problems. The league, with members in all 50 States, have made invaluable contributions to our knowledge of water resources.

One aspect of the water resource problem which has been given especially close study by the league is water pollution control. I was especially interested, therefore, in the league's position on H.R. 3610 which will increase Federal grants for sewage treatment plant construction. Today I received a letter from Mrs. Robert J. Phillips, president of the League of Women Voters, which under unanimous consent I am having reprinted below:

DEAR MR. BLATNIK: The League of Women Voters hase announced its strong support of the water pollution control bill, H.R. 3610, now about to go to conference between the House and Senate. League members in all 50 States have been studying our national water management problems for the last 4 years. They have concluded that the incentive Federal payment principle embodied in the proposed water pollution control bill is sound, that the program as operated during the past few years has been successful in speeding up construction of sewage-treatment plants and that an expanded program is greatly needed.

The following telegram was sent to the President of the United States today urging his support of this measure:

"The League of Women Voters strongly endorses the continuance and expansion of the Federal incentive payment program to encourage construction of sewage-treatment plans as proposed in H.R. 3610, now in conference between the House and Senate. The principle of stimulating local expenditures through incentive payments by the Federal Government is sound. Pollution-control funds, as administered by the States, have been responsible for needed expansion of sewage-treatment plant construction but much more is necessary to guard the public health and insure industrial growth. Stream pollution is increasing at an alarming rate, creating health hazards, and reducing the amount of usable water. We believe the National Government should assume a larger role than it has up to the present time in expediting pollution control."

We hope that the conference will resolve the differences between the Senate and House versions of the bill in the best possible way to encourage States and local communities to make greater efforts toward controlling stream pollution.

Sincerely,

RUTH S. PHILLIPS,
Mrs. Robert J. Phillips,
President.

Is There a Fuel Crisis?

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. DENT. Mr. Speaker, recently there appeared in the Wall Street Journal, last December 16, an article headed "Is There a Fuel Crisis?"

This is a very serious subject and in answer to this article in the Wall Street Journal, Joseph E. Moody, president of the National Coal Policy Conference, expressed the viewpoints of the coal industry.

One of the major developments in this country in recent years wherein the coal industry — producer-consumer-laborer, including management and labor have joined hands to work out the problems affecting that industry has been the creation of the National Coal Policy Conference. I believe that it is a matter of great importance, and urgency that every Member of this Congress become acquainted with the discussions from both coal and other fuels as to whether or not there is a fuel crisis.

Believing this to be a question of the moment, I herewith submit both the article from the Journal and the reply from Mr. Moody to be made part of the RECORD of Congress.

[From the Wall Street Journal, Dec. 16, 1959]

IS THERE A FUEL CRISIS?

The coal people say there is. And they suggest that Uncle Sam step in. Historically, our fuel industries have grown the freely competitive way. Yet here we have one of them turning its back on that way. If only because the implications reach into all business, a few questions should be raised. What, exactly, are the facts?

Question. What are our fuel problems as the coal industry sees them?

Answer. According to the coal people, we are in danger of running out of fuel. Any lack of energy, they point out, would threaten our economic development. Always near the surface, of course, is the fact that coal's share of the fuel market has shrunk.

Question. What does the coal industry want the Government to do about it?

Answer. Coal asks for a single, overall national fuels policy. In the words of Joseph Moody, president of the National Coal Policy Conference, this would "insure an adequate energy supply for our Nation while at the same time promoting the healthy and balanced development of the American economy."

Question. Precisely what would coal's policy call for?

Answer. The Senate resolution coal's spokesmen introduced in August would have the Government consider "the optimal allocation of the various fuel and energy resources to their most productive economic uses, including such consideration as the geographic distribution of these resources and the development of balanced and interrelated regional fuel economies."

Question. Why wouldn't such a policy be helpful?

Answer. In the first place, the kind of crisis coal talks about simply does not exist. We are in no present danger of running out of oil, natural gas or coal. And the competition among fuels has actually promoted the kind of healthy development coal refers to.

Question. Do the coal interests really want to see their industry controlled?

Answer. Coal denies the policy would mean controls. But the word "allocation" in that Senate resolution is enough to frighten any businessman. In our opinion, it would probably lead to end-use controls on fuels.

Question. Are any of the other fuel industries for coal's program?

Answer. Let them speak for themselves. According to Frank Porter, president of the American Petroleum Institute, "We will fight hard to protect our industry and its customers from unjust restrictions." And John Ferguson, executive director of the Independent Natural Gas Association, says the policy "has as a principal purpose the curtailment and prohibition of the use of natural gas."

Question. What of the consumer? Might he not gain from such a program?

Answer. Fred Seaton, Secretary of the Interior offers an answer: "I cannot believe that it would be appropriate or just for the Government to distort the picture by preventing the function of normal economic forces. I do believe the consumption of fuels should continue to be determined by such forces as relative costs at specific locations, efficiency of use, dependability of supply, cleanliness, convenience and ease of control."

Question. Are you saying coal would be the only beneficiary of the policy?

Answer. Yes. And at the expense of oil, natural gas, and the consumer. At the expense, in short, of our economy as a whole. Coal has failed to show a truly national justification for its policy. If there is a fuel crisis here, it is the one coal's policy would bring on.

Question. But if there is no policy, what of coal's future then?

Answer. It's true that coal's share of the total fuel market has shrunk from 70 percent in 1926 to less than 30 percent in 1959. But coal has a future. Secretary Seaton cites these figures. The United States will use 5 billion barrels of oil in 1975 compared to 2.7 billion in 1955, 19 trillion cubic feet of gas to 9.1 trillion. And we will use 775 million tons of coal to less than 450 million.

Question. Isn't coal essential to our national security?

Answer. Of course it is. But no more so than oil and gas. It's worth remembering the oil industry has been cooperating with the Government since World War I. A good recent example is the commendation the oil industry earned from our Government for cooperating in the 1956–57 Suez crisis to stave off a European oil shortage.

Question. Hasn't a National Energy Board recently been proposed in Canada?

Answer. Yes. But Canada is concerned mainly with export and import of natural gas and oil. This demands some international negotiation at the official level. The board could suggest a domestic policy for all fuels. But the validity for such a program north of our border does not automatically extend south of it.

Question. Elsewhere in the world, what is the trend in fuel coordination?

Answer. The British attitude is fairly typical. Although Britain faces a glut in coal from state-owned mines, Fuel and Power Minister Richard Wood told the miners in November he "could not encourage any hope of measures to restrict the use of oil or to force fuel-consuming industries to use coal."

NATIONAL COAL POLICY
CONFERENCE, INC.,
Washington, D.C., January 4, 1960.

MR. WILLIAM K. WHITEFORD,
President, Gulf Oil Corp.,
Pittsburgh, Pa.

DEAR MR. WHITEFORD: Your Gulf Oil Corp. advertisement in the Wall Street Journal of December 16, 1959, says in bold headlines: "Is There a Fuel Crisis? The Coal People Say There Is." This statement is simply untrue. In previous emergencies such as the world wars, foreign oil largely disappeared from the sea but the railroads and the coal industry were able to step in and carry the tremendous load of furnishing energy to the industrial part of our country. We believe that the railroads and the coal mines and the people that work in these industries should be able to carry that burden of national defense again if called upon, thus the coal industry does not say there is a fuel crisis—it merely suggests that reasonable safeguards be taken to prevent a fuel crisis.

In the next paragraph your advertisement reads: "According to the coal people we are in danger of running out of fuel." I am sorry that I must point out to you again that this is completely untrue. What the coal industry does say is that while the domestic reserves of oil and gas are limited, they are increasing quantitatively each year and we have coal reserves for thousands of years. All of us boast about the great fuel reserves in this country, but because we happen to be fortunate enough to have large reserves of all of the fuels, certainly we should use them wisely.

Your advertisement, in which you appear to speak for the entire oil and gas industries rather than just your own company, appears to imply that the coal industry is seeking some special advantage to the detriment of other fuels. What we really seek is the adoption of a national fuels policy for the good of the entire country and in the interests of national security if an impartial congressional committee of high standing feels such a policy is desirable.

I might point out that you are not quarreling with the bituminous coal industry alone when you say such a policy is not needed, but you are quarreling also with many distinguished and impartial authorities who have studied the question. These groups include the Energy Resources Subcommittee of the National Resources Committee in 1939, the Senate Interior and Insular Affairs Committee in 1951 under the chairmanship of Senator JOSEPH C. O'MAHONEY, the President's Material Policy

Commission (The Paley Commission in 1952) and the Presidential Advisory Committee on Energy Supplies and Resources Policy in 1954. Only a few months ago, the Honorable William R. Connole, Vice Chairman of the Federal Power Commission said: "The need for a national energy policy seems so patently obvious that I am simply unable to understand how thoughtful people concerned with this business can overlook it."

In the first place, coal has absolutely no argument with the domestic oil industry. We believe as it does, that at times when there is a world surplus of oil, there should be some restrictions from dumping both crude and residual oil on our shores, but only to the extent that such restrictions permit the most economic and intelligent development of our own domestic fuel sources—gas, oil or coal. President Eisenhower's Cabinet Committee in 1954 agreed with this premise and said that "If the imports of crude and residual oil should exceed significantly the respective proportions that these imports of oil bore to the imports of crude oil in 1954, the domestic fuel situation could be so impaired as to endanger the orderly industrial growth which insures the military and civilian supplies and reserves that are necessary to the national defense."

The Gulf Oil Corp. advertisement implies that the coal industry would interfere with the national development of the gas industry. Whether or not you can speak for the entire natural gas industry, I do not know, but I do know that it is wrong for you to infer that we would restrict the growth of this fast growing fuel. The consumer in many parts of the country has chosen gas because it is the fuel he likes best for home heating as opposed to oil and coal. This is the consumer's choice.

There is a small fraction of natural gas distribution, which we believe is improper. I refer to the amount of natural gas which is dumped under boilers in coal's natural markets at prices less than cost and prices sometimes as low as one-third the price you and others pay for the same gas to heat your homes. However, this is merely our opinion and we are perfectly willing to let an impartial congressional committee determine whether or not such below-cost sales are in the public interest. The Cabinet Committee on Energy of 1954 concluded that such sales below cost are unfair and "are inimical to a sound fuel economy."

We believe, as you must, that the coal industry and the coal-carrying railroads must be ready to take up a great part of the load of furnishing the industrial East with its energy if foreign oil is shut off again. To do this, we cannot maintain both these industries on a standby basis but must have them operating at a healthy rate. The thousands of our citizens who normally work in the mines and on the railroads who are idle today demand the attention of our entire country. Their welfare and their availability in an emergency seem to me to be vastly more important than permitting a few large oil companies with foreign production to dump their surpluses along our eastern coast in more than normal amounts.

The coal industry wants the fullest and most economic development of all three of our fuels—natural gas, domestic oil and coal. We believe that all of these three fuels have their proper place in the market. We believe that as far as possible, the consumer should have a free choice in the use of alternate energy sources and there should be free and fair competition among all suppliers of domestic fuels. On the other hand, we believe our own national economy and the welfare and livelihood of so many of our own citizens are more important than our being a dumping ground for a world surplus of oil. This seems just as wrong from a national viewpoint as dumping valuable natural gas under boilers at less than cost.

The fact that we believe in these principles doesn't make them right, therefore, we would like an impartial highstanding congressional committee to make the final judgment. If such a committee advocates a sensible national fuels policy, it is not by any means advocating end use control of fuels. We do not want that any more than you do. Bear in mind that the coal industry is complaining about a small percentage of natural gas production and only the quantity of foreign residual oil imported which is dumped on the east coast and exceeds the importations of a base year such as 1954 or 1957.

In closing, I would repeat—the coal industry does not seek to impose an end use control on the Gulf Oil Corp. or its industry. We are intelligent enough to realize that such an imposition is beyond our economic or political powers. We merely ask that the U.S. Congress conduct a study to determine impartially whether a national fuels policy is necessary in the interests of national security. We believe that such a study would be impartial and we are prepared to take our chances as to what the study would reveal. From your advertisement and other statements by your spokesmen, you, apparently, are not.

Sincerely yours,

JOSEPH E. MOODY,
President.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

The Year in Which We Choose

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, it was my privilege to be the guest at a banquet of the American Federation of Government Employees at the Willard Hotel last Saturday evening, January 16, celebrating the 77th anniversary of the Federal civil service system.

The Honorable LYNDON JOHNSON, majority leader of the Senate, was the principal speaker. He delivered a forthright address in which he expressed appreciation for the intelligent, efficient and loyal work of the Government's career employees.

Senator JOHNSON demonstrated an intimate knowledge of our merit system and an appreciation of its good points as well as its shortcomings.

Federal employees and all concerned with preserving and increasing the efficiency of the civil service merit system will be interested in the majority leader's speech which follows:

THE YEAR IN WHICH WE CHOOSE

(Address by Senator LYNDON B. JOHNSON, American Federation of Government Employees, 77th anniversary of civil service, Washington, D.C., January 16, 1960)

It is always pleasant after a busy week to spend Saturday night with good friends. Then you can say the things you have been wanting to say.

I am happy to have this opportunity to visit with you tonight. I am especially happy because this is an appropriate occasion to take stock and to review some of the fundamentals of our Government in the light of the problems of 1960.

We are here to commemorate the anniversary of civil service. For 77 years—nearly half the life of our Republic—it has been the expressed will of our people that their Government should not be operated in the service of partisans. This is the bedrock on which the basic integrity of the National Government has stood and must continue to stand.

And this is the bedrock on which we, as a nation, need to plant our feet firmly in this year of 1960.

TIME FOR PARTISANSHIP

We live in a land in which we have tried to place things in proper categories. We recognize that there is a place for partisanship and a place in which partisanship is not appropriate.

Our political system is based upon partisan divisions—because our people must have a choice in determining the basic policies of our Government. But partisanship running rampant through the operation of our Government would soon lead to the collapse of the Nation itself.

There was a time when our country could afford the spoils system of parceling out Government jobs. Those were simpler times—an age in which the actual operation of Government was largely a matter of routine.

The victors of partisan strife looked upon the Government and its jobs as the proper reward of success. And they also though of the Government as an institution which could be used to perpetuate the power of the victors.

TIME FOR CONTINUITY

The Pendleton Act put an end to that era. It dedicated our country to the proposition that our governmental machinery should be in the hands of public servants who held their jobs because they had demonstrated merit and capacity.

The act also brought into our Government the concept of continuity—that the inauguration of a new administration did not mean the complete dismissal of all of those who possessed the necessary knowledge to keep the day-to-day wheels running smoothly.

No one pretends that civil service has worked perfectly. It has its faults—as does any system devised by the mind of man.

But over the decades, it has built up a core of hard-working, able, competent people without whom this Nation could not stand in the 20th century.

A HIGH STANDARD

It is fashionable in many quarters to deride the civil servant who works for our Government. It is a popular form of public amusement to consider the civil servant a parasite who is living off the hard-won money of the taxpayer and drawing down lush salaries, for little or no work.

I have been connected with the Federal Government in either the legislative or the executive branch for 30 years. In such a vast and complicated establishment, I have, of course, found loafers and incompetents.

But I have found far more dedicated people; hard-working people; far more selfless people. And I think that the standard of performance required by the civil service is fully as great as that required in any field of human endeavor.

It seems to me that those in the Government who are the legitimate subject of partisan activity owe certain obligations to those who are in the civil service.

UPON THE MERITS

A civil servant has relinquished some of the protections which are enjoyed by those who are engaged in private endeavor. The civil servant has tenure; but he does not have—and cannot have—the right to use collective economic force to set the terms and conditions of his employment. For this reason, those who do have the right and authority to set those terms and conditions have an obligation to lean over backward to be fair. Wages, hours, and working conditions cannot be settled at the table of collective bargaining. They can only be settled on the basis of considering legitimate requests upon their merits.

This I believe Congress will do. I think that regardless of the outcome, you will be given a fair shake of the dice.

But I am not here tonight to talk to you about the problems of civil service. There are more appropriate times and places in which, through your able leadership, you can discuss your specific affairs with the Members of Congress who are expert in this field. I do want to talk to you tonight about problems that affect you all as Americans.

YEAR OF DECISION

This year is a year of election in America. There are choices to make and decisions to take.

But what we choose, we do not choose for ourselves alone. With us, on the way that we go—whatever that way may be—will go the hope and faith of free men everywhere and the prospects of generations still unborn.

The responsibility that rests upon America in this young year is awesome. There should be more of us getting down on our knees right now and fewer of us standing on our right to hold the floor.

The office we are to fill in 1960 is the Presidency of the United States. The man we will elect is not going to be god of the universe or a ruler of the world—but he is going to lead our country for 4 years.

The decision we are going to make will be determined along partisan lines. It is right and proper that we should do so.

But it will not be right and not be proper if we permit ourselves to be so divided by partisanship that 1960 will come to an end with our Nation weaker than it was when the year began.

LEGITIMATE ISSUES

There are many legitimate issues to be submitted to—and discussed fully before—the American people. We are entitled to a frank and searching debate upon our national goals.

We must choose between an America that looks with confidence to an ever-expanding future or an America that shrinks into a bygone past.

We must choose between an America that is preeminent or an America that is second best.

We must choose between an America that can lead the world boldly into the age of space or an America that is content to tag along behind another power.

We must choose between an America that has the initiative in world affairs or an America that merely reacts to the moves of others on the international chess board.

We must choose between an America that seeks ever higher standards for its people or an America that believes the best that can be done is to hold that which we already have.

CHOICES WE DO NOT HAVE

In the months that lie ahead it is essential that such issues be fully debated. But it is equally essential that we realize that there are certain choices which we do not have to make.

We do not have to choose between treason and patriotism.

We do not have to choose between bad character and good character.

We do not have to choose between men of ill will and men of good will.

The differences between us are honorable differences of men who disagree over the course that should be followed. They are not the differences between men, some of whom seek to advance and others to subvert our country.

There is ample room for partisanship in discussing the issues of our day. There is no room for partisanship based upon

bigotry—bigotry of race, religion, or section. Against this, we must all be united.

TEST OF MATURITY

And we must also realize that the problems of maintaining our strength and our prosperity will not wait upon the November elections. We cannot ignore the gathering storm while we wait for the verdict from the polls. We are in this year to face with our first real test of the Nation's political maturity in the modern world.

The world—both friend and foe—is watching America this year, looking on it not as spectators, but as judges of the processes by which we set the course to which the hopes of so many others are tied.

If ever there was a need for us to show ourselves responsible in the conduct and in the spirit of our democracy, that time is now, as the world is watching us.

We need more than a great mass of statements. We need more than gimmicks that make headlines. We need more than contrived eloquence.

We need the type of responsibility which can resolve our disagreements without tearing the Nation apart in the course of that resolution.

To this end, the civil service is a hard core of the strength of America. It is the continuous demonstration that our Nation can operate effectively even while we are going through the processes that settle our differences.

This is an anniversary of great significance. And I think that we can draw from it tonight a lesson that our Government is a continuing government which will survive the storm and strife and prove forever that reasonable men can govern themselves.

Address by Hon. Frank Carlson, of Kansas, to National Convention, Association of Wheat Growers

EXTENSION OF REMARKS
OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 21, 1960

Mr. YOUNG of North Dakota. Mr. President, one of the most knowledgeable Members of the U.S. Senate in the field of agriculture and agricultural problems, and one of the best friends of the farmers, is the distinguished junior Senator from Kansas [Mr. CARLSON]. I ask unanimous consent to have printed in the Appendix of the RECORD the text of an excellent address which he delivered on December 10, 1959, before the National Convention of the Association of Wheat Growers, at Wichita, Kans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WHEAT PROBLEM IN PERSPECTIVE

(By Senator FRANK CARLSON, National Convention of the National Association of Wheat Growers, Wichita, Kans., December 10, 1959)

It is indeed a pleasure to meet with the National Association of Wheat Growers at their 10th annual convention.

I want to tell you, personally, some of the things I told your officers and the Members of the Senate last February when I introduced Senate bill 1484, authorizing your comprehensive wheat stabilization proposals.

At that time I told your officers that, in my judgment, the wheat stabilization program, which they had developed and which was authorized in Senate bill 1484, was by far the most comprehensive and the most equitable proposal for wheat that had been developed in recent years. It was indeed an honor and a pleasure to introduce and support your wheat stabilization program in the 1st session of the 86th Congress.

I also told the Members of the Senate, at that time, that wheat producers for the past 5 years have recommended giving up the present outmoded program for wheat. I told my fellow Senators that there would be no wheat crisis today if we had had the vision and the wisdom to adopt a domestic parity program for wheat several years ago.

Last year's recordbreaking wheat crop was grown on an acreage 30 percent smaller than in 1949. Wheat yields have moved up from about 14 bushels per harvested acre in the pre-World War II period to 27 bushels in 1958, and 21 bushels in 1959. This is a record achieved by few groups in America. The wheat producers of America are entitled to high honors for this outstanding performance.

The wheat producers of America also are entitled to high honors for the vigorous market development programs which they have under way.

I have been following very closely the work of the Great Plains Wheat Market Development Association under the direction of my longtime friend, Clifford Hope, and I am indeed proud of the progress that has been made in the short time it has been operating.

Surely no one can say that the wheat growers of America are sitting on their hands waiting for the Government to solve their economic and marketing problems.

I am not one of those who considers the current wheat situation our No. 1 farm problem. I rejoice in the great productive capacity of our wheat producers. I consider it a national asset that we can produce more wheat than is needed for domestic food and for export.

All that is really required at this time is a wheat stabilization plan similar to the provisions of Senate bill 1484 which recognizes the high productive capacity of wheat growers in relation to market outlets available and deals with it in a way which is fair and equitable to wheat producers, to domestic consumers, to feed-grain and livestock producers, and to producers in other exporting countries.

THE BROADER SETTING OF THE WHEAT PROBLEM

I could spend all my allotted time relating our experiences in trying to get fair and equitable wheat legislation passed in the 1st session of the 86th Congress. However, I want to take this opportunity to discuss with you some of the more general problems of agriculture which vitally affect wheat producers. And I want to make a few observations a little later regarding the statesmanship I believe is required on the part of wheat producers and all farm leaders if economic disaster on the farm is to be avoided.

OVERRAPID TECHNICAL ADVANCE

The first broad problem which I want to mention is the overrapid technical advance now going on in agriculture. Farm technological advances are cost-reducing and are largely irreversible. They have made possible our great strides in increased efficiency on the farm. Throughout the last 2 decades output per hour of farm labor has increased at a rate equal to two to three times that of the nonfarm worker.

Largely because of great technical advances in agriculture, food costs have been dropped rapidly in relation to nonfarm workers' earnings. A weekly market basket of food for a family of three, which cost 25 percent of the workers' average weekly earnings in 1958, would have cost 35 percent of their weekly earnings 10 years earlier and 41 precent of their earnings 20 years earlier.

And here is a related item that all too often is overlooked by nonfarm people—although Government costs of farm price support programs are higher than they should be, they equal only 5 percent of the money spent for food at retail. If farm program costs had been added to the cost of food in recent years, workers would have spent only 1 percent more of their weekly earnings for food.

The cost of the weekly market basket of food, plus the current record high farm program costs, take a smaller percentage of the average worker's weekly earnings today than would have been required for the food alone 5 or 10 years ago. These are important facts which must be brought to the attention of nonfarm people over and over again.

But the hard, brutal economic facts for farmers of overrapid technical advance may be summed up in this way:

Where unrestrained competition prevails the rate of increase in farm production is dependent primarily on the year-to-year increase in the use of nonfarm inputs and on the adoption of associated new technologies. These in turn depend on the backlog of cost-reducing nonfarm inputs and technologies available for more general adoption, and the educational, advertising, promotional and credit programs devoted to obtaining their adoption.

Competent agricultural economists tell me that the backlog of cost-reducing technologies, which also are production increasing, are so great at the present time that in the absence of policies for balancing supplies with market outlets available the production of all major farm commodities will continue to expand faster than market outlets for a number of years.

In the absence of Government programs of orderly production and marketing, prices will fall faster that costs can be reduced on both the large and the smaller farms. This too-rapid rate of expanding farm production, in the absence of a realistic general farm program, may well continue, I am told, even though the number of farm-operator families in agriculture drops by one-half or more. There is no assurance that the corrective forces for overrapid technical advance will come into play until much of the agricultural industry has suffered severe financial reverses.

In this connection I call your attention to the often-overlooked importance of the Government farm program in maintaining farm income in recent years. Each year for the past 7 years, $1.5 to $2.5 billion of farm products have been removed from commercial markets by Government loan, storage, and surplus removal operations.

If the supplies diverted to Government storage and disposal, plus the potential supplies held in check by acreage allotments and the soil bank, had been channeled through commercial markets, prices would have been sharply lower than they were. A recent press report indicates that Iowa State University economists conclude that net farm income would have been one-third less for the years 1952–58 in the absence of Government support programs. Another estimate indicates that farm income would have been $4 billion or more lower in most of these years in the absence of existing farm programs.

UNEMPLOYMENT IN AGRICULTURE

Another general problem which I want to talk with you about briefly is the disproportionate burden of unemployment and underemployment which agriculture is forced to carry.

W. E. Hendrix, of the U.S. Department of Agriculture, has been conducting studies of

the low-income farm problem for a number of years. His studies indicate that although the number of low-income farm people has declined in the last decade, on a relative basis, incomes for those remaining in agriculture are lower than 10 years ago.

He finds that monopoly elements in the market structure for manufactured products and for nonfarm labor prevent many, who would like to work at the prevailing wage levels, from obtaining jobs. Only in brief periods of rapid economic growth can all those seeking nonfarm employment find jobs. Since agriculture is a highly competitive industry in a larger world where less than fully competitive markets are widespread, agriculture becomes the escape valve for the bulk of the Nation's underemployment.

In the face of this market structure it is a mistake to put it mildly, to believe that a solution to the current farm problem of overrapid technical advance can be found by withdrawing production controls and lowering price supports in the expectation that sufficient farm people will shift to nonfarm jobs to equalize farm and nonfarm incomes.

CONFLICTS IN BELIEFS AND VALUES

Another general problem facing farmers and farm leaders today is the conflicts in beliefs and value judgments which have come to the fore as farm leaders attempt to formulate realistic policies for an overly dynamic agriculture in our largely industrialized society.

The cultural beliefs and values which we hold today in the rural communities have been transmitted to us from earlier less-industrialized societies The technological revolution sweeping rural America is uprooting these older personal beliefs and values just as ruthlessly as it is uprooting long-established production and marketing practices.

However, personal value judgments and beliefs play a greater role in slowing social and economic change in the rural community than in the urban community, for in the urban community the key decisions are usually taken by a few officers and the corporations. In the rural communities each farm family has an equal voice.

Technical advance poses a dilemma for the conscience of farm people by placing in opposition their desire for equity or economic justice which may involve collective action to achieve orderly production and marketing, and their love of proprietary freedom.

Not all of our premachine age values and judgments must be junked. But our older creeds must be subjected to careful and searching inquiries. To what kind of a life do we aspire in the rural communities in this machine age? To what extent are our older creeds applicable in modern life?

The sharpest value conflicts generated by our highly productive farms and limited markets is a clash between the deep-seated desire for economic justice, and the equally deep-seated desire for proprietary freedom. All of us would prefer more—rather than less—individual freedom in our farming operations. All of us would prefer to do away with price support and production controls if farm prices and farm income would not fall to disastrously low levels.

I am confident that if we will re-examine our premachine cultural and value judgments in the light of the economic facts of the machine age, we can arrive at wider visions as to their essential meanings and we can eliminate many of the conflicts which now prevent community cooperation on a realistic farm program.

THE WHEAT VERSUS THE FEED-GRAIN PROBLEM

With this very brief explanation of some of the more general and deep-seated problems faced by all farmers, I want to turn once again to your primary interest, wheat.

As I said earlier, I do not look upon the wheat problem as the number one farm problem. Wheat has been made a political football—the whipping boy for those who do not know the nature of the farm problem. I recognize, however, that the present wheat program is not adapted to present day conditions. Increases in Government surplus stocks are still continuing and Government costs are far higher than they should be.

I am in favor of moving as rapidly as we can to replace this outmoded program with a comprehensive wheat stabilization plan. But I want to call your attention to the feed-grain problem which makes the wheat problem seem insignificant by comparison.

On September 30, 1959, the Commodity Credit Corporation had 1,200,116,000 bushels of wheat under loan and in inventory. This is a large quantity of wheat. But the Commodity Credit Corporation at that time also had under loan and in inventory 1,921,763,000 bushels of feed grains.

I ask, why have Government stocks of wheat been singled out as the number one farm problem when feed-grain stocks are 50 percent greater than the wheat stocks? I simply cannot understand why wheat has been made the whipping boy when the feed-grain surplus situation, as of today, is far more serious.

A possible explanation might be that improvement is expected in the feed-grain situation in the year ahead. Actually, however, the technical staff in the Department of Agriculture estimates that the carryover stocks of wheat at the end of this season will be increased by 2 to 3 million tons as a result of the 1959 crop being larger than available market outlets, while the carryover stocks of feed grains will be increased by 12 to 13 million tons as a result of the 1959 record feed-grain crops.

Unless there is a change in feed-grain legislation in the next session of Congress there is no doubt in my mind that the 1960 crop of feed grains will again add substantially to Government surplus stocks. As compared with the feed-grain situation, wheat simply is not the problem it is made out to be.

I personally believe that we should pass legislation in the next session of Congress which will deal realistically with both feed grains and wheat. And I believe wheat producers will have to join with the feed-grain producers in the development of a comprehensive program covering both wheat and feed grains if impending economic disaster for both groups is to be avoided.

However, I see little merit in engaging in acrimonious debate in an attempt to modernize the wheat program while ignoring the more serious feed-grain problem.

A MEANS OF IMPROVING FUTURE FARM PROGRAMS

I would like to turn now to a matter which has been on my mind a good deal lately.

In recent months I often have been appalled by the great divergence of opinion among farm leaders regarding the accomplishments of past programs, the nature of the current economic problems facing farmers and the probable economic effects of alternative Government programs. This need not continue. We have a fine, competent technical staff in the Department of Agriculture. We now have the largest staffs on record in the land-grant colleges.

There is no good reason why a larger part of this talent should not be devoted to providing the basic facts needed for a better understanding of farm programs and their accomplishments. In my opinion, if we could more nearly agree on the relevant economic facts we could rather quickly agree on desirable changes in farm price-support legislation.

It has been suggested that perhaps in future general legislation substantial administrative discretion and flexiblity should be permitted for meeting the changing problems in a complex industry. The administrative discretion might be subject to periodic review, however, by providing for an annual accounting of the administrator to the farm groups and to Congress. This annual accounting might take the form of a report to farm and trade organizations covering:

1. The price and income goals for the year just closed.

2. The extent to which the goals were achieved and the contribution of the Government programs to the achievements recorded.

3. The cost to the Government of the operating programs.

4. The proposed price and income goals for the year ahead.

5. Proposed changes (within limits of existing legislation) in the operating programs to more fully achieve the goals.

The Federal Extension Service, for the past 34 years, has been holding highly useful annual economic outlook conferences which are attended by agricultural economists from the land-grant colleges and from the allied industries.

Perhaps what we need, to achieve a better understanding and a better administration of farm programs, is a rather formal annual review of farm program accomplishments at a set of meetings comparable with the national economic outlook meetings.

I am told that the British have a formal annual review of their price-support programs each February. This review is preceded by several weeks of meetings and consultations between the technical staffs of the various Government agencies dealing with food and agriculture and the national farm organizations. These meetings and consultations at the technical staff level result in general agreement as to the relevant facts regarding the price-support programs.

This British procedure seems to me to be wholly desirable and a practice which we could well emulate. The occasion of a formal annual review might also be an appropriate time for the Department of Agriculture to receive suggestions from the farm organizations and the trade groups for improvements in the program in the year ahead. The Secretary of Agriculture, of course, would be free to accept or reject such suggestions.

As I see it, however, an annual review procedure along these lines would go a long way toward providing an agreed set of facts, thus eliminating much of the needless controversy which exists today.

It would force the Secretary of Agriculture and his staff to make a realistic appraisal of both his administrative activities and his recommendations for changes.

Finally, I believe it would provide Congress with the necessary facts to more fully evaluate proposals for changes in farm programs.

In closing let me remind you that it was Senator Capper who secured the passage of the Capper-Volstead Cooperative Marketing Act in the early 1920's as a first attack on the problem of orderly marketing of farm products. The first national legislation, having as its objective the stabilization of farm prices, was passed in 1929 with the active support of President Hoover. President Hoover's first Chairman of the Federal Farm Board's Alexander Legge, the former president of the International Harvester Co., conducted a wide-ranging educational program on the need for production controls for the basic commodities, which was an important factor in the later success of the agricultural adjustment programs of the 1930's.

And I am now looking forward hopefully to the not-far-distant future when we can again reach a wide agreement on the facts relating to agriculture. When we do reach such an agreement on the facts, we can again

build an effective program which will prevent further sharp declines in farm income, reverse the current buildup in Government surplus stocks, and reduce Government farm program costs.

Retirement of Hon. Gordon Canfield

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. MARTIN. Mr. Speaker, there are many satisfactions and pleasures to be derived from service in this great body. There are times, however, when we are deeply saddened. Some of these occasions arise when a friend departs from this earthly life. There are other sad occasions when a Member with whom we have been closely associated announces his voluntary retirement.

One of these moments of deep regret occurred recently when I was informed that my good friend, the Honorable GORDON CANFIELD of New Jersey, announced that he would retire at the conclusion of his present term, after a distinguished service of 20 years as a Member of the House.

GORDON CANFIELD entered the House well equipped by experience for the outstanding services he has performed. He had been secretary for 17 years previously to the Honorable George Seger of New Jersey, whom he succeeded in Congress. It was with keen satisfaction that I watched his progress. There has never been a more diligent, more conscientious Member of this body. He was completely dedicated and devoted to the service of his district, the State of New Jersey and the Nation. He worked so arduously and with such disregard of his own welfare that his health suffered. He could stay on and take it easier, but it is not in his character to accept a lighter burden. His sense of responsibility is so deeply rooted within him, he would feel obliged to give his job all the energy he possesses, and this might further endanger his health.

As a member of the Committee on Appropriations, he has rendered outstanding service to the Nation and to the House. To me personally, he has been a very close associate and a most loyal friend. His departure from our ranks will be a great loss to the country, to his constituents and to the House. We will all miss him and none more than I.

That his retirement is genuinely regretted by all is evident from the following editorial published this week by the American Post, the only Jewish news weekly in northern New Jersey:

A GOOD MAN RETIRES

The decision of Congressman GORDON CANFIELD to retire from his official duties was greeted by all his friends with a deep feeling of regret. We can truly understand the sincere motives which prompted him to take the step. Nobody, but one in similar circumstances, can fully realize the strain which comes to a man in public life who is imbued with the noblest sense of civic responsibility, who takes to heart all the problems, either of the myriad of individuals who come to him for help, advice, and guidance, as well as the weighty domestic issues of the Nation, and its relationship vis-a-vis the whole world. There is a valid reason why GORDON CANFIELD is loved by all citizens, regardless of race, color, or creed, or even political persuasion. Because he was prompted not by political or partisan prejudices, but because he represented the true statesman and public servant. Every candidate for office makes a promise to serve the people. But GORDON did not have to make such promises. He showed by deed that he was a genuine humanitarian, and that he could serve his party best by being good to all. He exemplified in creed and deed the highest conception of all faiths, expressed in the Biblical doctrine: "Love thy neighbor as thyself."

We salute GORDON CANFIELD for his unselfish service to his people, and trust ever to cherish his warm friendship. We feel confident that his retirement does not mean complete isolation from the affairs of mankind. While he has earned his Sabbath after 37 years of devoted labors, we feel that his benigh influence will still be felt in service to his fellow man, unhampered by the tedium of official duties. We extend our blessings to him and his beloved family for years of contentment, happiness, and good health.

Freedom of Information

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, January 21, 1960

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Joplin (Mo.) Globe published January 12 of this year. The editorial deals with freedom of information and the right of the public to know what its Government is doing.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPPORT FREEDOM OF INFORMATION

America's newspapers have made much of late of freedom of information. This subject should be particularly near and dear to Missourians, since a national freedom of information center has been established at our own University of Missouri College of Journalism.

But what does this issue mean to you? Is this a plot to further their own interests, fostered by and for newspapers with profit in mind?

The pressures of modern economic trends have greatly increased costs but few have lost sight of the real reason for their existence—to keep their readers informed.

The people's right to know is the real theme behind freedom of information. It is not profitable in dollars to a newspaper to seek out with every means available all of the information that can be obtained. As a matter of fact, it is often quite expensive. But it stems from a dedication to the purpose of supplying the people with all of the facts, to enable them to make fair and accurate decisions.

Modern bureaucrats in Government feel that their personal rights transcend those of all others. Too many elected officials today yield to the desires of the few—not the majority. During war, rights were yielded for the overall good of the Nation. Censorship, restriction, and preferential treatment were permitted. There are those today who feel these are inalienable rights, but there are no allowances for these in our priceless Bill of Rights.

An informed public is an intelligent public. In all of today's media, none can more completely and intelligently inform the public than the daily newspapers. When your newspapers are denied access to information relative to individuals and departments supported by your taxes, you are denied this information.

You may be a bank president or a ditch digger, but you are "boss" of those who work for public pay. They collect your money. You are stockholder, director, and executive. It is your right to know.

Newspapers are as human as those who man them, and make human mistakes, often. When they err, correct them. As subscribers you have this right. But never let personal differences cloud the issues involved in this great Nation's guaranteed freedom of information.

The Real America

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. GEORGE. Mr. Speaker, a very interesting editorial appeared on Thursday evening, January 14, in the Lawrence Daily Journal-World. This newspaper is published in Lawrence, Kans., which is also the site of the University of Kansas and the Haskell Institute.

Mr. Dolph Simons, and more recently his son, Dolph, Jr., who is his associate publisher, over the years have supported higher education and contributed materially to the outstanding character of educational institutions in Kansas.

The editorial, Mr. Speaker, which I ask be printed with the extension of my remarks in the Appendix of the RECORD shows how very human even newspaper editors can be, and I believe every Member of Congress should have an opportunity to read this splendid article.

AMERICA AT ITS BEST

Where do you go to find the real America?

Actually there is no one place to look because America includes the factories, the farms, skyscrapers, Miami, Fifth Avenue, the desert, and all the other places, large and small, which are components in the greatness and goodness of our country.

But there is a place where America seems near its best; where the genuineness and goodness of people are strikingly apparent, and where men and women appear as average Americans—not as poor or rich, not in obvious racial groups, nor as any special class or group—just normal people.

And where does this picture exist? Strangely, in the church in the small town when neighbors and friends gather for funeral services for a longtime neighbor and friend. Surely there is no place where average people give a better picture of America at its best.

The day started early at the church when members of the women's society and the

building caretaker arrived after quick breakfasts to get the pretty old white church ready for the gathering. The caretaker soon had a hot wood fire going in the pipeless furnace and the ladies divided their attention between dusting the auditorium, and getting the cookstove started in the basement.

The cooking stove is an important part of small town church funerals because a noontime luncheon for the family and visiting relatives is an essential part of the day. Really it isn't a lunch, but instead a sumptuous dinner with both roast beef and baked ham, along with mashed sweet potatoes topped with marshmallows, home processed sweet corn, an old fashioned tart salad in gelatin, homemade hot rolls and delicious cherry pie.

The noonday meal was almost a homecoming; not a gay party, but a welcome reunion of friends who had not seen each other for a long time, in some cases many years.

After the meal the family and all the relatives visited while the church ladies pitched in to wash dishes and get everything in orderly shape before the services began at 1:30.

The church is small with rows of individual theater-type seats facing from two side directions. Everyone sitting in one section can almost look into the faces of those seated on the other side. And what clean and handsome faces. Everyone had on Sunday clothes, although this was only midweek, and there wasn't a soiled spot or a smudgy face in the assembly which filled the little church.

More than half the people were from farms. Wholesomeness was in every face. Tears were not common but each face was serious with reverence and compassion. No one fidgeted and most of the time nearly all the eyes were focused on the minister, a kindly white-haired gentleman, perhaps in his early seventies, who spoke with all the earnestness and sympathy he could offer.

When eyes did wander they saw the wall plaque which said 62 had attended Sunday school and church last Sunday, and 43 were here "This Sunday." The drop in attendance in one week was contrary to the trend in collections; $6.43 last week, and $9.05 this week.

An electric organ, halfway concealed by flowers, gave the services a modern touch and music provided by the kindly appearing lady was suitable for any church—every surging hymn was one you had heard dozens of times before. The young male soloist seemed at a disadvantage by being so close to his audience but he sang with much feeling and not as a professional soloist. At least one of the listeners had the urge to applaud his efforts which were so sincere, if lacking in skill and tone.

The flowers seemed to speak for themselves, somehow saying "We are here as a genuine expression of friendship and sympathy, not simply because sending flowers is the thing to do." And getting pretty floral displays to a funeral in a small town where there is no florist is not the easy thing to do that it is for the city dweller.

The funeral lasted nearly an hour, largely due to the lengthiness of the remarks of the devout and gentle minister. But it didn't seem so long because the man was trying so hard to express his love of God and appreciation of Christian teachings. Calm and gentle and faithful.

Everyone went to the cemetery a mile from town. Graveside services were brief and then came a round of warm handshaking. The family and a few close friends were invited to "stop by" at one of the neighbors before starting the drive back to the city. The neighbor lady had hot coffee, homemade cookies, and sugared rolls, which tasted good after the chill of the wind at the cemetery. She was a friend, a true friend.

Driving away from the little town most anyone would agree that people of small communities perhaps are more average Americans than city groups, and that attendance at a small town funeral where an old respected citizen is given final tribute is a place to come close to finding the real thing in American life.

Lyndon and the Liberals

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 21, 1960

Mr. PROXMIRE. Mr. President, Robert Novak, of the Wall Street Journal, is one of the most perceptive and shrewd reporters in the Capital. In this morning's Wall Street Journal appears an analysis by Mr. Novak of the recent policy and conference discussions among Democratic Senators. Without agreeing with everything Mr. Novak reports, I offer this analysis to my colleagues as an unusually discerning evaluation.

Mr. President, I ask unanimous consent that this article by Mr. Novak be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

LYNDON AND LIBERALS—SENATOR JOHNSON'S VICTORY OVER INSURGENT DEMOCRATS MAY ACTUALLY BOOST THEIR POWER

(By Robert D. Novak)

WASHINGTON.—The fires of liberal rebellion against Senate Democratic Leader JOHNSON seems to have subsided, apparently extinguished by the tactician from Texas. Mr. JOHNSON survived the insurrection of the outnumbered liberals simply by agreeing to hold a series of caucuses, where he can find the votes to beat them any time he wants to.

But is Mr. JOHNSON so firmly in command as it might seem?

Actually, the tiny band of uncompromising liberals—so accustomed to defeat in behind-the-scenes power fights—may be winning this time. For their goal is not anything as dramatic as the ouster of Mr. JOHNSON or any kind of open victory over him. Instead, they are trying to mobilize the Senate's big Democratic majority behind New Deal programs. And since they don't want this mobilization tempered by a Johnsonian tendency to meet the Eisenhower administration halfway, most of the liberals are convinced that Mr. JOHNSON's wings must be clipped.

The core of the liberal's problem in the Senate, however, is not Mr. JOHNSON but something much more basic: Their lack of numbers. They come from the populous Midwestern and Eastern States which control the nomination at national conventions but are outvoted by the West and South in the Senate, where each State has two votes and only two votes no matter how populous it mey be. Then there is the matter of Senate seniority. It has placed southern conservatives, hostile to liberal programs, in command of Senate committees handling key domestic legislation—finance, banking, judiciary.

These basic weaknesses of the Senate liberals have been all the more troublesome for the past 7 years because of the absence of a liberal Democratic President who could crack the whip of party discipline on Capitol Hill. Certainly, the New Dealing Advisory Council of the National Democratic Committee has been an inadequate stand-in for a National party leader. That's where Mr. JOHNSON comes in, rushing to fill the power gap. And as far as most liberals are concerned, he has practiced too much moderation and not enough militancy in exercising full suzerainty over the Senate.

GUERRILLA TACTICS

Obviously, the minority status of the Senate rebels bars direct action in the style of the purge of Southern conservative committee chairmen by Democratic progressives during the first Wilson administration almost 50 years ago. That's why their revolt more resembles a legalistic guerrilla war than open parliamentary combat. And in their drive to push Mr. JOHNSON to the left and curb his freedom of action at the same time, their most effective weapon promises to be the long-neglected Democratic caucus.

A caucus yesterday on Federal aid to education showed that the liberal strategy seemed to be working. Not only was there no talk of watering down a Federal school construction bill, but the caucus generated support for adding aid for teachers' salaries. What's more, Mr. JOHNSON appeared on the verge of backing the broadening of the measure.

Senate veterans scoff at the idea that a caucus of quarreling Democrats ever could displace the mysterious operations of the inner circle headed by Mr. JOHNSON—operations that probably are half fact, half myth—in determining the way of the Senate. But to appreciate the importance of Mr. JOHNSON's agreement for caucuses, take a look at last year's fight over housing legislation—as it was without caucuses, as it might have been with them.

As it was, Mr. JOHNSON kept whittling away at the scope of the housing bill in an effort to reach some compromise with the administration. Moreover, he hurried through the Senate an administration-sought increase in the maximum interest rate on veterans housing as a separate bill; liberals had wanted to keep this proposal in a catchall housing bill as a bargaining point to try to stave off a veto. If the liberals had been able to press their demands in caucus, Mr. JOHNSON might have been less free to urge compromise. If strategy had been hashed over in caucus, he could not have surprised the liberals by suddenly bringing up the veterans housing measure—at least, not without being vulnerable to charges of bad faith.

But since Mr. JOHNSON still commands the loyalty of a vast majority of Senate Democrats and can overwhelm the liberals in just about any clear-cut voting test in caucus, why should the prospect of caucuses make the liberals smack their lips in anticipation? The answers lie within Senator JOHNSON himself, his personality, and his ambitions.

For a shrewd parliamentary manipulator who has spent most of his adult life in politics, Mr. JOHNSON is extraordinarily sensitive to criticism—particularly criticism from his colleagues. This sensitivity has been all the more acute since Mr. JOHNSON last year set his sights on the presidential nomination. Consequently, he will think twice before going to the mat in caucus with outvoted but vocal liberals.

Furthermore, the liberals believe that Mr. JOHNSON's aid, however grudgingly given, is all that is needed to transfer Senate Democrats into a more militant band. For the Senate insurgents do not face the seemingly insurmountable obstacles that are plaguing a newly organized band of House Democratic liberals. Southern conservative influence and the effectiveness of the GOP-Dixiecrat coalition are far more pronounced in the

House than in the Senate, and the Senate has no counterpart of the House Rules Committee to block all manner of liberal bills.

And despite all their talk of militancy, the Senate liberals are not aiming at any brave new world. For example, the list of subjects to be aired in caucus will not include the civil rights question, a bitterly divisive one for the Democratic Party. The liberals will be quite content if the Senate builds a record on issues that have been kicking around for some time—enactment of Federal aid to education, broader coverage for the minimum wage, defeat of the administration's effort to lift the interest ceiling from Government bonds. They realize that a broader, more exciting program would need the help of a Democratic President. Anyway, many admit privately that the Democratic Party just isn't coming up with new and startling ideas.

IMPERSONAL ISSUES

To achieve their limited goals, liberal ringleaders believe they must confine their rebellion to impersonal issues and avoid personal challenges to Mr. JOHNSON. That's why they view as a tactical error the effort by Tennessee's Senator GORE to strip from the Senate leader the power to appoint members of the Senate Democratic policy committee, a group of minimal influence in any event. The Gore resolution produced in caucus what amounted to a victory for Mr. JOHNSON. The result: Mr. JOHNSON won by a 51 to 12 vote.

Accordingly, the liberals are reticent, even in private, to concede the anti-Johnson nature of their campaign; they claim publicly they are motivated by a desire for better Democratic procedures, not dissatisfaction with Mr. JOHNSON. But one liberal candidly describes the insurgent aim this way: "We want to put irresistible pressure on LYNDON in caucus, to make it so uncomfortable for him that he has to go our way."

Moreover, something of their true feelings about the Johnson regime slipped out during the heat of Senate floor debate when Senator GORE declared: "As a result of the constant compromise with principle, we ended the session (last year) in virtual rout on economic issues." Mr. GORE quickly recovered, however, to praise Mr. JOHNSON as the "ablest Democratic leader that has served in the Senate in my lifetime."

Ironically, Mr. JOHNSON appeared ready this year to assume a more militantly liberal stand on his own initiative. For one thing, his advisors contend that such a leftward drift is needed to build his Presidential backing in the North.

CHOPPING AWAY

But even if the liberals were convinced that Mr. JOHNSON would move to the left without being pushed, they would rather push him there—and diminish his power in the process. Liberal Senators don't like the prospect of a liberal Democratic President—if one is elected—dealing with Mr. JOHNSON next year on something like equal terms. Thus, they would like to establish a precedent of caucus rule that could be used to implement the recommendations of a Democratic President.

Although the liberals probably didn't plan it that way, the immediate political impact of their revolt has been to chop away at Mr. JOHNSON's stature as a possible Democratic Presidential darkhorse choice. Mr. JOHNSON's drumbeaters have been arguing that he is no Dixiecrat, that he has closer ties to the New Deal than any other Democratic hopeful. Furthermore, they have pointed to his skill in leading the prima donnas of the Senate without serious rebellion. The image of Mr. JOHNSON tussling with liberal leaders damages even if it doesn't destroy both these arguments, no matter how many times he may win by 51 to 12 votes.

Mr. JOHNSON's Presidential rivals in the Senate have been discreet enough to stay away from the heart of the battle. True, Minnesota's Senator HUMPHREY has associated himself with the insurgents but has kept at arm's length from the center of the fight; Senators SYMINGTON of Missouri and KENNEDY of Massachusetts have ignored it.

But if any of them consider Mr. JOHNSON a serious potential rival, they couldn't really be blamed if they are grinning about the current course of events in the Senate.

The Late Honorable Albert Joseph Engel

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mrs. BOLTON. Mr. Speaker, one of the very stimulating experiences of my congressional years was my contact with Albert Engel who represented Michigan's Ninth District for many years. His energy always seemed inexhaustible, and no matter how great the frustrations he had to meet, he was never disheartened. Leaving Ohio where he was born, he served Michigan in her senate with a deep loyalty. Here in the House he spent himself overgenerously in an effort to gather the truth and use it to reduce extravagance and waste. One could not but respect and admire Albert Engel for what he stood for and for what he was.

[From the New York Times, Dec. 4, 1959]

ALBERT J. ENGEL, LEGISLATOR, DIES—FORMER U.S. REPRESENTATIVE FROM MICHIGAN INVESTIGATED EXCESSIVE EXPENDITURES

GRAND RAPIDS, MICH., December 3.—Former Representative Albert Joseph Engel, Republican of Michigan, died today at Butterworth Hospital of complications to injuries he suffered September 30 in a traffic accident. He was 71 years old.

Surviving are his widow, Bertha; a son, Albert, Jr.; two daughters, Mrs. Robert Cavanagh of Dayton, Ohio, and Mrs. James Strahle of South Bend, Ind.; a sister, Mrs. Harold Aylor of Bay Village, Ohio, and eight grandchildren.

FOE OF BIG SPENDING

Representative Engel made a reputation throughout his legislative career as a dynamic, one-man investigating force of excessive Government expenditures. He was never at a loss for such scandals to expose.

His most famous exploit was his lone tour of 48 war plants in 44 days in January and February of 1943. He drove his own car throughout the Midwest staying overnight in cheap tourist homes and descending unannounced on war plants during the day.

Afterward, Mr. Engel reported to Congress his shock at corporations earning 1,700 percent of their investment, stockholders gaining up to 5,300 percent, unskilled workers earning more than two-star generals, and dishwashers getting $250 a month plus maintenance.

The remedies he demanded were: better recapture by the Government of excess profits on war work and lower ceilings on wages.

During that tour Mr. Engel had a serious accident when a railroad train hit his car near Akron, Ohio. The Representative had 22 stitches taken in his head, but resumed his tour in a rented car in 3½ hours.

Earlier, during his 10 years as chairman of the military expenditures subcommittee of the House Appropriations Committee, Mr. Engel made a tour alone of new Army camps in the East in 1940 and 1941. He charged that of $800 million to build these camps, $250 million had been wasted.

MADE PENTAGON CHARGE

In 1944, Mr. Engel charged that the War Department had spent $86 million to build the Pentagon, whereas Congress had set a limit of $35 million upon that building.

He was interested not only in saving money but also in spending it efficiently. Thus, in 1939, during the defense buildup for World War II, Representative Engel was responsible for lowering the cost of producing the Springfield .03 rifle, of adopting the Garand rifle as the new basic weapon, of scrapping the 75-millimeter field cannon for the more powerful 105-millimeter.

Mr. Engel was born in New Washington, Ohio, on January 1, 1888. His parents were Alsatians who emigrated to Ohio during the Franco-Prussian War. From his father, a schoolteacher and musician, the youth learned French and German, as well as the piano.

Despite this cultural background, he left school after the eighth grade for work in the logging camps of Michigan. While working in Chicago as a youth, he completed high school at night; then he went through Northwestern University Law School in 3 years.

From 1910 to 1916, Mr. Engel practiced law in Michigan. He was selected prosecutor of Missaukee County in 1916, his first public office.

ON PERSHING'S STAFF

His term was interrupted, however, by service in World War I. He served as a linguist on General of the Armies John J. Pershing's staff in France and Germany, leaving after the armistice as a captain.

During his first term in the Michigan State Senate, beginning in 1921, Mr. Engel exposed financial scandals in State prison administration. He was twice defeated for Congress before winning election in 1934.

Although a Republican, Representative Engel often showed independence from his party. In 1936 he defeated an effort by Republicans to blame the Democratic administration for failure to evacuate hurricane victims from the Florida keys.

Always economy minded, Mr. Engel opposed the Townsend old-age pension plan in 1936. He fought against big arms appropriations after World War II. He was no stooge for big capital, however, and led the successful fight against the Republican 20-percent tax cut in 1947. He charged the measure was a "rich man's bill" and unfair to small wage earners.

After eight terms, Mr. Engel left Congress to seek the Republican nomination for Governor of Michigan. Never an organization stalwart, he ran a poor third in the primary of 1950.

Mr. Engel was a short, stout man, 5 feet 7 inches and 235 pounds, and had prodigious energy. While on the road during his many long tours of investigation, he was able to drive and work long days with little sleep, eating sandwiches in his car. At home, he lived modestly.

[From the Washington Evening Star, Dec. 3, 1959]

ALBERT J. ENGEL DIES, SERVED EIGHT HOUSE TERMS

Former Representative Albert J. Engel, Republican, of Michigan, who vigorously fought waste in Government spending, died today in Grand Rapids, Mich., at the age of 73.

For 10 years he was a member and later chairman of the House Armed Services Appropriation Subcommittee. He achieved a

reputation as a vigilant watchdog over military expenditures.

He made a one-man tour of military bases during World War II, seeking to locate waste and extravagance. But he also fought needless expenditures in all branches of Government.

In 1935, Mr. Engel was elected a Representative from Michigan's Ninth District. He served eight terms, retiring in 1950 to seek the Republican nomination for Governor of Michigan. But he was defeated in the nomination race by former Gov. Harry Kelly.

In recent years, Mr. Engel had devoted his attention to operating a 1,400-acre tree plantation near his Lake City home in western Michigan.

NATIVE OF OHIO

A native of Ohio, Mr. Engel was elected to his first public office in Michigan as Missaukee County prosecutor in 1916. He was elected in 1921 to the State senate and served three other terms, beginning in 1927.

In 1950, Mr. Engel revolted against the actions of Representative CANNON, chairman of the House Appropriations Committee, who rushed through $27,266 million in administration spending plans after 152 minutes of consideration. Mr. Engel claimed this was spending $3 million per second.

During World War II Mr. Engel contended that workers in war plants in some instances received pay about equaling that of the highest officers of the Army.

HIT HIGH WAGES

In 1940 Mr. Engel blamed the Davis-Bacon Act and the Labor Department's rulings under it for "outrageous wages" received by structural steel workers who erected temporary supports for the age-weakened roofs over the Senate and House Chambers. He also fought District or Federal Government employees holding jobs on outside work when on annual leave or during their off hours.

For a time, he was a member of the District Subcommittee on Appropriations of the House and took a deep interest in District affairs. He felt this job took time away from his constituents, yet he was an active proponent of an equitable Federal payment toward running the Capital.

He knew the value of a dollar, for he had been a roustabout in a Michigan logging camp, and once in Chicago had no job and only $1.50, of which 50 cents was in each of three pockets so he could not lose it all at once. Even when a Representative, on his one-man investigations, he could do with a 25-cent breakfast, drove his own car, and carried a notebook and a 28-year-old camera, gathering facts about waste.

Mr. Engel's efforts caused a shakeup in the Army's contract-award system and personnel and enforced remedial measures.

Farm Writer French Retires After 34 Years on Journal Staff

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 21, 1960

Mr. WILEY. Mr. President, all of us recognize the power of the press for informing and influencing public thinking.

Particularly, in a free country, the press, as well as other forms of mass media, has a great responsibility for providing information to maintain a well-informed citizenry, upon which depends the future of freedom.

In the newspaper, as in other fields, the history of progress is really the story of the contribution of talented, dedicated individuals to their vocation; of unstinting devotion to high principles; of pursual of their ideals; of relentless efforts to do a good job.

Today, I would like to pay tribute to one such individual, Lewis C. French, of the staff of the Milwaukee Journal, one of the great newspapers in the country.

For 34 years, Lew French has covered thousands of stories in a wide variety of fields. From readers of the Journal—and particularly from representatives of these fields—Lew has received the kind of respect that goes with a job well done.

Especially in agriculture, the analytical insight and outstanding reporting of the pen of Lew French has made a real contribution.

Now, Lew is retiring from the staff of the Journal. With him go the warm feelings of affection, high regard, and best wishes, not only of his associates on the Journal staff but also of the thousands of readers who have benefited from his writings over the years.

Exemplary of the splendid contribution which one individual has made to the newspaper profession—a fundamental institution in American life—I ask unanimous consent to have an article entitled "Farm Writer French Retires After 34 Years on Journal Staff" printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM WRITER FRENCH RETIRES AFTER 34 YEARS ON JOURNAL STAFF—COVERED BIG STORIES, BUT LIKES TO RECALL ARTICLES THAT HAD A HUMAN TOUCH

Lewis C. French of the Journal staff, a farm boy who became one of the Nation's outstanding writers on agriculture and conservation, retired Saturday.

In 34 years of reporting for the Journal, French covered thousands of stories ranging from vice investigations to the campaign to rid Wisconsin rivers of pollution. He was honored a dozen times by organizations, including the University of Wisconsin regents and the American Association for State and Local History.

He had his own formula for reporting in competition: "Figure out how a cub would go after the story, then don't do it, and the chances are you'll come up with something the competition wouldn't find."

A REAL FRIEND

The success of this formula—plus French's bulldog tenacity in pursuit of a story and reputation for utter integrity—was reflected in the tributes paid him.

"We recognize him as a real friend, although he doesn't agree with us always and stands his ground," the Farm Bureau said in 1954 when it awarded him a plaque for service to agriculture. "His reporting is always honest, accurate, fresh, and colorful."

French, now 66, came to the Journal on New Year's Day in 1926 as a member of the business news desk and became financial editor before switching to general reporting with emphasis on farm news in 1934. He served 1 year at the Journal's New York bureau.

PLAYED FOOTBALL

Before coming to Milwaukee he had been a football star at Janesville High School, a top sergeant in the artillery in World War I, a supervisor in the parts and service department of General Motors Corp. at Janesville, and a reporter for the Janesville Gazette and the Duluth (Minn.) News Tribune.

French covered some of the most important stories of his time—the stock market crash of 1929, the bank holiday of 1933, the end of prohibition, the development of the soil bank and the postwar crop surpluses—but it is indicative of his character that these are not the stories he recalls most fondly.

In a reminiscing mood he prefers to talk about the time the people of Prentice turned out to honor their doctor. "You should have seen the expression on those faces." Or the pastor at Fort Atkinson who never lost his faith and never stopped preaching although he knew he had an incurable disease. "I rewrote that story three times to get some of the tears out."

He likes also to talk about the men, many of them from the University of Wisconsin, who have waged unselfish battles to improve the life of people in rural areas and to conserve the natural resources and beauty of Wisconsin.

"I like agriculture—it's so clean," French said, "and these men are the greatest in the world."

French was born February 11, 1893, on the family farm between Napersville and Warrenville in Illinois. His father later moved to a farm at Belvidere, Ill., and finally went into the livery stable business at Janesville.

Of his high school football days at Janesville, Fullback French recalls proudly that his team beat Beloit and that he was priviledged to play with Hercules Edler, who became a UW gridiron star.

BOY, WAS HE FAST

"I was supposed to block for Hercules," French said with a smile, "but my main job was keeping out of his way. Boy, was he fast."

In connection with his athletic activity, French started writing about high school sports for the Janesville Gazette and this was the start of his career in journalism. After graduation he went to work on the Gazette sports staff.

Attracted by the boom town atmosphere of the Minnesota iron ranges, he went to work for the Duluth News Tribune shortly before the United States entered World War I. He served as a correspondent at Virginia and Hibbing.

ENLISTED IN ARTILLERY

When the United States did enter the war, French enlisted in the artillery. He was trained in the San Francisco area and rose to the rank of sergeant before being shipped overseas to France. In the fighting in France he became first sergeant in charge of his artillery unit, and he lost part of his hearing.

After the war he returned to Janesville, where his widowed mother was living. Largely because he was partly deaf, he left newspaper work to find employment with General Motors.

Operations restored his hearing and he headed back to journalism with an idea. He sold Harry H. Bliss, owner of the Gazette, on making agriculture a regular newspaper beat. French believed that in the Janesville area, and everywhere else for that mat-

ter, the farmer was being neglected as a source of news and features.

BANKERS WERE REPAID

He believed that a newspaper could do much to help farming by carrying articles on what individuals, farm experts, and organizations were doing to improve agriculture.

French became one of the first farm editors, putting out a weekly farm page that he believes was the first regularly scheduled page of its kind to appear in a newspaper.

Carrying out his philosophy of aiding the farmer, he borrowed money from banks to take 18 carloads of Rock County cattle on a tour of show rings. The promotion idea worked—Rock County gained a national reputation for livestock and the prizes that they won enabled French to pay back the bankers.

"They got back every cent," he said, "and were they ever surprised."

SPECIAL ATTENTION TO YOUTH

When his mother died, in 1925, French left Janesville and went to work for the Milwaukee Journal. On the Journal he received his greatest recognition for articles on agriculture and conservation.

In these articles he carried out the Journal's long-standing policy of opposing practices that were damaging natural resources and of encouraging campaigns such as those to rid cattle of disease, to clean up rivers, to reforest the cutover areas, to improve conditions on farms.

JUST ONE THING TO DO

And through it all he paid special attention to rural youth projects, assisting 4–H members and Future Farmers of America.

"They are the farmers of tomorrow," he would remind anyone who challenged the importance of youth activities.

In 1937, French's story about the national corn-husking contest was reprinted in a journalism textbook as an example of outstanding feature writing. The dean of the University of Iowa journalism school asked French to comment on how he had handled the story.

"As with other news and feature stories, there was just one thing to do about it," French replied, "just write what you saw and heard."

The first annual award of the Epsilon Sigma Phi, a fraternity for agricultural extension workers, was given to French in 1947 for outstanding contributions to Wisconsin agriculture.

In 1950 French was given an honorary Wisconsin farmer degree at the State convention of the Future Farmers of America, and in 1952 the Racine chapter made him an honorary member for his interesting and informative articles.

RECEIVED AWARD OF MERIT

The American Association for State and Local History lauded the Journal in 1953 for important contributions to the agricultural history of the State represented in the reporting of Lewis French over many years.

The award of merit of the National Association of Conservation Education and Publicity was given to French in 1953.

Flood Control

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. LEVERING. Mr. Speaker, 1 year ago today the district which it is my honor to serve in Congress, the 17th of Ohio, was hit by one of the biggest, if not the biggest, floods in its history. I made a hurried flight from Washington to render whatever aid I could to the thousands of men, women, and children literally driven from their homes into the bitter cold by waters on a rampage from the swollen streams. Other parts of Ohio and adjoining States also experienced untold human suffering and material damage from this catastrophe. The American Red Cross reported that a total of $2,424,485.95 in disaster relief alone was spent in the area during the January–February period. Of course, this was only a drop in the bucket compared to the grand total representing lost furniture, fixtures, machinery and equipment, grain, livestock, water systems, roads, dikes, and, in some instances entire homes.

This was indeed a sad story but the greatest tragedy of all lies in the fact that it could have been averted by sensible flood prevention measures.

We are all aware, of course, Mr. Speaker, that flood control is expensive but we also know that floods are infinitely more costly.

I have been charged, on occasion, by those who oppose progress as a spender because of my efforts on behalf of programs for the preservation of the things we hold dear in this Nation. I want to make it clear, Mr. Speaker, that although I am by nature tight with the dollar I have no hesitancy in fighting for programs that insure the future of our people, even if it means I will be labeled a spender for doing so. Of course, no one should tolerate waste or extravagance in any program, even a good one. It seems to me that the real question is how and for what we spend our money that really counts. If the balance sheet of our Government indicates that what we appropriate for builds up the asset side of the ledger in the way of greater security for our people in the form of manageable rivers and streams and in other things we are trying to do, then I think we are on sound ground. It is when our liabilities are allowed to exceed our assets on the books that we find ourselves in trouble.

This is why, Mr. Speaker, I have been working tirelessly since taking office a year ago to procure for my district flood control assistance from our Government wherever needed. I am delighted to report that we have had the utmost supports of the U.S. Corps of Army Engineers and the Department of Defense at all times.

Upon our request, the engineers promptly rebuilt the dike at Mount Vernon, Ohio, which had given way to the raging waters of the Kokosing River a year ago. Swift action here prevented on February 10, 1959, a repetition of what happened only a few days earlier on January 21. The corps also responded to the call for help on Dry Creek. Then, too, Federal assistance in the way of funds was extended to Mount Vernon, Newark, and other areas to relieve the costs of rebuilding public facilities on the long road back.

BLACK FORK CHANNEL IMPROVEMENT PROJECT

I am glad to report that at long last the Congress last session approved funds for the completion of the Black Fork channel improvement project below Charles Mill Dam in Richland and Ashland Counties. This achievement in my mind is a real tribute to the hundreds of people who assisted me in many ways with evidence of need as we appeared before the Committee on Appropriations.

Mr. Speaker, I, and the good people I represent in the 17th Ohio District, are indeed grateful to the House Committee on Public Works which last year approved my request for flood control studies by the Army Engineers on the Licking River system in Licking County, Ohio; on the Clear Fork and Rocky Fork Creek, in Richland County, Ohio; on the extended study of the Kokosing River Basin, Knox County, Ohio; and on Killbuck Creek, in Holmes County, Ohio.

I trust that I will have the continued assistance of all those back home who have heretofore held up my hands in my efforts for flood-control projects and that I can depend on the same sympathetic understanding and support which I have received from my colleagues in the Congress.

Objectionable Practices of Chicago Board of Trade

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 21, 1960

Mr. YOUNG of North Dakota. Mr. President, I have been deeply concerned over the practices carried on by the Chicago Board of Trade. Their policies have usually been selfish and shortsighted, especially under their present leadership.

The August 1, 1959, edition of the Prairie Farmer, one of the more reputable farm publications, contains an excellent article on this subject. It gets right to the heart of the practices carried on by the Chicago Board of Trade.

Mr. President, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Prairie Farmer, Aug. 1, 1959]

SAYS FARMERS SHOULD SIT ON BOARD OF TRADE DIRECTORATE

A prominent grain trader has sharply reprimanded the Chicago Board of Trade and has asked that farmers be put on its board of directors.

Daniel F. Rice & Co., a member of the Chicago Board of Trade, charged that the board is dominated by warehousemen and is no longer properly performing its duties to the farmers and the public. The whole of the exchange, Rice charged, is run in the short-term self-interest of the deliverers of adulterated grain.

REVAMP CONSTITUTION

He urged that an investigation be made of Chicago Board of Trade practices and that its constitution be revamped to require representation for town members and farmers.

Rice & Co. said the Chicago Board of Trade is a public institution. It should be run in the interest of the public. It is engaged in the business of marketing farmers' grain. It should be run in the interest of farmers.

Existing contract terms and freight rates are hammering the price of grain down, costing farmers hundreds of millions of dollars every year.

Until the advent of the Government's support program, many of the grain warehouses were in dire straits. In the past 20 years, sustained and nourished by the dole of Government grain warehousing income, the warehouses now present themselves in arrogance as the powers of the marketplace.

There is a place and function for warehousemen in the grain trade, and certainly in the Chicago market, but it would be well for them to remember, and for the market to note it, that they are only part of the total marketing scheme, not the entire marketplace.

Not so the contracts that are sold on the Chicago Board of Trade. They are totally unrealistic. The contracts traded on this exchange are loaded so that delivery cannot be taken, the grain ordered out cannot be sold at a price equal to the current delivery price. Warehouse grain taken on delivery and sold on the spot market just across the room from the pit sells at fantastic discounts under No. 2 cash grain being sold on spot.

To prove our point, even at considerable expense to ourselves and knowing full well the beating that we would take, we took delivery on some soybeans and wheat, and offered a car of each for sale on the spot market.

The soybeans were No. 2 Yellow, 56½ pound, 12.5 moisture, origin Indiana, with 20½-cents freight paid in. They were loaded out of an off-water house. Three major buyers would not bid. A fourth bid July price delivered at its elevator. The cost of taking the soybeans across town was 4.8 cents per bushel, the loading out charge 2¼ cents, and inspection ⅛ cent. To arrive bids were four over July for I.P. billing. The discount on the delivery soybeans was thus 11¼ cents.

The wheat was No. 2 Red, 59.3 pound, 13.5 moisture. Four major buyers were not interested. A fifth bid 2 over even rate billing delivered to their elevator. Crosstown switch was 4.8 cents, loading out 2¼ cents, and inspection ⅛ cent. Bids on the floor were 2 to 4 over with no switch charge. The discount on the wheat was thus 5¼ cents. This is at the peak of harvest.

Now why is this? There are three ways that these contracts are loaded to give an unreasonable advantage to warehouses.

First, the admixture and adulteration of grain is permitted and encouraged. Warehousemen are encouraged to sort over their grain and deliver the worst possible combination that will skin through and make grade. The discounts on the delivery of noncontract quality are set so small that all of the trash can be cleaned out of elevators.

BAD LOCATION

Second, the rules of the exchange delivery in unmerchantable locations. Delivery in off-water houses is permitted. At one time it was agreed that as much regular space as possible was needed. With all of the new space there is in Chicago, this argument no longer has one iota of validity. The rule says that grain delivered in off-water houses has to be moved to water if an export sale against the delivery can be proved. This is a ridiculous and unreasonable rule to impose on speculators or merchandisers. Also, anyone taking delivery in an off-water house will have high insurance, high tariff, and high interest to pay.

Third, the cost of getting grain out of a delivery elevator and switching it across town is ridiculously and outrageously high. We have spoken of this subject repeatedly. There is no surer way to kill the Chicago market than to allow this rate to persist.

Acceptance Speech by George Romney, President of American Motors and Vermilye Medalist of the Franklin Institute

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following acceptance address by Mr. George Romney, president of American Motors, which was made when he received the distinguished Vermilye Medal award from the Franklin Institute on November 18, 1959:

Thank you very much. I am humbly grateful for this distinguished award. Few men are so honored without protesting their lack of adequate merit. But protests themselves can be immodest—if we believe, as I do, that this kind of generous recognition is intended to go beyond individuals, reaching through them to honor high principles. So, with my sincere appreciation, permit me to join you tonight in honoring the great purposes of this institution.

I hope you will consider it consistent with these purposes for me to speak earnestly on a truth that I believe has a profound bearing on the future of this Nation and of the world.

Someone is usually heard proclaiming impending disaster. This is not my intent. On the contrary, I am caught in a sense of excitement over what our achievements so far promise for tomorrow, and how near we may be to the breakthrough in human affairs for which I believe this Nation was divinely created.

But first, we have some impediments that need clearing away. Our central target today, in my view, should be the excessive power that is growing like great clots in the Nation's arteries.

For our heritage, we are strangely blase about excessive power.

When our Constitution was being drafted here, the framers seemed as sensitive to freedom, and its antithesis—power—as if each had just made an escape from bondage. You cannot read the accounts of that momentous spring and summer here without feeling that the air was charged with the ardor of liberty. And you cannot consider liberty without considering power.

No matter where you place your finger on the debates—whether the relative power of the States versus the Federal Government; the large States versus the small States; southern slavery or northern commerce; suffrage for freeholders only; the Senate's power versus the House's power; the Executive's power, the Supreme Court's power; aristocracy versus democracy, no matter where you listen in on the arguments (with Dr. Franklin striving throughout, counseling and seeking unanimity), the balancing and dispersion of power are at the core.

In his fascinating new book, "Advise and Consent," Allen Drury, the author, has Bob Munson, the Senate leader, say this:

"The whole story of the operation of the American Government is the story of the deliberate diffusion of power; the whole story of the life of the American Government is the story between the deliberate diffusion of power, which in and of itself is perhaps the most brilliant device for the protection of liberty ever conceived by freemen, and the deliberate concentration of power which freemen have often deemed necessary to preserve liberty. If either diffusion or concentration were to win the battle once and for all, then I think freedom would finally be gone, and the great dream of liberty within discipline which is America would be gone forever."

We face the early prospect of concentration winning once and for all, and seem little concerned.

How is it that our forbears were so sensitive to power, and we have grown so forgetful?

Here are some of the reasons:

1. The material abundance produced by freedom has caused us to confuse bigness and power. Bigness and its benefits are cited as justification of what has become excess power.

2. There is the theory of countervailing power, one big power group offsetting another. This balance of power theory has always failed, and the balancing of excess industry power with excess union power is now threatening us with permanent concentration of excess Government power.

3. The complexity and magnitude of our present problems create individual confusion, uncertainty, and irresponsibility. Because all progress starts with the capacity of individuals, this must be corrected through citizens informing themselxves and exercising their responsibilities, or concentration will win by default.

4. Indifference and apathy resulting from our extraordinary abundance and superficial security. Most civilizations have expired on the bed of luxury. America has the opportunity to create a great new age by resisting this historical temptation.

Is anything plainer in history than the fact that concentrated power, whether it is countervailing or not, always finds its final expression in domination?

We are face to face with the dangers of such domination.

Excessive power of industry required reforms that reduced that power and opened the door to greater power for unions. Our laws became two-faced, banning monopoly power in the marketplace, but inducing it in collective bargaining. The steel strike is a forceful illustration of the result. The powerful unions banded together. The steel industry massed itself. And there they stood, two massive antagonists, both far greater in their strength than some foes whose struggles changed the course of civilization.

A point and a question are clear today.

First, the question: Must we wait for a whole series of national emergencies such as the steel strike to throttle us before acting—isn't it far wiser to tackle the causes of the national steel emergency before others arise?

The discouraging thing is that no one of consequence in national political leadership is discussing how we prevent such national emergencies, but only what do we do when one occurs?

The point: Power begets power. If it breeds excessively in one place, it encourages

it—even demands it—in another. Labor and industry strive to outdo each other in their strength, and their impasse can only result in the necessity for still greater power power in a third quarter—in government.

Let me discuss these three power areas separately.

Powerful economic interests have always undertaken to dominate the country.

The tendency was resisted by our strong Presidents.

The first big antitrust crusade of Presidents Theodore Roosevelt, Taft and Wilson was followed by the passage of the Clayton Act, prohibiting specific monopoly practices. This act, however, excluded labor organizations from the antitrust laws, which was the genesis of immunity for labor in the exercise of monopolistic powers and abuses. It is this exclusion that provides the major point of conflict in the Nation's economic policy. That policy regulates industrial activity on the basis of competition and promotes collective bargaining on the basis of monopoly.

Not until the Government began promoting the expansion of union power as an offset to business power did collective-bargaining exemption from the competitive principle become an economic weapon of blockbuster proportions.

After passage of the Wagner Act in 1935, union power was substituted for business and agricultural power as the most important single political influence in our country. Today, we are faced with inherent dangers of excessive union power as well as excessive industry power.

The one sound and adequate solution is the elimination of the conflict in our national economic policy and adequate division of collective-bargaining power. This country cannot progress economically half competitive and half monopolistic. Such economic conflict is as destructive of economic progress as our earlier division over slavery and freedom was to our social progress.

Are there alternatives to a change in national collective-bargaining policy? Some people say all we need or should first attain is impartial enforcement of present local, State and Federal laws and sound judicial interpretation of present laws. Certainly there are flagrant instances of failure impartially to enforce local ordinances and laws. However, I do not see how impartial enforcement or sound judicial interpretation of present laws can importantly affect the basic problem.

Others apparently believe that right-to-work laws might have some bearing where organization has not occurred, but they have no particular bearing where excessive employer or union power already exists.

While it is certainly desirable, the Landrum-Griffin bill, recently passed as a result of exposure of corruption, racketeering and a host of unethical union practices, will be relatively meaningless in reducing the legalized excessive concentration of collective-bargaining power.

Proposals for prohibiting union compulsion and coercion deal with important aspects of union power over the individual worker. Legislative action in this area is certainly necessary but will not substitute for that necessary to deal with the basic problem resulting from our trying to ride the competitive price horse and the monopoly wage horse at the same time. We are faced with a choice we cannot escape. The wage monopoly is destroying price competition. Competition is our means of keeping economic power divided and placing ultimate economic power in the hands of the people as consumers. Economic freedom in America depends upon the preservation of competition. The monopoly power of unions and employers for collective-bargaining purposes must be divided on the basis of competition or it will destroy our economic strength and make us an easy prey for our enemies.

Then what must we do?

The answer is not the application of the antitrust laws to unions. Here are some specific proposals for amending our laws on collective bargaining that may not be the final answer but at least I think they recognize the basic problem.

1. The combining of national unions for the establishment of common bargaining demands or use of economic power should be prohibited. The same prohibition should apply to national employer organizations.

2. Unions representing more than about 10,000 employees of a single employer should be prohibited from combining to establish collective bargaining demands or exercising joint economic power against more than one enterprise. Unions should be free to combine in bargaining with employers having less than about 10,000 employees, but only within prescribed geographical limits. The same prohibition and political limitation should apply to employers and employer organizations.

3. In our basic industries, affiliated unions of a national union representing employees of a single large company, regardless of size, should be permitted to combine in their collective bargaining demands and joint use of bargaining power.

4. The law should not prohibit union cooperation aside from the above limitations.

Whatever remedy Congress may ultimately fashion to solve the problem of excessive concentration of collective bargaining power by employers and unions, I believe it must conform to these principles:

First, the full benefits of genuine collective bargaining must be retained, including the right to strike.

Second, we must avoid creating some new form of bargaining inequality.

Third, the legislation must be tailored to fit the divergent forms of trade unionism. Craft unions will require treatment different from industrial unions.

Fourth, employees working for business units having a relatively small number of employees, or for concerns operating only on a local or regional basis, must not be squeezed into a mold designed for unions representing employees of big business.

Fifth, responsibility for collective bargaining with an enterprise in a basic industry having more than about 10,000 employees should be in the hands of a union and an employer representing solely those employees.

The ultimate objective is to prevent combinations of employers or combinations of unions from destroying the competitive system by creating national emergencies. The only forms of economic discipline are competition, or some form of absolute authority. If we take the absolute authority approach of more Government control, then we are on the road to statism. To prevent the replacement of competition by absolute authority it is necessary to prohibit joint bargaining on the part of large employers in our basic industries, as well as joint bargaining on the part of unions representing the employees of large concerns. We must also prohibit national bargaining by both unions and employers.

Now, let's turn to the concentration of industrial power. One of the factors that prevents needed action is the public misconception as to the advantages of colossal size in industry. Actually, there is some basis for union and public opinion that colossal industrial power justified colossal union power. I believe our antitrust laws, which were enacted in our early stage of industrial development, need to be modernized and strengthened to cope with new problems created by excess industrial power.

When we fail to keep our fundamental policy laws up to date, inequities arise that create pressures for special interest legislation and regulatory laws applying detailed control.

What we need is not more laws but more modern laws.

This need is pointed up by Federal subsidization to create and maintain adequate competition. During and after World War II, the Government finally broke the monopolistic position of the Aluminum Co. of America by using indirect Government subsidization to establish four additional aluminum companies. In the case of the automobile industry, the President of the United States, a few years ago, directed the use of Defense Department procurement powers to indirectly subsidize the continuation of one of the five remaining passenger car companies.

The competitive principle enables consumers to reward companies that successfully meet their preferences and to reject companies that fail to do so. Elimination, or economic death, is and should be the penalty of economic failure in a competitive society. It keeps our economy healthy and responsive to consumer desire and need. However, in many of our basic industries, the competitive discipline of the market place has now reduced the number of companies to a mere handful. In the case of the automobile industry, in my opinion, the five passenger car companies left constitute barely the minimum number necessary for adequate consumer choice, confidence, and discipline.

I believe preservation of the competitive principle in America is dependent upon its complete development by provision for economic birth as well as economic death in our major basic industries. I made some specific recommendations for economic birth based on the degree of market domination in such industries.

Briefly, this was what I proposed—when a company engaged in only one basic industry is doing more than 35 percent of the business, or when a company engaged in more than one basic industry is doing more than 25 percent of the business, such companies should be required to submit to a specified public agency their own programs for reducing their percentage of the particular business involved. An obvious way for them to do this would be through the creation of more than one company from the old company. In other words, by the process of division or economic birth. Adherence to such percentage figures only guarantees the future existence of four to five companies in each basic industry.

This proposal would reward, not penalize, companies for being successful. It would not prevent bigness or maximum technological efficiency, it would insure a minimum number of competitors as a basis for public reliance on competition rather than Government control.

When a company acquires a large share of control over a basic industry it begins to fear the shadow of adverse Government action. It must necessarily begin to restrain itself, to hobble its skill. We need all of the competitive skill we can get. We must seek to increase it, not restrain it.

My proposal for economic birth has as its objective the further development of competition and voluntary cooperation in this country. It is important to emphasize that the problem is not one of size or bigness. Bigness per se is not bad. Indeed, bigness is essential in a modern industrial economy. Under my proposal a company would be as large as the nature of the industry required for efficient, competitive operation and no arbitrary fixed limit is suggested. The problem is the degree of economic control or power permissible in a competitive economy.

Adoption of a birth policy in industry would, I believe, again unleash some of the principal factors of industrial growth without enactment of new laws but simply the modernization of the old.

Now I would like to touch on one aspect of concentrated political power.

Big societies, especially those in competition with other big societies, certainly need strong—even big—governments and strong—even big—unions and corporations. But their power can and must be dispersed. The ultimate control can and must be in the hands of the people as citizens and as consumers. That is the only way to build the greatest strength and soundest growth.

But we cannot achieve this goal unless we recognize that it is morally, socially, and economically wrong for unions as unions, or corporations as corporations, to get into politics, directly or indirectly.

It is wrong, as far as I am concerned, for the simple reason that it is wrong for any American to transfer his personal rights of citizenship to an institution—and it is wrong for an institution to act in any way to encourage the relinquishing of such rights.

Little difference in principle exists between the present excessive political influence of unions and the earlier excessive political influence of business denounced by both Roosevelts. One excess is as wrong as the other. Both are obstacles to political freedom, economic justice and individual development.

The question is whether in a democracy based on political freedom and the rights of the individual, economic organizations should be permitted to participate directly or indirectly in political affairs.

I am not referring to individual union leaders or members, or individual business leaders or white-collar workers participating in political activity. Unions or businesses certainly should not be permitted to present economic facts to political bodies or to private citizens' groups, but what I am decrying is direct or indirect political activity on the part of economic organizations, whether they are unon organizations, business organizations or other organized economic groups.

Before church and State were separated, church participation in politics and Government unquestionably exerted a direct influence on the political attitudes of church members. Similarly, political activity by a company is likely to cause an executive to feel that his economic opportunity in the enterprise is affected by his political support of company political thinking.

The same holds true of unions. How could union members or union officers fail to feel that their treatment by the union would be affected by conformity or opposition to union political programs?

I believe corporate officials and union officials should participate personally, as individual citizens, in political affars. But I think they should take every possible step to assure members and employees that this right is a personal right not to be abridged in any manner—and to encourage them to use it on that basis.

Our political parties today, unfortunately, have given victory at the polls such engulfing preeminence that neither party will take a position that might offend any sizable segment of voters. As a result, we have a close similarity between stated party objectives, with very little choice left to the voter. Attention is focused more on personalities, money and organization than on issues, citizen participation and spontaneous support for basic principles.

Both parties have allowed themselves, to an alarming extent, to become the captives of dominant economic groups. In Michigan, for example, one party is largely under the control of big labor, while the other is largely in the hands of big business. The dominance of these power groups, expressed through organizations rather than individual citizens, resulted in a 7-month deadlock which was broken by an increase in the sales tax, but recently declared unconstitutional—and now the stalemate is with us again, resulting in continued thwarting of progress in the State.

To combat this impossible situation, we are developing a nonpartisan citizens' program identified as Citizens For Michigan. Its members are individuals acting for themselves as citizens, not as representatives of any organization of any type.

We hope through this effort to establish a means by which an influence greater than the minority economic groups now dominating our two political parties can be created. We hope to acquaint enough citizens with the facts on the State's problems and the means for their solution to secure essential political and governmental action. Finally, we hope to restore citizen belief in the effectiveness of individual political participation.

The success of the Citizens For Michigan program can provide the basis for releasing the political parties from their captivity and restoring to the people these necessary instruments of self-government.

If we are going to encourage an increase in political participation, we must have two political parties with programs that provide the people a clear and basic choice. At least one party should be more dedicated to the principles of human liberty and justice than to political victory at any cost through colossal campaign expenditures, economic power, subsidy, and special advantage.

To stop the drift toward increasingly massive centralized governments, we need to do three important things.

First, we must make certain, by modernized law, that power outside government is dispersed and kept dispersed.

Second, we must improve the character of State governments and modernize the smaller governmental units—the parish, the county, the township—that were set up on the basis of travel and population distribution in a frontier country.

Third, we must revive the political participation of the people in control of the government.

The most effective means of putting hope and zest back into political participation would be for the political parties to reject economic power group participation, reach out for citizenship participation, put less emphasis on dollars and more emphasis on people and principles.

We need to bring our political parties and the people together, if our democratic system is to continue to be truly representative. When the people have little choice, they are powerless to act, and control is defaulted to willful power groups that can be arrogantly unaccountable to a listless electorate.

As I have indicated, I don't believe the mechanical answers to excessive industry, union, and government power are hard to find.

But we will not find these answers or put them into effect until we build a new fire under our aspirations as a people.

Dr. Charles Malik has said:

"You have in your own traditions certain invaluable beliefs about man and society and history and human destiny and the nature of God—beliefs that you should not be ashamed of, that you should feel free to export and to teach others. But first you must rediscover them yourselves and believe in them profoundly yourselves. Many of you have taken life too much for granted. Therefore, the great deposit of belief and conviction and interpretation of life which has come to you, you simply don't honor enough."

In considering historical fact, we have an odd propensity for believing that years must pass before the meaning of events comes into clear focus.

But listen to these lines written by Washington in 1786, during the period our new Constitution was in the process of ratification:

"The plot thickens fast. A few short weeks will determine the political fate of America for the present generation and probably produce no small influence on the happiness of society through a long succession of ages to come. Should everything proceed with harmony and consent according to our actual wishes and expectations; I will confess to you sincerely, my dear Marquis; it will be so much beyond anything we had a right to imagine or expect 18 months ago, that it will demonstrate as visibly the finger of providence, as any possible event in the course of human affairs can ever designate it."

And, a short time later:

"You will permit me to say, that a greater drama is now acting on this theater than has heretofore been brought on the American stage, or any other in the world."

Can we recapture this focus? If we can, I believe it will reveal that we are much nearer than we think to a major breakthrough in human affairs.

The question in my mind is: Can we awaken and realm ourselves in time? Will we continue to divide excess power, or let it divide us?

We are facing two things:

Abroad, we are facing a great perversion of the ideal of human liberty, and the stain is spreading with speed.

At home, we are stalled at a crossroad—confused about our direction and split into opposing power camps. In other words, by not dividing power, we are being divided by it.

And while we are thus stalled in our continuing American Revolution, the stain spreads.

To get moving without delay, we should modernize our basic antitrust and collective bargaining laws. But we are not likely to see this change until at least one of the political parties is willing to risk putting the national interest ahead of the desire to win the next election.

The people desperately need the political leadership necessary to give them a chance to make the basic choice.

I think such an approach should and could be provided. I'm convinced it would capture the imagination and support of the American people.

While I do not anticipate that the step will be taken tomorrow, I believe it will and must be taken.

We have a certain knowledge of what has happened to others.

Defending Christianity against the charge that it had brought down the anger of the pagan gods and caused the sack of Rome, St. Augustine said: "depraved by good fortune, and not chastened by adversity, what you desire in the restoration of a peaceful and secure state is not the tranquillity of the commonwealth, but the impunity of your own vicious luxury." He reminded the Romans that even the threat of the barbarian invasion had not diverted them from their pleasures.

With this historic characteristic of peoples in mind, Somerset Maugham once wrote, "A nation that wants anything more than freedom will lose its freedom, and the irony of it is, if it is comfort and security it wants, it will lose them, too."

America's destiny is threatened but not lost. We can win by searching and risking and by sacrificing to the laws of God, our Nation and our fellow man.

Helen Keller gave a magnificent summary when she said: "Not until we can refuse to

take without giving can we create a society in which the chief activity of man is the common welfare."

With freedom, we can still achieve this goal. I believe we are still capable of building a new great age for ourselves and others, and thus drown out the voices of gross materialism, power and compulsion at home and abroad that would destroy us.

Narcotics Use Among Juveniles

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, January 21, 1960

Mr. HENNINGS. Mr. President, tomorrow the Senate Subcommittee To Investigate Juvenile Delinquency, of which I am chairman, will begin the Washington phase of its investigation into the problem of narcotics use among teenagers at 10:30 a.m. in the Old Supreme Court Chamber. Witnesses at tomorrow's hearing will be three officials from the Department of Treasury, including Assistant Secretary of Treasury A. Gilmore Flues, who directs both the Narcotics and Customs Bureaus, along with Commissioners Harry J. Anslinger, Bureau of Narcotics; and Ralph Kelly, Bureau of Customs.

Our main reason for calling these witnesses is to try and clarify the role assigned Federal agencies in the narcotics enforcement field. Certainly control of narcotics is—or should be—primarily a job for the Federal Government, since international borders and ports of entry, interstate movement of contraband and addicts are deeply ingrained in the whole heinous business.

During 2 weeks of public hearings on the narcotics problem in California last November, we learned that the smuggling of narcotics at the U.S.-Mexican border is the biggest problem for the Collector of Customs in that part of the country. According to Customs agent Frank Thornton, who heads the San Diego office, 75 percent of the Federal trial cases there are for narcotics violations.

The great preponderance of witnesses—public officials and law-enforcement officers—named the U.S.-Mexican border as the primary point of entry for narcotics into the southwestern part of the United States, and the Republic of Mexico as the primary source of supply. Abundant testimony was also given to demonstrate that much of this contraband brought across the border and into our seaports finds its way into every city in the land.

Mr. President, much editorial comment has been made on the illicit narcotics traffic and its inherent evils in different parts of the country, testifying to the local awareness and concern felt by our citizens. I ask unanimous consent that two of these editorials—one from the Bakersfield (Calif.) Californian, entitled "Narcotics as Juvenile Trouble Cause," and one from the Tucson (Ariz.) Citizen, entitled "Mexican Border Problem Is Not Tucson's Alone"—be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bakersfield Californian, Sept. 25, 1959]

NARCOTICS AS JUVENILE TROUBLE CAUSE

Testifying before a Senate committee on the problem of combating juvenile delinquency, Mayor Robert F. Wagner, of New York, called upon the Federal Government to join with State and local authorities in a nationwide crackdown on the narcotics trade. Mayor Wagner has a valid point, indeed, as anyone knows who has interested himself in this problem.

Mayor Wagner's own city has had grievous difficulties in recent years with juvenile gangs and in the past 9 months has recorded 11 gang killings. Much has been written about these troubles, with perhaps the best account being the series by Harrison Salisbury in the New York Times. Mr. Salisbury notes in many places in his narrative the frequency with which narcotics are used by the young people who are members of these organized teenage packs.

Other cities have similar troubles, and investigators are consistent in their findings regarding the connection between juvenile crime and the use of narcotics. The dope problem in California was brilliantly told in a series of articles appearing in the Los Angeles Times and written by Gene Sherman, a careful researcher and excellent reporter.

Mayor Wagner told the committee that a concerted effort to cut down on the supply of narcotics now reaching our youngsters would do much toward aiding in the reduction of juvenile crime. This view will no doubt find agreement among law-enforcement authorities and social workers in other cities who know the extent of narcotics usage among juveniles and the evil it causes.

Mr. Salisbury remarks upon the use of narcotics by the teenagers who make up the gangs and implies that there is little difficulty involved in the acquisition of these drugs by the youngsters, in spite of the efforts locally to prevent it.

The same conditions prevail in other cities, according to some accounts, and the Federal, State, and local laws are sufficiently complex to make enforcement of them a difficult matter.

But Mayor Wagner has a point, and we hope something can be done to accomplish what he describes, because the juxtaposition of narcotics and juvenile delinquency is too constant to allow argument on the matter, and law-enforcement agencies will welcome all the help they can get to make effective war on the dope traffic.

[From the Tucson (Ariz.) Citizen, Nov. 19, 1959]

MEXICAN BORDER PROBLEM IS NOT TUCSON'S ALONE

There was a little unfavorable reaction mingled with a lot of public and parental concern when the Citizen recently carried stories about Mexican border problems and a so-called "marriage mill" for teenagers being operated illicitly in nearby Nogales, Sonora.

The scope and depth of the border problem have been expanded and further illuminated this week in wire dispatches from San Diego, Calif., which is up in arms over the Mexican border attractions and hazards for teenagers, centering particularly in the town of Tijuana south of San Diego.

The U.S. Senate Subcommittee on Juvenile Delinquency has been probing into the situation relating to border problems and Senator THOMAS C. HENNINGS, Democrat, of Missouri, declared yesterday that legislation to close the entire Mexico border to unescorted juveniles was a possibility.

Such Federal legislation, if enacted, undoubtedly would apply to the Arizona-Mexico border as well. This approach has been considered here as an answer to teenage escapades in Nogales.

It was pointed out clearly in the Citizen's reports about easy marriages for underage couples in Nogales, Sonora, that shady operators and not Mexican officials were involved. Mexico's laws are as strict against underage marriages as are Arizona's, and Sonora officials are conscientious about them.

Some question was raised in Tucson about the danger of disturbing friendly relations with our Mexican neighbors as a result of pointing up the teenage problem. On the contrary, it can be assumed that Mexico's officials are as concerned as we are about misconduct of teenagers visiting their country.

District Attorney Don Keller of San Diego told the Senate investigators that he hears reports that Mexican officials do not want unescorted U.S. juveniles in their country. This seems a reasonable attitude.

No problem is eliminated or resolved by pretending it doesn't exist. The Mexican border is a notorious source of narcotics entry into this country, as well as a temptation for trouble-bent juveniles. Mexican-American relations actually will be furthered if such matters are dealt with cooperatively by officials on both sides of the line.

When the juvenile border problem reaches the senatorial and ambassadorial levels it is no phony issue. The findings in the San Diego and California investigation may lead either to joint action by Mexican and American officials or to legislation. Either or both could help Arizona's parallel problems.

A Bill To Establish a Program of Federal Assistance for the Collegiate Training of Nursing Students

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mrs. GREEN of Oregon. Mr. Speaker, last session I had the pleasure of introducing in this House a bill (H.R. 1251) to establish a program of Federal assistance for the collegiate training of nursing students. After introducing that bill, I had the very satisfying experience of receiving, not a flood of identical pressure letters, as are so often inspired by even the best legislative proposals, but rather a series of highly informative, and very specific accounts, from nursing educators and leaders in most of the States of the Union, of precisely what the needs of their States were, and precisely how the funds authorized by my bill would be utilized. Although our distinguished Committee on Interstate and Foreign Commerce has been unable to schedule hearings on this bill, because of the crush of business upon that committee, these letters will constitute, when those hearings are held, a very useful file

of facts on the background of this legislation.

The American Journal of Nursing, the respected publication of the American Nurses' Association, has compiled some of the materials contained in these letters, and has, in an article in the December 1959 issue of that magazine, set forth a sampling of these letters. Under permission to revise and extend my remarks, I ask that that article be reprinted in the Appendix of the RECORD, as an indication of the interest which the nursing profession has shown in this legislation.

IF FUNDS WERE AVAILABLE—NURSING EDUCATORS CITE NEEDS FOR PUBLIC SUPPORT IN COLLEGIATE SCHOOLS

Nursing's Federal legislative efforts will focus on securing financial aid for collegiate nursing education when Congress reconvenes in January. Expansion of such programs is one of the primary needs for public support outlined by the American Nurses' Association.

In spearheading this effort, the ANA will seek passage of H.R. 1251, a bill introduced last January by Representative EDITH S. GREEN, Democrat, Oregon, and its companion, S. 1118, introduced by Senator HUBERT HUMPHREY, Democrat, Minnesota.

These bills propose a 5-year, $100 million program of grants to schools for the construction of teaching facilities; a 5-year $50 million program of grants to assist with costs of instruction, and a 5-year, $50 million program of scholarship aid for nursing students in preservice baccalaureate programs and to graduate nurses in supplemental programs leading to a baccalaureate degree.

This effort is one of three priorities of need for public support outlined by the ANA Committee on Legislation in accordance with the ANA platform approved by the house of delegates in 1958. The other two priorities are traineeships or scholarships for nurses in advanced programs preparing for teaching, administration, and supervision in nursing, and research and research fellowships.

Focus on securing financial aid for supplemental and basic programs in nursing leading to a baccalaureate degree is possible now because of the 5-year extension of the Federal traineeship program. Through this program, administered by the Division of Nursing Resources, U.S. Public Health Service, nurses are able to secure funds to prepare for positions in administration, supervision, and teaching. During the past year, ANA devoted much of its legislative effort to the extension of this program.

As demands for more as well as better prepared nurses continue, ANA believes the public must provide financial support for nursing education as it does for education in other health professions.

WHY COLLEGIATE SCHOOLS?

The need for such aid has received support from nurses and nursing educators throughout the country. Many have urged action on this legislation. This is what they say:

UNIVERSITY OF SOUTHERN ILLINOIS,
Carbondale, Ill.

Teachers for schools of nursing are prepared only in institutions of higher learning. If the cost of higher education is prohibitive, the students may be forced into other fields, thus increasing the already distressing shortage of qualified personnel. Without financial assistance in some form, teachers who are no better qualified than the students they teach must be utilized.

VIRGINIA H. HARRISON,
Chairman, Department of Nursing.

VISITING NURSE ASSOCIATION OF BROOKLYN, INC.,
Brooklyn, N.Y.

This bill (H.R. 1251) is an important step in meeting the critical need for qualified personnel in all areas of nursing, including public health.

DORIS ELDREDGE,
President.

RUTGERS UNIVERSITY,
Newark, N.J.

Most everyone knows that there is a shortage of nurses, but not all are aware that the shortage extends to quality as well as to numbers. The truth of the matter is, of course, that nursing education has not kept pace with changes in our social order that affect the health needs of our people. We are today, 50 years after the establishment of the first college program in nursing, preparing 82 percent of our people in hospital programs of nursing much as we were at the turn of the century. In other words, we are today preparing yesterday's nurses to meet today's need for nursing care.

ELLA V. STONSBY,
Dean, College of Nursing.

THE MARY FLETCHER HOSPITAL,
Burlington, Vt.

It is our policy to help direct young people into the type of nursing program for which they seem best fitted. Many tell us they would like to go to the University of Vermont's nursing program, but they cannot afford it. We need students of nursing in hospital schools and in the new type of associate degree program, but our greatest need is to somehow direct more into a college nursing program. With additional preparation and experience, these nurses can more quickly fill the greatest gap we have—the lack of qualified teachers, supervisors, and administrators of nursing.

GRACE M. BUTTOLPH,
Director, School of Nursing.

LOYOLA UNIVERSITY,
Chicago, Ill.

There is indeed an acute and urgent need for financial aid in this area of education for essential health services. A school of nursing is ordinarily one of the most expensive educational units in the university because the number of students each faculty member has must be limited when teaching clinical nursing in hospitals and public health agencies.

GLADYS KINIERY,
Dean, School of Nursing.

PROGRAMS FOR R.N.'S LIMITED

UNIVERSITY OF CONNECTICUT,
Storrs, Conn.

This university conducts no program for registered nurses since we do not have adequate faculty for the purpose. The constant increase in enrollment in our basic program has meant that all available funds must go for faculty in that program, and, even so, we do not have enough. Yet there is urgent need for a baccalaureate program for registered nurses at this university and for scholarships for such nurses.

CAROLYN L. WIDMER,
Dean, School of Nursing.

UNIVERSITY OF MASSACHUSETTS,
Amherst, Mass.

There is a growing demand for a supplementary program at the University of Massachusetts. Hospital administrators, directors of schools of nursing and of nursing service, and, indeed, graduates of diploma schools of nursing themselves, are increasingly urging such a program, not only because of the accessibility of the university and the modest tuition rate, but also because married faculty members find it difficult, if not impossible, to be far away from their children and family. The university administration is most sensitive to this education need. However, the problem of financing an educationally sound program is ever before us. The provision of H.R. 1251 for grants to assist in the costs of instruction in baccalaureate programs is a necessity if educationally sound collegiate nursing education is to survive.

MARY A. MAHER,
Dean, School of Nursing.

BASIC PROGRAMS SUFFER

WASHINGTON UNIVERSITY,
St. Louis, Mo.

Washington University plans to offer the basic baccalaureate program in nursing, but funds are not yet available to meet the anticipated deficit for the first 4 years of operation. The registrar's office at the university estimates that about 50 applications were accepted from young women who did not enter the university in the fall semester when they discovered no program in nursing was available.

LOUISE KNAPP,
Director, School of Nursing.

UNIVERSITY OF MAINE,
Orono, Maine.

There are five diploma schools of nursing in Maine of which only one has received full accreditation by the National League for Nursing. One of the handicaps to full accreditation is the lack of prepared faculty. Another lack in the State is that of prepared public health nurses. A major reason for these lacks is that there is no baccalaureate program for nurses in the State. We plan to establish one as soon as we are able, but such a program will require additional faculty.

JEAN MACLEAN,
Director, School of Nursing.

SCHOLARSHIPS SADLY LACKING

UNIVERSITY OF MARYLAND,
Baltimore, Md.

The University of Maryland graduates a class of 50 to 60 students each year in the baccalaureate program. We have a huge medical center and could accommodate classes of at least 200 students if the applicants had scholarship aid. Then, too, we have many out-of-State requests from applicants who are unable to pay the fees and maintenance. Roughly, more than 50 percent of our applicants request financial assistance.

FLORENCE M. GIPE,
Dean, School of Nursing.

UNIVERSITY OF PENNSYLVANIA,
Philadelphia, Pa.

Many high school graduates and graduates of hospital schools of nursing who are eager to take advantage of the opportunities offered in baccalaureate programs at the School of Nursing of the University of Pennsylvania are unable to do so because of financial need. For example, 30 qualified high school graduates who live within commuting distance and who were interested in attending this university could not apply for admission to the basic baccalaureate program because of financial need. Because of lack of dormitory space at the present time, enrollment in this program is limited almost exclusively to students who can commute. In 1960, when the new women's dormitories are available, it will be possible to admit a much larger number of students and the need for scholarships will increase proportionately.

In the general nursing program (for graduates of diploma schools of nursing) 114 full-time students and 541 part-time students were enrolled in the fall term, 1958. Sixty-nine of the full-time students could not have attended without some financial assistance. Approximately 150 of the part-time students could have attended full time if scholarships had been available.

THERESA I. LYNCH,
Dean, School of Nursing.

CHICO STATE COLLEGE,
Chico, Calif.

If finances were available, Chico State College could prepare twice the number of students that we now have because of our excellent clinical program and the contract we have with the medical center in San Francisco for the use of clinical facilities.

AGNES A. DIX,
Coordinator, Department of Nursing.

UNIVERSITY OF NEBRASKA,
Omaha, Nebr.

Frequent requests come from students interested in the University of Nebraska program for scholarship aid. Very little such aid is available and, as a result, good degree candidates are frequently lost.

IRMA M. KYLE,
Director of Nursing, School of Nursing.

NORTHWESTERN STATE COLLEGE,
Natchitoches, La.

The majority of students desiring admission to our school come from rural areas and need to have financial assistance available to them in order to attend college.

HILDA C. BURNHAM,
Dean, School of Nursing.

UNIVERSITY OF CALIFORNIA,
Berkeley, Calif.

During 1958, the University of California accepted 65 students for admission to its basic baccalaureate program. Of this number, 15 asked that their names be withdrawn prior to admission because of inability to finance the program. In a recent survey of financial needs of the group of 50 who entered in September 1958, only 20 percent indicated they were having no financial difficulties.

HELEN NAHM,
Dean, School of Nursing.

UNIVERSITY OF ILLINOIS,
Chicago, Ill.

There is a basic difference in the education for nursing which I believe makes financial assistance of more importance for students in this field than in many others. This is the nature of the clinical practice required. Even in the collegiate school, where the hours of clinical practice are limited to those required for educational purposes, the number of clock hours per week exceeds those of the students enrolled, for example, in the liberal arts and sciences. This factor makes it more difficult for the student in nursing to contribute significantly to the cost of her education.

EMILY C. CARDEW,
Dean, College of Nursing.

OUTGROWING FACILITIES

UNIVERSITY OF CINCINNATI,
Cincinnati, Ohio.

The College of Nursing and Health is one of two colleges on the university campus without a building of its own. It is estimated that a building of the size which would accommodate the college would cost at least $800,000. It has been necessary to use classrooms, laboratories, and offices belonging to other colleges in the university. With the present and anticipated increase in enrollment in all colleges in the university, those now sharing facilities with the College of Nursing and Health are finding it increasingly difficult to continue to provide for nursing.

LAURA E. ROSNAGLE,
Dean, College of Nursing and Health.

MEHARRY MEDICAL COLLEGE,
Nashville, Tenn.

Since 1957, it has been necessary to use some double decker beds in rooms designed to accommodate a single student. The recreational rooms, classrooms, and office space for instructors are also inadequate.

LAURIE M. GUNTER,
Dean, School of Nursing.

UNIVERSITY OF COLORADO,
Boulder, Colo.

The University of Colorado has made great effort since 1941, but even now the medical center constructed through private donation in 1924 is sadly outgrown and money for adequate construction seems hard to come by. My own office is the unused motion picture booth behind the medical amphitheater. It will just hold my desk and four chairs. Classroom space is bitterly fought for with the nurse-teachers often the losers. Forty years of growth in the medical and nursing schools has to be provided for in some way.

HENRIETTA ADAMS LOUGHRAN,
Dean, School of Nursing.

BOSTON UNIVERSITY,
Boston, Mass.

To care for expanding enrollments we need additional teaching facilities which include a nursing laboratory, science laboratories, nutrition laboratories; offices for additional faculty, secretaries and a general counselor; 4 additional conference rooms, 3 additional classrooms accommodating 60 students, 2 accommodating 150, and other adjunct rooms.

Boston University, like many other universities which have undertaken responsibility for nursing education, has already outgrown the limited physical plant with which it started. We have also estimated that 26 additional teachers would be needed for this kind of expansion.

MARIE FARRELL,
Dean, School of Nursing.

QUALIFIED FACULTY SHORT

RUSSELL SAGE COLLEGE,
Troy, N.Y.

Our problems in relation to instructors for our nursing programs are twofold. There are far too few adequately prepared instructors to meet our minimal needs, and the number of instructors needed for clinical instruction is much higher in the collegiate school of nursing than in other departments of the college. A large number of students may be present in the classroom with one instructor, but in the clinical area of the hospital or in public health the instructor is not only responsible for the teaching and supervision of the student learning to give nursing care, but also for the maintenance of good quality of patient care and the safety of patients.

DOROTHY MCMULLAN,
Director, School of Nursing.

MEDICAL COLLEGE OF GEORGIA,
Atlanta, Ga.

Our approved budget does not permit the employment of an adequate number of faculty. Many of our present faculty are heavily burdened with an overload and will wear out long before they should. Financial assistance in this area would be of inestimable help. It would improve the program for those students currently enrolled, would improve faculty opportunities for study and research, and would make it possible to offer short courses, conferences, and make available other educational opportunities which, as a State institution, is our responsibility.

E. LOUISE GRANT,
Dean, School of Nursing.

INDIANA UNIVERSITY,
Indianapolis, Ind.

Our enrollment has increased more than four times since the collegiate program was first initiated in 1950. We have currently a considerably larger number of students interested in admission to the school than we had last year. Of this number, many of the more able students have indicated need for scholarship aid to enroll this coming fall. Even with such scholarship aid, it is impossible to accept the number who are in process of meeting the requirements for entrance without a decided increase in faculty and in instructional facilities. Without financal assistance the number of qualified faculty needed cannot be secured.

EMILY HOLMQUIST,
Dean, School of Nursing.

UNIVERSITY OF MISSISSIPPI,
Jackson, Miss.

The University of Mississippi School of Nursing has been in existence only 10 years and is the only collegiate nursing program in the State. To date the enrollment has been low but is increasing each year. However, without additional teaching and instructional facilities it will not be possible to expand the school enough to meet the needs of the State.

H.R. 1251 could be used in Mississippi to increase enrollment from approximately 50 to 150 students if the following 5-year grants were made: Construction, $300,000; instruction, $195,000; and scholarships, $50,000.

CHRISTINE OLGEVEE,
Dean, School of Nursing.

Will the Oversighters Overlook the Real Fix?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, January 21, 1960

Mr. THURMOND. Mr. President, on January 17, 1960, the Spartanburg (S.C.) Herald-Journal printed an excellent news column by one of its outstanding staff members, Mr. Bob Craig, entitled "Will the Oversighters Overlook the Real Fix?" Mr. Craig has pointed up in this column several of the many barbs which have been tossed at the people of the South by the television and movie industries. I take pleasure in calling this column to the attention of the Senate and the readers of the CONGRESSIONAL RECORD so that these slurs on the people of the South—some of them being of a subtle nature and some being quite obvious even to those from other sections of our country—might be recognized for what they are. Mr. Craig refers to the whole scheme as "the race fix," and I feel that his descriptive term is very appropriate.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL THE OVERSIGHTERS OVERLOOK THE REAL FIX?

(By Bob Craig)

The House Legislative Oversight Committee will meet February 8 to hear evidence about TV-radio fixes.

Possibly due to oversight, the Oversight Committee will neglect the biggest fix in the industry: the race fix.

For the entire entertainment industry has been subtly slipping the race fix noose over the public's head for some time.

Here's how:

Hollywood turns out one monotonous movie after the other which chants the integration theme in the background.

Sayonara: The story of a poor little ol' Japanese girl and her GI lover boy who were persecuted by a nasty old officer with a distinctly southern accent. Somehow, when Hollywood does it, a Jap can be in the minority even in Japan.

Giant: Another movie where the Mexican wetback gets a pat on the back from Hollywood. So far, the Civil Rights Commission has shown little interest in wetbacks, Japanese, or southerners.

Raintree County got down to the "big" issue, southern Negroes.

Then that thing that Ingrid Bergman did about China. The problem there revolved around a Dutch-Chinese lover boy who left Holland because he didn't want to be a "second-class citizen."

But this is show buiz. All the villians are white. The black, green, purple, and other off-whites, are always heroes.

Now there was a time, 20 years ago, when Hollywood made a movie about a Mexican wetback, played by Paul Muni.

In the end, the movie went on to prove that integration was a bad thing indeed. Muni left white lover girl Bette Davis and returned to his own nationality group.

Then there was that Jean Harlow movie on TV recently in which the Negro maid says, "Why, if he was the right color, I'd go after him myself."

Keep in mind these movies were made in the 1930's.

Louis Armstrong recorded Basin Street "where the dark and the light folks meet" in the forties, then switched the words to "rich and poor folks" when he did the song in hi-fi in the fifties.

You can't play Steven Foster's stuff on TV networks any more. It differentiates between blacks and white.

A big detective magazine was quite interested in doing a story on the famous Rocky Rothschild murder confession but only if none of the principals were Negro.

Television obviously will not use a story in which a Negro is portrayed in a bad light; in other words, he's either the hero or we don't want it.

To borrow a phrase from the KKK, you have to be a white, Protestant, red-blooded American (preferably southern) in order to be a villain on television or in the movies.

Comedian Joey Bishop just last week claimed he turned down a movie part because it was that of a bad fellow with an Italian name. Presumably he would have taken it if the villain were renamed O'Hara, or Legare, or perhaps Byrnes.

There is the big fix in the entertainment industry. With an efficient methodical purpose, the boys distorting American life as it has never been distorted before.

They are attempting to paint this Nation as one where all Negroes are true and pure and many whites are rather nice, too, especially northern whites.

Let us hope that someday, Hollywood and their video counterparts will decide that southerners are members of a minority group (we are, you know). Then perhaps they will slant their business our way.

Meanwhile, we'll just have to feel a little left out.

Memorial Service Honoring the Late Clinton Amos Clauson, Late Governor of Maine

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. McINTIRE. Mr. Speaker, I submit to the CONGRESSIONAL RECORD a copy of the memorial service conducted by the Daniel E. Geagan Post, American Legion of Brewer, Maine, honoring the late Gov. Clinton A. Clauson of Maine. I also submit the Fifth District announcement on memorial honors.

MEMORIAL SERVICE HONORING THE LATE CLINTON AMOS CLAUSON, LATE GOVERNOR OF MAINE, CONDUCTED BY THE DANIEL E. GEAGAN POST NO. 98, AMERICAN LEGION AND AUXILIARY, HELD AT THE LEGION HALL IN THE BREWER AUDITORIUM ON MONDAY, JANUARY 11, 1960

MEMORIAL PROGRAM

Calling to order of the joint session: Charles C. Campbell, commander Daniel E. Geagan Post, American Legion; Mrs. Kathryn Mildred Campbell, unit president, Geagan Unit, American Legion Auxiliary.

Advancement of colors: Post color guards.

Invocation by Ernest Byther, post chaplain.

"Let us pray—Almighty God, Father of all mankind and Judge over nations, we pray Thee to bless this memorial service and to look down with favor and understanding upon the hearts of all who have gathered here to pay tribute to our late comrade, Gov. Clinton A. Clauson, who has joined the Post Everlasting. His life and the lives of all our comrades who have gone before are a daily reminder and inspiration for all us to remain faithful to the cause of freedom, justice, and democracy. In God we trust, and may the faith of our fathers guide, protect, and sustain our Nation. Amen."

Memorial tribute by Carl Estabrook, post sergeant at arms

"My comrades and fellow Americans, tonight the Brewer American Legion and auxiliary groups pause to honor the memory of the late beloved chief executive of Maine, the honorable Clinton Amos Clauson. On Wednesday morning, December 30, 1959, Governor Clauson passed away at the Blaine Mansion in Augusta at the age of 64. It is enough to say that Governor Clauson was beloved by all men and women of good will in the Pine Tree State.

To us especially in the American Legion and auxiliary, Governor Clauson held a warm personal spot. He was an active participant in the affairs of the American Legion on a State, local and national level.

Governor Clauson served as a post commander of the Waterville Post No. 5, the American Legion and was a life member of his Post. He served on the national levels of the Legion scene as a member of the Countersubversive Activities Commission for 6 years, the National Distinguished Guests Commission for 4 years and the National Law and Order Committee for 3 years. He served one term as housing chairman for the department of Maine, American Legion and at the time of his death was a member of the department finance committee.

He was a warmhearted and sincere Legionnaire and a friend of the veterans of all wars. We shall miss his kindly comradeship and devotion to the work of the American Legion. May his soul rest in peace.

Formal tribute by Daniel E. Lambert, commander, Fifth District, Department of Maine, American Legion.

"My Flag and I"

"Two of us this vigil keep,
Mid summer rains and winters snow,
Month by month and year by year,
As seasons come and seasons go.
Remember as you pass my grave,
I am not dead. I cannot die,
So long as Legionnaires keep the faith,
We live—my flag and I.
Pity, no: nay envy me
My place against the morning sky,
So long as you will guard us well
We live—my flag and I."

At this point and by direction of the special memorial tribute honors of the fifth district organization of the Maine Department of the American Legion, the Post Charter was draped for a period of 30 days in memory of the late governor.

Benediction by J. William Rogers, Chaplain, Penobscot County Councils, Department of Maine, American Legion.

"Let us pray: This day is sacred with the almost visible presence of our departed comrade and all those who have gone before us. We honor the memory of those who gave their lives in the service of community, State and Nation and who have now dropped their burdens by the wayside of life and are gone to the post everlasting. May the ceremonies of this hour deepen our reverence for our dead. Let us renew our pledge of loyalty to our country and its flag. Let us resolve by word and deed to emphasize the privilege and duty of patriotism. Amen."

Taps were sounded by the fifth district organization.

A minute of silent tribute was observed with Commander Charles C. Campbell and unit president, Mrs. Kathryn Mildred Campbell, presiding at the stations.

End of service.

FIFTH DISTRICT AMERICAN LEGION

To All Post, County, and District Officers in Penobscot, Hancock, and Piscataquis County Areas of the Fifth District, Department of Maine, American Legion:

Memorial honors: In that Almighty God in His mercy has called our good friend and comrade, the late Governor Clinton A. Clauson to the post everlasting, and due to the great service rendered to the American Legion by our late comrade, Clinton A. Clauson, I, Daniel E. Lambert, commander of the fifth district, department of Maine of the American Legion, do request that all posts in the fifth district observe the following memorial honors as a tribute to our late Governor, Clinton A. Clauson, of Maine:

(a) That all post charters be draped for a period of 30 days in honor of our late comrade.

(b) That each post, county and district organization observe a fitting memorial program and period of silence for our departed comrade.

(c) That we recall to mind our many pleasant associations with our departed comrade and continue to honor that memory by a pledge of continued services to community, State and Nation.

(d) That the memorial honors contained within this district announcement, be read at all post, county and district meetings

and be posted upon the bulletin boards of all groups within the district.

Four chaplains memorial Sunday: All post and auxiliary organizations within the fifth district are urged to pause on Sunday, February 7, 1960, to honor the fond memory of the four chaplains who perished on the U.S.S. *Dorchester* in the North Atlantic during World War II. We urge all legion and auxiliary groups to hold appropriate programs during the observance and to stimulate the churches and religious groups in our community to join in the special observance. The sacrifice of the four heroic chaplains of all faiths in war is the strongest answer we in peacetime America can give to the godless Communist and those who seek to create religious tensions at home.

District legislative committee: In order that our area of the State might have a voice and be representative properly before the State legislature, it is announced that the district legislative committee headed by the district commander will coordinate all legislative programing and represents the district in the State legislature at Augusta.

DAN LAMBERT,
District Commander,
the American Legion.

SOUTH BREWER, MAINE, *January 6, 1960.*

Article in Tribute to Christopher Columbus, of Genoa, Italy, Discoverer of the New World, and One of the Immortal Navigators of History

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, January 20, 1960

Mr. NEUBERGER. Mr. President, Congress rarely is in session as late in the year as October 12. Thus, seldom do the Members of Congress have an opportunity while Congress is in session to appropriately pay tribute to the immortal discoverer of the New World—Christopher Columbus, who made landfall at Long Bay, on San Salvador Island, on October 12, 1492. This date will live forever in the history of the human race, for on that day the middle ages gave way to the modern era.

Columbus was one of the greatest of all men. He had knowledge, wisdom, and a vision. He was not shackled to the suspicion and the idolatry of his time. He refused to believe that the planet was flat, because the sun and the wind and the stars told him differently. He staked his career and, indeed, his life on the faith that he was right; and he discovered a vast New World which lay beyond the horizons of ignorance which formerly had hemmed man in.

Columbus was born in Genoa in 1451. This meant he was only 41 years old on that day of all days, when he stood with his navigators and looked on the shores of destiny. We hear now that the age of 40 or 45 is too youthful for one who is to be our President. Let us remember that America was discovered by a young man, who had sufficient courage and knowledge to tell the seers of his age that they were wrong in their concept of our terrestrial home.

In the Saturday Evening Post of last October 3, 1959, a most impressive and wonderful article, entitled "Greatest Voyage Ever Made," was written by Prof. Samuel Eliot Morison, a distinguished historian, and winner of the Pulitzer Prize. I ask unanimous consent that excerpts from the article be printed in the Appendix of the RECORD as a lasting tribute to its subject, the great Admiral of the Ocean Sea, Christopher Columbus, of Genoa, Italy, the discoverer of the New World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post, Oct. 3, 1959]

GREATEST VOYAGE EVER MADE

(By Samuel Eliot Morison)

Christopher Columbus did more to chart the course of history than any other individual since the Emperor Augustus. He was the sign and symbol of a new age of hope and glory; he closed the book of the Middle Ages and wrote the first page of the modern era. The Americans are legatees of his faith and wisdom. The voyage of discovery that took him to "The Indies" and home was no blind chance, but his own creation, long studied, carefully planned, carried through by virtue of his courage, sea knowledge and indomitable will. No later voyage could ever have such spectacular results, and Columbus' fame would have been secure had he retired from the sea in 1493.

Yet there is a strange paradox in his career. He never accomplished what he was trying to do; he never did find a new, short sea route from Europe to Eastern Asia. What he achieved was accidental, although of a magnitude that he never even imagined. On his third voyage in 1498, after he had touched the American continent at Venezuela and observed the vast volume of fresh water flowing from the Orinoco, he did indeed write, "This is an Other World." But he died believing that this New or Other World of his discovery lay in about the same relations to the Asiatic continent that Indonesia actually does to Malaya. For him, Japan and China were always just around the next headland, and it remained for Magellan to find out how really remote they were.

He was born in Genoa in 1451 to a family of respectable wool weavers. His parents had the inspiration to name him Christopher after the patron saint of all travelers by land or water, and now by air.

Christopher learned seamanship the hard way. At the age of 20 or 21, he began making short voyages in the Mediterranean as a foremast hand; and in 1476, when he was 25, he was cast up on the shores of Portugal through the sinking of the Genoese ship in which he sailed. This lucky landing was the turning point in his careeer. Genoa was interested in the Mediterranean and Middle East, but Lisbon looked out on the illimitable waters of the ocean, which men still regarded as one indivisible ocean, surrounding Europe, Asia, and Africa. Portuguese mariners, then the world's best, were making new discoveries along the West Coast of Africa almost every year. They had cracked the crust of the narrow "habitable earth" known to Europeans of the Middle Ages, and they were eager to move further.

In Lisbon, the most enterprising and ambitious of European cities, Christopher joined his brother, Bartholomew, in the business of making and selling charts. But often he left his brother in sole charge to go to sea. One winter when the Arctic was unusually open, he sailed in a Portuguese ship to a point north of Iceland, calling at Galway en route. Later, a Genoese firm sent him to Madeira to buy sugar. After executing this mission he marked a Portuguese lady of noble family, daughter of an eminent navigator. Obviously, this young man was coming up in the world. We next hear of him as officer, possibly captain, of one of the king's ships, making voyages to the fortified trading post of El Mina, whose ruins may still be seen on the coast of Ghana.

At the age of 32 or 33, the future of this transplanted Genoese was secure. With family connections to help him obtain profitable commands, he could have retired in a few years with a small fortune.

But Columbus was not a man of ordinary ambition. Somehow, somewhere, he had come by a great idea—that it would be possible to sail due west to the Orient, and establish a western trade route to Asia. He did not, of course, expect to land anywhere in Japan or China and take over the country. His plan was to set up a trading post on some island like Okinawa where the products of Europe and the Orient could be profitably exchanged. That sort of thing had been done by the Portuguese in Africa, so why not in Asia? And that trading post would be an entering wedge for Christianity. Actually the foundation of Manila, in 1571, was the fulfillment of that part of Columbus' dream.

Every educated person in Columbus' day accepted the sphericity of the earth; the round globe was the basis of geography as taught in schools and universities. The story that Columbus alone thought the world was round, and that people opposed his voyage because they believed in a flat earth and that ships would fall off the edge if they sailed too far is pure myth. People like the Russians, who lived on broad plains, may have believed the earth to be flat, but no sailor could have done so, after observing the sails of ships whose hulls were invisible below the horizon. Nor could dwellers on mountainous coasts, like those of Genoa, Spain, and Portugal, have believed in a flat earth, because they had only to climb a hill to see the horizon recede and islands appear that were invisible from sea level.

Columbus' trouble in getting people to support him was not the shape of the earth, but its size. By a series of miscalculations, making out the globe to be about one-fourth smaller and the length of Eurasia about 50 percent greater than they really are, he figured that a voyage of 2,400 nautical miles from the Canary Islands would take him to Japan, and a voyage of 3,550 miles to the coast of China. The actual airline distances are 10,600 and 11,766 miles respectively. The eggheads of 1490 did not know that, but they did know that Columbus' calculations were very, very wrong. He expected to find Japan about where Florida actually is, and the coast of China at about the mouth of the Mississippi, in relation to Spain. That is why he had to appeal to the intuition of a great lady—Queen Isabella—before he could win support.

For 5 or 6 years, the Queen kept Columbus dangling, as it were, with a tiny pension. It was in April 1492 that the appeared before the sovereigns in the audience chamber of the Moorish Palace at Granada, and was told that his proposals were accepted.

The scene now shifts to Palos. This little town in Andalusia was chosen as the port of departure because three proment shipowning families, there—Pinzón, Niño, and Quintero—were sold on Columbus and could be counted on to recruit men. The fitting out

of the three vessels cost only about $15,000 in gold. Most of this was borrowed by the Crown from a fund that had been collected to support the police of Castile. The payroll, which amounted to about $1,750 a month, was assumed by the Crown.

These vessels were well built, rigged, and properly equipped for a long voyage. Columbus himself described them in his sea journal as "well suited for such an enterprise." His only complaint, and that against *Santa Maria*, was her slow speed compared with the two lively caravels. But the really surprising thing about these vessels to a modern sailor is their speed. On the outward passage in 1492, the fleet averaged 8 knots for 5 days' running, and on 1 day of the homeward passage *Niña* and *Pinta* covered nearly 200 nautical miles, hitting 11 knots in the gusts. Racing yachts can better that today, but few, if any, commercial sailing vessels of their size 50 years ago could have surpassed their speed.

Columbus' plan for the voyage was simple and practical. Having observed that the Portuguese navigators who went exploring west of the Azores never got anywhere, owing to the prevailing westerlies of the North Atlantic, he decided to drop down to the Canary Islands and sail thence due west before the northeast trade wind which could be counted on in the winter months, as he had observed on his African voyages. Japan, on the best map available to him, compiled according to his geographical ideas, lay due west of the Canaries, with the fabled Island of Antilia en route.

By Thursday, August 2, 1492, everything was ready for the great adventure. That night every man and boy of the fleet made his confession and communion at the Church of St. George, Palos. At a quarter to five the next morning, when the ebb tide began, the captain general—as Columbus ranked on this voyage—gave the signal to get under way.

By 8 a.m., two glasses in the forenoon watch—Columbus set his watches at 3, 7, and 11 o'clock—the ships were across the bar and a course was shaped for the Canaries. On the sixth day the Grand Canary could be seen above the southern horizon, but an accident to *Pinta's* rudder delayed the fleet, repairs had to be made at Las Palmas, and it was not until September 2 that they anchored in the roadstead of San Sebastian, Gomera, westernmost inhabited island of the Canaries. Doña Beatriz de Peraza, the young and beautiful widow of the captain of Gomera, was there to receive Columbus. According to a gossipy shipmate, he fell in love with her, but he was too intent on his great project even to tarry a few days for the full moon. He took on a last load of provisions, and on September 6, weighed anchor for the last time in the Old World.

Due west was the course set by the captain general. That night they cleared the land, and by the afternoon of the 9th the high peak of Tenerife had sunk below the horizon and the three ships had an uncharted ocean to themselves.

Of course, they had to hit something if they sailed due west, and for most of the way the fleet enjoyed perfect weather. It was an easy and delightful voyage, especially during the first 10 days beyond sight of land. The wind blew fair and fresh on the starboard quarter, every sail bellied out and pulled its best, the fleet made 1,163 nautical miles' westing. As they were near the northern limit of the trades, the sea was smooth, "as calm as the River of Seville," noted Columbus; and "the weather was like April in Andalusia."

A week of dull sailing, September 19–26, when the wind turned soft and variable, followed the first 10 days. The men went in swimming, and the caravels were frequently rowed alongside the flagship so that the captains could consult, while the sailors shouted jokes and insults from ship to ship. In one of these conferences, toward sundown, Martin Alonzo Pinzón and Columbus were discussing a chart on which Antilia and other mythical islands were plotted, and Pinzón had just sent it back to the flagship on a line, when he rushed up on *Pinta's* poop and shouted, "Land! Land! I claim the reward!"

There was a general scramble up the rigging and almost everyone thought he saw land on the southwestern horizon. Course was altered accordingly and all night the lookouts were on the alert. But at dawn no land was visible. It had been a cloud. To mistake a cloud on the horizon for land is a very common phenomenon at sea. It deceives sailors even nowadays, when the entire globe is charted; in those days anything was possible.

Columbus was not disturbed by this false landfall, since he reckoned that the fleet was barely two-thirds of the way to Japan. On October 7, when multitudes of birds were seen flying in a southwesterly direction, he changed course to west-southwest, for he knew that the Portuguese had discovered islands by taking their direction from the birds. That was wise, for the fleet was actually crossing the birds' route from North America to the West Indies, and their fall migration had started.

So far, this had been an unusually prosperous voyage. No squalls or gales, no gear lost, no leaks sprung, no men overboard, winds mostly fair. But it was a thrust into the unknown, uncharted ocean, where anything might happen, toward the fabulous Japan which no European had ever seen. The sailors were now becoming discontented and mutinous, fearful they would never return. These fellows had never been more than a week's sail from land. How can we ever get back, said they, if we sail on and on and on? This Genoese is crazy; we're not sailing to the Indies, but to slow death by starvation.

The 9th and 10th days of October, when the fleet was only 200 or 300 miles from the Bahamas, were the most critical of the entire voyage. "Here the people could stand it no longer," noted Columbus in his journal, "complained of the long voyage," but (says Las Casas) "the admiral cheered them as best he could, holding out good hope of the profit they might gain, and, he added, it was useless to complain, since he had come to see to go to the Indies, and so would continue until he found them, with the help of our Lord."

That little speech was the most characteristic of Columbus ever recorded. It embodies all his stubbornness, sincerity, and absolute faith in his mission.

The two captains, Pinzon, as eager to make the Indies as their captain general, were also having trouble with their crews. Evidence of what happened is conflicting, but I, for one, follow the early historian Oviedo, who spoke with many of the officers and sailors, and had far more evidence than has come down to us. He says that Columbus, by tactful and cheery words, "awakened the courage of the weakened minds of those who were about to resort to something shameful. * * * and they agreed to do what he commanded and sail on 3 days and no more." This pact was made on October 10.

With only 3 days' grace, Columbus cracked on all the sail the ships could bear. The fleet averaged seven knots to sunset of the 11th, when the wind increased and the sea rose. Signs of land were now abundant, and the seamen no longer complained. All night twittering birds flew overhead right on the fleet's course; by day, objects were seen that proved land to be near—a green branch with a little pink flower on it, a carved stick, a land plant. When the sun dipped under a clear horizon, every man on deck was watching for a silhouette of land against the sunset; but none was there.

On this last night, October 11–12, as it turned out to be, of the outward passage—a night big with destiny for the human race—the ships sailed as they had never sailed before, rolling and pitching in a high following sea, logging up to 9 knots.

Under these circumstances, with everyone's nerves taut as the topsail sheets, there was almost certain to be a false alarm of land. At 10 p.m., an hour before moonrise, it came. Pedro Yzquierdo, Rodrigo Sánches and Columbus himself thought they saw a light like a little wax candle rising and falling, but they didn't see it long, and no light was or could have been there, 35 to 40 miles offshore on a rough night. It was all in the skipper's eye. Almost every sailor watching eagerly for an uncertain landfall at night has seen imaginary lights; and often a few shipmates will see them, too, before the illusion disappears.

Now let us get a picture of this great moment in history. It was 2 a.m. October 12, 1492, in the midwatch. Rodrigo de Triana, on the lookout in *Pinta*, sees something like a white sand bar gleaming in the moonlight ahead, then another, and he sings out, "Tierra! Tierra!" Land! Land!

And this time, land it is. What they saw were the white sand cliffs on the eastern coast of the Bahamian Island which the Indians called Guanahani, which Columbus named San Salvador, and the English renamed Watling's and then San Salvador again.

As soon as day broke they squared away past the southwest point of the island. There they found that the coast trended north, giving good protection from the wind and sea; so, with sails trimmed close on the starboard tack, they sailed slowly northward in the lee of the land, looking for an opening in the coral reef. After logging about 4 miles an opening appeared, north of what is now called Gardiner Reef. All three vessels then entered the bay now called Long, and came to anchor off a white sand beach. Not until the Christmas of 1956 was a monument erected there to mark the spot.

It was now the middle of the forenoon watch. Naked natives could be seen assembling on shore. The Spaniards were seething with excitement—the Indies at last. For nobody had the slightest doubt, having come so far—33 days from the Canaries—that this was an outlying island of China or Japan. The officers of the caravels bourded the flagship to congratulate Columbus, hailed him as Admiral of the Ocean Sea and Viceroy of the Indies, begged his pardon for ever doubting him, and swore fealty and allegiance for the future.

Next, a landing party is organized. The boats, each rowed by 8 or 10 sailors, carry ashore Columbus and the three captains, Rodrigo Sánchez, the royal comptroller, Luis de Torres, the interpreter, and Rodrigo de Escobedo, the flag secretary. While the six gay banners, their staffs planted in the sand, wave in the breeze, all hands fall on their knees and thank God for His immeasurable mercy at having brought them to this land. Columbus, rising, draws his sword, names the island San Salvador—the Holy Saviour—and, summoning all hands to witness, takes formal possession of it in the name of Ferdinand and Isabella, while scribe Rodrigo de Escobedo—provided with inkhorn and quill pen—writes down the record.

The Indians, as Columbus promptly insisted these natives were, must have been dumfounded. They had never seen such people as these "men from the sky," as they called them, nor any boat larger than a dugout canoe. But they were a trading people and seemed to know instinctively what sailors want after a long voyage, since they kept the young girls away from the beach. Columbus had brought with him an assortment of the trading truck that the Portuguese used on the Gold Coast—red caps,

glass beads, hawk's bells, tambourine jingles, and the like. These proved to be just what the Indians wanted.

In turn, they had gold ornaments, parrots and skeins of cotton, which they gladly exchanged for any sort of trinket, even pieces of broken crockery and lace points, so that Columbus had to set up a price scale to prevent his sailors from robbing them. He reported that the natives were straight-limbed, well built, and handsome; not black like the Africans, "but the color of the Canary Islanders. Their nudity, lack of private property and ignorance of money and of iron suggested to him that they were primitive communists, a holdover from the fabled Golden Age when the world was young and innocent. But their completely defenseless state, far from arousing his compassion, suggested that they could easily be enslaved; while their apparent absence of religion marked them as a fertile field for missionaries. The first desire, alas, prevailed over the second. Every sailor came home with the conviction that God created the Indians to work for Spaniards; and before a single missionary reached Guanahani, that island, named after the Saviour of mankind, had been depopulated by Spanish slave raiders.

Not only the day we celebrate as Columbus Day, October 12, but the next two as well, were spent in exploring San Salvador.

The 3 days spent in San Salvador, which Columbus imagined to be as near Japan as Okinawa is, were perhaps the most delightful and wonderful that any sailors have ever had, anywhere. There have been discoveries more spectacular than that of this island outpost to the American continent, but it was there on the 12th of October 1492, that the oceanic barrier which bound Europeans to near horizons and coastal voyages was broken at last, and Spain acquired the key to a new world. San Salvador, for the Spaniards, was a clean break with the past. The people were completely strange in appearance and spoke a tongue that no man could understand. Every tree, shrub, and flower was new; the pottery, the ornaments, the houses, and canoes were completely unlike anything that the most traveled sailors had seen in Africa; and as none of them had ever visited China or Japan it was easy to conclude that this island lay off the Asiatic mainland—but what part of the mainland, and where was Japan? These poor naked people, it is true, were nothing like the gorgeously clad orientals described by Marco Polo, but hadn't one always suspected that Marco Polo was a big liar? Some such thoughts must have been passing through the minds of Columbus and the Pinzóns and Niños when they hopefully set sail from San Salvador for—as they hoped—Hangchow or Yeddo.

However that may be, the 12th day of October 1942 not only marks a new era in history; it was the day on which those lucky sailors of the Columbus fleet had the most unusual experience enjoyed by explorers in the modern world.

NATO, the Communist Bloc, and the Uncommitted Nations of the World

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting article on NATO and the Atlantic Congress by Dr. Howard White of the Department of Government, Miami University, Oxford, Ohio. The Congress met for a week in London last June and was participated in by 650 citizens from the NATO countries. There were 130 delegates from the United States. It was my privilege to be one of them.

NATO, THE COMMUNIST BLOC, AND THE UNCOMMITTED NATIONS OF THE WORLD

(By Howard White)

Has President Eisenhower's tour of the principal NATO capitals and his exchange of visits with Premier Khrushchev lessened tensions so that we can look forward to peaceful coexistence with the Communist bloc and to the gradual development of effective world government through the U.N.? Or, must we become reconciled to a divided world with conflicting economic policies, propaganda, and a continuing heavy burden of armament? To a divided world in which we can never be sure that some Russian or Chinese dictator may not decide that he commands sufficient military power to seize world dominion and thus precipitates mutual destruction instead of making the world safe for communism?

Even if Marxist theory that war is inherent in the nature of capitalist society has been revised, as one recent visitor to Russia has reported, so that "Soviet philosophers see no ideological or historical obstacles in the way of accommodation with the capitalist West," the same reporter notes that "the confrontation of the United States and the U.S.S.R. continues—largely because of the anarchy in the international field, producing an old-fashioned balance-of-power struggle." (Norman Cousins, Saturday Review, Aug. 29, 1959, p. 20.)

It seems to me that the foreseeable future will be much like the past decade, except that the struggle for control of the still uncommitted and neutral peoples will be intensified. A third world war may not be imminent so long as military power is substantially equal, but frequent incidents such as those which have led to fighting within the borders of India and Laos will test the readiness of free nations forcibly to resist Communist aggression.

Consequently, the survival of the free nations and the maintenance of their influence in underdeveloped areas of the world depend upon effective organization both for defense and for achieving better living conditions for all peoples not in Communist bondage. Can an existing organization serve these purposes? Not the U.N., because there the Communist nations can block action. The reasons for their membership in such agencies as they have seen fit to join seem to be to produce deadlocks and to provide a forum for their propaganda.

To some extent, the Organization of American States may be utilized to check the spread of Communist influence; but many, if not all, Latin American states need capital and technical assistance to raise their own living standards. The principal reliance must be upon expanding functions of the North Atlantic Treaty Organization, NATO, which, as a military alliance, "has, in its first 10 years, preserved the peace of Europe, although the threat of aggression is still present." Indicative of a growing realization of the need to expand NATO's functions is a declaration adopted by the Atlantic Congress which met in London, June 5–10, 1959, that "The time is ripe for these nations" (members of NATO) "to build an Atlantic community with responsibilities extending to military, political, economic, social and scientific fields."

I was privileged to serve as a delegate to that Congress. Its recommendations can become realities only with popular support. They deserve consideration by citizens of every country which is a member of the alliance. What I have to tell you about the Congress and its deliberations may help you to realize how essential for counteracting the designs of the Communist bloc is a unified center of power in the Atlantic community.

The phrase, Atlantic community, is a misnomer. Italy, Greece, and Turkey are members of NATO. Even this extension did not satisfy those who prepared the program for the Congress. Its studies were to be "outward-looking in terms of geography, forward-looking in terms of time." The Congress fulfilled these requirements. Much attention was given as to how to counteract Communist influence in Asia, Africa, and Latin America. Military obligations of signatories of the North Atlantic Treaty do not extend to these parts of the world. As discussion proceeded in subcommittees, in committees, and in plenary sessions of the Congress it became evident that members felt the need to build an organization whose geographical and functional scope was not limited to the military defense of nations bordering the North Atlantic and the northern and eastern shores of the Mediterranean.

The Congress opened on the morning of June 5 with addresses by Queen Elizabeth and Prime Minister Macmillan. For this session, we met in the Great Hall of the Palace of Westminister The delegates were in their seats by 9:55. During the next half-hour, and before the Queen's arrival, there entered at the north door of the Hall and proceeded to their appointed places, the State Trumpeters (who sounded a fanfare for the Queen and Prince Philip as they took their places on the stage), the Guards of the Honourable Corps of the Gentlemen-at-Arms and Her Majesty's Bodyguard of the Yeomen of the Guard. Their medieval costumes, bright red predominating, enlivened the scene at the same time that they and the Great Hall, originally built almost 900 years ago, exemplified the antiquity and the continuity of the pomp and pageantry which surround British political institutions.

In spite of the participation by the highest officials of the British Government and the presence among the delegates of members of legislatures of NATO nations, the Atlantic Congress was not an official body. Its delegates had not been chosen by the governments but by national committees of citizens supporting NATO. The Association of NATO Parliamentarians initiated the calling of the Congress to signalize the tenth anniversary of the North Atlantic Treaty and to study "the whole complex of both problems and prospects facing the NATO countries . . ."

The United States was allotted the largest number of delegates, 130. (Among those appointed but unable to attend were Senators Hubert Humphrey and John Sherman Cooper and President Grayson Kirk of Columbia University.) France, Germany, Italy and the United Kingdom were each assigned 70 delegates; the other NATO countries proportionately to their smaller populations, had fewer delegates. The delegates were chosen to be representative of politics, industry, commerce, finance, labor, agriculture, education and mass media in their respective countries. It was thought that they would, more freely than officially-appointed delegates, discuss and make recommendations on "those subjects on which governments would hesitate to act without a display of influential public support."

Such was the composition of the Congress which heard the Queen say: "These old walls have witnessed innumerable stirring events in our national history." (She did not mention the trial which resulted in the beheading of Charles I.) "Today they are sheltering a meeting which has significance far beyond the boundaries of any one State.

* * * The Atlantic community is the first real effort to give practical form to a growing desire of the people of this part of the world to work more closely together. * * *"

How strong was the desire to work more closely together? The more than 600 delegates came from only 14 of the 15 nations which have adhered to the North Atlantic Treaty of 1949. Iceland was not represented because of its unsettled dispute with Great Britain over fishing rights within 12 miles of its shores. NATO, being almost exclusively a military alliance, had no machinery to settle this dispute or such earlier differences as that between Great Britain, Greece and Turkey over Cyprus, and the even more serious conflict between the United States and Great Britian and France when the latter two nations sought to wrest control of the Suez Canal from Egypt.

These evidences of deficient authority in NATO may have been considered in one of the other four committees into which the delegates were divided. These evidences were not mentioned in Committee E, Relations with the Communist Bloc, or in its Subcommittee 3, Soviet and Western Propaganda Techniques, to which I was assigned. Nothing was said about these instances of NATO's inadequacy in any of the regular plenary sessions of the Congress. In the extraordinary session on Tuesday evening, addressed by Prime Minister Macmillan, NATO Secretary-General Paul-Henri Spaak, and other prominent men, the Prime Minister of Norway commented regretfully on the absence of Icelandic delegates. Perhaps it is more diplomatic not to refer to specific instances of failure, but how can stronger institutions be built if malfunctioning is ignored?

Obviously, disputes among member states weaken the structure of the alliance. If there is to be a genuine union to oppose Communist aggression, some supranational authority must be created, as it has been in the six-nation Coal and Steel Authority and in the same six-member European Economic Community, better known as the Common Market. Such authority is needed, not only to command a unified military force but also to settle disputes among members. To create such an authority over NATO members was a proposal distasteful to most delegates. The Congress adopted the previously quoted declaration that the time is ripe for these nations to build an Atlantic community with responsibilities extending to military, political, economic, social and scientific fields. But the building of an Atlantic community was left to the national governments which should convene a special conference of leading citizens to examine exhaustively means of attaining greater unity.

If the 15 NATO signatory states act on this recommendation, the special conference may face the issue of supranational authority and agree upon what sovereign powers the national governments shall give up. The Atlantic Congress requested that it be convened not later than the spring of 1960, and that it be composed of not more than a hundred leading representative citizens, directed to convene for as long as necessary in order to examine exhaustively, and to recommend as expeditiously as possible, the means by which greater cooperation and unity may best be developed within the Atlantic community.

Even if the national governments do set up this special conference, there are at least two reasons for being pessimistic about results. First, it will be difficult, if not impossible, to get a larger proportion of leading representative citizens to serve in the special conference than there was among the delegates to the Atlantic Congress. The special conference would be much smaller and would have more time to resolve, or dissolve, differences. Such an outcome would tend to be negated by the second handicap: the fact that the members are to be shown by the respective national governments. If an unofficial congress of leading citizens can not agree upon definite limits on national sovereignty, a conference of official representatives of the national governments is not likely to accomplish more.

It seemed to me that when the British and some other delegates opposed giving supranational authority to NATO they were really saying: "We do not want the United States to tell us what to do." To them supranational authority meant the authority of the United States. It may have been on account of this feeling that some delegates from the United States were as insistent as were those of any other country that no supranational authority be vested in NATO. Possibly these delegates did not want those from economically and militarily weaker states to feel that the United States was becoming an imperial power. On the other hand, the reluctance of the U.S. Senate to let our Government be subject without its consent to the jurisdiction of the International Court of Justice indicates that the Daughters of the American Revolution are not the only citizens fearful of surrending our national sovereignty. The delegates of the Atlantic Congress were unanimous in urging that national governments should not take major decisions affecting NATO without previous consultation. (Every one of the major powers has done just that on more than one occasion, and will probably do so again as long as there is no superior authority to restrain them. Moreover, pursuant to this resolution, national governments, having consulted with the other signatories, will then be free to act as each thinks best. That illustrates the anarchy of national sovereignty.) The Congress also recommended that meetings of the heads of NATO governments, similar to the one held in December 1957 should take place annually. So what? Does this solve the problem of conflicting national sovereignties?

The problem of the relation of member states to NATO, as dealt with by the Atlantic Congress, can be interpreted more favorably. To do so, however, we must start with the assumption that there is not yet an Atlantic Community. Several expressions in the reports of committees, as well as statements of speakers in plenary sessions, called for building an Atlantic Community.

The Report of Committee B, Political, is explicit on this point. It said:

"[T]he problem before us is whether the alliance as it operates today gives effective expression to this desire of our peoples, whether we have yet reached a sufficient degree of unity, whether existing measures are adequate to meet the dangers—in a word, whether its policy is adequate to meet requirements.

"This then is the crux of the matter. The pooling of our national resources in the traditional form of international cooperation seems today hopelessly inadequate and out of date compared with the new danger that is threatening us all in equal measure. Of course, one solution would be to bring about some form of political federation of all of our states. The idea of such a federation at this time should not be ruled out, but we must face up to the possibility that it may be psychologically premature. In any event we must proceed beyond the stage of an alliance. In other words what we must do is create a genuine Community.

"This will not be an easy task. * * * At all events, there is a fundamental principle which we must acknowledge as the cornerstone of this Community; namely, that the traditional concept of the sovereignty of our countries must not be regarded as something unalterable, like Holy Writ. It must also be realized that in our democratic society the rights of the individual, though they remain the general rules of that society, are limited by law in order to preserve the freedom of other individuals, or to insure social progress in accordance with technical progress. Hence the need for us to accept limitations of the sovereignty of our states; limitations which are urgently called for by the overriding needs of our defense, our well-being and our unity."

By adopting this report, the Congress showed an awareness of the need for building a genuine Atlantic community, a realization that it does not yet exist. For a Congress of over 600 delegates from 14 nations to accept such pronouncements of the inadequacy of existing institutions may be ground for some consolation; but until practical steps are taken to create a supranational authority over the 15 states in NATO, we should not feel safe from aggressive acts by the monolithic power of the Communist bloc.

As I indicated in the beginning, the Atlantic Congress was not solely concerned with a more effective political union of the 15 nations. It wanted this, without being sure how to attain it. It also wanted its original defensive posture to be strengthened. Beyond these objectives was the realiztion, as expressed by the Secretary-General of NATO, Paul-Henri Spaak, that "in the coming years it is probably to the economic and social aspects that we shall have to pay the greatest attention; and the less economically developed countries of Asia and Africa will probably be the scene of the clash between the Communist and the free world."

Herein lies the main difference between the first and the second decades of NATO's existence. Necessarily, the first decade required concentration upon consolidating defensive military power and upon rebuilding the shattered economies of Western Europe. Russia was engaged in similar tasks in its own territories. The second decade is to witness a worldwide contest between Communist and NATO powers to influence the economic development of the peoples of Asia, Africa, and possibly of Latin America as well. Various powers of western Europe controlled such development as took place in their respective colonies; but the colonizing era has ended. Peoples of Asia and Africa are asserting their political independence and striving to improve their living standards. Selected leaders from these awakening lands are indoctrinated with Communist ideology. Russia's phenomenal industrial progress is exhibited, and financial and technical assistance is promised with no strings attached.

The Russian program is designed to counter the point IV program of the United States. The general chairman of the U.S. delegation to the Atlantic Congress, Eric Johnston, who has had experience with technical assistance programs in the Near East, told the Congress that "if Africa and Asia go Communist, the Atlantic alliance will be thoroughly outflanked. * * * [H]ere is the central battleground we face; here is the engagement we have with communism * * * In this economic arena, victory is clearly attainable—if we give it half the attention, half the funds and initiative we now give our military defense. * * * Thus far, much of our aid has been given piecemeal and at random, without the essential continuity through which these nations can make long-range plans."

Eric Johnston proposed "to approach the problem of economic growth through the internationalization of econom aid." Speaking as a citizen of the United States, he declared that we "cannot go it alone. There is for us the need for a coordinated pattern of aid in which other advanced economies will take their proper part. Beginning now and in our Western World, we should con-

sider the establishment of a lending consortium, a coordinated long-term fund capable of rooting stable economies in Asia and Africa. The nations of the Atlantic Community, together with such advanced economies as Switzerland and Japan, would be lending partners in the consortium."

In line with Eric Johnston's idea, but somewhat less specifically, the Congress declared "That the Atlantic countries should undertake a massive and sustained effort to help the peoples of the less developed countries to achieve a rising standard of living together with individual freedom, human dignity, and democratic institutions; in this effort we must act not as outside patrons but as equal partners with them in a joint enterprise of freedom."

Committee E, Relations With the Communist Bloc, was also concerned with "the politically uncommitted nations of the world, and particularly with those among them that are still classified in the stage of relatively low industrial development, living standards and economic growth rates." These, it declared, "will be a primary target for Communist penetration in the years ahead * * *." To counteract these efforts, the committee recommended, and the Congress approved, that "an international unofficial organization be set up as a separate institution, for the purpose of diffusing throughout the world basic information which will help people to assess and understand more clearly the ideological aggression of totalitarian communism and to appreciate the true value of liberty."

Perhaps nothing more could be accomplished by over 600 delegates from 14 countries in 6 days and nights crowded with subcommittee, committee, and plenary sessions, receptions, dinners, and a special midnight performance of "My Fair Lady." The reports and recommendations showed an awareness of the insufficiency of reliance upon national sovereignties; a realization that the nations of the free world need to act in a unified manner, not only in maintaining their military shield, but also by concerted assistance to the less developed peoples of the world. The North Atlantic community can only endure if it develops a global character. To do this, unified economic and technical assistance programs and also a centralized propaganda agency will be required effectively to check the designs of Moscow and Peiping.

There's Magic in the Mississippi but Stream Also Creates a Practical Problem

---

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. EVERETT. Mr. Speaker, after Congress adjourned last fall an article appeared in the State Gazette, of Dyersburg, Tenn., which is in our district, relative to the Mississippi River Commission, which I think should be brought to the attention of the Members of the Congress.

Under the able leadership of Maj. Gen. W. A. Carter this commission is doing a wonderful job for the people of the Mississippi Valley.

This article from the State Gazette follows:

THERE'S MAGIC IN THE MIGHTY MISSISSIPPI, BUT STREAM ALSO CREATES A PRACTICAL PROBLEM

Since time began, rivers have captured the imagination of man. They have been an inspiration for poets, magic for the ordinary, and a boon, as well as a problem, for the practical. There are the sweet, gently flowing Afton, the mysterious Nile, the blue Danube, and the mighty Mississippi.

It is interesting to discover the personality of a river. In this the Mississippi presents no problem, for it is indeed, a mighty river, a "devil in the ditch," an "angel in disguise." Shifting, winding, eroding, its tons and tons of water flow ceaselessly to the Gulf of Mexica. At Cairo, Ill., 534 river miles north of Vicksburg, Miss., headquarters of the Mississippi River Commission, the Ohio and the Upper Mississippi Rivers join to form the lower Mississippi. Taming the lower portion of this "devil in the ditch" and keeping him securely in his shackles is the responsibility of a body of seven men. These men, appointed by the President of the United States and confirmed by the Senate, form the 80-year-old Mississippi River Commission, a U.S. Army Corps of Engineers agency. The general duties of the Commission as an executive body include the recommendation of policy and work programs, the study of and reporting upon the necessity for modifications or additions to the flood control and navigation project, recommendation on matters authorized by law, making inspection trips and holding public hearings. The Commission is scheduled to begin its annual low-water inspection trip on October 5, starting just above Cairo at Cape Girardeau, Mo.

CREATED IN 1879

Charged with harnessing and improving the lower Mississippi to make its valley safe from floods and the river a strong navigation artery, the Mississippi River Commission was created in 1879 by act of Congress. It made its first inspection trip that year, with General Benjamin Harrison (who was later to become President of the United States) and James B. Eads, noted engineer, as two of its members. Each year since that time, the commission has made semiannual inspection trips during the high water season in the spring and the low water season in the fall. The present members of the Mississippi River Commission, who might well be called the managers of the lower Mississippi River, are Maj. Gen. W. A. Carter, U.S. Army, president, Vicksburg, Miss.; Mr. DeWitt L. Pyburn, civil engineer, Baton Rouge, La.; Mr. E. F. Salisbury, civil engineer, Kansas City, Mo.; Rear Adm. H. Arnold Karo, Director, U.S. Coast and Geodetic Survey, Washington, D.C.; Mr. Harry L. Bolen, Cairo, Ill.; Brig. Gen. William W. Lapsley, U.S. Army division engineer, U.S. Army Engineer Division, Ohio River, Cincinnati, Ohio; Maj. Gen. Keith R. Barney, U.S. Army division engineer, U.S. Army Engineer Division, Missouri River, Omaha, Nebr.

On their inspections, the commissioners make a thousand-mile trip downriver on the steamer *Mississippi*, one of only a few remaining paddlewheel steamers on the river. The deep-throated, three-toned whistle of the steamer, blown by the pilot with a virtuoso's touch, heralds the steamer's approach to each landing where stops are scheduled. There local officials, levee board and drainage district officials, barge line interests, businessmen, farmers, and others come aboard to greet the commissioners and find seats in the improvised meeting hall in the main cabin of the boat where public hearings are held. Questions of importance to be put before the commissioners concern maintenance of flood-control works, higher levees, new revetment, deeper channels, improved drainage, and the like.

A PARTNERSHIP

A grassroots event, these public hearings, where the river is a common denominator in a partnership between the local interests and the river commission, are a springboard of ideas where questions of mutual concern for a common problem and a common hope are discussed. The partnership of local interests and the Corps of Engineers has paid big dividends in bringing successful flood control to a valley often ravaged by the unbridled river. In fact, as the Chief of Engineers recently testified before the Congress, the dividends have already been $6 for every $1 invested.

With the flood control work has also come great benefits from a navigation artery which, with its many arms, is the greatest in the world. From the Alleghenies and the Rockies from forests and plains, from streams small and large, come the waters that form the lower Mississippi River. A thousand miles from Cairo, Ill., to the gulf, a thousand winding miles to the sea. The Mississippi, greatest of all American rivers, is often peaceful, silent, lazy. But not always. Sometimes it's wild and wild rivers must wear a harness to work for mankind. It is to this end, the harnessing of the turbulent Mississippi for the good of mankind, that the Mississippi River Commission is dedicated.

CONTROL A REALITY

Since the present project was authorized by act of Congress in 1928, the most spectacular accomplishment has been making flood control a reality. A 1,600-mile system of giant earth levees, cutoffs which have straightened Mark Twain's meandering river and lowered flood stages, overbank floodways which in time of great flood will divert from the Mississippi an amount of water equal to the floodflow of the Missouri and Tennessee Rivers combined with that of the Yazoo River thrown in for good measure, concrete revetment of the riverbanks to prevent the Mississippi's wandering, and other features such as reservoirs on the tributaries, floodwalls, dikes, and pumping stations are combined to give the lower Mississippi Valley successful flood protection.

But navigation was the commission's earliest concern. Today, with deep-draft tows pushing strings of barges often a fifth of a mile long, maintenance of a navigable channel is of even greater importance. Revetment is helping to accomplish this, and dredges carve channels through shallow sand crossings to keep the river open. It will be 255 years next year since the first international cargo floated down the Mississippi—a load of 15,000 bear and deer hides bound for France. The river has come a long way since then, and cargoes have changed. But the Mississippi is still the Nation's central artery, now the main stem of America's 28,600-mile inland waterways system.

CARGO DIFFERS

Navigation statistics no longer show deer and bear hides as cargo. It's oil and grain, coal, stone, sulfur and steel, bulk commodities suitable for transportation in the huge barges pushed by sleek modern towboats traveling a deep and safe waterway. The Mississippi carries mass transportation on a gigantic scale. But this is as it should be, for the Mississippi River is of gigantic proportions and accomplishments.

Draining 41 percent of the Nation, all or parts of 31 States and 2 Canadian Provinces, the Mississippi gathers waters from as far east as New York State and as far west as Montana. The drainage system roughly resembles a huge funnel with its spout at the Gulf of Mexico. Enough rain falls on this area in a normal year to fill a cubical tank 8 miles on each side, and during a flood year, a million million tons of water pass down the Mississippi.

Supporting commerce from the entire country, the Mississippi is truly a national river. But it is international as well. In the great river ports of New Orleans and Baton Rouge, ships of all nations gather—Iranian oil tankers; spice-laden vessels from India; ships from the "have not" areas of the world receiving grain from the Midwest to feed their hungry populations; and South American traders taking on shiny new automobiles from Detroit for the streets of Lima and Rio.

Industry is moving to the lower Mississippi, too, in a steady march with a Dixieland beat. Attracted in part by an awakened, progressive South that is "on the move" but more attracted by the abundance of water and bulk transportation afforded by the river, hundreds of new industries have moved into the area in the past few years. Aluminum plants, oil refineries, huge chemical plants, furniture and textile mills—a diversified industrial complex is rising in what was once "cotton" country.

TO CHECK WORK

Of particular interest to the Commissioners while making the low-water inspection will be a progress check of work at the Old River control site, just below Natchez, Miss., where a plan of improvement is under construction to prevent the Mississippi from behaving in an especially devilish way. It has been trying to change its course and flow to the Gulf of Mexico through Old and Atchafalaya Rivers. This diversion, which offers the waters of the Mississippi a shorter route to the Gulf, would also isolate Baton Rouge and New Orleans from their present advantageous position on its banks.

These and other matters are the concern of the Mississippi River Commission as the Mississippi becomes more and more important to the future of America. It's paradoxical—this steamboat trip along the silent Mississippi in the jet and missile and Moonrocket age. But it makes a lot of sense. Witness the lesson taught by the river itself—a great rushing, plunging flood brings only destruction, while the steady, orderly flow made possible by manmade improvements brings benefit for all. This has been proved by test.

Republican Club of the First Ward of East Orange, N.J.

EXTENSION OF REMARKS
OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. WIDNALL. Mr. Speaker, on December 9, 1959, at an executive committee meeting of the Republican Club of the First Ward of East Orange, N.J., Mr. Joseph H. Bissell, historian of the club delivered the talk appended.

It is a fitting tribute to an organization now 50 years of age that has contributed greatly to the political life of our country and New Jersey.

It is interesting to note that the abilities of many members have been recognized by election to high office. Two members, Albert L. Vreeland and Frank Sundstrom were both elected to the House of Representatives and served with distinction.

I have asked permission to insert the remarks of Mr. Bissell as they convey the high purpose of this organized political group that may well be the oldest Republican club in New Jersey and possibly the oldest of its kind in the Nation. Mr. Bissell's talk follows:

In the early days of the 20th century this great country of ours was, with the rest of the world, actually catapulted into a new experience in living. At that time people little comprehended what that new experience was to be. Certainly only the most astute men of wisdom and philosophy at that time could not have predicted with any accuracy the swift arrival, within a few decades, of the automobile, the airplane, the radio, the television, the atomic age, the vast economic changes, the awakening of men's minds to a great parade of ideas (some good and some not so good), the waning of some older world powers, and the growth of some new world powers. Living today we see those events and many, many of far-reaching import on history.

Now in 1960 we find ourselves on the threshold of things to come more so than ever before. We earth people are on the move and we will go forward to great new heights of living as the kaleidoscope of new advancements unfold. If the quickly occurring procession of events of the past 60 years is any barometer, these new penetrations into the present unknown must come. As we now have had the experience of these past few generations, we must see the necessity of girding ourselves to meet anything with equanimity and stable wisdom so that they do not destroy us. Particularly is this true of government; always has it been true of government. For, if people are to live in organized society under stable government—and there seems to be no other way to achieve continuity of society—they must be ever ready to probe into the future for new advancements and adapt themselves in thinking to accept those new progressions in order to continue to survive; progress and be ready to meet and defeat those men who would selfishly misuse those new progressions to establish themselves as the sole power. This is the responsibility of free men if they wish to remain free.

A good many years ago—slightly more than 100—a group of people in our United States of America, in wisdom organized themselves to galvanize into action the true concept of the American dream. They seemed to find that the governing ideas and practices of those first several decades of our new Nation were a medley of attempts to identify this new dream of government and they particularly found the freedom idea was conspicuously misused. Thus they set forth to found a new approach for our American dream. They simply said men must be free. Upon this declaration they founded a new political party. To lead this movement they chose, either in their wisdom or by the wisdom of God, the first great leader of the movement who was elected the first Republican President of the United States. This great leader—Abraham Lincoln—came to epitomize the spirit of the whole American dream when he recorded for all time these immortal words: "* * * government of the people, by the people, for the people, shall not perish from the earth."

Not so many years ago—just 50 years to be exact—this Republican Club of the first ward of East Orange, N.J., came into formal existence. In this area of East Orange there were men actuated by the spirit of true Republicanism for on September 29, 1910, 58 of them gathered into a group, organized our club, and incorporated as such. As one would expect because of the limitations of the voting franchise of that day all members of the club at the outset were men. Today in 1960 the membership includes both men and women as all voters are eligible to join in the club's activities.

Preceding the official organization of the club in 1910, about 15 men had met together rather informally each year shortly before election day to place their combined thinking and influence behind the candidates of the Grand Old Party. The first meeting of these men in 1904 was held at the home of Bloomfield Littell, 46 East Park Street. Here the avowed purpose was stated to further in every way possible the candidacy of Theodore Roosevelt for President and his running mate, Charles W. Fairbanks, for Vice President. These earlier informal meetings were undoubtedly the real beginnings of our present club.

To be sure from these earlier years we can note many interesting facts about the history of the first ward. Perhaps mentioning a few will suffice to illustrate. For instance there were only two election districts. Then, according to voting statistics, the voters in the area were Republican, 10 to 1. Finally Mr. Littell was an attorney practicing in New York. This last is of special interest because commutation to and from the city must have been a real problem in those days.

The club has always adhered to the true principles of Republicanism—the rights of free men in a free republic for the benefit and welfare of all. It has consistently abhorred the cant and hypocrisy of those who mislead to gain political power in the city, county, State, and Nation. Its members have aimed always to adapt themselves to the changing times and have ever accepted the responsibility of free men and women because they wished to remain free and, not only that, they also wanted the freedom of our American dream for their progeny.

It could be noted, too, that in following the true concept of Republicanism the club members have been free always to think for themselves. They have not ever tolerated bossism among themselves. There have been reasonable differences of opinion and those differences have been expressed freely without fear of repercussion. Differences of opinion preceding a primary election have always been resolved, however, when the wishes of the Republican voters had been registered in each primary, the group has stood united behind the party's candidates.

According to all known facts this club is the oldest Republican club in New Jersey. Probably it is the oldest of its kind in the Nation. It is interesting to note, also, that whenever the wheelhorses of the organization have stepped out for varied reasons, such as health, removal, or death, there have always been new, courageous, and determined successors at hand. This succession of workers for the cause is again emblematical of Republicans for always has this characteristic been true of this great political concept. To maintain it this will surely continue to be necessary, for freedom for the individual will never come without struggle and without dedicated workers to accept the challenge of attaining it and maintaining it. There is no permanence in freedom or any ideal unless we will it so by our determined effort.

In keeping with its aims and purposes of Republicanism, the club has supplied the Nation, the State, the county, and the city of East Orange with men and women of integrity—that great inherent quality necessary for continued good, progressive government. Each and everyone has been inspired to serve his or her constituents well for the benefit of all. This service has been rendered with distinction and honor. A few of these who come readily to mind are:

1. Miss Alice I. Webster, our champion and queen of public service, served 50 years as East Orange city clerk. Her knowledge and efficiency in that capacity are exceeded by none, at least anywhere in New Jersey, as an authority on city clerkship and her counsel is sought by many.

2. Our most distinguished and faithful member is undoubtedly the Honorable Albert L. Vreeland who has served our Government as Congressman, colonel of the Army, judge, and commissioner. He has never failed to serve the other members of the club as adviser and friend.

3. The honorable Frank Sundstrom was Congressman from our district while Colonel Vreeland was in the Army. His other well-known success was as all-American tackle while attending Cornell.

4. All of our councilmen, year in and year out for 50 years, were and are members of this club. Anton Krause has had the honor of serving on our city's governing body for 12 years, a notable and distinguished record. Presently Ed Ruhnke is serving the city as a councilman from the first ward. He has served for 7 years and chairman of the city council; Mark Stern has just begun his first term as councilman from the first ward.

5. Mrs. Eliza Wright, widow of former State Senator Wright, served capably and honorably as recreation commissioner, freeholder, and director of our county government.

6. Hon. Charles H. Martens, of beloved memory, was mayor of East Orange for 34 years, in addition to many years of service as councilman from the third ward. He, habitually, attended our yearly club dinners and annual business meetings as well as all of our campaign rallies. He once said, "The heart of the first ward is right." He was a stanch party man and his administration was best known for its strict ethics in the conduct of our city government.

So that anyone interested may have this further information, following are the names of all known club presidents listed alphabetically: Joseph H. Bissell, William J. Cairns, Ross K. Cook, George S. Dates, Chris H. Freimuth, David S. Kelly, Jr., George L. Kelly, Anton Krause, Bloomfield Littell, Hoyt D. Lufkin, James J. MacWithey, Charles Mapletoft, J. W. Marden, John W. Noble, Karl J. Olson, George B. Roesch, Edward E. Ruhnke, M. DeForrest Soverel, Mrs. Edgar Vail, Mrs. Albert L. Vreeland, Hon. Albert L. Vreeland.

With this listing this attempt of a brief history to date of the First Ward Republican Club is hereby ended. The truly complete history of the club, however, will never be ended or written. As long as Republicanism remains a part of the American dream of freedom for everyone regardless of creed or color, the club will prosper and it will practice its Republican ideals. The new penetrations in thinking and practice of an ever-active society will ever be embraced as a part of these great American ideals if the penetrations always fit into the picture of freemen in a free world. My the Eternal Power under whose guidance we aspire to live ever show us the way to this achievement. May our prayers to Him help us and give us strength to attain that goal be bountifully granted. May we always be grateful in humility for His ever blessing.

Rail.oads Can't Meet Wartime Emergency

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. VAN ZANDT. Mr. Speaker, in the January 9, 1960, issue of the Register and Defense Times, Daniel P. Loomis, president of the Association of American Railroads, is the author of an article, titled "Railroads Can't Meet Wartime Emergency." Mr. Loomis' statement is based on the report of the Kilday Subcommittee on Transportation of the House Armed Services Committee and is a revealing article, since it discloses the inability of the Nation's railroads to continue to play their part in support of the national defense effort. Copies of the report and of the hearings conducted by the Kilday subcommittee may be secured from the House Committee on Armed Services and will be very interesting reading for those concerned with the adequacy of transportation systems in support of the National Defense effort in the event of a national emergency.

Mr. Loomis' article follows:

RAILROADS CAN'T MEET WARTIME EMERGENCY

(By Daniel P. Loomis)

(Charges have been made in Congress that the Nation's transportation system is inadequate to meet defense needs in event of national emergency. To give reads a better understanding of this situation, the Register invited the president of the Association of American Railroads, Daniel Loomis, to explain the positon of his industry in national defense.)

The Nation's railroads and Armed Forces have much in common. Both are essential to national security; both have long and proud records of service in the Nation's defense; and both—despite repeated demonstrations of their vital roles in time of emergency—are frequently denied the means to build added strength in time of peace.

In World War II, railroads of the United States confounded the theorists who had buried them prematurely by giving the greatest performance in their history. Their accomplishments included handling of more than 90 percent of all military freight and more than 97 percent of all organized military travel.

At the peak of the war, in 1944, the volume of freight moved by rail was double the prewar volume, and the passenger volume had multiplied four times. Of the total intercity movement of freight, both civilian and military, the railroads' share increased from 61 percent in 1940 to a high of 71 percent in 1943.

Reached mark: Railroaders well recall when they were criticized by high authority for misleading the public, when they promised to move 200,000 barrels of oil a day early in Warld War II to take up the slack created by the action of enemy submarines operating off the east and gulf coasts. Yet railroads not only quickly reached that mark, but eventually were handling more than 1 million barrels a day.

Commending the railroads for their wartime performance, President Roosevelt, in 1944, observed that "the way our railroads have transported munitions and men to all parts of the United States and to our seacoasts to be sent to our fighting fronts all over the world has earned the admiration and gratitude of the entire American people."

Even in the Korean war, in which other carriers were not hampered by rationing of fuel and scarce materials as they were in World War II, the predominant reliance of the military on railroads was apparent. Military freight routed by railroad during the years 1951–54 amounted to 72 percent of the total. Of the remainder, 23 percent moved by highway and 5 percent by water. In the movement of military passengers, counting both group and individual travel, railroads handled 64 percent of the total, airlines handled 30 percent, and buses, 6 percent.

In another emergency, the need for railroads and the Nation's reliance on them would be at least as great as in any war in the past. Indeed, if war should come to our shores, as is more likely than at any time in history, the need for railroads and the tasks they may be called upon to perform may greatly exceed in importance even their vital role of World War II.

House probe: This, in fact, is the conclusion of a special subcommittee of the House Armed Services Committee which in July and August this year conducted an investigation into the adequacy of transportation systems in support of the national defense effort in event of mobilization. This subcommittee, in its report of October 1959, flatly asserted that "no plans for transport dependence can fail to take into account the railroad industry." It added: "* * * military logistical planning is built around the railroads for the bulk of its freight and passenger movements. The other forms of transport, important as they are to the total need, are auxiliary and supplemental to the railroads."

Why the railroads would continue to be vital in another war, whether fought by conventional means or nuclear, has been well stated by Maj. Gen. Charles G. Holle, formerly Deputy Chief of Engineers for Construction of the U.S. Army. Referring to the vast scope and variety of transportation service that would be demanded by the Armed Services in a nuclear war, Holle has said:

"The changes in military planning brought about by the nuclear age will in no wise diminish the needs for such service and may well increase them. The tides of battle may shift with greater rapidity about the globe, requiring more movement and transport."

Whether another war is fought by conventional means or nuclear, or whether the war is over in a matter of days or years, it is clear that destruction on both sides would be widespread and severe. In the vital work of reconstruction following an attack railroads would have their greatest role. And new developments in weapons concepts, rather than lessening reliance on railroads, portend even greater military use for them than in the past.

Missile pads: One of the probable new uses for railroads in another war was revealed recently by Lt. Gen. Francis H. Griswold, vice commander in chief of the Air Force's Strategic Air Command. Plans being developed, General Griswold said, call for using railroad cars as a mobile base for the new Minuteman missile now under development, the purpose being to insure against loss of our retaliatory capability if fixed bases are destroyed.

In the light of this demonstrated and continuing importance of railroads to national defense, the railroad industry, like the Armed Forces, should be given every encouragement possible to remain strong and healthy in the public interest. It is a curious fact, however, that instead of providing encouragement, public policy in many areas is actually a deterrent to the railroads in their efforts to help themselves.

Public policy, for example, has decreed that in the competition for traffic and revenue the competitors of railroads shall have the use of highways, airways and airports, and waterways that are provided, operated, and maintained by Government out of taxes. It further provides that some of these costly public facilities may be used by competitors of railroads either entirely free of charge, as in the case of waterways and the Federal Airways System of navigation and traffic control, or without adequate charge, as in the case of airports and highways.

About face: When it comes to railroads, however, public policy does a complete about-face. It decrees not only that the railroad companies themselves shall provide, operate, and maintain their own road-

way and other facilities, but also that they shall pay heavy taxes on these facilities and that some of the taxes they pay shall be used to provide the highways, airways, and airports, and waterways for the use of railroad competitors.

Another reason for the difficulties that confront railroads in preparing for their defense role is that Department of Defense policies as to allocation of military traffic among the several forms of transportation in time of peace are inconsistent with the predominant reliance which the Armed Forces place on railroads in time of war.

As I told the House Armed Services Subcommittee this year in its investigation into the adequacy of transportation systems to meet a defense emergency, the railroad industry does not today have the reserve equipment to meet an emergency increase in traffic that it had in 1940—this despite new capital expenditures totaling more than $15 billion since the end of World War II. It does not have this reserve capacity because public policies such as those I have described have combined to keep railroad earnings far below the level necessary to support adequately the full-scale improvement effort that is necessary in the public interest.

Time is now: The time to rectify these inequities of public policy is now, not after an emergency is upon us. For as Chairman KILDAY of the House subcommittee said in opening the hearings: "The fact that we had time to prepare and to buildup our transportation capacity in previous conflicts, is no assurance that the same period of grace will be extended to us again. In fact, the reverse is perhaps more in line with probability.

"Therefore, it behooves us to be prepared to meet this situation by providing a posture that will, to the best of our efforts, be adequate in the event of a future conflict."

Shorter Presidential Campaigns

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. MONAGAN. Mr. Speaker, in further support of my suggestion for shorter Presidential campaigns, I append herewith an editorial which appeared in the Waterbury-Republican on January 11, 1960:

WORTH LOOKING INTO

It may come as something of a disillusionment to some of our stanch citizens of Irish ancestry to learn that one of their number is advocating borrowing an idea from "our British cousins." But the idea is not without its merits, even if it does have a British flavor.

The time, the money, and the patience expended in our quadrennial presidential election campaigns has not infrequently been a topic of discussion among some of our intelligent and interested citizens.

The consensus has been that we Americans expend too much of all three—but especially money—in the process of selecting our national leaders.

In line with this thought, our own Congressman from the Fifth District of Connecticut, suggests that the U.S. Congress adopt a law limiting presidential campaigns to 60 days, roughly half of the present length. As it now stands, approximately 4 months elapse from the time of the nominating conventions to the day of election. JOHN S. MONAGAN suggests that this is wasteful in many ways and often results in apathy on the part of voters saturated to the gills with political propaganda.

His idea stems, he admits, from the election methods of "our British cousins." In his speech to his colleagues, Mr. MONAGAN pointed out that in Great Britain the whole machinery of a national election, from the first call on September 7, 1959, to the actual day of balloting on October 8, lasted just a month and a day.

He adds: "It is becoming more obvious every day that this 4-month period (in American campaigns) serves no useful purpose. It brings the candidates to physical prostration. It causes the unnecessary expenditure of vast sums of money, and it carries the voting public to a condition of apathy.

"I honestly believe that the time has come to reduce the campaigning period of our national elections * * * a shorter campaign in this country would prevent wear and tear on the candidates; save millions of dollars and preserve the voter's interest in the candidates and the election."

We doubt that the Congressman's suggestion will get to first base, but we think it should have a chance at bat. Who knows—it might even hit a home run.

Dulles' Policies Were the Best Possible in the World He Had To Contend With

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlain from the Wall Street Journal of January 4, 1960. The more experience others have in trying to halt Communist expansionism and preserve our freedom, the more they will come to respect Secretary John Foster Dulles and to appreciate the fundamental soundness of the policies he followed:

DULLES' POLICIES WERE THE BEST POSSIBLE IN THE WORLD HE HAD TO CONTEND WITH

(By William Henry Chamberlin)

Until his display of physical courage in the last months of his life won universal recognition and admiration, the foreign policy of John Foster Dulles probably elicited more brickbats than bouquets. It was easy to attack an attitude of firm resistance to Communist expansion as "unimaginative" and "inflexible," even if critics were not successful in proposing any alternative that did not savor strongly of appeasement.

Certain phrases of Mr. Dulles—"massive retaliatory power," "agonizing reappraisal," "brink of war"—were taken out of context and attacked as bellicose or obnoxious to our allies. These phrases, however, seem more justifiable if the circumstances in which they were used are recalled.

Certainly, for all but absolute pacifists, there are conceivable situations in which the United States would be obliged to use massive retaliatory power. And a reappraisal of American political and military policy in Europe would have been necessary if France had persisted in blocking the rearming of the German Federal Republic. As for "brinkmanship," Mr. Dulles was not proposing to risk war just for the fun of it, but as a response to the familiar Communist maneuver of seeking to realize aggressive ends by threat of force.

Now a Belgian-born professor of political science, Mr. Paul Peeters, has prepared a vindication of the foreign policy of the Eisenhower administration, of which Mr. Dulles was the principal architect and executive. He first presents the doctrine of "massive retaliation" as stated by the administration, often in the administration's own words. He then analyzes the arguments against this doctrine and ends with a consideration of the course and shape of public debate on issues of foreign policy.

POLICY DEFINED

Mr. Peeters carries on his running fight with the critics of Dulles with vigor, logic and lucidity. He makes the point that there is more flexibility than is generally recognized in the expression, "massive retaliation" and deflates some of the horrendous interpretations with the following exposition of what this policy really means:

"If an aggressor is not able to calculate that aggression is a paying proposition, the retaliation to which he exposes himself is massive; it is massive in relation to his expected gains. Defined thus, massive retaliation is self-explanatory. The essence of any punitive action is to make the hurt outbalance the gain; if the aggressor knows in advance that he would lose more than what he would gain, it would be unreasonable for him to carry his aggressive plans into execution. He is deterred. This is what massive retaliation generally means. It does not mean atomic bombs being dropped all over the map, nor does it imply that the United States would fight for the complete destruction of any enemy or that local hostilities would automatically be turned into a general war. The substance of this strategy is its flexibility."

Some of the criticisms of American foreign policy during the Dulles era, as Mr. Peeters shows, cancel each other out. So the administration was reproached, sometimes even by the same individuals, both for endangering the Western coalition by its stand on Suez and for not committing itself to an all-out support of movements against colonialism. One of these criticisms could be justified; but scarcely both.

The author scores another point against American liberals when he remarks: "They repeatedly claim to be ready to defend causes that are morally justified. The trouble is, however, that when there is a cause to defend it never seems to have a moral justification."

BESETTING WEAKNESSES

This hits at one of the besetting weaknesses in the attitude of some Americans toward foreign affairs, a weakness generated during the time when America's role was that of a sidelines spectator and kibitzer in the game of world politics. This weakness is the belief, explicit or implicit, that unless an issue of absolute moralism is involved, there should be no involvement, however great the risk to national interests and security.

But the usual picture in the history of international relations is not of a clash of pure white against dark black, but of something much closer to gray. America's age of innocence in international affairs is being outlived; but enough of this heritage remains to warrant Mr. Peeters' astringent comment.

Although the book is not free from the sin of repetitiousness and the style sometimes

suffers from a rather rarefied scholasticism, there are some well-expressed sharp epigrams:

"Lack of courage surrenders policy to appeasement, the most rigid and inflexible policy of all."

"Spelling out a policy in order to appease domestic opinion serves only to handcuff the administration without tying the hands of an enemy."

"The day communism truly changes it will cease to exist."

Readers of this book will find a good deal of chapter-and-verse evidence for the exaggeration, inconsistency and downright emptiness of many of the stock criticisms voiced against Mr. Dulles' conduct of the Nation's foreign affairs. They will also learn why the Democrats seem to be up a tree as regards a convincing campaign issue in the field of foreign affairs.

Free Passage Through the Suez Canal

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, the Jewish Federation of Omaha recently adopted a resolution calling for the opening of the Suez Canal to Israeli ships, Israeli cargoes, or Israeli products. The continued denial of the use of the canal to Israeli shipping is contrary to historic agreements and contrary to the policy of the United States.

The unilateral action taken by the United Arab Republic in this instance is a clear violation of international agreements, and I urge that the State Department make a strong protect to the United Arab Republic and also take appropriate action through the United Nations to open this waterway to Israeli interests.

Under leave to extend my remarks, I include the resolution adopted by the federation:

RESOLUTION OF THE JEWISH FEDERATION OF OMAHA, NEBR., JANUARY 10, 1960

Whereas the United Nations Security Council repeatedly has called upon the Government of Egypt and subsequently the United Arab Republic to respect the Constantinople Convention of 1888 providing for the free passage of the ships of all nations through the Suez Canal; and

Whereas the President of the United States of America personally pledged our Government to secure such free passage at the time of the withdrawal of Israeli forces from the Sinai Peninsula; and

Whereas the Government of the United Rrab Republic continues to deny free passage of Israeli ships, Israeli cargoes, or Israeli products through the Suez Canal, the organized Jewish Community of Omaha, Nebr., assembled in its annual meeting on January 10, 1960, does hereby and herewith call upon the United Nations and the United States to take immediate and appropriate action in this matter: Be it

Resolved, That copies of this resolution be sent to the President and General Secretary of the United Nations, to the President of the United States, the Secretary of State, and the Senators and Representatives of the State of Nebraska in the Congress of the United States.

Research on Causes of Blindness

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HOSMER. Mr. Speaker, the Ridder newspapers recently carried a revealing story by Columnist Virginia Kelly on the subject of blindness. It points up the meager amount of funds being devoted to research on this subject of such great and vital importance to so many Americans. I commend the article to the attention of all. It was printed as follows in the Long Beach Press Telegram for January 15:

APATHY SHOWN TOWARD BLINDNESS—FUND SPENT ON RESEARCH SMALL

(By Virginia Kelly)

The thought of blindness has always brought a shudder of terror to mankind. Nevertheless, Americans, including the medical profession, show apathy because so little is spent on research in the cause, treatment and prevention of blindness. Approximately $4,031,714 was spent in 1959 on this research. This includes public and private funds.

In contrast, Americans spent $76 million for lipsticks; $24 million for playing cards; and $14,400,000 for dog and pet medications last year.

An estimated 60 million Americans have eye defects and need glasses. Nine million are children. Three hundred and forty-five thousand persons are legally blind. A million and a half Americans are blind in one eye.

Two of the main blinding diseases are glaucoma and cataracts.

About 1 million Americans have glaucoma without knowing it and may go blind unless they have treatment. Of the known blind, 14 percent have primary glaucoma. Of the legally blind, 24 percent lost their sight from cataracts. Eighteen percent have senile cataracts (found in those over 55) for which the cause is unknown. Six percent have congenital cataracts or the cataracts of youth.

The cataracts of youth have many causes. I experienced the first symptoms of cataracts—a slight blurring of vision in sunlight—before I was 30. A reputable ophthalmologist said, "You imagine it."

For several years thereafter, eye specialists said, "The condition is not serious." They never told me I had cataracts. Doctors still do not agree as to when young patients should be told the truth.

In an astonishing lack of scientific interest—if nothing more—neither the U.S. Government nor the medical profession have figures on the incidence of cataracts in the population.

The most common major eye operation in U.S. hospitals today is for cataracts. The Division of Neurological Diseases and Blindness, National Institute of Health (U.S. Department of Health, Education, and Welfare) lists cataracts as a neurological disease. Many doctors prefer to call a cataract merely "a clouding of the lens of the eye."

Because longevity is increasing, cataracts are on the increase. Also because women live longer than men, more women will eventually have cataracts. Cataracts are present in about 60 percent of the population over 60, and in about 100 percent of the population of 80 or older.

Some doctors believe that drops could be developed which would help in retarding cataracts. None are now in existence.

Doctors emphasize that one must be careful not to translate research data about animals to human cataracts. It is known, however, that depriving rabbits of certain food elements will bring on cataracts. Some medical scientists believe the high incidence of cataracts in India has several contributing causes, including heredity, poor diet, and the reflected glare of sunlight.

Scientists agree that, if enough interest and funds were provided, great strides could be made in cataract research.

It is impossible to evaluate the human misery and loss of productivity to the Nation caused by blindness. More than $90,400,000 in public funds has been expended in 1959 for aid to the blind. This does not include the tremendous sums expended for medical care and hospitalization by those with visual disorders.

Here are some of the things you should know about cataracts: A cataract is a clouding of the lens of the eye. One of the first danger signals is a blurring of vision.

This symptom does not necessarily mean that a person has cataracts but it does mean that thorough eye examination is in order.

Vision can be restored by removal of the cataract by surgery if the only difficulty with the eye is the cloudy lens and if the person is in good general health.

Hospital records show that 85 percent of cataract operations are successful but the operation is still a serious and delicate one requiring great surgical skill.

Formerly, it was thought that a cataract had to be "ripe" for removal. Now the operation is usually performed when the better eye is no longer able to service the patient satisfactorily. The time also depends on the type of business, age, and general condition of the patient.

In many instances, surgeons operate earlier than they formerly did.

In most cases, a person stays in the hospital 8 to 14 days and it will be 4 to 6 weeks before he can be fitted with glasses.

There is no way that a cataract can be cured without an operation. So-called "cures" involving drops, medication by mouth, and the like have not been proved of value. All eye patients must be careful to avoid racketeers and charlatans.

Many Americans have read of the alphachymotrypsin enzymes rather recently developed for use in cataract surgery. During this reporter's recent operation by Dr. Elliott Randolph at Johns Hopkins Hospital in Baltimore these enzymes were used.

Surgical techniques have greatly improved and much of the terror has been removed. Although each surgeon has his own technique, most allow their patients to get up soon after the operation. There is no longer the dreaded immobility of the sandbags to be reckoned with.

Confusion in the Space Program

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HECHLER. Mr. Speaker, some years ago while I was teaching political science at Columbia and Princeton Universities, I used to bring groups of undergraduates to Washington to meet with Members of Congress, the judiciary and high administrative and political officials.

It was on one of these trips that I first met Ralph E. Becker at the Republican

National Committee at the time when he was national head of the Young Republicans. Although we are of different political faiths, I respect Mr. Becker as a brilliant organizer and a patriotic man who always has the interest of America at heart.

Last November, during the 14th annual meeting of the American Rocket Society at the Sheraton Park Hotel in Washington, D.C., Ralph E. Becker delivered a cogent and penetrating address entitled "How To Win the Space Race." So that this excellent analysis of our space program be given wide circulation, I am asking that it be printed in conjunction with my remarks.

Mr. Becker states bluntly:

The United States is running second in a two-party race * * * the machinery we are employing seems ill suited to the task of winning.

Mr. Becker asks:

Why then have we failed to give ground on the front-running Soviet Union? I am persuaded to agree with the growing number of qualified observers who have concluded that the answer lies in the organization of our space efforts and not its extent and caliber.

Mr. Becker goes on to state that our space program lacks "well-defined long-range objectives" and is also duplicative, "laboring under a maze of ill-coordinated and sometimes conflicting committees, agencies, and councils, and as devoid of a day-to-day central administrative authority."

Mr. Speaker, these criticisms, coming from a leading Republican and patriot, are devastating. Recently, I called attention to the need for an organization like the Manhattan project, which developed the atomic bomb during World War II, to administer our space program.

Mr. Speaker, although there are aspects of Mr. Becker's solution to the problem with which I do not completely agree, I believe he is 100 percent correct in his analysis of what is wrong with the current administrative mess in our space and missile programs.

I commend Mr. Becker's remarks to the attention of all thoughtful Americans.

HOW TO WIN THE SPACE RACE

(By Ralph E. Becker [1])

Implicit in the problem how to win the space race are several facts of life Americans must face and accept.

The basic assumption that cannot be avoided or understated is that this country is in a race—an intensely competitive contest for the highest possible stakes—survival. With our collective lives and fortunes riding on the outcome, we cannot afford to bemoan the fact that the race may not have been of our choosing or the ground rules to our liking. Nonetheless, it began on October 4, 1957, has accelerated, and though the United States finally left the starting gate we are still many lengths behind.

And this is the second basic fact which seems to become more evident with every new Soviet feat, namely, that the United States is running second in a two-party race.

Lastly, what now appears to be painfully clear is that even after a reluctant start and a too slowly developing thirst for the chase, the machinery we are employing seems ill suited to the task of winning.

America should be told and retold in unequivocal terms that this is a winner take all race. There is no place or show money in this race. Despite the fact that Mr. Khrushchev has temporarily muted the Communist trumpet, he left us with no allusions that he has changed the basic theme—the world is inexorably moving toward communism. The Soviet Premier may have decided that the audience has wearied of this theme in martial notes and that now is the time for symphonic instrumentation. But regardless of how the Soviets express their objective of world domination, it exists, and their prime tools for achieving it are the breathtaking weapons in their missile arsenal.

Soviet supremacy in the production and use of missiles and space vehicles will give them a twofold advantage. One, the United States will and ability to combat Communist moves of aggression will be paralyzed by the threat of mass destruction, and, two, the world will be told the Communist system is best suited to the new era of civilization in which man has escaped his earthy confines. It takes little imagination or foresight to anticipate our plight were such advantages to reside in the hands of the masters of the Kremlin. Our eventual submission to Communist dictates and control would be assured.

The challenge is real—it needs only articulate expression and acceptance by the Government and the people of this great country. It would be disastrous to allow the Soviets to win the space race. It is unthinkable that we would lose by default and equally beyond reason to compete without utilizing all of our ability in the most effective manner possible.

This is the crux of the problem. It is not enough to desire victory, for the will to win is not lacking in our opponents. Our resolve must be accompanied by the most efficacious utilization of our talent and productive ability. It is an individual American characteristic to want to win—we are notoriously poor losers. Never looking for a fight, we have never backed away from one when the challenge was clear and the provocation sufficient. If this threat is made clear to our people, they will once again translate their will to prevail into a collective national effort to be victorious.

Assuming then the existence of the will to fight and win, do we have the wherewithal to achieve this victory?

No country seems better equipped to win such a race than the United States. We have the most money, the greatest production capacities, the largest pool of research facilities, and walked away from World War II with the cream of the crop of German missile experts to complement our large reservoir of brilliant scientists. Are we spending enough money, employing enough people, and using enough facilities? The outlay of $25 billion since 1950 and the scores of private and governmental projects engaging thousands of skilled scientists and technicians compel an affirmative answer to all of these questions.

Why then have we failed to gain ground on the front-running Soviet Union?

I am persuaded to agree with the growing number of qualified observers who have concluded that the answer lies in the organization of our space effort and not in its extent or caliber. This conclusion finds support in the competence and diversity of its proponents. Numbered among those who feel that the weak link in our space program is its organization are many of its scientific and administrative architects, past and present, astute congressional leaders, some military leaders, seasoned newsmen, and a wide range of private citizens and government leaders experienced in management.

What are the factors and circumstances which militate against any other conclusion? In general terms, our space effort is attacked as being without well defined long-range objectives, as being duplicative, as laboring under a maze of ill-coordinated and sometimes conflicting committees, agencies, and councils, and as devoid of a day-to-day central administrative authority.

A brief recital of some specific facts and figures gives these criticisms a large degree of substance, correctness, and credibility. Included among those entities with some responsibilities and authority in the space program are: four separate presidential advisory councils; the Bureau of the Budget; two congressional committees; the Department of Defense and thereunder the Joint Chiefs, the Office of Defense Research and Engineering, the Institute for Defense Analysis, the Advanced Research Projects Agency, the Army, Navy, and Air Force each with research, development, and operational projects; the National Aeronautics and Space Administration with its seven research and operational projects. Supporting this vast governmental complex are a great variety of industrial contractors with intricate organizational structures rivaling those of the Federal agencies. Interspersed through this maze are numerous liaison groups at all levels which advise, criticize, and coordinate.

This bureaucratic complex, consisting of 61 distinct organizations and committees concerned with the space effort, is administering 67 rocket, missile, and space projects plus scores of subsidiary research projects. Physical separation, organizational separation, differing security classifications, jealousies, incomplete exchange of data and views assure duplication no matter how diligent are the attempts to avoid it. And the evidence is that duplication is not avoided but fostered by interservice and military-civilian rivalries for domination of projects and facilities. Why should all three services separately be studying space medicine and all services and the civilian agency be working along parallel lines on propulsion, instrumentation, tracking, and other aspects of missilery and space probing?

That a program so fractional, so disparate, so unwieldy, could give America the momentum and the direction necessary to beat a highly systematized totalitarian opponent is on its face questionable. That it has to date failed to do so seems evident from our country's respective positions in the space race, which show the United States still trailing badly.

What is the solution? After Sputnik I the space program was analyzed, examined, criticized, and dissected from within and without. The prescriptions for the program's ills were largely to establish more bureaus, more committees, more councils, with the result that the cure was worse than the disease. As long as the organization remains fragmented we can expect only a never-ending series of debates, transfers of functions and projects, expansion and contraction of responsibilities and duties and a multiplication of coordination and liaison activity further burdening a now overburdened labyrinth.

While I do not pretend to have all or even a few of the answers, I have a suggestion. Oftentimes an intimate involvement with problems in all their details blinds the eye to their obvious resolution. I make my proposal as a "tyro"—a term which you all must agree best describes my participation in the field of space. My suggestion has the characteristic simplicity which the un-

[1] Partner of the law firm of Brookhart, Becker & Dorsey, Washington, D.C. Member and program vice chairman Space Law and Sociology Committee, American Rocket Society. Member Committee on Law of Outer Space, American Bar Association. Delegate Inter-American Bar Association Convention Buenos Aires, 1957, address on "Impact of Atom and Satellite on Law and Lawyer," Miami, 1959, address on "the Lawyer and the New Dimension of Space."

initiated bring to the solving of problems outside their ken. But often it is the simplest solution that is the best and its uncompounded nature that most recommends it.

My plan is to take all of the projects, facilities and personnel now devoted to the space program in the 61 scattered, separate agencies and bring them together as a unified single force in a single organization—the Department of Space. This would be a new major Government department of equal rank and magnitude with the Departments of State, Defense, etc., and administered by an officer of Cabinet rank—the Secretary of Space. All of our eminent and dedicated scientists and administrators would find their skill and energies merged into an integral whole, with the stature and dignity that a department at the highest executive level commands. NASA and all of its subordinate commands would be disestablished, and the Department of Defense would be taken out of the research, design, and production of missiles and space vehicles. Operational control of certain missiles would remain with the military and perhaps complete responsibility for certain well-defined tactical weaponry. But all basic and advanced research and development in every aspect of space utilization would reside in the Department of Space, in a manner similar to the Atomic Energy Commission's responsibility for all nuclear programs.

The authority of the Secretary of Space would be complete subject only to the President and the National Security Council which would establish national requirements. The Secretary of Defense could place the requirements of all the military services on the Secretary of Space with the authority to resolve any conflicts thereover resting with the National Security Council.

I would foresee that all scientific and technical personnel now working on research and development for NASA and the Defense Department would be transferred permanently to the Department of Space. Wherever necessary, military personnel could be assigned to the new department. No unilateral control would be exercised by the Department of Defense over a missile or space vehicle until it was operational and assigned to fulfill a specific military need and mission. Defense Department personnel assigned to the Department of Space would of course work on any project which had military application. The lines of authority would have to be so drawn as not to imperil the ability of the Department of Defense to fulfill its prime mission of insuring the security of the country.

A unified program would induce a less disputatious climate in which the scientists would be free from the strife which curbs and hinders the fullest expression of their talent. The frustrations inherent in any divergent program have already cost us the service of some eminent scientists, and we stand a good chance of losing more, not only to industry but to the employ of friendly allies. We can ill-afford to hazard such a possibility.

An examination of our opponent's formula for winning the space race reveals the existence of a well-functioning, monolithic, all-pervasive organization—the Interdepartmental Commission for Interplanetary Communications. The experience of a winner has taught many a lesson.

Any such sweeping proposal as this raises a plethora of questions as to how it could best be achieved with a minimum dislocation of people and interruption of projects. Assuming that unification of effort in a single department is the answer and a decision to do so is reached, I would urge a 60- to 90-day crash basis study by a Hoover Commission-type group as to how this can be accomplished. I am not proposing a unification feasibility study, but an organizational study based on a firm decision to unify. At the end of this period the study group would answer specifically the who, what, when and where's of this consolidation and also submit a draft of the necessary enabling legislation.

If unification is the answer, and I believe it is in large part, it will not be accomplished without a struggle. No far-reaching change is ever wrought without opposition. Tempers will be short, wounds inflicted and scars remain. But the end result should be a single cohesive force with wasteful rivalries and duplication reduced to a minimum, and probably a savings of many billions of dollars.

Another indispensable element of any program large or small is its leadership. The man who will inherit this newly unified space family will find it not entirely happy or at once homogeneous. Memories of the inevitable fight over unification and old jealousies will plague the organization at the beginning. The Secretary of Space will have to be a forceful, courageous man of broad vision, proven management ability, able to harmonize conflicting personalities and competing aims and rise above partisan motivations. I don't see how anyone who is or has been an active participant in the space program could meet all of these qualifications. It therefore would seem prudent to recruit a man whose judgment could not be questioned on the basis of prior actions. There come to mind several ably equipped and proven leaders such as Charles H. Percy, the imaginative president of Bell & Howell who recently chaired the committee which outlined broad national objectives and aspirations; Henry C. Alexander, the able executive, lawyer, banker and president of Morgan Guaranty; George Romney, the brilliant far-sighted president of American Motors who brought about America's small car revolution.

These are but a few of America's store of skilled managers among whom we would surely find an administrative architect of a unified effort to conquer space. At critical periods of our history we have always found the man who could unite, organize and arrange our capacities, resources and genius to the undertaking at hand. In President Eisenhower we have a living example of a man who twice, in World War II and at the onset of the cold war, displayed the qualities and ingenuity which a Secretary of Space will have to command. Somewhere today there is such a man—he must be found and put to the task.

Our overlapping, duplicative, cumbersome, fragmented, bureaucratic space program is not providing the thrust that we need to surpass or draw abreast of the Soviets. The competition is too strong, the risks too high to tolerate any longer the luxury of a red-tape organization where all are chiefs but no one is in charge.

We have all the ingredients necessary to win the space race—the money, the resources, the brains, the know-how and the will. We need only to harness them in one concerted effort under a single authority of the highest standing and rank.

Only then can we reasonably expect to see the day when the hammer and sickle will find at the terminus of its planetary voyages the Stars and Stripes already firmly planted.

Woodrow Wilson Memorial

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. RODINO. Mr. Speaker, I am pleased to join the other Members of the New Jersey delegation in introducing a bill which looks toward the establishment of a Woodrow Wilson Memorial in Washington.

Citizens of New Jersey have a special interest in, and regard for, the man Woodrow Wilson. We consider him New Jersey's adopted son, and the years which he spent in our State, and the great contributions he made during that time, will never be forgotten.

Nor can the Nation forget Woodrow Wilson who, as our 28th President, gave his life, in effect, for the pursuit of world peace. The principles for which he stood, and which in large part he originated, still guide us, today, in our own very similar efforts to achieve a lasting peace, with justice.

I therefore feel it is most fitting that we reflect our gratitude in a permanent memorial to President Wilson. As a member of the Judiciary Committee, to which this bill will be referred, I intend to push for immediate committee support and approval.

Unfair Attack on Benson

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALGER. Mr. Speaker, admittedly the farm subsidy program is difficult, legislatively, and something ought to be done. Meanwhile the clamor of critics, particularly the Congress, reminds me that some of the more vocal critics are those in responsible positions in the Congress. In no other field, it seems to me, has Congress failed so miserably to provide the right legislation. In this lack of proper legislation or maze of improper legislation, Mr. Benson attempts to do the best he can. His congressional critics fail to realize or overlook the fact that if Congress does not like the farm program, Congress can certainly change it.

Further, the Congress is under the leadership of the Democrats and it is their responsibility to provide the necessary corrective legislation. Short of this, the criticism of Secretary Benson by the congressional Democrat leaders comes with poor grace.

Perhaps Mr. Benson's gracious attitude, despite vicious attacks, has been noticed and appreciated by the rank and file of American people in and out of agriculture. A good expression of this viewpoint is found in the Dallas Morning News editorial of Wednesday, December 16, 1959, entitled "Unfair Attack on Benson," which follows for the benefit of my colleagues and those interested in the agriculture problem:

UNFAIR ATTACK ON BENSON

Never has there been a more unfair, more unfounded, or more pusillanimous attack upon an American Secretary of Agriculture than the attack now carried on against Ezra Benson lying on his sickbed and as it has been carried on against him for years.

It is unfair because the program attributed to Benson is 90 percent of Democratic origin and enactment and 100 percent non-Benson. It is unfounded because Benson's enforcement of the program stems out of Benson's oath of office to enforce the law—not as Benson likes it, but as Congress has left it.

The attack is pusillanimous in the full dictionary sence of that word. It is "destitute of manly strength and firmness of mind"; it is "of weak or mean spirit"; it is "cowardly."

Benson's critics blame him because their solution of the farm problem—and not his—won't work, never has worked, and never will.

The more we subsidize limited production on the farm the more the farmers overproduce. Our warehouses are full; our granaries can hold no more; even caves and mothball ships are loaded.

It is cruelly unreasonable to make out Benson as the farmer's enemy. He grew up milking a string of cows and peddling the milk to customers in town. He is a successful farmer now—taking no subsidy from anybody. His Mormon church and his Mormon people refused to touch a dime of Federal giveaway.

Have you heard about the legless Mormon's barbershop? When the patient's stumps were healed, the church brought him a high chair, taught him the barber's trade, rented him a shop—and ordered 150 Mormons to get their haircuts and shaves at that shop.

Benson comes of that kind of people. He is that sort of man. As a religious man, he respects his oath. But, as a farmer, he knows that no Washington farm plan can donate anybody out of bankruptcy or enact farm prosperity. He is everlastingly right.

A Memorial to the Memory of Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. WIDNALL. Mr. Speaker, today I have joined with many other Representatives in introducing a bill authorizing the creation of a Commission to consider and formulate plans for the construction in the District of Columbia of an appropriate permanent memorial to the memory of Woodrow Wilson.

True recognition of the great abilities and service of President Woodrow Wilson is clearly shown by the sponsorship of the resolution which completely crosses party lines.

Senator HARRISON A. WILLIAMS, JR., who has introduced this resolution on the Senate side with many cosponsors, has received a number of suggestions for a fitting memorial.

It is my own hope that when a Commission is created and plans formulated, that a living memorial, such as suggested by the Rev. Francis Sayre, son-in-law of Woodrow Wilson, would be the truest recognition of the great contribution made by President Woodrow Wilson.

President Eisenhower has also indicated that his own belief would be for a Woodrow Wilson House, rather than a statue and that he would favor the fund to be raised by private subscription. Knowing of the great interest in this proposal throughout the United States it would certainly appear that the accumulation of necessary funds for such a project would be no serious problem.

It is my hope that prompt congressional action can be obtained on this resolution.

Legislation To Remove Inequities in the Social Security Program

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. KING of California. Mr. Speaker, I am introducing two bills today which I would like to discuss briefly. They will remove inequities in the social security program and, I believe, improve it. As a member of the Ways and Means Committee, I am, quite naturally, extremely interested in any legislation designed to modernize this great program. Identical legislation is being introduced in the Senate today by Senator VANCE HARTKE, a member of the Senate Finance Committee.

This legislation will:

First. Remove the present $1,200 limitation on earned income with respect to individuals receiving benefits.

Second. Provide earlier retirement at reduced benefits for men at age 62 and for women at age 60.

Third. Eliminate the requirement that an individual must have attained age 50 in order to be eligible for disability benefits.

Fourth. Provide a special tax credit against social security taxes to employers who employ individuals who are more than 45 years of age.

Mr. Speaker, this legislation will remove inequities in the social security program which experience has shown us are unwise and unfair.

EARNINGS LIMITATION

Present law forbids a person receiving social security benefits from earning more than $1,200 a year. He may receive unlimited amounts of money from dividends and annuities and still receive a social security check each month. The absurdity of this is, I believe, apparent. We are rewarding the rich and penalizing those who really need the protection offered by the social security program.

This legislation calls for the complete removal of the income limitation. Since this will involve an annual cost of almost $3 billion, it will be necessary to have this matter thoroughly considered by the proper committees of the Senate and House. I believe a comprehensive study will indicate the feasibility of doing this immediately. If for fiscal reasons it cannot be done immediately, a temporary adjustment should be made raising the present ceiling to a more realistic and reasonable figure.

EARLIER RETIREMENT

Present retirement age under the social security program is 65, except that a woman may retire at age 62 with reduced benefits. I would like to see these requirements lowered to age 60 for women and age 62 for men, if they so desire. This would be optional and at reduced benefits.

DISABILITY BENEFITS

Present law requires that a person be 50 years of age, and totally and permanently disabled, before he can qualify for disability benefits. If an individual is fully paid up and becomes totally and permanently disabled, I feel that he should be able to receive disability benefits at any age. I can think of no reason why a person at age 50 is more entitled to receive disability benefits than a person at a lower age.

HIRE THE ELDERLY

We are all aware, I am sure, Mr. Speaker, of the difficulty which individuals over the age of 45 are experiencing in finding employment. While I say hire the elderly, we cannot, of course, say that an individual as young as 45 is old. But they are old in terms of finding employment. Something must be done to encourage the employment of these individuals. One thought which has come to my mind as a possible inducement is a special tax credit equal to one-half percent of the wage with respect to which the social security tax is imposed on employees over the age of 45. This credit will be given to the employer hiring or employing an individual over the age of 45. I believe this would encourage the hiring of the elderly. It is at least worthy of consideration.

I earnestly hope that the House Ways and Means Committee will schedule hearings on these amendments to the social security program at an early date. This is not a matter which we should continue to neglect.

Neither Snow, Nor Rain, Nor Heat, Nor Ocean Gale

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. PORTER. Mr. Speaker, an ancient Greek historian discussed the Persian postal system around 600 B.C. At that time Herodotus wrote "Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds."

I'd like to add the words "nor ocean gale" to that description of the delivery of the mail as it applies to Mrs. James Cochran of Lakeside, Oreg., in my district. Mrs. Cochran has delivered the

mail in her boat three times a week to some 30 permanent residents on the north and south Tenmile Lakes for the past 9 years. And she doesn't swim.

Her work has taken her through stormy waters whipped up by a 90-mile-per-hour wind.

The story of Marj Cochran in detail appeared in the November 1959 issue of Northwest Ruralite. Under leave to extend my remarks in the RECORD I include that article:

WATERBORNE MAILMAN

Every Monday, Wednesday, and Friday morning, the tiny boat slips out from its dock on south Tenmile Lake and heads for Lakeside, on the Oregon coast below Reedsport. At the post office at Lakeside, mail destined for some 80 permanent residents on the north and south Tenmile Lakes is loaded aboard the boat and the "mailman" starts the appointed rounds.

As has been fabled in story and song, the mail must go through no matter what the weather. It does—even in the primitive back country around the two Tenmile Lakes on the coast. For this, Uncle Sam can thank a tall, slim, quiet lady named Marj Cochran. She's the mailman.

"Just an everyday grind," she says matter of factly.

But as a matter of fact, it's more than that. Since the mail traditionally must go through, Marj Cochran has delivered the U.S. mail regularly through such obstacles as hurricane-like gales, snow, hail, thick fog, even mechanical breakdowns. Only once in the 9 years she has been on the job has she failed to complete her 40-mile mail delivery run—and then it wasn't her fault. A log jam had blocked the canal which connects the north and south Tenmile Lakes.

At latest count, there were 7 permanent residents on north Tenmile Lake, and 23 on south Tenmile. The two lakes combined have a total of 178 miles of shoreline. The people who live on this shoreline are an individualistic sort. Many of them are retired or semiretired, spending their golden years in the restful solitude of a sprawling, rolling showcase of nature (which is now patching up the scars of an old logging area). The few roads that serve these families are primitive and open only a few months of the year. The dairy farmers who live on the shores of the lakes, take their milk to market by boat, for the lakes and their many octopus-like arms and inlets are the only highways to the outside in winter.

Electricity has come to these families only within the last few years, thanks to Douglas Electric Cooperative and the Central Lincoln Public Utility Division. Most of the residents are still without telephone service, save for the special private circuit that eight residents on the south lake have set up to talk among themselves. But even this telephone system has no connection with the outside.

In winter often their major means of communicating with the "outside" is via mail. Mrs. Cochran's yellow and red boat skims over the lakes three times weekly, delivering the mail and sometimes even doing such neighborly tasks as delivering a bag of groceries or feeding a cat while its master is away.

And in her appointed rounds, Marj Cochran often finds a neighborly offering of a steaming cup of coffee from her patrons. At the Bill Wolfe place she's greeted on each trip by the barking, tail-wagging, jumping and running enthusiasm of a big black Labrador dog named Butch. Marj sometimes gives the mail to Butch who, gripping it firmly in his teeth, delivers it to the house nearby.

"I always look first to see that the Wolfes are home," says Marj, "because if they aren't, Butch would probably take the mail out back someplace and bury it. But Butch has always done a good job delivering the mail—until the Montgomery Ward catalog came. That was almost too big for him."

Marj actually uses two boats in her delivery, one for summer, another for winter. The summer boat she describes as a "classy racing job," 13 feet 8 inches long and 42 inches wide. Powered by a 40-horsepower motor, it gets up to 34 miles per hour. In winter she switches to a larger and less classy boat that provides a cover for keeping the mail (and Marj) protected from the ravages of wind, rain, hail and snow.

Although the elements are bad enough, they aren't the only hazards to prompt delivery of the U.S. mail. Once she smacked a submerged log and ruined the motor. She had to paddle some distance, before hooking a tow from a passing motorboat. As insurance against getting stuck up the lake without a motor again, she now carrier a spare motor—a tiny 1.7 horsepower unit. Marj, incidentally, is handy at fixing motors. "Changing the plugs is usually all that's necessary nowadays, anyhow," she says. The wear and tear on the motors is such that a new one is necessary every 18 to 24 months.

Fog is often a hazard to the safe delivery of mail on the Tenmile lakes, although Marj navigates the many twisting, fjord-like arms of the lake in the thickest fog at a fairly good clip, apparently by some sort of instinctive radar. "The boat knows the route," she says.

"My main worry in a fog," she says, "is that some crazy fool will be anchored out in the middle of the lake fishing, and I won't see him before it's too late."

The number of mail patrons on the lakes varies considerably from summer to winter. The variance may be even greater in the future, for many summer homes are now being built. The current number of summer homes adds about 10 residents to the 30 permanently on the lakes. Camp Easter Seal, the summer camp for crippled children on north Tenmile Lake, accounts for a lot of summer mail (and the arrival of the mail boat is a big event at the camp).

Although summer accounts for more stops for the mail boat, winter exacts its work, too. Residents order many items through the mail order houses and as a result such divergent cargoes as linoleum and baby chickens are common. The Christmas mail, of course, always taxes all of Uncle Sam's postal facilities, and Marj's boat gets its share of cards and packages.

Marj considers her "worst" cargo the big box of fishing worms one man had ordered through the mail. Unfortunately, they apparently got delayed somewhere along the route, because by the time Marj got them at Lakeside, they were pretty ripe. But the mail went through.

The most hectic trip may have been the one in which Marj fought her way through the boiling cauldron of water whipped up by one of those hurricane-like gales that occasionally come up on the coast. She ran the little boat through buffeting 4-foot waves, holding the craft to the middle of the lake because the shoreline was being bombarded by falling limbs and even whole trees as a result of the 90-mile-per-hour wind. She made it, but breathed a sigh of relief that afternoon when she pulled the boat up to the dock and slipped out of her lifejacket (she doesn't swim) at the end of the trip.

Marj, who is married to Lakeside Boatshop Owner James Cochran, got into the mailboat business in partnership with her father. When her father died, she carried on with the boat run. Not only has she held her three-trips-a-week schedule for the past 9 years, but she has never even allowed the mail to get wet. And that's a pretty big order when the mail must go through by boat on a stormy coastal lake.

National Whirligig

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial by Mr. Ray Tucker appearing in the November 30, 1959, issue of the Beaver Valley (Pa.) News-Tribune.

The editorial effectively sets forth a strong and cohesive argument against enactment of the Harris fair trade bill, H.R. 1253, which, according to reputable economists who unanimously and uniformly oppose the measure, would cost consumers of this country between one and twelve billions of dollars a year.

The editorial follows:

NATIONAL WHIRLIGIG

(By Ray Tucker)

WASHINGTON.—A pile of mail from pensioned old folks and social security beneficiaries in forgotten fountains of youth—Florida, Louisiana, Arizona, southern California—has spurred Senate action of fair trade bills designed to keep retail prices at artificially high levels, especially drugs and medicines.

Alarmed by these complaints, Senator GEORGE SMATHERS, of Florida, thought that he saw too much caution concerning this problem on the part of the Senate Anti-Monopoly Subcommittee, which is headed by Senator ESTES KEFAUVER. SMATHERS showed his concern, and obtained a promise from the Tennessean that he would begin his drug inquiry on December 7, Pearl Harbor Day.

The druggists had hoped that consumer complacency and their unorganized state would permit quick and quiet passage of the Harris fair trade bill. Sponsored by the Arkansas chairman of the Television Quiz Committee, the measure was reported favorably with a 20-to-9 vote by the House Interstate and Foreign Commerce Committee at the last session.

It is now before the House Rules Committee, which directs legislative traffic. It may or may not be reported to the floor for action next January.

STRATEGY TO ALERT CONSUMERS

The Smathers-Kefauver strategy is designed to alert consumers so that, like the old folks' letters, they will use their influence to offset the drug trade's powerful lobby. If killed at the next session, the price-fixing program will be embalmed, perhaps permanently.

Gov. Edmund G. Brown, of California, has shown his concern over this problem, in view of the difficulties resulting from the migration of so many retired people to his State. He has appointed Mrs. Helen Ewing Nelson as California's first consumer counsel, one of the few in the Nation.

THAT FAIR TRADE MEASURE

The Harris fair trade bill empowers a manufacturer to negotiate a fixed-price contract

for his goods with retailers within a State which permits such deals. If a single retailer signs such an agreement, his price scale becomes binding on every retailer in that State, even though they would prefer to sell that manufacturer's products at a lower figure.

This schems has been criticized by Robert A. Bicks, Assistant Attorney General in charge of the Antitrust Division, as monopolistic. It is opposed by every Government official and department which has any jurisdiction over goods, services, and prices, from foods and farm machinery to drugs.

In fact, few manufacturers or retailers support the fair trade scheme. Its only aggressive backers are the druggists' and medicine men's lobbies.

EXCESSIVELY HIGH PRICES HERE, LOW PRICES ABROAD

The Kefauver files explain fully their commerical interest. Only a few firms manufacture about 60 percent of the Nation's drugs, and, if reinforced by a monopolistic fair trade bill, they can control prices merely by watching each other's trade lists—or advertising. It is as simple as that.

Whatever the reason may be, they maintain excessively high prices in this country while dumping them at whatever the market will bring abroad.

Fifty Miltown tablets, for instance, sell for from $3.85 to $4.25 in the United States and for only 46 cents in South America. Migraine headache pills, which old and young alike need because of age or alcohol, cost $14 a hundred in this country and only $7 in Western Europe.

In contrasting these charges, it should be remembered that foreign costs must include fees for shipping, insurance, two dock handlings, several transshipments, and a far more complex and expensive system of retail distribution than exists in this country.

But there is no need to wander so far from Capitol Hill. In Maryland, which suffers from a fair trade act, drugs cost from 25 to 75 percent more than in the District of Columbia, where Congress has legislated in favor of a system of free enterprise and competition.

Communist Rule in Poland Exposed

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. PUCINSKI. Mr. Speaker, during the recess between sessions of the 86th Congress, the Chicago Tribune ran one of the most penetrating series that I have read about present conditions in Poland, which today tragically finds itself in the hands of a Communist regime.

This series was written by Mr. A. M. Rosenthal, a correspondent of the New York Times, who had been expelled from Poland for probing too deeply into the affairs of the Polish Communist Government.

I have asked permission to reprint this very revealing series because I believe the Chicago Tribune and the New York Times through Correspondent A. M. Rosenthal have performed a great public service.

Mr. Rosenthal's articles throw the spotlight on the absolute folly of those who today still live in the belief that the free world can trust or look forward to any semblance of coexistence with those who preach the Communist doctrine.

The series is particularly timely because we see in this country today a rising tide of those who have been fostering coexistence with communism. The series is particularly significant because Mr. Rosenthal so expertly draws the fine line of distinction between the present Communist regime in Poland and the people of Poland. We in the Congress of the United States must always keep in mind the fact that the Communist regime, presently holding a tight grip over the Polish people, in no way reflects the true spirit of freedom so deeply imbedded in the people of Poland themselves.

This series demonstrates that communism, whether it is practiced in Poland or in the Soviet Union, cannot stand the glare of truth. It is, therefore, no surprise that the Communist regime of Poland ousted Mr. Rosenthal because in maintaining the highest tradition of American journalism, he refused to compromise in bringing the true story of conditions in Poland under Communist rule to the free world.

It is my most sincere hope that the formulators of American foreign policy will learn a revealing lesson from Mr. Rosenthal's series, for it indeed dramatizes the total failure of Communist dogma.

I wish to congratulate the Chicago Tribune for reprinting this excellent series on conditions in present-day Poland under Communist rule.

Mr. Rosenthal's series, which was printed in five articles, follows:

[From the Chicago Daily Tribune, Nov. 30, 1959]

WRITER TELLS SITUATION IN POLAND TODAY

(By A. M. Rosenthal)

VIENNA, November 29.—The story of Poland in the autumn of 1959 is the panicky realization of Polish Communist leaders that they have failed stunningly to establish effective Communist rule and direction in the country.

This is the reason—this failure and not vast mysterious plots—that Wladyslaw Gomulka, a hero 3 years ago and now taut, nerve ridden, and isolated, has decided he has need of harder men and harder ways. "Discipline," Gomulka cried furiously at a Communist meeting, and "discipline," a Warsaw newspaper cried back a few days later in a pagewide headline.

Everywhere he turned in Poland, Gomulka could see this deep failure of Polish communism to reach out into the roots of the country's life.

BACK IS TURNED

He saw a peasantry that has turned its stolid back on every form of socialism simply because it hated his government. He gave them more and more in the way of food and profits, but the hatred was there and the back remained turned.

He saw a Communist Party filled with opportunists and grown paunchy with cynicism and apathy.

"Jobseekers and churchgoers, that's what we have in our party," a central committee member said wearily. "What kind of a party is it when half of our members sneak off to church every Sunday? Half of them, I tell you."

He saw an intellectual class that despised the party and what it stood for. He could starve them for a while, give them little economic plums for a while, punish them or censor them, but he could not get them to work for the party.

YAWN AT SLOGANS

He saw a youth that yawned at slogans and programs of the Communist East and turned with pathetic eagerness to Dave Brubeck, Marlon Brando, and Albert Camus. He saw empty Communist meeting rooms and crowded Roman Catholic churches.

It is this failure Gomulka is determined to end. He intends to make sure the Communist Party starts ruling Poland, that communism is heeded by the worker, the intellectual, and the peasant.

But Gomulka and the people around him are not men free to act precisely as they please. They are aware of the essential boundary—the boundary that divides resentment from chaotic rebellion and the entry of the Russian Army.

That is why the story of Poland in the autumn of 1959 is still a continuing one. The move away from liberalized communism is clear. But at some point it will run up against Poland's emotional boundary and there it may have to stop.

SEEMS IN FURY

Even at the moment, the story of the strange, deliberately heightened crisis in Poland touches directly upon some of the most important problems in Communist society. Perhaps most important of all, it touches upon the extent to which Communist rulers of a satellite nation can afford to permit liberties to grow.

These days Gomulka acts more and more like a man in a strange fury.

"That man does not talk to us any more," a Polish Communist official said in Warsaw. He opened his mouth in a silent, derisive yowl, "That man screams at us."

It is an essential part of the story, however, that neither Gomulka nor the men around him have any fear that communism will be overthrown in Poland—nor have the Polish people any hope.

RUSSIA HOLDS KEY

The Communists know—every adult and most children in Poland know—that communism in Poland is maintained by the existence of the Soviet Union.

The determination of the Soviet Union to keep a Communist regime on its western frontier is the paramount fact of political life in Poland.

It is one of the ironies of Poland that foreigners particularly Western diplomats, have to deal much more gingerly with this basic reality than do Communists. Western policy is engaged in an attempt to come to terms with the Soviet Union and the captivity of Eastern Europe is a topic it is best to stay away from. What's the use?

For most Communists it is all so obvious.

GRIPE ABOUT RUSSIA

In a car in eastern Poland, a couple of Communists riding with a foreigner were griping about the Soviet Union. A nonparty Communist sympathizer in the back seat spoke up:

"Without the Russians we would all be swinging from trees," he said. Then he gestured toward one of the party members. "But you gentlemen would go first," he said mockingly.

The party member laughed:

"Is this a discovery? As my American friend here always says—what are you supposed to be, Christopher Columbus discovering America?"

So the Communists are not worried about being thrown out of power. And of course all the Communist Parties of Eastern Europe, not just the Polish party, rule in effect by the authority delegated to them by the existence of the Russian Army.

PARTY IN CONFUSION

There is a difference in Poland, however, and it is this difference that has led the party to failure, filled Wladyslaw Gomulka with a sense of frustration, driven the Polish party to a state of confusion, and made for the decisions of the past couple of months to tighten political and economic control.

The parties of Hungary, Rumania, Albania, Bulgaria, and Czechslovakia are able to rule by plain and unashamed force. The Communist Party of Poland has foresworn the use of police terrorism—partly in answer to pressures of the people, partly because of the revulsion of many party members. It has not been able to find any substitute technique.

In 1956 Gomulka and many of the members of the Communist Party resisted complete Russian domination of their country. Then they set about picking up the pieces of communism in their own land.

Gomulka never pretended to be a liberal. Quickly and decisively he cut dead any thought that Poland would move to the "second stage" of social democracy. He purged his party not only of Stalinists but of the "revisionists" who believed in ever-increasing liberalization. He set about making friends again with Nikita Khrushchev.

IT'S DIFFERENT BRAND

The Polish brand of communism remained far different—and still is far different—from the Czech or East German brand. Gomulka believed a truce with the church and permitting peasants to own their land was the price of peace in Poland and he was willing to pay it.

In other important ways Gomulka and his party changed the model of Eastern European communism. In Poland today a man cannot vote freely or write freely, but he can speak his mind to his neighbor, read Western books, often get a passport, and go freely to church.

Poland became a country where a man, although he might not like his government, at least had the privilege of turning his back on it and leading his own life.

For a while the tacit live-and-let-live bargain between the people and the government worked. As far as the people were concerned it might still work, because they have no other choice.

LIFE IS DREARY

Life in Poland is gray and dreary, but German devastation has as much to do with that as Communist misrule. Anyway, production went up, consumer goods appeared on the shelves, food was plentiful, and if a man could not live in happiness, at least he did not live in pain. Internationally, Poland found herself in the delightful position of being wooed by Washington and acclaimed as a brother by Moscow.

It was not long, however, before the Polish road to socialism ran into trouble.

Liberalization was successful in removing the edge of discontent and revolt. But the Communists found liberalization did not draw the Polish people closer to a system they detested. It simply permitted them to turn their backs on it.

Gomulka took steps. He has been taking them for at least 2 years, but, because they were not particularly dramatic, many westerners overlooked them and concentrated instead on the fact that a Polish writer could get a passport or an American newspaper was on sale in a hotel lobby.

PRESS IS MUZZLED

Factory workers' councils were stripped of influence and put under party control. The Polish press, a couple of years ago astonishingly free spoken, was muzzled. Writers found it more difficult to get books published.

Still nothing worked. The Communist Party found itself deeper and deeper in the soupy indifference of the Polish people.

Since the government was the only major employer and the government was detested, it became the accepted thing to cheat and steal. Factory managers, given a slight amount of administrative freedom, joined in the fun and cut themselves huge slices of graft, making sure to pass out some crumbs to the workers in the form of unearned wage dividends and overtime.

In the struggle against the church, the Communists found themselves making little headway. In Poland today it is only the nonconformist parent who does not enroll his child in a religious instruction class.

CAME SO LATE

There were only two surprising things about Gomulka's decision to try more emphatically to tighten control. One was that anybody was surprised at it. The other was that it came so late in the game.

The Russians undoubtedly urged Gomulka to bring back men like Julian Tokarski and Lt. Gen. Kazimierz Witaszewski—fervently pro-Russian, enthusiastically tough-handed men.

Having made the decision that the time had come, Gomulka set about creating the necessary atmosphere of crisis. In March he boasted about how much meat the Poles ate. In October he denounced meat eating as a national disaster.

BOASTS OF WAGES

In January the Communists boasted of their increased production and increased wages. In October Gomulka shouted that industry was going to pot and billions of zlotys were overspent.

The big question in Poland for most people, of course, is how tough things will get. It means a lot to Polish Communists and intellectuals that some of the old-time Stalinists are coming back.

It means more to more people that wages are to be cut, overtime wiped out, dividends eliminated, payrolls slashed.

Gomulka is fighting, not to return to Stalinism, but to establish the party as the instrument of power and authority in the country. He has not suddenly become a tyrannical beast but is using the methods he thinks imperative now to prod Poland along the road to communism in fact as well as in theory.

It is likely the nature of Poland will make the current trend not a steady downward slide but a matter of ups and downs.

The Polish story therefore may not be continuously dramatic. The next upward trend will convince many people that it's all been a fuss of no terrible significance.

[From the Chicago Daily Tribune, Dec. 1, 1959]

POLISH REDS IN CONFUSION—GOMULKA LOSES HIS POPULARITY WITH PARTY

(By A. M. Rosenthal)

VIENNA, November 30.—Poland's Communist Party, placed in power and kept in power by Russian might, has been thrown into confusion and bitterness by a leader it once followed out of hope and now follows out of desperation.

In a Warsaw newspaper office, three Communist journalists were teasing a fourth Pole because he was the only member of the editorial board who did not belong to the party. "Aren't you afraid for your job?" they kept asking him.

SOLE PEOPLE'S MAN

"Not at all," the nonparty man answered, lightly. "I am the only one of us who feels secure. They have to keep me. I am the only one who represents the people."

It is the awareness that the Communist Party of Poland is a party of a small minority, kept in control by the existence of a foreign power, which has never been able to bridge the gap of distrust that separates it from the people of Poland.

UNDERSTANDING MISSING

But this is an old story in all the eastern European Communist countries and in Poland the Communists have learned to live with it.

Some of them live with it proudly—"We are part of the forces of history." Some cover it with a layer of cynicism—"If they don't like us in Poland all they have to do is move the country to the moon."

But in the past few months, the Polish Communist Party—officially, the United Workers Party—has been stumbling badly under additional troubles, troubles that few Polish Communists really understand.

IGNORED BY SAVIOR

Polish Communists find themselves denounced with scorn by Wladyslaw Gomulka, the man they brought back to power with that surge of hope in 1956. Then they find themselves ignored by Gomulka until the time comes for another denunciation.

They find men coming back to power whose very names chill them with memories of the past—and of the people's reaction to the past. They find more and more of the men who recalled the hope of 1956 being dismissed and sometimes they refuse to believe, because it is too painful to believe or because nobody bothers to inform them.

"I tell you Hochfeld cannot have been dismissed," said the editor of a Polish Communist weekly to a Western correspondent. "I'll bet you a hundred zlotys he has not been dismissed."

NOBODY TELLS HIM

Julian Hochfeld, a socialist spark of the 1956 intellectual upheaval, had been dismissed as head of the Institute for International Affairs a full week earlier. Nobody had bothered to tell the editor of the weekly that is Gomulka's mouthpiece.

Poland's Communists are not Liberals or Social Democrats; they are Communists. But many of them are men who believe deeply in socialism and who had believed deeply that socialism could be achieved under a considerable degree of freedom—and in 1956 risked their necks to prove it.

RIGHT PROVES WRONG

In 1956 they saw themselves as part of a movement that might not be liked by the people but was right for Poland and would be accepted by the people. Now they see that there will be restrictions in the range of liberty. It may not be as bad as it was in the days of Stalinism but having had a taste of freedom even Communists are not happy with dollops.

As Communists they would accept much more easily if they understood fully or believed fully in what their leader was doing. They neither understand fully nor believe fully.

For one thing, most of the members of the party have lost contact with Gomulka. For the first time since 1956 they refer to him not just by his underground nickname of "Wieclaw" but as "Wieclaw the dictator."

FILLED WITH FEAR

The party follows Gomulka. It has no other choice. Members know in essence what he is driving at—instilling discipline

into the party, trying desperately to give it roots in the country, prodding the people and the party.

But many party members are filled with a heavy fear that he is going about it the wrong way. Perhaps peasants in the countryside or workers in a provincial town do not care much which Communists are appointed to high places. They lump most Communists together and would be happy to pack them all off to the Devil.

STALINISTS RETURN

For a party member there are not many more important things than the men who rule the apparatus. The personalities and philosophies of the leaders determine the tone of life for the rank and file.

Now men whom most Polish Communists took it for granted were destroyed by 1956 are coming back to places of influence, men like Julian Tokarski, the Stalinist target of the workers' wrath in 1956, now recalled from obscurity to the post of Vice Premier.

It has been a long time that the party has been trying to dilute the memory of 1956. At the last party congress in March 1959, history was rewritten to make Russia the inspiration of 1956 instead of the main opponent of 1956.

SOME GAINS REMAIN

But the trends set in motion by 1956 still exist in Poland and the Government has not yet turned its back on some of the principal achievements of 1956—the truce with the church, the removal of Polish terrorism, privately owned land.

But the fear is heavy in the party ranks that Gomulka is so intent about establishing the power of the party and so heavy-handed that whether he wills it or not he is recreating the influence of the Stalinists.

RECREATED PARTY

Gomulka was successful in the days after 1956, successful in Communist terms. He found himself a leader of a shattered party and recreated it.

But in the last 2 years, particularly the last few months, he has made one enormous error. He has failed to give the party the line.

The line for a Communist party is a combination of ideology, directive, officially accepted causes and remedies and, most of all, clearly understood political atmosphere.

PARTS MISSING

These days there are none of the component parts of the line available for the Polish Communist to latch onto.

There are days of jumpiness in Warsaw when newspapermen compare the number of tranquilizers being swallowed in their shops—"on Jeruzalimskie street it's just like Madison avenue."

Then days come when nothing happens and in the steamy cafes people tell each other it's all a passing fuss. "You know," a Polish teacher said comfortingly, "in Poland the Communists always have to act tougher than they intend to get because otherwise who would pay any attention to them?"

But nobody really knows because nobody knows the line.

WHAT'S THE LINE?

Gomulka screams at the propaganda chiefs for failing to get out there and pitch. Party editors go to the next briefing prepared to hear the whip crack. But Edward Ochab, the new propaganda boss, merely talks mildly about the need for "studies." What's the line?

And the Russians, what to think about them?

Every time something unpleasant happens in Poland or is about to happen, Polish Communists, particularly foreign office types, whisper to their Western friends that it is all the Russians' fault.

And then there's agriculture. Everybody says that's the key. Everybody knows that the peasant cannot be cajoled into collectivization and cannot be forced into it.

[From the Chicago Daily Tribune, Dec. 2, 1959]

POLES' RATION OF FREEDOM GETS SMALLER BUT RETAIN MORE THAN OTHER RED LANDS

(By A. M. Rosenthal)

VIENNA, December 1.—The ration of liberty doled out in Poland is becoming more meager.

It is still so much larger than in the other Communist countries that a Pole returning from Moscow kissed the ground of Warsaw airport.

It is still large enough to give Westerners who come to Warsaw with a chain and gag image of Polish communism a comfortable glow that comes with the feeling that things are pretty good for the natives after all.

STILL CAN BUY A BOOK

It is still large enough so that a Pole can buy a book on an American jet pilot in the Joseph Stalin Palace of Culture, that seven young Poles, who call themselves the New Orleans Stompers can bang out "Warsaw Ragtime No. 1" in the Philharmonia auditorium.

But the ration has become more meager, and it leaves Polish intellectuals bitter because foreigners pay more attention to the fact that an American newspaper can be bought in a hotel lobby than that the Polish press, once virile, is now subservient.

ESSAYS CONFISCATED

Culture minded western diplomats are so entranced with finding a copy of Kafka on sale that they shrug off the fact a collection of literary essays by one of Poland's best known writers was confiscated a couple of days after it was put on sale.

("O, Old Wladek"—which is not his name—"He's always complaining, but he does all right for himself, after all," westerners like to say. Certainly, says "Old Wladek," he is doing all right, he has enough money left for a couple of months yet. And in a cafe another writer says, "Perhaps your diplomat friends would like Old Wladek to put on a little demonstration of starvation for them. Would that get them interested?")

DESPOTISM EASY TO SEE

It is all fairly confusing, this business of rationed liberty. Freedom is easy to see, understand, and evaluate. So is despotism.

Polish intellectuals are placed in a position between freedom and repression and are shifted about by the government, sometimes in one direction, sometimes in another. The story is not dramatic—"The west won't pay any attention until we are all arrested and then who will care about what the west thinks," a Polish essayist likes to say.

Polish intellectuals appreciate what degree of liberty they have. They appreciate it so much that they are terrified at every sign they are losing it. Some of them decide that the best thing to do is to keep quiet for fear of making matters worse.

FOREIGNERS GET PEEVED

Others decide to shout and complain and it is true that on occasion their conversational pitch gets rather high. Then foreigners in Warsaw tend to get a little peeved.

"It is a rather strange situation, you know," a Polish writer said one day. "The west sits down to a big dinner—a big dinner of liberty—and looks across the room at us and says 'aren't you lucky to have potatoes and bread.'"

The evidence that a measure of liberty still exists is not hard to come by because Poles speak plainly if not quite as freely as a couple of months ago. It is not free speech; a Pole who spoke his mind from a soapbox would be carted off. It is free conversation.

SATIRES IN "THE BARN"

Many Poles have no fear about mixing with foreigners although fewer do recently.

Warsaw university students put on muted little satires in a club called "The Barn."

Artists are free to paint as they please and there's a buzzing colony of abstract artists down in Cracow. American scholarship programs take Polish intellectuals and scientists to Western Europe and the United States.

The radius of liberty is sometimes seen as an achievement of communism in Poland, a vindication of the hopes of liberalistic communism. Not all Poles see it that way, not all by any means.

RADIUS GETS SMALLER

Many of them feel that liberty was expanded in Poland during 1955 and 1956 because of the pressure against the Communists and the disgust of many Communists with what they had created. When the party pasted itself together and the disillusioned were thrown out or retired, the radius began to get smaller.

A Pole cannot vote freely, engage freely in political activity, write freely, travel freely, or speak freely in assembly.

There is plenty of evidence that the ration is getting smaller. Last December, the Polish union of writers, meeting in Wroclaw, adopted a resolution denouncing government censorship and calling for a fight for the defense of freedom of expression.

Polish writers had become convinced that the party had determined to restrict them into an ever-narrowing corner of expression.

A couple of months ago the screws were turned tighter and when this reporter left Poland by invitation of the government a couple of weeks ago some of the most important writers in Poland were telling each other that the time had come to withdraw in silent protest from the leadership of the writers union—a sort of intellectual boycott.

This discussion was reported in the New York Times. That dispatch was in the file given to Wladyslaw Gomulka, Poland's Communist chief, by party leaders and was one of the reasons he ordered the reporter expelled for probing. Gomulka detests the writers of Poland, but he is quite aware that they still have some meaning abroad.

WORRY ABOUT FOOD

The decision to tighten the screw was part of Gomulka's broader decision to fight to impose the party's control on the life of the country. Gomulka is giving the writers something else to worry about aside from politics—getting money for food.

Editors of State publishing companies are turning down more and more books on flimsier political grounds.

In newspaper and radio offices throughout the country people are being fired, making those who kept their jobs readier to toe the line.

[From the Chicago Daily Tribune, Dec. 3, 1959]

CHURCH, STATE SHARE CONTROL OF POLES' LIVES—ARMY MAINTAINS REDS IN POWER

(By A. M. Rosenthal)

VIENNA, December 2.—In the life of Poland, fundamental power belongs to the Soviet Union, but fundamental influence still belongs to the Roman Catholic Church.

The existence of the Soviet Union and the existence of the church are the two overriding realities in Poland. Everything else stems from them.

These two realities shape the broad outlines of political moves and political structure in Poland and determine their limits. And in an intimate day-to-day way these two realities influence the life of every Pole.

It was because of the existence of the Soviet Union—more bluntly, because of the ever-present shadow of the Russian army—that communism was able to come to power in Poland and has been maintained in power.

POLES ARE UNSWAYED

It is because of the existence of the church—more precisely, because of the intense devotion of the huge majority of Poles to it—that communism has had virtually no impact on the emotions and loyalties of the Polish people.

It is largely because of the existence of the church that the Polish Communists, who know that at best they only share authority with it, have had to strike out on some unexplored socialist roads to maintain order and even the semblance of control.

And the existence of the Soviet Union puts constant limits on the actions, decisions, and pronouncements of the church in Poland. Fear that the overthrow of Polish communism would bring the Russian army into the country has made the church forego the use of its strength against Polish communism—and sometimes help it.

LIVE WITH REALITY

To turn the coin around, fear that an all-out contest between Polish communism and Polish Catholicism would result in chaos and the entry of Russian troops has made Poland's Communists decide, as no other Communist land has, to try to live with the reality of the church—to struggle against permitting its influence to grow, but not to risk the attempt to destroy it.

Catholicism for most Poles is not a matter of mass on Sundays, but as much a part of their lives as the earth they walk.

A Polish woman on a pilgrimage does not saunter into the fortress-like monastery at the shrine of Czestochowa. She falls on her knees as she enters the stone courtyard.

A MATTER OF NATIONALISM

For most Poles Catholicism is not only a matter of piety but also a matter of fervent nationalism. For them the church and Poland are one. They sing "Mary, Queen of Poland."

Officially, there is a truce between the church and the state in Poland. Wladyslaw Gomulka, Poland's Communist leader, agreed to it in 1957 soon after he ordered the release from imprisonment of the only other man who counts for anything in Poland, Stefan Cardinal Wyszynski.

It is not a piece of paper that keeps the truce alive despite the incessant pressures on it. It is the realization of the Catholic leader and the Communist leader that without it their nation would be in constant turmoil and in constant danger of occupation.

RECURRENT CRISES

There are recurrent crises between church and state in Poland and there will continue to be.

These crises come from the belief that each side is endeavoring, under the protection of the truce, to reduce the influence and prestige of the other.

In the summer of 1958, for instance, the Communists became convinced that the priests in the parishes were becoming too outspoken in their opposition to communism. The government took the dramtic step of raiding the cardinal's offices in the monastery of Jasna Gora at Czestochowa, impounding church presses, and launching a violence antichurch campaign.

NEW PRESSURES BEGUN

The campaign died after a while, before it became too dangerous. Now the state has started on a series of administrative measures designed to restrict the church—high taxation, calling seminarians into the army, refusing to recognize the bishop of Kielce.

For its part, the church is neither powerless nor inactive. It has no political party and its only real newspaper is a weekly printed in Cracow.

But the voice of the parish priest is heeded more than the voice of Trybuna Ludu, the party newspaper.

CHURCH SUPPORT NEEDED

For example, a Warsaw priest was leading his congregation on a 9-day pilgrimage on foot to Czestochowa. Within sight of the great walls of the monastery he turned to a foreigner and said, "Show me a Pole who would walk 9 days for a copy of Trybuna."

Without church support the Communists usually find their programs drowning in the indifference of the people.

While there is constant pressure against the church, there is no interference with church attendance. A Warsaw police official once said that one of the big administrative problems of his force was making sure there were enough policemen on duty on Sunday to direct traffic and control crowds coming to church.

PROBLEMS OF CROWDING

The state also allows religious instruction in state schools, one of the agreements of the truce. In Poland a boy who does not go to religious education class risks the taunts and blows of his schoolmates.

The church has its problems in Poland that are not the result of state pressure. The hideously crowded living conditions in the Polish cities have led many Catholics to ignore the injunctions against birth control and abortion.

And it is a fact that many young Poles, particularly in the cities, have lost some of their admiration for priests—as men, not as priests.

There are priests in the hierarchy whom Catholic intellectuals regard as backward looking and out of step socially with the mid-20th century. Among Catholics there are leaders who believe in a policy of resistance to everything the state does. And there are leaders who believe in positivism—working, as Poles and as Catholics, to create the best kind of Poland that history, geography, and the reality of Communist power allow.

[From the Chicago Daily Tribune, Dec. 4, 1959]

POLAND'S ROLE IN EAST-WEST DRAMA FADES—RED PARTY BOSS GLAD OF IT

(By A. M. Rosenthal)

VIENNA, December 3.—The Polish Communist government is faced with the fact that its international role is dwindling as a conduit between East and West, and within the Soviet bloc.

But in a strange and important way this diminution of importance is not a matter for despair for Party Boss Wladyslaw Gomulka, but a matter of satisfaction.

Poland's international role is becoming less significant, because two things made it virtually inevitable: The trend of East-West power relations in the last year, and the development of communism in Eastern Europe in the last 3 years.

In October 1958, Foreign Minister Adam Rapacki, of Poland, visited Oslo, Norway. This visit of the well-mannered and well-groomed Communist diplomat to an ally of the West had importance. It was one of the moves the Poles took, with the approval of Moscow, toward preparing an atmosphere for negotiations.

CHANGE IN IMPORTANCE

Just about a year later, Premier Khrushchev visited Washington. This historic visit of the leader of the Soviet bloc and the real power behind M. Rapacki to the fountainhead of Western strength obviously reduced the significance of Polish diplomatic trips and Polish diplomatic contacts almost to the point of invisibility.

In October 1956 the other Communist governments of Eastern Europe looked at what was going on in Poland and trembled with fear lest the infection spread. In December 1959, these governments feel themselves growing stronger and the Poles weaker and they do not bother to contain their "we told you so's."

Ever since 1956, Polish Communist diplomats have prided themselves on their contacts in the West. They never thought for a minute that these contacts meant that they could be independent of the Soviet bloc—and it was a matter in which they had no interest.

FOR SMOOTHING OFF

But these contacts, and Western interest in the Polish story, gave Polish diplomacy a certain prestige within the bloc and outside it. The Poles did not see themselves as a bridge exactly, but as a sort of sandpaper smoothing off the rough spots in East-West relations.

For the West they provided an insight into Russian thinking as passed to the satellite world for relay to the outside. For the Russians, the Poles provided a sort of soundingboard.

At the same time, the Poles drew advantage from the role. In Moscow they presented themselves as faithful members of the bloc who were using their position in the world to help the bloc; in Washington, London, and Paris they presented themselves as reasonable men and were able to win sympathy for their country by the hint that, whatever the Polish Communists did that the West did not like was a result of Russian pressure—which was true only part of the time.

NOT ALWAYS EASYGOING

Seen in Warsaw, Polish Communist diplomats are not always so easygoing, liberal, and knowingly sophisticated as they are in Washington or the United Nations. But in Warsaw or in Washington their diplomacy stands out vividly from the heavily clanking, party-line diplomacy of other communist diplomats. Their contacts remain good and useful to their nation.

But they are not especially useful any more to the great powers. When Khrushchev can tour the Western capitals and talk directly with Western leaders he has no need of the Polish advance man. When Western leaders can talk directly with Khrushchev and when Russian diplomats generally start loosening up, there is no particular importance to the West of glimpses of political thinking in Moscow as relayed by Warsaw.

The Russians are not at all sorry about seeing the Polish diplomatic role reduced.

THE RUSSIANS' ADVANCE

Now the Russians are not shy about making it clear that they are delighted they can deal directly with Americans instead of via the Polish detour. The Russian attitude toward Americans is "We are all big boys together," and "Who are these others?"

A couple of small cases in point:

An American newspaperman was expelled from Warsaw a few months ago for misquoting M. Gomulka. A few weeks later the newspaperman received a visa to Moscow.

About 5 hours after this reporter was ordered to leave Poland, he received a rare invitation to a Russian Embassy reception that night, by special messenger. He was unable to attend. But Russian officials told his colleagues that they had wanted him to come and have a vodka, apparently to show there were no hard feelings as far as they were concerned and to kill the idea that they were behind the expulsion order.

As far as the West is concerned, contacts with Polish diplomats and the Polish people are still valuable. But against a broad political background there is a certain embarrassing quality in them.

The West has made up its mind to try to come to an arrangement with the Soviet Union. It has not a great deal to say to Eastern Europe now. The Russian presence in Eastern Europe—the status quo—is taken for granted as part of any arrangement, written or unwritten.

The policy of liberation is dead. The West cannot urge Poles to take any strong action in relation to the Soviet Union, because, as a Polish Communist said to this reporter soon after he arrived in Warsaw, in case of trouble the West could only send flowers.

NOT GREATLY CONCERNED

That does not mean that the situation is forever frozen in Eastern Europe. As an Eastern European Marxist said, things have a way of happening in the part of the world, and the people of the area are not simply puppets waiting for strings to be pulled by Moscow or Washington.

But it does all mean that, for the time being, neither the West nor Moscow is as concerned with Polish diplomatic activity as both sides were not long ago.

Within Communist Eastern Europe, Poland's role has become more that of a political football than a political catalyst. And Poland's neighbors take joy in kicking the ball around a little.

POLAND'S INFLUENCE SLIGHT

The Czechoslovakian and East German Governments, particularly, see themselves growing more economically solid as the Poles become economically weaker. They see that Polish "liberalization" has not worked very well while their own policy of force and repression has at least kept the lid on tight.

Steadily the other satellites push toward complete collectivization of the land. In Poland only about 15 percent of the land is cooperatively, or state, owned.

The Polish infection has not spread. Instead the Poles find themselves more and more isolated economically.

The attitude of officialdom in eastern Europe 3 years ago toward Poland was heavy with concealed respect. Now it is heavy with unconcealed sardonicism.

It used to be thought that the Poles could influence the other eastern Europeans. Now they find the influences being applied to themselves.

There is often talk of Soviet pressure and, of course, the existence of the Soviet Army is a matter of everyday pressure for the Polish people.

Moscow exerts its influence in many of the Polish Communists' decisions, and in many decisions the political ties among Communists make pressure unneeded.

But there is also pressure on Poland from the satellite countries. The east Germans and the Czechs become increasingly critical in private talks with Poles and foreigners about the Polish way.

GOMULKA NOT UPSET

The dwindling of Poland's international role may upset Polish diplomats concerned with their prestige in the west, and it upsets Polish Communists, who saw themselves as part of a great movement to reform the Communist system. It is most unlikely that it upsets Gomulka.

Gomulka never saw Poland in terms of great international standing. The fact that Polish communism was pushed center stage always seemed to rub against his unsmiling, irritable sense of the fitness of things.

Gomulka is not concerned with establishing Poland as a key player in the diplomatic world. He is not interested in having Poland play a potentially dangerous game between east and west.

ORDERLY ROLE PREFERRED

Gomulka is interested in establishing communism as a functioning and orderly mechanism inside Poland and establishing his party as the wielder of power and influence as well as its symbol. He has determined to take stricter methods to establish that goal. His job is made infinitely more difficult than the jobs of the other satellite leaders, because neither he nor his party is eager to go back to the use of naked force—and they fear the reaction of the Polish people if they do.

In an important sense the diminution of Poland's international role inside and outside the Soviet bloc takes some pressures off the Polish Communist leadership. That leadership is freer to concentrate on internal problems. It is freed to some extent of the fear of being caught in a big power play, freed to some extent of the fear that Polish communism will be held responsible by its allies for all their troubles.

Almost Respectable

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. PORTER. Mr. Speaker, more and more people are coming to realize that practicality and reason, if not survival itself, require resumption of communication with the governing entity of the 600 million Chinese people who live on the mainland of China. While at one time a suggestion of this kind would have elicited tacit, if not outspoken, accusations of near treason, some of our most respected leaders are now advocating it without incurring any thought that they are disloyal. One of those who is speaking out on the subject is the distinguished Senator from Ohio, STEPHEN M. YOUNG.

Under a previous consent, I am including excerpts from his newsletter, "Straight From Washington," of November and December 1959:

RED CHINA

Thought should be given and, very likely, action taken early in the year to bring about increased communications with Red China and opening trade between that nation and ours. Then the question of recognizing the government of Red China may be given consideration. Of course, recognition of any de facto government does not at all mean that this Nation approves of that form of government. Practical considerations are persuasive in connection with doing business with Red China. For one thing, how can we definitely stop testing of nuclear weapons under a plan for international inspection unless the government of Red China agrees to allow control stations within her borders? We are not advocating appeasement, softness or concessions to Red China, but why not start this troubled world on the road to disarmament with adequate safeguards to compel real disarmanent?

PENETRATE THE CURTAIN

We, in this Nation, have had no definite foreign policy since the good neighbor policy of Cordell Hull 25 years ago. It is important that we find some way to establish friendlier relations with Red China. We should penetrate that bamboo curtain and permit American newsmen, businessmen, tourists and students to visit that country and permit Red Chinese nationals to visit this country, under severe restrictions, of course. Were we to engage in some trade with Red China, we in this Nation would gain from that. Furthermore, we cannot ignore that nation of 600 million people. We have no intention of abondoning Taiwan (Formosa), as our frontier there and the maintenance of bases are important to us and to the free world. Nevertheless, Chiang Kai-shek is merely a symbol. He knows that the Communist regime is well entrenched in the Chinese mainland. Furthermore, 35 percent of 640,000 Nationalist soldiers are Formosans. The youngest and best soldiers of the Nationalist Army have never seen the Chinese mainland. As Formosans, they desire freedom for their country. They have no particular liking for Chiang Kai-shek. The force is entirely too small anyway for a successful invasion of the Chinese mainland, unless American air, sea and military might spearheads the drive. Chiang Kai-shek himself knows that he is talking as a politician and boasting as a warlord when he speaks of invading the Chinese mainland. This has been going on for 10 years, and the prospects of his meeting with success are nil. No revolt in Red China could possibly succeed unless elements of the Red Army revolted. The peasants have no arms or munitions. Were any section of the Red Army to revolt, and of course there is no indication of that, then that Commander would be the new No. 1 boy, and General Chiang would be definitely out even as a symbol.

Nineteen Hundred and Sixty's Busy Man—Philleo Nash

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include in the CONGRESSIONAL RECORD a column on Wisconsin politics by my good friend, Miles McMillin, of the Capital Times, Madison, Wis. The article, "Nineteen Hundred and Sixty's Busy Man—Philleo Nash," describes the infinite variety of the Lieutenant Governor's activities. I have known Philleo Nash for many years and value his friendship highly. At this time, I am glad to call the attention of my colleagues to his many contributions in the field of anthropology, agriculture, business, and politics.

The article follows:

NINETEEN HUNDRED AND SIXTY'S BUSY MAN—PHILLEO NASH

(By Miles McMillin)

You can put it down in the winter book that when the Democrats send their team out next fall Lt. Gov. Philleo Nash will be on it.

Nash has not said that he will be a candidate for reelection, but one does not talk to him very long without getting the impression that another shot at the office is pretty well imbedded in his plans.

He considers himself a part of the Democratic team elected in 1958. He puts cou-

siderable emphasis on the program that is yet to be carried out—a program which has been blocked by the Republican majority in the Senate.

Nash not only talks as though he expects to run but as though you expect him to.

He brings a rare combination of qualities into the political life of the State. He is at home talking about the academic life, where he spent several years in anthropology; business life, where he is still engaged in cranberry production; and in politics where he has had top level experience in both National and State politics.

And if conversation should wane he can pick up a guitar and do a first-rate job knocking out some folk songs.

He has a quick and piercing mind, driving to the heart of problems in a hurry, a facility that gives him time to keep all his irons hot. During the recent cranberry crisis he was in and out of Washington as much as he was in and out of Madison. Not even the most rabid Republican could accuse him of neglecting his duties.

Veteran observers know of no Lieutenant Governor who more quickly mastered the rules of the senate, over which he must preside. Up until the other day when the Senate Republican majority blew its stack at the spanking it received from Governor Nelson it had not overridden one of his rulings, a tribute to his fairness and mastery of the rules.

There are reports that the Republicans had decided to deliberately overrule him sometime during the session to keep him from making a perfect record.

"The Republicans didn't do any violence to me," Nash said. "They did it to the rules of the senate."

He is going to be a busy man in 1960. In addition to his own campaign for reelection he will be engaged this spring in Senator HUBERT HUMPHREY'S presidential campaign in Wisconsin. Nash will be on the Humphrey slate. He may join with Mayor Frank Zeidler of Milwaukee to head it up.

Some Democrats profess surprise at Nash being for HUMPHREY. A former member of President Truman's White House staff, he is a confidante of the ex-President and is considered to be Truman's man in Wisconsin. Truman is reported to be for a fellow Missourian by the name of SYMINGTON, and it was believed that Nash would go along.

But when Truman was recently in the State, Nash talked over the situation with him, pointing out that HUMPHREY, for years, had put himself at the disposal of Wisconsin Democrats in their efforts to build up the party.

Truman told him that he thought Wisconsin Democrats should support HUMPHREY.

Symbol of Hope

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial written by Mr. Verne McKinney in the Hillsboro (Oreg.) Argus on the President's trip abroad:

SYMBOL OF HOPE

President Eisenhower's journeys abroad developed into a phenomenon. Nothing like this had ever happened. In far-off places, India, Pakistan, Afghanistan, and others, men and women who had never seen him before hailed the President as a new messiah. A messiah of peace.

These throngs were welcoming more than an individual. They were greeting a symbol, who represented all of us as Americans. These peoples have come to see America as lighting a path to peace and a better way of life—a nation strong enough to lead—a great challenge to Americans.

Many of the nations visited have been termed less-developed nations. Probably the same label could have been tacked on the Original Thirteen Colonies.

The Founding Fathers seemed to have done pretty well, even though they had only an idea. This idea was that freedom, if you could hold on to it, could make a nation great. The core of the idea was that the things free people wanted came from themselves, not the Government. This idea was what the colonists and their descendants turned into the America hailed as the hope of all nations.

While basking in the warmth generated by President Eisenhower for us around the world, we could very well recollect that we are close to losing, or rather destroying, the hope we are holding forth to ourselves and to others.

This threat to our freedom stems from the notion, sprung up in this country in the last 30 years or so, that government is the fount from which all blessings flow. This is the exact reverse of the original idea held by the founding fathers.

When politicians make golden promises in order to be elected, people are prone to forget the simple principle "that governments can never give to the people something it has not taken away from them." Real wealth is created by people, not government.

Staggering Cost of U.S. Debt

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Washington Sunday Star of January 17, 1960:

STAGGERING COST OF U.S. DEBT
(By Sylvia Porter)

Tomorrow, when President Eisenhower submits the budget, he'll report that almost $12 of every $100 in taxes in the next 18 months will be used for interest on the national debt.

The President will make no effort now to hide the staggering size of this expense. Debt interest has become a drain on taxes second only to national defense. During the Eisenhower administration this expense has risen by billions.

When the President said last week that he'd introduce a budget balanced at $79.8 billion to show a surplus of $4.2 billion, he went out of his way to stress the chunk earmarked for debt interest. He did so by prefacing his comments about balanced budgets in 1960 and 1961 with the words, "The debt with which we are now confronted is about $290 billion. With interest charges alone now costing taxpayers about $9.5 billion, it is clear that this debt growth must stop."

But the emphasis in those sentences easily could mislead you into thinking that the reason interest on the debt has been skyrocketing is that the total of the debt has been skyrocketing.

This is not so.

In 1946 the U.S. debt was at a war-swollen total of almost $270 billion. It's not much bigger now.

But in 1946 the annual interest cost of that debt was $5.3 billion. The cost of carrying the not-much-bigger debt has almost doubled.

While the climb in the total debt under Mr. Eisenhower has been relatively modest, the climb in its carrying cost has been spectacular.

The explanation lies, of course, in the upsurge in the level of interest rates—the cost of borrowing money.

And while a businessman may decide to shelve his borrowing plans in a phase of expansive credit, the Treasury has no similar choice. It must borrow to cover the Government's bills when outgo exceeds income. It must constantly tap the market for new loans to replace maturing IOU's. These days is must compete in the marketplace for the cash, pay the rates demanded by lenders for funds.

Thus this one figure in tomorrow's budget will stress the impact of tight and expensive money on a borrower.

This one statistic will dramatize the tight-money issue—which many believe will be the key issue in the Democratic campaign this year.

Don't underestimate this. It is a major issue which warrants plenty of honest questioning. As an illustration, the aim of tight and expensive money has been to discourage fringe speculation and thereby control inflationary activities which spur price rises. But while the price rise has slowed, it hasn't stopped. A fundamental objective of the GOP has been to reduce the total of the national budget. But the soaring interest cost item in the budget has been steadily raising the budget total.

When interest rates rise to a level forcing the Treasury to collect $9.5 billion a year from all taxpayers to pay out only to those who own Government securities, the entire economy is directly and vitally involved.

When debt interest becomes such a massive factor in the budget, a national debate on the reasons and justifications for the expense becomes not only desirable but also imperative.

How About Academy of Foreign Service?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BOSCH. Mr. Speaker, long before I was elected to served in this House I was interested in legislation to create an Academy for training young men to serve in the Foreign Service of

the United States. Among the first bills introduced by me in the 1st session of the 83d Congress, my first term in the House, was a bill to establish a Foreign Service Academy, and I have introduced this bill in each succeeding Congress—the latest being H.R. 1232, introduced January 7, 1959, and pending before the Committee on Foreign Affairs. It is my hope that this legislation will see the light of day before this Congress adjourns.

Under leave to extend my remarks, I include an editorial on this subject which appeared in the Long Island Press of January 20, 1960:

HOW ABOUT ACADEMY OF FOREIGN SERVICE?

We're glad to hear the State Department is attracting more bright young people into Foreign Service careers.

Only 3,000 applied in 1958, but more 10,000 did last year. One reason: tests now are held in 65 or more places around the country. A few years ago they were held only in 16 places.

The State Department is only one of several Federal agencies with representatives all over the world.

These people are our front-rank troops in waging the war for world peace.

We should have a National Service Academy to prepare these young men and women for careers in foreign fields. It should be along the lines of, and have the prestige of, our Military Academies—West Point, Annapolis, Air Force Academy, and our own U.S. Merchant Marine Academy at Kings Point.

Congressman ALBERT H. BOSCH, of Richmond Hill, has introduced bills time and again for such an Academy. We hope he gets action at this session of Congress.

Putting in Your "2 Cents Worth"

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. O'NEILL. Mr. Speaker, it is a privilege and a pleasure for me to bring to the attention of my colleagues in the House an article which appeared in the December 1959–January 1960 issue of Topics which was authored by our distinguished and beloved majority leader, the Honorable JOHN W. MCCORMACK.

It is a simple yet eloquent statement on a subject which is very close to all of us written by one of the most sincere and splendid Americans ever to sit in this Chamber. I am sure that you will find the following of great interest, and I am more than happy to be able to place it in the CONGRESSIONAL RECORD:

Americans have a way of expressing their views in down-to-earth, simple terms, and one of these phrases is: "I put in my 2 cents worth."

Putting in our 2 cents worth, or expressing our individual opinions, can be vitally important to the future of our country.

Americans have a God-implanted love of free speech, but I have observed during my service in Congress that too few of our citizens take advantage of this privilege of speaking up on Government matters.

A reason may be that many people believe their Congressman does not welcome a letter or a telephone call from a citizen who has an opinion on some past, pending or future matter. May I correct this mistaken idea as simply and as clearly as possible? Every Congressman welcomes the opinion and counsel of our citizens because his primary job is to do just that: represent our people in the government of our country. To do this well, the Congressman must know what his people are thinking, and the more opinions he gets the better will be his decisions. Public opinion is a very important factor in a democracy.

The very basis of our government is built around people. What we call politics, elections, legislation—all are attuned to one great determinant, the voice of the people or public opinion.

The people created America, and the people—you and I—must continue to watch over and improve the country our forefathers built and our contemporaries are building. This is our duty and our greater obligation.

As a country, we decided long ago to place this responsibility upon our citizens. Freedom for all was the fruit of this decision, but freedom carries with it the cost of widespread citizen interest and participation in the affairs of Government.

One of the best ways to fulfill your duties of active citizenship, of course, is to help elect the man or women of your choice to public office. But do not stop there. Let me encourage you to take the next step. Keep the persons who represent you in government informed of your views throughout the year. This is an equally important responsibility in our democratic form of government.

Sometimes I think it might be well if we erected a large sign over Congress which contained this thought: Here the opinions of all Americans are heard—and should be heard—with equality. As a result, the sense of their proposals becomes the law of the land.

Or perhaps we should put it in more typical American language: Here your 2 cents worth does make a difference.

JOHN W. MCCORMACK,
Member of Congress.

American Credo Stamp Series

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. CHAMBERLAIN. Mr. Speaker, on January 20, Postmaster General Arthur E. Summerfield launched the American credo stamp series designed to revitalize famous quotations from great American patriots.

The first of these new 4-cent stamps honors George Washington and carries the advice contained in his Farewell Address of 1796: "Observe good faith and justice toward all nations."

Postmaster General Summerfield's comments in dedicating this stamp deserve wide reading. Therefore, under leave to extend my remarks in the RECORD, I include the address of the Postmaster General:

ADDRESS BY THE HONORABLE ARTHUR E. SUMMERFIELD, POSTMASTER GENERAL OF THE UNITED STATES, AMERICAN CREDO STAMP CEREMONY, MOUNT VERNON, VA., JANUARY 20, 1960

There could be no more appropriate place to dedicate the American credo stamp series than here on this hallowed ground of Mount Vernon.

Here lived the man whose creed became the guiding inspiration of every generation that has followed, most certainly including our own.

The lives of great Americans lie behind us; but the immortal principles they expressed in words stand vitally before us.

In these treasured words we find the shining ideals by which our Nation has grown and prospered in freedom. By these words are formed the great and timeless credos that light our way forward.

We need to keep them before us, to emphasize their spirit, and to offer to share their universal truth with all the people of the world.

It is with these thoughts in mind that we have created the series of American credo stamps, the first six of which will be released in the months ahead.

As we join with you to launch the first of them today, we are inspired by the magnitude of the purposes they may serve. No other special stamps have received such warm and wide acclaim.

Our distinguished Citizens' Advisory Committee began consideration of this series over 2 years ago. At that time, we asked 100 prominent Americans—leaders in public life, historians, presidents of State universities—to state their opinions.

We presented a list of 24 expressions by great Americans, and proposed that they rate them according to their own evaluations, and add any which they believed to be more meaningful.

We received an almost 100-percent response. All heartily endorsed the endeavor. And with their vote and suggestions, and our own judgment, we arrived at the six which are to inaugurate this series.

There was almost unanimous agreement as to the first. It is the admonition enunciated by George Washington in his Farewell Address to "Observe good faith and justice toward all nations."

As you will recall, President George Washington announced his unequivocable decision on September 19, 1796, to relinquish his high office when his second term ended in March the following year.

In a Farewell Address on this occasion, the vigorous but aging First Citizen culled from his long life a series of principles which, summarizing his deep "solicitude for your welfare" chartered the course for the then infant United States of America.

No document save the Constitution has been quoted more often in political debate and whether the arguments from it are used pro or con in the heat of political controversy, Washington's Farewell Address is rightfully regarded as one of the most significant political testaments ever made.

Of all the national policies advocated by our first President in the farewell document, the precept "Observe good faith and justice toward all nations" is without question the most abiding.

We hope it can be said that over the course of 170 years, we have followed this counsel devotedly. It has been our guiding light; and today, it is the very essence of our international policy and desire.

Some may say that this ideal is easily and completely applicable as far as the free world is concerned. But what about the ideologies that are hostile to our very way of life? What about those who strive for world domination?

What, in short, about the Soviet Union and Communist China?

The counsel of Washington still applies, as surely as it did to the tyrannies of his day.

We can only hope for good faith in others as we demonstrate it ourselves. We must assume that the leaders of the Soviet Union, of Communist China, and other totalitarian regimes will eventually understand justice the better if justice prevails as the overwhelming world force of their time.

Let us observe good faith toward all nations, including those whose motives we dare not, at this juncture, fully trust. Let us impress upon their peoples the clear fact that we are as dedicated to freedom for all mankind as our fathers were in those fateful years when General Washington and his tattered legions fought to establish liberty as man's God-given right.

In practicing good faith, we must of course be prepared against bad faith at the same time.

As President Eisenhower expressed it so clearly in his recent state of the Union message: "Neither we nor any other free world nation can permit ourselves to be misled by pleasant promises until they are tested by performance."

And until this test is conclusive, we must follow the further wise advice of our first President, in his view that: "To be prepared for war is the most effectual means of preserving the peace."

We should not forget, either, the extent to which Washington gave of himself to insure that the precepts set forth in his farewell address would be realized.

Let us not forget that Washington and the men around him, not only his fellow Americans, but supporters from other countries like Lafayette, Kosciusko, Von Steuben risked everything, including life, in the cause for freedom.

George Washington was a wealthy planter, with a life of ease and comfort before him, if he so chose, when the call to duty came.

He accepted that call without hesitation. He suffered with his troops at Valley Forge. He endured all manner of hardship, even including the attacks of some of his own shortsighted countrymen.

And while he was leading the way in costly war and turbulent peace, he cast much of his own fortune into the struggle, never to be recovered.

His later years, here at Mount Vernon, were shadowed by debt and economic problems—a sharp contrast to his earlier life.

Thus George Washington set the challenge for us to meet today. It is for us to pledge ourselves to serve wholeheartedly, and to sacrifice as need be, in the preservation of the incomparable heritage we enjoy.

May this postage stamp carry our message of American hope, trust, and purpose throughout the world. May this stamp, as it expresses this great and noble ideal in 120 million printings, be a force of historic value in our own unity as a people; in the advancement of good will and understanding between ourselves and the peoples of today's closely knit world.

Other great Americans whose credos will be illuminated by these American credo stamps include: Thomas Jefferson, Benjamin Franklin, Patrick Henry, Francis Scott Key, and Abraham Lincoln.

We hope that each of these stamps, so beautifully designed by the noted artist, Frank Conley, will provide a means and an occasion for schools and patriotic and civic groups to commemorate these credos as they apply today.

Let me say that the Post Office Department will be happy to cooperate to the fullest extent possible in all activities so designed.

We believe that, in this undertaking, there is the basis for great good to be accomplished beyond the reach of the stamps themselves.

The ideals of liberty, courage, and faith were never more vital. All that we can do to implant them, as individuals, and as educators and public leaders, will be critically important to our future.

It is in this solemn spirit that we here dedicate this series of American credo stamps and wish them Godspeed in bearing their messages not only throughout our country, but to the people who would observe good faith and justice in all parts of the earth.

The New York Times in its "Topics" column on its editorial page of January 20, 1960, made some apt observations about the significance of this new stamp. This news comment reads as follows:

TOPICS

INAUGURATION IN AN OFF YEAR

If 1960 were an inauguration year instead of an election year, someone would be taking the oath of office as President of the United States today. Whoever that someone may be, next year he will be only the fourth man to be inaugurated on this date; Franklin Delano Roosevelt became the first when he entered his second term in 1937, but all of the 30 men who preceded him in office during nearly a century and a half took the oath on March 4. This year January 20 has been chosen for a different kind of inauguration. Today at Mount Vernon, Va., the post office is issuing a new kind of postage stamp inscribed with eight words over the facsimile signature of "G. Washington."

POSTAGE STAMP CREDO

There is nothing new or unusual about the size of this stamp; it represents 4 cents' worth of postal service paid for in advance and has adhesive on the back for the usual purpose. However, instead of a portrait or a pictorial design, the eight words from Washington are set in a border of decorative panels printed in red and blue on white paper. This is the first in a projected series of stamps announced last September and planned to give prominence to wise words of Founding Fathers and later statesmen. The general idea is that as the series continues these periodic phrases from the past will form a kind of progressive creed for Americans. To affirm this each stamp will carry the word "Credo" in one of the border panels, and quotations selected will embody a basic principle of national policy.

WISE WORDS NEVER SPOKEN

The words selected from Washington are the antithesis of anything to do with inauguration, coming as they do from his last utterance as Chief Executive rather than from his first. The admonition with which this new patriotic creed opens today is "Observance of good faith and justice toward all nations," the opening words of a paragraph midway in the Farewell Address composed by Washington, with help from Alexander Hamilton, over a period of 3 or 4 years and finally corrected by Washington for printing in the Philadelphia Daily Advertiser in September 1796. He dated the manuscript pointedly without designating his office or even the city in which he completed the document, but simply wrote "United States." Although it is entitled an address as is always so cited, there is no record that Washington ever delivered it orally. It must not, of course, be confused with his Farewell Address to his officers at Fraunces Tavern at Broad and Great Dock (now Pearl) Street on December 4, 1783, an occasion marked chiefly by good food, few words and strong emotions carefully suppressed among fellow officers "gentlemen of the old school."

FAITH, JUSTICE, PEACE

Washington's admonition to "observe good faith and justice" toward other nations is followed in the original document by the words "cultivate peace and harmony with all." It is this passage in the address that contains his sound and thoughtful advice against too much love or too much hate for any other nation. Writers and speakers seeking to discourage close ties with foreign governments by this country have drawn upon it heavily. Often they associate with it the well-known phrase about avoiding "entangling alliances" which is not Washington's but Thomas Jefferson's expression and may be found in his First Inaugural Address, March 4, 1801. The whole tenor of Washington's thought on this point is to preserve a dignified, friendly balance between close attachment and strained relations; this course, he believed, would be especially wise for a small, new nation trying its way in the world.

WISDOM IN BRIEF

In the context of news at the opening of 1960 with high-level state visits behind us and before us and with summit meetings scheduled, few brief sentences could be selected which might describe more concisely the posture of this country on the world stage. As the serial parts of the new thumbnail-sized creed appear in wisdom and brevity through an election year, one may hope that statesmen now living, especially those ambitious to serve their fellow citizens in elective offices, might take the hint and recognize that words which live after a great man are often more admirable and memorable when found in such small gems as these.

A Two-Pronged Approach to the Farm Problem

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given by John H. MacMillan, Jr., last November before the First Bank Stock Corp., of Minneapolis. Mr. MacMillan is chairman of the board of Cargill, Inc., one of the largest grain companies in the world. Naturally he has wrestled with the problem of farm surpluses as have all of us. His analysis and suggestions are fresh and seem to me to make sense:

A TWO-PRONGED APPROACH TO THE FARM PROBLEM

(Remarks of John H. MacMillan, Jr., chairman, Cargill, Inc., before meeting of the First Bank Stock Corp., Minneapolis, November 20, 1959)

Virtually everyone in the United States today, regardless of political party, economic bias or personal claim to liberalism or conservatism, has come to refer to our 30-year-old program of high-level crop supports, and the consequence of such supports, not as the farm plan, but as the farm problem.

This choice of phrasing suggests immediately the regard in which the crop support program is held by most of our people. They recognize it to be a program that simply has not worked; a medicine that has not cured; a failure. With this popular finding I heartily agree.

The phrases "farm problem" and "farm plan" suggest more than just the failure of high crop supports. They also suggest a reason for the failure. They would indicate to a casual listener that the farm problem is a single problem, that should be amenable to solution by a single plan. In fact, however, it is two separate and distinct problems, one of them economic, and solvable only in the manner classic to economic functioning, and the other human, approachable only in human and social terms.

Confusing the two has led to a popular analysis that would define the farm problem as "too much production, at too low a price." Yet this, as a moment's reflection will tell us, is a paradox. Here is a ballpoint pen. It cost 15 cents at my neighborhood drugstore. Tens of millions of pens like it were produced last year and from one to a dozen were sold to virtually every person of scribbling age in the country. Others almost identical are in the pockets of people, rich and poor, from Thailand to Tanganyika to Tibet. This is so not, primarily, because so many pens were produced, but because each of them sold for 15 cents. If they had sold for $15, a dozen would have constituted a surplus, and such all-out production as we have today would have required the building of elevators and warehouses in which to store them. If they had sold for $15, a labor force of one man working in his spare time at home would have been enough to fill all real requirements. But they sell for 15 cents, so millions are produced and purchased and goodness-knows-how-many people are employed and sustained thereby.

SAME SITUATION

Exactly the same situation applies to our present great surpluses of grain and other farm commodities. The economic problem is not one of too much production and too low a price, but of prices so high as to result in unmarketable quantities of wheat, corn, cotton, etc. If prices were not prohibitively high, but instead were at levels consistent with present-day costs of efficient farm production, our surpluses would disappear overnight on expanded markets throughout the world, and our problem would become one of needing more production to supply the needs, not less.

The human problem—that is, the problems of too many people laboring too hard to receive too little—would in part solve itself if full production and consumption were brought about in agriculture through realistic pricing. But after 30 years of pretending to help American farmers, but failing to do so, I don't believe anyone would now propose abandoning them and telling them to "go it alone." Public spending to assist these people to their goals is certainly in order. But such spending, to accomplish its purpose, must reach the people who need it rather than being used to inflate and distort the true value of bushels or bales of produce. If it does reach these people—and it can—the job will prove to require far less public money than present farm costs might lead one to expect. And the "return on the investment" would not be embarrassing, white-elephantine piles of produce, but more gratified and gratifying human beings.

You gentlemen, as officers and executives of a major group of banks located throughout the Northwest, and myself, as chairman of a firm engaged in the handling, processing, and sale of farm products, are as vitally concerned with finding solutions to the two agricultural problems as is the farmer himself.

Certainly a very large percentage of your present business and future expectations are based on the prosperity or lack of prosperity of the farm economy and on the profitable occupation of the people who live in your various communities. At present you see a number of efficient farms and farmers operating in areas surrounding you, but with large tracts of their usable land standing idle, and with large portions of their present production moving not into the mills or processing plants in your towns, but instead into Government storage. You see some farmers placing whole farms into soil bank retirment, and themselves moving south to seek their own retirement. You see countless poor and small farmers, unable to take part in the community's business, or in your bank's business, because they have not enough land or enough training to buy or make effective use of the high-speed machinery, fertilizers, seeds, and other adjuncts essential to efficient production. You see in your towns feed mills, garages, grocery stores, truck and tractor agencies, and hundreds of other businesses that at best are expanding only slowly, and that in all too many cases are failing to expand or are going under. You know that healthy towns and a healthy countryside must have full employment of its people and full production of goods and services that in turn are being fully consumed. You know that no such situation exists today. You, no less than the farmer, are saddled with both the economic and the social aspects of the farm problem.

ECONOMIC PROBLEMS

To return to the purely economic problem, a desirable and workable agricultural situation must first call into question the whole concept of crop price supports. Such supports, originally intended to provide an emergency cushion for farmers at times of sudden and drastic price declines, have long since failed to serve that laudatory function. Instead, especially for producers of corn, wheat, cotton, and our other major surplus items, they have not been supports at all, but have functioned instead as artificial markets. Most farmers recognize that support prices are unreal prices, but they also recognize money legally received from the Government as being every bit as good as that received from a legitimate consumer. They have no reasonable alternative but to produce to their utmost, despite their own understanding that some if not all their production will be added to surplus stockpiles and paid for from the Public Treasury.

To be sure, both taxpayers and consumers have complained bitterly at the constantly greater demands made on their purses with each succeeding year. They have observed that the more they spend to "solve" the surplus problem the greater the surplus grows. They have also noticed that legislative efforts to resolve the dilemma—such efforts, for example, as acreage controls, production quotas, soil banks, and soil-conservation programs—have failed entirely to accomplish their primary goal. For efficient farmers, by intensively cultivating their restricted acreages, have been able to boost their total production higher than ever. Efficient operators, by placing their least fertile acres in the soil bank, have received from taxpayers the financial backing needed to buy fertilizers, improved seeds, high-speed machinery, and other aids to production. But efficient or not, they have received what amounts to a simple handout for doing absolutely nothing.

NO SERIOUS MOVE

Most of our legislators—confusing, like the rest of us, the economic problem with the social—have made no serious move to get out from under price supports, or to support that precious few in Government who do advocate their end. Yet the feasibility of changing from a supported to a competitive agriculture is shown by the fact that the so-called basic farm crops—corn, wheat, cotton, peanuts, rice, and tobacco—while totaling only one-fourth of the overall output of our farms, result in our largest surpluses and account for the bulk of our price-support payments. Other less fully supported crops—specifically eggs, flaxseed, wool, milk, and feed grains—account for an additional one-fourth and cost comparatively little to support. The remaining one-half of farm marketings, among them such large-volume items as meats, vegetables, and fruits, are raised entirely without subsidy and are successfully sold, year in and year out, in the competitive free market.

In the face of this evidence, and in the face also of the staggering budget required each year to maintain crop-price supports, it is amazing that we have not forced ourselves to a more clear analysis of what we are doing. Instead, we have accepted a picture of agriculture described wholly in terms of "averages." We have taken a lazy approach to knowledge, and have emerged with a typical lazy man's lack of understanding.

We are told, for example, that the average farmer does not receive his rightful share of our national income. We are told that the things he must buy cost proportionately too much and the goods he has to sell bring proportionately too little. We are told that the average farmer needs our help and have been under the impression that he was receiving it.

But is there such a thing as an average farmer? Certainly the range of economic and social difference in agriculture is as great as in any other segment of society. Certainly we should be able to describe a farm population of some 20 million persons in some more meaningful way than by averages.

Clearly distinguishable at the top of the heap are our major commercial farmers, a small but powerful group, and by every standard made up of prosperous and successful businessmen-farmers. Although they constitute only 27 percent of total farm numbers, they account for 78.7 percent of all product sales. This big farmer group receives at least 78.7 percent of crop price benefits, for only marketable commodities are eligible for Government support. They also receive, because of the size and business-like efficiency of their farming operations, by far the larger share of tax money paid for compliance with acreage allotments and soil bank or soil conservation programs.

The most recent agricultural reports of the U.S. Bureau of Census show annual sales per farm—a figure that does not include production control payments—totaling from $5,000 to $10,000 a year for 55 percent of our major commercial farms. They show 35 percent of the major commercials receiving from $10,000 to $25,000 annually, and 10 percent receiving more than 25,000. The census does not report peak incomes of this 25,000-or-over group, but I don't believe we can doubt that some are very high indeed.

The major commercials, operating some 1,300,000 farms, are our Nation's most efficient producers. Their farms are classified as almost entirely family-owned and operated. Their operations are highly mechanized; their investment in equipment and land is of big business dimensions; their output of grains and other products supplies virtually all our domestic consumer requirements as well as most of our export demands and all but the smallest fraction of our surplus stockpile.

Just as clearly distinguishable as the "majors," but at the bottom of agriculture's heap rather than at the top, is that large farm category currently described by the census as "rural residents and small or part-time farmers." Most of these people are both poverty stricken as individuals and deplorably unsuccessful as producers. They are, according to census figures and to Government social surveys, in acute need of

higher standards of living and broadened economic opportunities. These people, more than half of whom are called "economically marginal" by rural sociologists, represent 56 percent of our farm population, yet account for only 7.1 percent of total farm sales.

This small fraction of total production, the market output of 1,226,000 farms, can at best bring the farmers concerned 7.1 percent of our annual outlay for crop price supports, and in fact brings them considerably less. Their small harvests are seldom worth the red tape involved in obtaining a Government loan, arranging for storage, and so forth. The annual sales of farmers in this group, again according to the census, ranged from a peak of $2,500 downward literally to zero.

THIRD GROUP

A third important farm group, smaller than either of the others and situated economically between them, might be called the small commercials. These people operate some 812,000 farms, or 17 percent of the total, and on them produce 12.1 percent of all agricultural sales. Their incomes range from $2,500 to $5,000 a year. Their farming operations are both medium in size and medium in efficiency. They receive, obviously, no more than 12.1 percent of price support payments and are able to participate in production control plans only to a very limited extent. Among them appear to be two main developments, with one segment tending to become larger and more highly mechanized in order to join the major commercial group, and another tending either to dispose of its holdings and go to other kinds of work or to slide downward on the economic scale to the marginal category.

These groups, then, are our Nation's farmers. They are the recipients, but in proportions exactly opposite to their need, of our farm subsidy dollars. The fault for this is our own. By allowing ourselves to accept a set of averages in lieu of a true picture of agriculture, by lumping together the poor but large marginal group and the small but successful group of major commercials, we have hoodwinked ourselves into accepting a farm plan that brings undue returns to the prosperous and virtually no return whatever to the poor.

Even geography is ignored in the workings of the crop support program. We all know, for example, that there is no surplus even today of the high quality spring wheat raised in these northern States. But for purposes of the program, spring wheat and southwestern winter wheat are all lumped together as one, and are declared in equal surplus.

It is interesting to note that a similar, thought not exactly parallel, example of fuzzy analysis has now been spotted and eliminated by the Government's Census Bureau in preparation for its 1960 nose count. In the past any person was counted as a farmer if he lived on three or more acres of land and if he raised—whether for sale or not—150 or more dollars worth of produce. In consequence city-employed businessmen who commuted from country residences and who happened to raise a fair-sized garden for their pleasure and personal use found themselves counted as farmers. Also rural folk, who live on a fragment of farm but who gain their real livelihood from town or industrial jobs, continued to be counted. Retired people, pensioners and a dozen other categories were, in the same way, called farmers and their numbers included in the average farm picture.

CENSUS ESTIMATE

The Census Bureau estimates that this one clarification of thinking, and of researching, will result in the dropping from 1960 farm totals of some 500,000 farm units. Another 100,000 units are expected to have fallen away due to the ever-continuing trend toward larger and fewer farms. This will leave a grand total for all of agriculture of roughly 4 million farms rather than the earlier estimates of 4.6 million, and will have reduced the statistical population on farms by more than 4 million persons.

We encounter the misleading use of averages not only when we examine farm population and income figures but also when we look at figures on production and yield. By combining the inordinately small output of poor farmers on impoverished land with the enormous and efficient production of our commercials, we arrive, for example, at a national average yield for corn of 52 bushels per acre. Yet the average in California is 75 bushels and our top commercial producers in the Central States are today making 100 bushels per acre commonplace, with many turning in 120 to 150 bushels. Similar mixing of the fat with the lean shows national average wheat production to be 27 bushels per acre. Yet many commercial farmers are producing from 60 to 70 bushels in major wheat-growing areas.

At the same time, average productivity of farmworkers, a lumping together of the highly productive and the wholly unproductive to produce one of the most understated averages of all, has grown more since 1950 than it had grown in the previous 120 years. In 1820, an average farmworker produced enough to serve the needs of 4.1 persons; by 1940 this figure had risen to 10.8 persons, and it had climbed to 20.8 persons by 1956. If the average worker is serving 20.8 people, the efficient and well-equipped worker—about whom no such figures exist—is certainly serving upward of 100.

CONCLUSION DRAWN

What must we conclude, after examining closely the averaging of highs and lows in these various situations? Obviously, the bulk of our farm production is not in the hands of the "average" farmer but in those of the major commercials. Obviously, also, commercial production is far more efficient and involves far lower per-unit costs than average figures would indicate. Wheat, which is supported at roughly $1.77 per bushel, is being raised in the great Southwestern farm areas at costs as little as one-third of the support price. In 1958, Nebraska grew wheat for a statewide average cost of 79 cents per bushel, according to official USDA and Extension Service estimates. I personally know of large-scale farmers who are growing it for 60 cents per bushel and even less. These production costs, as low as they are, will get still lower, for farm technology proceeds at an unslackening rate.

So far, I have listed some of the reasons for the complete unworkability of the crop-support technique. I have also indicated that a realistic setting for supported crops, based on efficient production costs and values in growing markets, would be considerably below today's inflated levels. But I have limited my remarks entirely to the economic problem, without discussing the human values involved. What would happen to the farmer, you will ask, if price supports are either removed entirely or lowered from incentive levels to levels no more than protective?

The question, if it is to have meaning, must apply to real farmers, and not to those fallacious average farmers we have contended ourselves with for so long.

First of all, the large marginal group of our farmers would not be injured by an end to crop supports, any more than they have been helped by their 30-year continuance. One might, in a discussion of farm surpluses alone, choose to ignore this group entirely, for they produce almost nothing for the stockpile. But it would be unwise, as well as unjust, to do so, for they provide most of the argument for the continuance of supports. Not only does their production make up the lows from which misleading averages are derived, but their departure in large numbers from the countryside is used as proof of the downfall of the family farm. If their situation is not improved, they will continue to be used by politicians and farm groups as justification for continued high suports. If their condition is improved, we will have done the entire Nation a service by providing additions to total income, new sources of capable manpower, and new and vigorous markets for the sale of consumer goods.

For the past 3½ years, one Government program has been making tentative steps toward such improvement. Called the rural development program, it would encourage self-help in underdeveloped areas to improve farming methods, introduce economical farm crops, encourage consolidation of small units to create larger ones, and—most important but least emphasized of all—cause town and country cooperation in setting up or attracting local industry to provide farmers with full- or part-time jobs while living at home.

PILOT OPERATION

Unfortunately, the program is still a pilot operation. Its budget last year amounted to only $640,000. It has been organized in only 100 counties, spotted here and there among 30 States. It continues to be one of the President's requested programs for expansion, but so far it has been given very little support by the Congress.

I believe it politically essential that this program be greatly stepped up, and I believe it economically essential that its emphasis be shifted to creation of local industry, with farming encouraged only where there is promise of attaining commercial levels. And, most important, I believe jobs should not be created by direct Government expenditure, but only by encouraged or induced free enterprise activity. To some extent, the attraction of industry by organized local effort will bring results, especially if such persons as yourselves take active and creative roles. This approach alone might well have solved the problem long ago had not 30 years of Government programing so greatly hindered natural development of the rural economy. But if 30 years' induced timelag is to be overcome in a reasonable time, it would seem that some degree of Government encouragement would be in order.

The movement of industrial and service enterprises to the countryside, if such were to be undertaken and encouraged, would also be of value to the middle group of farmers, the so-called small commercials. As I have mentioned, some of these people, by trying to work undersized and undermechanized farms, are sliding downward toward the marginal group and could be greatly bolstered by the availability of nearby jobs. Many today are staying with their farms simply because there are no palatable alternatives, but they could be perfectly willing to leave farming if better-paying jobs were available. This, in turn, would make it possible for those deciding to continue as farmers to acquire needed land, to expand to full economic size, and to become effective members of the major commercial group. But it seems to me important that it be abundantly clear that if help is to come to these people, it will not come in the guise of a crop support program, or even of a farm program.

PROGRAMS OF HELP

If our marginal farmers, and those small commercials tending to become marginal, were to receive help from programs genuinely calculated to help them, the main excuse for the present farm program would dis-

appear and serious attention could be given to removal or lowering of crop support levels. Then, with realistic prices appearing in the free market, dramatic increases could be brought about in United States and world consumption of this country's production of grains, oils, and other farm commodities.

At present, because our supported prices are much higher than world prices, we sell grain abroad only on receipt of government subsidies to fill the gap. If however, domestic and world prices were identical, and were only reasonably higher than actual per unit cost of raising the products, we could compete with the utmost vigor, and without fear of charges by our international neighbors of economic dumping. That our prices would be competitive in this situation is beyond doubt, for today, when mechanization so largely compensates for the differences in farm wage scales between this and foreign countries, our commercial production is the most efficient in the world. Thus our farmers could not only acquire a larger share of present world markets, they could also offer products at prices that would create great new markets.

We have all read of the extraordinary expansion predicted for world populations in the next 10 and 20 years. This process is already taking place, not only in the industrialized West, but throughout the Orient, in much of Africa, and in major population areas of South America. These peoples are in acute need of lower cost foodstuffs and at competitive prices they will buy our grains and oil and meal, not only to fill presently acceptable needs, but also to replace present foodstuffs with more desirable alternatives, to increase overall consumption of grain in cereal form, and to initiate and expand meat production.

There has been ample proof that changes in dietary preferences can and will take place among foreign populations. In India, where rice is historically the basic food, low prices some years ago in grain sorghums caused that grain to increase in popularity and to be imported in quantity from the United States. Then, as sorghum supplies in this country became short, Indian importers were induced to try wheat. Today the taste for wheat is so well entrenched that sorghum producers are unable to regain more than a fraction of their old market. In a similar way Japan, also historically a rice consumer, is now importing considerable quantities of wheat and barley, and would import infinitely more at favorable prices. In this regard the soybean industry, with its various programs to stimulate sales of its products overseas, is doing an outstanding job.

The market are there and waiting. Our present need is only for reduction in supports and for a gradual lowering, to levels consistent with production costs, of free market prices.

I repeat my earlier question: What, then, would be the effect on farmers?

I trust my summary has indicated that our major commercial farmers, like the marginal group and the small commercials would be helped far more than hurt by a gradual end to price supports and a realistic lowering of free market prices. To be sure farm bloc politicians and some farm groups would object strenuously. But at the same time, many other farm groups, and a large percentage of the farmers themselves, would applaud the change and welcome a return to free and independent production. For as efficient producers, endeavoring to keep net profits high despite lower profit margins, they would be able once again to utilize all of their tillable land, to boost their total production, and to lower their per unit costs still further. They would make use of every cost-saving production technique presently available, and would seek more vigorously than ever newer and better techniques.

Meanwhile, however, though members of our consuming and taxpaying public are showing increasing distress at the size of farm program costs, neither they nor a sufficient number of their representatives have taken conclusive steps to end them. On the contrary, many politicians and farm groups are continuing to call for parity for crops instead of for people. They ask more crop supports, more land retirement premiums, more of all the things that have tended to freeze agriculture for three decades, that have prevented its adaption to world food needs, that have forestalled the improvement of its human beings.

It is a strange twist that those politicians who advocate such a holding onto the past should call themselves liberals, and should attempt to label as reactionary those who would let progress proceed. They are the reactionaries. They are the advocates of the obsolete, the antique, the outdated. They are the defenders of the status quo.

Yet sooner or later, if incentive crop supports and their resulting surpluses are not done away with, their cost to the U.S. public will become so great as to bring everyone—laborers, housewives, white collar people, literally everyone—into the streets to demand their end. If that should happen, farmers and all who associate with them—farmers and all who even admire them—will receive a blow to their prestige and honor that will require them years to overcome. The farm problem, still a political football, will then become nonpartisan despite the politicians, for their people at home will order them to solve it and solve it immediately or go look for another job.

I hope such a drastic situation does not arise. I hope the more wise and thoughtful of our Senators and Representatives—and there are a number of such men, in both the parties—will recognize and cause others to recognize that the issue is too important to be used as an insincere device for seeking headlines and votes; will understand that a continued partisan approach will weaken both themselves and the Nation; will see that nonpartisanship now, on their own initiative, may win them the name of statesmen rather than the name of fraud.

In January the Congress will again convene. Farm legislation, representing all extremes of political and economic position, will certianly be asked and attempted. The times, in terms of national production and employment, are expected by our best accepted economic analysts to be not only healthy but booming. As a result of this year's shutdowns in the steel and allied industries, there will be a heightened need for full operation of mines, smelters and refineries, and full production of autos, tractors, heavy machinery and a hundred other products to fill back orders and build up reasonable inventories. There will be full employment in industry and services and a compelling need for additional workers. Those presently ill-equipped farmers who wish to seek productive jobs outside of agriculture will find them waiting. Certainly the time is right both for solution of the economic problem and absorption of its social products. Let us hope the opportunity is not passed.

May we soon be able to write finis to the price-support program.

Gary, Ind., Crime Decreases 69 to 75 Percent Since 1952

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. MADDEN. Mr. Speaker, Mayor George Chacharis of Gary, Ind., has forwarded excerpts from an article in the February issue of the Coronet magazine pertaining to the remarkable crime decrease in his city. One of the main reasons for this amazing decrease has been the installation of modern street lighting in the city of Gary.

The excerpts follow:

McPherson, Kans., has installed one of the most extensive street lighting programs in the United States. Brightness was increased six times and enough street lights added so that there is now one for every two and a half homes. There have been no burglaries since then. Says Chief Paul Smith, "Our lights have just about illuminated residential crime out of existence."

Albuquerque, N. Mex., cut both auto thefts and thefts from autos by new street lighting. Detroit is attacking crime in its toughest neighborhoods with light. Police officials in Philadelphia; Washington, D.C.; Kansas City, Mo.; Houston; and Chicago report that street relighting programs have been a major weapon against crime in their cities.

Most police officials feel that bright streets not only make the police job easier but inhibit crime. The total of crime in any town actually drops when adequate lighting is installed.

Still, many cities refuse to face the facts. Among the U.S. cities with the darkest, most dangerous streets are: Richmond, Va.; Savannah, Ga.; Rochester, N.Y.; Cincinnati; San Francisco; and Des Moines. Close behind are Boston, Memphis, and Charlotte, N.C. These cities lack minimum safe street lighting. The major reason they cite is cost, yet with modern fluorescent and mercury vapor lamps proper street lighting is 20 percent cheaper per unit of light than it was before World War II. It costs each citizen annually less than the price of a restaurant meal to bring the lighting on his street up to standard.

An engineer who specializes in street lighting, W. E. Schwanhauser of General Electric, has five questions you can use to judge the effectiveness of lights in your town:

1. Are the fixtures hanging at least 20 feet above the roadway?

2. Are the lights spaced no more than 150 feet apart?

3. Does the fixture direct the light downward?

4. Does the light illumine just the streets and sidewalks or is light sprayed all around the pole, into house windows?

5. Is the lighting on the road and sidewalks fairly even and uniform, not a "puddle of light" under each pole with long stretches of darkness between fixtures?

If the answers are "Yes," then your streets are safe. If most of the answers are "No," then you had better start educating your neighbors so you can work together to make your street safe at night.

Good street lighting is your cheapest weapon against crime. Look at the case of Gary, Ind., which started installing mercury vapor lights in 1952, half of them in dimly lit areas. Between 1953 and 1955, when the program was fulfilled, Gary's population increased 27 percent, yet assaults decreased 75 percent and robberies went down 65 percent. Police Chief John Foley explained why: "A good street light is as valuable as a good policeman—and a lot cheaper, too."

Dictograph Products, Inc., Celebrates 50th Anniversary

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BOSCH. Mr. Speaker, in November 1959, Dictograph Products, Inc., located in my congressional district, celebrated its 50th anniversary in the field of internal communications.

American business can give much of the credit for its rapid growth and highly efficient operating methods to the dramatic advances in the vital area of communications. A significant contribution to this area has been made by companies which have engineered electronic means of voice transmission to fit the varied and complicated needs of individual firms. One of the pioneers in this field is Dictograph Products, Inc.

On its 50th anniversary it received congratulations from U.S. Secretary of Commerce Frederick H. Mueller and was presented with a certificate of merit from the city of New York in honor of the occasion.

In tracing the history of Dictograph Products and its founder Dr. Miller Reese Hutchison we can see how American inventiveness built a company that in turn has aided and fostered the growth of hundreds of businesses, small and large, throughout the country.

When Dr. Hutchison perfected and commercially produced his dictograph internal communication system at the turn of the century it was the first of its type ever marketed. The philosophy behind the system is the same today as it was then. In short, the system aimed to supply to the management and operation of every business a means of two-way communication which would be fast, private and flexible enough to fit any organizational plan.

Recognizing its wide application companies such as Sears Roebuck, Pacific Gas & Electric, and Monsanto Chemical became early users of the system. In the 1920's Supreme Court Chief Justice Charles Evans Hughes used the system to coordinate his tremendous volume of office work. As these companies and many like them expanded, their intercommunications expanded. Today Dictograph is used by 89 percent of America's leading companies, by more than 30,000 other successful companies and by military installations and Government agencies such as the Pentagon, Federal Bureau of Investigation, Atomic Energy Commission, and the Central Intelligence Agency.

But Dr. Hutchison did not confine himself to one area. He perfected other acoustical devices. The best known of these is the Acousticon hearing aid—the first commercially manufactured electrical hearing device. For this invention he received the Reward of Merit for Scientific Investigation and Invention from Queen Alexandra, of England. He received the medal because of the success of his acoustic appliance in aiding her hearing. Other medals and awards Dictograph has received include the Universal Exposition Medal, the Silver Medal at the Louisiana Purchase Exposition, the famed Diplome Bruxelles Exposition Universelle et Internationale, the Grand Prix de Paris, and the Grand Prix Gold Medal Hors Concours.

Today, the company under the leadership of its president, Malte J. Carlson is devoting considerable time, effort, and money to research and further perfection of its products. In conjunction with its golden anniversary in the intercommunications field it introduced a new transistorized system which was heralded by newspapers throughout the country as a major step in humanizing internal communication.

It is fitting that we should focus attention on Dictograph Products, Inc., on completion of its 50th year in the intercommunication field and give recognition as well to its pioneering efforts and contributions in the development of devices to aid the hard of hearing. I am proud to join in paying tribute to this company.

Loss to Cranberry Growers in Oregon Partially Estimated

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. PORTER. Mr. Speaker, Mr. Kenneth G. Garside, director of operations for Ocean Spray Cranberries, Inc., has estimated the loss to members of that organization at more than $11 million. Ocean Spray handles around 80 percent of the national crop.

Oregon cranberries generally make up about 4 percent of Ocean Spray crop. My arithmetical computations would place the loss at around $440,000 for the growers selling to Ocean Spray in my State, using Mr. Garside's figures. As you know, Congressmen from the cranberry-growing States have been meeting to find a solution to the unfortunate dilemma in which growers suddenly found themselves.

Under leave to extend my remarks in the RECORD, I include the full text of Mr. Garside's letter of January 4, 1960:

OCEAN SPRAY CRANBERRIES, INC.,
Hanson, Mass., January 4, 1960.

Hon. CHARLES O. PORTER,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: I wrote you on December 30 promising you information on the loss to cranberry growers following the pre-Thanksgiving ruling by Food and Drug Administration.

The figures I have compiled in an attempt to measure the cost to us of FDA's action with reference to aminotriazole are necessarily approximate because of the magnitude of the operation. Secretary Flemming's action affected every phase of the cranberry business and there just has not been time to get in the detail of checking invoices. Figures have been compiled for Ocean Spray Cranberries, Inc., as a whole. Since our company is a cooperative, all members share pro rata in the proceeds of operations—they also share pro rata in any losses. Therefore, I know of no better way of calculating the losses for the growers in Washington and Oregon except on a percentage basis, as their deliveries relate to the deliveries of all our members in total. In recent years Oregon's deliveries have been about 4 percent of the total and Washington's 8 percent to 9 percent.

Your letter to Mr. Orrin Colley on December 23 requests for "statistics concerning the loss to cranberry growers following pre-Thanksgiving ruling by the Food and Drug Administration."

Mr. Fleming's statement on that day, and subsequent statement by him, affected not only the 1959 crop but also the preceding two crops. My preliminary estimate of the loss to our members relative to these three crops it is in excess of $11 million actual reduction in net income to them. The total loss from this situation is incalculable. It includes such items as:

1. Loss to Ocean Spray employees.
2. Expense to FDA of this affair.
3. Expense to other Government agencies and to friends of Ocean Spray who cooperated in sampling and analysis.
4. Loss to the trade in profit on the sale of 150,000 barrels of fresh cranberries and 2 million cases of finished goods.
5. Credit expense to growers in financing future farming operations and in actual loss in investment, in many instances.
6. Value of products seized and used as samples.
7. Permanent loss of the cranberry market.

Ocean Spray handles over 75 percent to 80 percent of the crop and I am unable to guess the loss connected with the balance. Perhaps Mr. Colley, as president of the Cranberry Institute, can help you.

Sincerely yours,

KENNETH G. GARSIDE,
Director of Operations.

The Captive Ukraine

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. SHORT. Mr. Speaker, January 22 will mark the 42d anniversary of the proclamation of independence for the Ukraine. That independence was short lived, however, and since 1920 that na-

tion has been under Communist domination. In observance of the independence proclamation of 42 years ago that stands as a symbol of the hopes and aspirations of the still-captive Ukrainian people, I ask to include a story from the Belfield News of January 14, 1960. Many fine Ukrainian-Americans live in the Belfield area and elsewhere in southwestern North Dakota. The article follows:

UKRAINIANS TO CELEBRATE INDEPENDENCE MOVEMENT

This year, like in previous years, Americans of Ukrainian descent are observing the 42d anniversary of the proclamation of independence of Ukraine on January 22.

The universal proclamation of the Government and Parliament of Ukraine was issued in the capital city of Kiev on January 22, 1918, and the new state was recognized as the legitimate nation of the Ukrainian people by many foreign governments, including that of Soviet Russia. The latter, however, almost simultaneously with recognition, declared war and began hostilities against the new Ukrainian Republic.

Since that day in January 1918, Ukraine remained under the yoke of the Soviet Russian dictatorship without, however, surrendering in spirit or giving up hope of liberation, and complete independence. During the whole period of enslavement, Ukrainian resistance has been going on without interruption up till today. As a result the Ukrainian people are subjected to constant persecutions by the misruling Russian regime in the Kremlin. As Khrushchev himself stated at the 20th Congress of the Communist Party of the U.S.S.R. in 1956 the Communist regime of Stalin planned a total physical extermination of the Ukrainian people which plan failed only because of impossibility to do that because there were too many Ukrainians.

It is almost a unanimous testimony of former American, English, and other inmates of Soviet slave labor camps, as well as those of returned German and Japanese war prisoners that the Ukrainians constitute the largest number of inmates of slave and concentration camps. Also, the Ukrainians, along with other enslaved nations, are the organizers and leaders of anti-Communist resistance movements and rebellions throughout the Soviet Union, the concentration camps included.

During this time both Ukrainian Churches, namely: The Ukrainian Authocephalic Orthodox Church and the Ukrainian Catholic Church were completely liquidated by Moscow. In their place the Russians imposed upon Ukraine the Russian Orthodox Church which, since World War II, has had the full support of Moscow and serves as a tool of Russian religious and political aggression.

The struggle of the non-Russian people, among whom the Ukrainian are the most numerous and most determined, is vitally important to the entire free world and particularly to our own United States, now the unchallenged leader of the free world. Our President, the Senate and House of Representatives have expressed their concern and sympathy to all the captive nations by enacting the Captive Nations Week resolution.

The 42d anniversary of the proclamation of Ukrainian independence is the most fitting and appropriate occasion to repeat and make known to the world once again that Ukraine and the other so-called Union Republics of the Soviet Union have been imprisoned in the Soviet Russian prison of Nations for the longest time and that they deserve to be liberated in the interest of peace, justice and security of the whole peace-loving world, and primarily in the interest of the United States of America.

Chief Timothy, White Man's Indian Friend

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article by Rowena L. Alcorn, published in the Tacoma Sunday Ledger-News Tribune, Tacoma, Wash., on October 25, 1959.

This deals with another great Nez Perce Indian, known as Chief Timothy, who was born in 1800 and was the first Nez Perce to become a Christian convert. Chief Timothy undoubtedly had his influence on Chief Joseph who has become famous as the leader of the Nez Perce war of 1876–77.

The article follows:

CHIEF TIMOTHY, WHITE MAN'S INDIAN FRIEND—SETTLERS AIDED BY NEZ PERCE LEADER

(EDITOR'S NOTE.—The author of this story about Chief Timothy of the Nez Perces, Mrs. Rowena L. Alcorn, is a well-known Tacoma artist. Seven of her paintings of Nez Perce subjects, including Timothy, now are on display at the exhibit of the Tacoma branch of the National League of Pen Women at the Tacoma Public Library. The exhibit will end next Saturday.)

(By Rowena L. Alcorn)

The story of Chief Joseph and his outstanding leadership during the Nez Perce Campaign of 1877, is familiar to almost everyone, but another and equally important figure, Chief Timothy, is all but forgotten.

This remarkable Nez Perce Indian, who lived in our own State of Washington, helped immeasurably to lay the foundations for our great Pacific Northwest. Chief Timothy (Ta-Moots-Tsoo, Friendly One) ruled jointly with Red Wolf (He-Mene-Ilp-Pilp), over the Alpowa band. Their village was situated where the Alpowa empties into the winding Snake River, a few miles below the junction of the Clearwater and the Snake, where Lewistown and Clarkston are now located.

The Nez Perce, most powerful yet peaceful of all the mountain tribes, was divided into more than 20 separate bands, each one ruled by one or sometimes two chieftans. They lived in a widespread region, which included southeastern Washington, west and central Idaho, and the beautiful Wallowa Valley of northeastern Oregon. Expert horsemen, they moved freely about as they harvested camas roots, hunted and fished. Frequently they passed over the high Rockies via the Lolo Trail, to hunt buffalo on the plains of Montana.

The spectacular plateau and mountain country where the Nez Perces lived, was slashed here and there by deep pine-covered ravines and yawning canyons of the Clearwater, Salmon, Imnaha, Grande Ronde, and Snake Rivers. It is the swift, coiling Snake which carved the awesome Hells Canyon.

SAW LEWIS AND CLARK

Ta-Moots-Tsoo (Timothy) was 5 years old, when on October 11, 1805, the Lewis and Clark Expedition stopped briefly at the Alpowa village. Alpowa, which means "Place of Rest," is now known as Silcott. The members of the expedition were the first white men ever to be seen by the Nez Perces. Ta-Moots-Tsoo always remembered the mysterious "book" from which Captain Clark read devotions before the party pushed off down the Snake toward the mighty Columbia River. Their dugout canoes had been made for them by Chief Twisted Hair of the Kamiah band far up the Clearwater. Here the expedition made first contact with the Nez Perce Tribe.

The small curious Indian lad had a noble heritage, for he was a nephew of Twisted Hair, and a cousing of the great Chief Red Bear (Hoh-Hoats-Ilp-Pilp). These two chieftains and Broken Arm, in befriending the Lewis and Clark party, made their expedition a resounding success.

When he became head of the Alpowa band, Ta-Moots-Tsoo, at the 1831 Nez Perce all-tribe councils, persuaded Red Bear to seek the "Book of Heaven" for their people. Rabbit-Skin-Leggings, No-Horns-on-His-Head, Black Eagle, and Man-of-the-Morning were selected to make that long trip to St. Louis.

MISSIONS BUILT

As a direct result of that request, the two Presbyterian missionaries, Marcus Whitman and Henry Harmon Spalding came west in 1836 to establish missions. Whitman settled at Waiilatpu, near Fort Walla Walla, and Spalding chose Lapwai in the Nez Perce area, about 90 miles to the east. Here Lapwai Creek empties into the Clearwater (Koos-Koos-Kie) River. This place is now called Spalding, and the present-day Indian village of Lapwai is farther up the creek.

Chief Ta-Moots-Tsoo was Spalding's first Christian convert, and from then on he became known as Timothy. Spalding, aided by Timothy and the other tribesmen built the story-and-a-half Mission House at Lapwai; thus was the beginning of the great State of Idaho. Here were constructed the first grist mill, the first sawmill, and the earliest irrigation project. Apple orchards were planted and wheat was grown for the first time. Spalding brought in a printing press and the Gospel was translated into the Nez Perce language. Timothy became a stanch friend of the white man, and throughout his lifetime he proved his devotion many times.

In 1847, the Spalding enrolled their 10-year-old daughter, Eliza in the mission school at Waiilatpu, and she was there on November 29, when the Whitmans were massacred. She was one of those who were spared by the wrathful Cayuses, and there is no doubt that her ability to speak the Nez Perce language, taught to her by Timothy, saved her life.

GIRL RELEASED

This faithful Indian protected the Spaldings after the massacre, and then he went to Waiilatpu and demanded Eliza's release. It was a month before her captors allowed Timothy to return her to her parents, but she was delivered to them unharmed. Fearful for their safety, the Spaldings left Lapwai a few months later, for Oregon, and Timothy was not to see Eliza, until she was a grown woman. Timothy with Spalding's help, had established a small Indian church at Alpowa, and the devout red man made many converts of his tribesmen.

When our Territorial Governor, Isaac Ingalls Stevens, called the great Five Tribe Treaty Councils at Walla Walla in 1855, Chief Timothy arrived with the impressive Nez Perce delegation numbering 2,500. The standard they proudly carried was a large American flag. The tribes invited for the negotiations were the Cayuse, Walla Walla, Yakima, Umatilla and Nez Perce. The Nez Perces arrived first and led the way in persuading the others to sign the treaties.

The Nez Perces refused to convene on Sunday, and the astonished Governor and his commissioners listened, through an interpreter, to Timothy as he preached to his reverent tribesmen. His text that day was the Ten Commandments.

Among the signers of the treaties, one will find listed, Chief Timothy of the Alpowa band.

GUIDED EXPEDITION

Three years later, Timothy, fully aware of the dangerous situation, volunteered to accompany as guide the Steptoe Expedition. Colonel Steptoe with 157 cavalry men and officers, camped overnight at the Alpowa Village on their way up to Colville. Request for military protection had come from the frightened settlers in that area, who were fearful of the rising tempers of the Coeur de Alenes, Palouses, and the Spokanes.

On May 17, as they wound through the Palouse hills near where the town of Rosalia is now located, they were stopped by nearly 1,000 whooping warriors. Holding a high point, they were attacked repeatedly that afternoon. When night came and the enemy fire ceased, Steptoe discovered they were almost out of ammunition, but faithful Timothy led the white men out of the trap in a miraculous escape down along an unguarded shallow curving gulch, through the enemy encirclement.

Without resting, for fear of pursuit, they pressed on in spite of seven severely wounded men who had been strapped on their horses. Two nights later they filed down through a steep narrow canyon, since known as Steptoe Canyon, from the ramparts to the Snake River bank. Too exhausted to ford the river that night, at dawn they were ferried across by members of Timothy's band. They had been saved from the same fate which came to General Custer at Little Big Horn on June 15, 1876.

LOST OWN LAND

Timothy, always believing and trusting in the white man's religion and laws, was persuaded to sign what proved to be a disastrous treaty in 1863. This treaty, which even omitted Timothy's own land, further shrank the Nez Perce Reservation. Flagrant violations of Indian property by some early settlers and avaricious miners, eventually led to the uprising in 1877. In this Timothy took no part.

Even though he no longer owned his land, he was permitted to live out the remainder of his life at Alpowa. Entirely forgotten by the white man to whom he had been so devoted, he died in 1891 at the age of 91. Totally blind in the last years, he outlived his wife, Tima, who was a sister of Chief Old Joseph (Tu-Eka-Kas, father of Young Joseph, who led his people in the War of 1877).

Lonely and bewildered, his only comfort was his worn Bible and a treasured, faded old watercolor sketch painted for him by Mrs. Spalding, and given to him the day she left for Oregon in 1848.

The exact location of Timothy's burial spot was forgotten until 1915, when A. E. White, who owned the land, was riding his horse and it broke through into the shallow grave where Timothy was buried beside his wife and two sons. (Their daughter Jane Silcott was buried elsewhere.) The area of the graves was fenced in by Mr. White.

MONUMENT ERECTED

Largely through the efforts of the late Judge Elgin V. Kuykendall, who always said that it was disgraceful Chief Timothy had been so neglected and unappreciated, the city of Clarkston, a few years ago, moved the bodies to a place of special honor in their Beachview Park. There an appropriate monument was erected bearing this inscription:

"CHIEF TIMOTHY

"He was the first Nez Perce Christian convert and preacher, and lifetime friend of the white man. When Colonel Steptoe's troops faced annihilation by hostile Indians, Timothy led to safety and ferried them across the Snake River at Silcott, May 20, 1958.

"In tribute to Timothy—1800–1891."

When one passes through Clarkston, it would be very fitting to pause beside this monument and pay silent tribute to that Nez Perce, the gentle Timothy, who devoted his life to spreading the Gospel among his tribesmen and serving his white brothers.

Cumberland County, Pa., Woodrow Wilson Birthday Association

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. QUIGLEY. Mr. Speaker, one of the truly unique organizations in the country is the Cumberland County Woodrow Wilson Birthday Association in my home county of Cumberland, Pa. This group grew out of a corporal's guard of Wilson admirers who first met on the birthday of our 27th President in 1923. By the time they met again in 1924 President Wilson was dead, but the organization conceived in his honor is today far from dead. Every year on or near Woodrow Wilson's birthday the association holds a dinner meeting to pay tribute to the memory and to take inspiration from the ideals of one of America's greatest Presidents.

The Cumberland County Woodrow Wilson Birthday Association is not a partisan organization and its dinners are in no way partisan affairs. They have never, for example, been used for fund-raising or other political activity. The sole function of the annual meeting is to inspire those who attend with a little of the burning faith in democracy which burned so brightly in the soul of President Wilson.

Through the years some very prominent and distinguished Americans have graced the speaker's table of the annual Woodrow Wilson dinner. A few years back, when I had the honor of serving as president of the association, the speaker was our distinguished colleague from New Jersey, the Honorable FRANK THOMPSON, JR. This year the speaker was the Honorable Anne X. Alpern, the attorney general of the Commonwealth of Pennsylvania and the first woman attorney general in any State in the Union.

However, the truly distinctive note of every Woodrow Wilson birthday dinner, and probably the secret of its survival, is the fact that every meeting is addressed by three young orators selected from the schools of Cumberland County. In this way, each year the future citizens of Cumberland County are made aware of the greatness of Wilson. This year, the young speakers were Russell Acri, Rural Route No. 2, Carlisle, Pa., Middlesex Elementary School; Gary Martin, Rural Route No. 1, Newville, Pa., Centerville Elementary School; and Russell Gutshall, Rural Route No. 6, Carlisle, Pa., South Middleton Township Elementary School. All of the speakers are in the sixth grade in school.

I ask unanimous consent to extend in the RECORD at the conclusion of my remarks the talks delivered by each of these students so that through their words we might be reminded of the yet unfulfilled goals of America and democratic government as personified by one who had an abiding faith in the destiny of each.

The first student, Russell Acri, spoke on "Wilson, the Idealist." The text of his talk follows:

WILSON, THE IDEALIST

Many of Woodrow Wilson's critics scornfully spoke of him as an idealist. Those who admired him were quick to admit he was an idealist. Is it wrong to want and strive for freedom and peace between people and nations? Is it a scornful thing to believe in America? Its institutions, and its way of life? These beliefs were Wilson's ideals for which he died.

Soon after coming back from the peace conference in Europe, President Wilson was heard to say, the most touching and thrilling thing that has ever happened to me, happened almost every day when I was in Paris. Delegations from all over the world came to me to solicit the friendship of America. They frankly told us they were not sure they could trust anybody else. They came and sat at the feet of the youngest nation of the world and said, "Teach us the way of liberty."

January 1910, when he was president of Princeton University in an address honoring the memory of Gen. Robert E. Lee, remembering Lee's great sacrifices, Wilson said: "I wish there were some great orator who might go about and make men drunk with this spirit of self-sacrifice. I wish there were some man whose tongue might every day carry abroad the golden accents of that creative age in which we were born a Nation," accents which would ring around the whole circle of the globe so that America might again have the distinction of showing men the way. That certain way of achievement and of confident hope.

Yes those who revere the memory of Woodrow Wilson proudly admit that he was an idealist, and that his fervent wish came true in his own person. The world today could do no better than to follow his wise counsel.

The second speaker was Gary Martin and he directed his remarks to "Wilson, the Prophet," in the following form:

WILSON, THE PROPHET

While it is true that Woodrow Wilson was an idealist in the best sense of the word, he also possessed so deep a sense for the truth that he was able to prophesy with great accuracy the future state of affairs.

In 1919, while fighting desperately and unsuccessfully for his League of Nations, he declared, "I can predict with absolute certainty that within another generation there will be another world war if the nations of the world do not concert the method by which to prevent it."

Later he said, "There will be no reform in the world for a generation if the conditions of the world are not now brought to settled order and they cannot be brought to settled order without the cooperation of America."

His words went unheeded, the United States did not join with other nations in the League of Nations and within a generation the world was again at war.

Again he predicted, "I do not hesitate to say that the war we have just been through, thought it was shot through with terror of every kind, is not to be compared with the war we would have to face next time. What

the Germans used were toys as compared with what would be used in the next war."

In keeping with Wilson's dark prediction, the most destructive weapons ever known to mankind destroyed millions of lives and billions of dollars worth of property in World War II.

Finally, after America rejected Wilson's League of Nations, the last public words he uttered before his death were, "I cannot refrain from saying, I am one of those who have the least anxiety about the triumph of the principles I have stood for. I have seen fools resist providence before, and, I have seen their destruction as will come upon these again," utter destruction and contempt. That we shall prevail is as sure as that God reigns."

We have since seen the utter destruction of the contemptible Hitlers and Mussolinis who dared to resist providence, and we have seen Wilson's League of Nations again arise in the new form of the United Nations.

The final student, Russell Gutshall, chose "Wilson, Man of the Ages," and he had this to say:

WILSON, MAN OF THE AGES

Reviled and hurt by his enemies during his lifetime, Woodrow Wilson, within less than 40 years after his death, has become a man of the ages. * * * The world now knows that Wilson, being an idealist, a prophet, and a realist, was a man of truth, while his enemies are remembered only for their blindness to the truth.

His honored place in history has long since been assured. How well assured can be best stated by quoting the words of newscaster Raymond Graham Swing, spoken in a radio broadcast as long ago as December 28, 1943. He said of Wilson:

"Being a prophet with the training of a historian, he was devoted to the idea of the League of Nations, and the only eulogy he would crave would be to have his idea perceived as truth. He was among the rare and great men of state. * * * No man ever believed more devoutly that right becomes might. No man ever believed more profoundly that peace grows only in the soil of justice.

"He had the gift of utterance not matched among Presidents since Lincoln. * * * We are imbued with his spirit and are now following his prophetic leading.

"We are grateful to feel that Washington, Jefferson, and Lincoln walk with us in America; we should as gratefully acknowledge the guiding companionship of Woodrow Wilson."

The Late Peter D. Henderson

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. VAN ZANDT. Mr. Speaker, when word reached Capitol Hill last Monday of the sudden death at West Palm Beach, Fla., on January 16, of Peter D. Henderson, first director of the gymnasium for Members of the House of Representatives, a pall of gloom settled over many offices in the Senate and House whose personnel had come to know and esteem the genial Scotch-American who fought as a doughboy in the American Army in the First World War.

Pete, as he was affectionately called by scores of Members of the House and Senate whom he met and served personally during his 15 years as director of the House gymnasium, was equally well known by employees in all departments of the House of Representatives. His friendly disposition was not reserved for officialdom but was known to be one of his outstanding characteristics by employees at every level.

At this point I wish to call attention to the obituary notice that appeared in the January 19 issue of the Washington Evening Star which I wish to include at the conclusion of this tribute of love and respect for one of the finest men ever employed on Capitol Hill.

After his retirement Pete made return visits annually to Washington in the spring and summer, returning to his Florida home to spend the winter months. On these annual visits he always made it a point to call at my office and those of many other Members where he knew he was certain of a royal "welcome home."

The last time I saw Pete was in October 1959 when he came to my office to discuss an article he was writing, incorporating many of his experiences during his 15 years of employment as gym director. At that time he repeated his appreciation of my statement upon entering naval service in 1941 when I alluded to the fact that I owed my fine physical condition to the benefits derived from daily activities under his direction at the House gym. During the 18 years following the statement he never forgot its utterance as he told me that along with similar complimentary remarks by several other Members such commendations were a source of recollection of his days on the Hill which gave him great pleasure in his retirement years.

In tendering this tribute of respect and esteem for my good friend, Pete Henderson, I would be remiss in appraising his many fine qualities were I to neglect to mention the great love and devotion he shared with his beloved wife, Ellen Cavanaugh Henderson, who survives him. Pete and Ellen were in the fullest sense true partners and inseparable companions traveling at home and abroad on various occasions. Together they were examples of a typical American couple capable of radiating sunshine and spreading cheer as they traversed life's highway. When the Angel of Death invaded their home the genuine sorrow expressed and the beautiful tributes tendered to the memory of the deceased husband were indicative of the indelible impression his life made on those who were privileged to know and love him.

It is my sincere wish in expressing deepest sympathy to Ellen Henderson that Almighty God will give her added strength to bear the great sorrow that has befallen her in the death of her beloved husband. It is hoped that the exemplary life of Pete Henderson when reflected upon by his loved ones will prove a source of consolation in the knowledge that he was highly respected and greatly esteemed by his fellowman.

Finally, it is my fervent prayer that God will have mercy on the soul of my departed friend and grant him eternal rest.

Mr. Speaker, the editorial from the Washington Evening Star, referred to above, follows:

PETER HENDERSON DIES—DIRECTED HOUSE GYM

Peter D. Henderson, first director of the gymnasium for the House of Representatives, died Saturday in West Palm Beach, Fla., after a heart attack and an emergency operation.

Mr. Henderson was gym director for the House when the new office building opened in 1933. He served 15 years there before his retirement.

He helped win additional space from House planners to add a half-court gym floor to the original steam bath layout. The space is used for handball, volley ball and individual exercise. His reputation was made when he invented the congressional game of "paddle ball," the easy way to play handball on Capitol Hill.

DEFENDED PRACTICE

Generally considered an easy-tempered man, Mr. Henderson saw red when articles suggested Members of Congress were living the life of Romans when they tried to take care of their health in the gym.

A magazine once printed a picture of a Congressman in a steam bath and captioned it "Asleep in the Deep."

"These aren't Roman baths," Mr. Henderson exploded, "They're places where a Member can relax right and keep himself fit."

Among the politicians who took physical fitness seriously and joined in the workouts were Vice President Henry A. Wallace and Representative RICHARD M. NIXON.

LEARNED AUTO TRADE

Born in Scotland, Mr. Henderson took to the sea as a youth. His goal was America. He learned the automobile trade, and worked in Paterson, N.J.; Buffalo, Detroit, Cleveland, Chicago and Santa Fe, N. Mex.

When World War I broke out he joined the American Army and fought as a sergeant. He was attending officers' training school when the armistice came.

After his retirement, Mr. Henderson and his wife spent winters in Florida and summers in Washington.

He leaves his wife, the former Ellen M. Cavanaugh of Washington.

Funeral arrangements, which are being handled by the James T. Ryan Funeral Home, are incomplete.

Burial will be in Arlington Cemetery.

Guilt of Intolerance

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. GALLAGHER. Mr. Speaker, people everywhere remember with profound sorrow the horrendous tragedy that was inflicted on our fellowmen by Hitler's Nazi regime. The malignancy of hatred and bigotry is once again flaring up throughout the Western World

notably in West Germany and here in the United States. The wave of desecration in places of worship is deplored by morally sensitive and responsible people. These apparently unrelated acts by irresponsible people may well be unconnected. However, to ignore these acts as trivial incidents is inexcusable in the light of recent history. It may well be only the acts of stupid ignorant people. However, the real beneficiary of any discord among the United States would be international communism. And only international communism is capable of instigating similar acts in any part of the world at the same time. Therefore, the bruised mind of the survivors of nazism who are intent on destroying the democratic government in West Germany could very well be the willing tool of the Communists whose goal is still world supremacy by any means. Even though Communist Russia is today talking peace, let us never forget that the great danger to freedom is being lulled into a sense of security. Let us be ever vigilant not only of the Soviet Union military posture, but even more so of the insidious subversive potential of the international Communist conspiracy.

I have asked the Secretary of State, Christian Herter, to have an investigation by the United Nations to see if the latest anti-Semitic movement was international in character and determine its sponsors. The State Department has informed me that the United Nations Subcommission on the Prevention of Discrimination and Protection of Minorities is now investigating the matter and assembling the available facts.

We must do everything in our power to oppose and condemn any display of anti-Semitism. Recent history disclosed that the sparks of bigotry and intolerance became a flame that roared in the ovens of the concentration camps until approximately 6 million lives were consumed.

I would like to include in my remarks the following editorial which appeared in the Jersey Journal of January 16, 1960. It is most thought provoking and depicts a question which we should all ask ourselves, "Are we guilty of intolerance?"

The article follows:

GUILT OF INTOLERANCE

A few swastikas painted on synagogues and other buildings can do little harm in themselves. The danger is that the poison which the swastikas represent—the poison of bigotry and hatred and intolerance—will spread. That is what those who paint the swastikas manifestly want, a spreading of their poison.

And that, precisely, is what men of tolerance and good will do not want. The conflict is absolutely clear. The problem is how to neutralize this poison by means that will not in themselves foster its spread.

The painting of swastikas is vandalism. It can be attacked as such with laws now on the statute books in most civilized countries.

The World Council of Churches was right to issue a statement denouncing all forms of segregation or discrimination; it was right to call upon all member churches throughout the world to work for their abolition. Yet this must be done, not by harsh repression, using totalitarian methods, but through a reawakening of greater tolerance in the hearts of men.

The swastikas are overt signs of a festering wound that usually lies hidden beneath the skin of society. Bigotry is not felt only by those so sick that they smear abominations on places of worship; it also corrupts, to some degree, the minds of millions of others. The symbols of hatred are a reminder that many of us must share, in some measure, the guilt of intolerance.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Old Stone House in Georgetown

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. BIBLE. Mr. President, on Saturday afternoon, January 23, 1960, there will occur an event of unique significance in the long and cherished history of the District of Columbia. I refer to a showing by the National Park Service of the Old Stone House at 3051 M Street, in Georgetown.

Through the interest and generosity of several Georgetown citizens, period furniture of the 18th century has been loaned for this building. On the following day, Sunday, the restored structure will be officially opened to the public, and there will be no charge for admissions.

The Old Stone House has many traditions, Mr. President, many of them legendary. In 1934 an architectural survey determined conclusively that it was built between the years 1764 and 1766, which makes it the oldest known house in the District of Columbia. When this fact became known, interest immediately began to generate. The 2d session of the 81st Congress held hearings on H.R. 7722 and testimony brought out the fact of the age of the prerevolutionary building and the fact that it had witnessed many events in the Nation's Capital stamped it with inescapable historical value.

On September 25, 1950, Public Law 836 gave the United States title to the building and the Department of the Interior was authorized to administer it and exhibit it as a public museum.

Since that time architectural restoration has been completed, and we have an attraction that is bound to add to the many charms of Georgetown and the District of Columbia.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. METCALF. Mr. Speaker, on January 14, 1960, Mrs. Agnes E. Meyer made a speech to the Woman's National Democratic Club on "Federal Aid to Education" that merits the careful consideration of every Member of Congress. Her speech follows:

FEDERAL AID TO EDUCATION

(By Agnes E. Meyer, address before the Woman's National Democratic Club, Washington, D.C., January 14, 1960)

When I look back over the last 20 years, I would be discouraged about the number of fruitless speeches I have made on "Federal Aid to Education" were it not for the Biblical admonition "Be not wearied in well-doing." I assure you the only thing that keeps me going is the faith that every important issue, if constantly pursued, is bound to prevail.

Yet at this moment the prospect of success is dimmer than ever. At present we Americans approach most of our great contemporary problems with a frightening complacency. For a complexity of reasons our people seem to think that we ought to find easy answers to all our tough problems. Above all, their solutions must not increase our taxes nor interfere with the equable tenor of daily life.

Harold B. Dorsey, writer on economics and finance for the Washington Post, a very astute observer of the American scene, said in his New Year's article that many organizations and individuals are scheming to obtain more and more for less and less effort, instead of relying on the solid achievement and the sound economic principles that have given our country its high standard of living. In other words, the American people are in a mood where they are only too glad to believe the phony promise of "peace and prosperity" despite the fact that the military and economic security of the Nation is more seriously threatened than at any period since our democracy was first established.

Why do I call peace and prosperity a phony promise when the experts say that our production will rise by 30 billion next year and the first summit meeting has been called for May? Our prosperity is precarious because we are spending too much on consumer goods and not enough on necessities, both military and civilian. And peace is an illusion—a dangerous illusion as long as the Communists continue to augment their power and their influence among the impoverished masses of Africa, India, and other eastern countries. To be sure, the Communists don't want a shooting war any more than we do, since they have every reason to think they can win their objective—world domination—without it. The plain fact is that we are not meeting the challenge of the Soviet Union. Walter Lippmann is right when he said on December 31 "It is a dual challenge—to negotiate and to compete, to reduce the international tension and to increase the national effort. This is the case which the Democrats need to make if ever they can unite behind a candidate who understands the case and has the eloquence to take it to the country."

There are, to be sure, profound psychological reasons why our people are prone to believe this propaganda of peace and prosperity. All other peoples of the world have lived with tragedy that is unknown to us. Ours is the only country, protected from its beginnings by two oceans and blest with vast resources, that has long enjoyed a sense of security denied to all other nations. Our increasing wealth also increased our self-satisfaction. Now that our land, our homes, our great cities are exposed for the first time to the constant insecurity with which all other nations have always had to exist, it is too hard for us to face this reality. We are only too ready to believe that everything will come out for the best with no effort or sacrifice on our part. It is a question—a serious question—whether we shall be able to conquer the psychological effects of isolation and its consequences—the moral and intellectual lethary of the overprotected.

Certainly the American people are as yet completely unaware that the Russian sputniks and moonshots are not merely the symbol of a foreign power's military prowess. They symbolize an intellectual attainment of the highest order and indicate that brainpower rather than military power will become the chief instrument of national policy in the future and the deciding factor in ideological conflicts.

"The achievement of the Soviet satellite," said Lloyd V. Berkner, member of the President's Scientific Advisory Council, "has demonstrated to Americans what they refused to believe before, that they are in a race for intellectual leadership when they hadn't realized that there was a race. In the complacency of our assumed technological lead, we have confused our high standards of living and material prosperity with intellectual stature. It is an extravagant and dangerous mistake."

If the next campaign is conducted on the dubious premise of peace and prosperity, it will make our people even more indifferent than they are now to the fact that the Communists are outmaneuvering us on every front. In our minds we are well aware that we have already lost our position of world leadership. Many of our most respected military leaders have proved this with chapter and verse. But in our hearts we feel too secure and too certain of ultimate victory. Furthermore—and this is not a partisan statement but a plain fact—under this administration the people have had no leadership, I repeat, absolutely no leadership, on their serious domestic problems.

It is unbelievable, for example, that President Eisenhower should boast of a surplus of $4.2 billion in his message on the state of the Nation, while insisting for the nth time that the States can and must pay the bill for better schools, that the "educational process cannot be made to leap ahead by crash, centralized Government action." In fact the whole message exudes the same smiling optimism with which he has lulled the American people to sleep throughout his administration. No wonder his popularity is greater than ever. Like most Americans, President Eisenhower does not like to face the tragic aspects of life in a revolutionary era. Western civilization and our social structure is crumbling before our eyes—but President Eisenhower is blissfully unaware of it.

As a result there is no sense of urgency to improve our chaotic society and to make our Nation strong enough internally to cope with our many foreign responsibilities. We think there will always be time to do next year what we fail to do now. As a result there is an indifference even in Congress—whether on the Democratic or Republican side—to Federal support for education. Unless we awaken from this dream world we shall regret it to the end of time.

What about the National Defense Education Act of 1958? You may ask, "Is that not a step in the right direction?" At first the friends of Federal aid said to themselves,

"Well, at least the fear of the Soviets has breached the wall of opposition to Federal aid. A minute loaf is better than none." But in some respects the measure fills me with apprehension. It was obviously drawn up by persons who have only the vaguest concept of education, and of Federal-State-local relationships. It declares at the outset that "This title prohibits Federal control over the curriculum, program of instruction, administration of personnel of an educational institution or school system." And yet that is precisely what this measure could bring about, if it is not amended or scrapped completely when we get a better bill for Federal aid to education. The loyalty oath demanded of any student wishing to take advantage of the loans it offers, has met with vigorous opposition by many universities who have withdrawn from participation. And yet that provision is typical of the whole spirit of the bill. Calling it a defense act was probably necessary to make our political reactionaries swallow the bitter pill of Federal aid. But this in itself will lead children to think that they must be educated not for their own development but primarily for national defense. Yet education in a democracy must cherish each child as an authentic individual, not as a means to an end. If we treat our children as tools of the state we are imitating the Communists.

And yet, education is our first line of defense. But the only way education will make its greatest contribution to our national security is by developing the child's whole personality whatever its special talents may be. For we need not only more scientists and engineers; we need a vast reservoir of highly educated manpower of various kinds, people capable of guiding our complex society and our no less complex relations with other nations. Such leadership demands plural abilities and calls for the education of many types of minds in many different fields. We can develop this type of leadership not by Federal dictation concerning this or that subject matter, however important, but by underpinning the whole school system with adequate Federal funds, and leaving the States and localities free to determine the curriculum.

It is precisely this freedom which the National Defense Education Act undermines by dictating not only what shall be learned but how it should be taught. There is an undue emphasis on educational gadgetry such as television, radio, motion pictures, and other audiovisual materials—excluding textbooks. Why this prejudice against textbooks? Are they obsolete? All these gadgets have their value but they can never replace textbooks. As a matter of fact, new textbooks in physics and mathematics are essential, so great has been the progress of these sciences in the past 10 years.

Much as I have always favored greater emphasis on mathematics, science, and foreign languages, if the Federal Government gives support only to these subjects, it will gradually determine the whole curriculum. And this dictation of subject matter is precisely what we criticize in the Russian school system.

I do not wish to imply that the present Commissioner of Education wishes to be a dictator. I am certain he doesn't. But the wording of the legislation makes it possible. This is dangerous. If we deprive the State and local school boards of their autonomy, we undermine our whole democratic structure. For local control of education is the strongest bulwark we have left against the growing tendency in our country toward overcentralization of power in the Federal Government in our military hierarchy, and in our industrial bureaucracy.

In addition to dictating subject matter and methods of instruction, no State can participate without submitting a plan to the Commissioner of Education indicating that the provisions of the act will be faithfully executed. And in spite of these minute Federal directions, the States must match the Federal funds, dollar for dollar. And all this subservience for Federal contributions so small that they are not worth the vast amount of paperwork and administrative redtape required in the State boards of education to follow out the orders.

The worst weakness of the National Defense Education Act lies in loaning money to our talented boys and girls instead of giving them outright scholarships. To load down our most promising youngsters with debts early in life is bound to cripple their spontaneity and freedom of action. To bribe them, moreover, to work off these debts, or rather half the debt, if they teach 5 years in the public schools, is bound to make them hate the thought of this bondage. What kind of teachers will they make under this stress? Certainly this temporary period of service in the schools will not build up a permanent, experienced teacher staff. And what will the Federal Government do if these young borrowers fail to repay the loans? The whole concept is unsound—a false gesture on the part of a parsimonious Federal administration.

The enemies of Federal aid to education may be tempted to use my criticism of the National Defense Education Act by saying, "We told you so. Even Agnes Meyer now claims that Federal aid to education will result in its control from Washington." But the point I am making is that Federal aid can and always has been given to support the public schols, without any such controls as exist in the National Defense Education Act. Federal aid began in the early days of our country with the land grants for public schools and land grant colleges and continued through the Smith Act for vocational training. It is this tradition of making Federal grants and leaving the States free to use them as they see fit that must be continued.

Instead of imitating the Rusians by becoming educational authoritarians, we must develop a thoroughly democratic philosophy of education which will serve the purposes of a free society as effectively as Soviet education serves the purposes of despotism.

How do we approach such a goal? For one thing we cannot begin at the top of the educational ladder, as the National Defense Education Act does. A new concern must be the acceptance of the nursery school as a public responsibility. This is essential not only because millions of mothers work but because millions more women are needed to increase our labor force, according to the reports of the National Manpower Commission. The young child in our society is frequently neglected not only because his mother works but because of the disruption of family life. Thus when the school gets the child at 6 years of age, it must frequently cope with serious psychological aberrations already so fixed that they are difficult and sometimes impossible to overcome. If more and more mothers are recruited into the labor force, nursery schools would constitute a sound contribution to National Defense. But they will not be established quickly enough without Federal aid to education.

Federal Aid has long been essential for our overcrowded and understaffed elementary and high schools. At present 7 million elementary schoolchildren are in classes larger than thirty. It is impossible to teach with the psychological insight teaching requires today when the teacher cannot possibly get acquainted with her pupils and understand their personal problems. Of prime importance is immediate Federal aid to the elementary schools. If all our children received a good elementary school education, we would not need Federal subsidies for improving the teaching of mathematics, science, and languages in the secondary schools. If our children came to high school well prepared, all talented boys and girls would take these subjects in their stride.

Secretary Flemming recently gave some figures which are alarming. There is a shortage of 132,400 classrooms and the number of pupils enrolled in excess of normal classroom capacity has risen this fall to almost 2 million. This means that not only these 2 million children receive an inadequate education. It means that they overcrowd existing classrooms and lower the educational standards for millions of other children. At the same time due to the high birth rate, we must provide classrooms for 1 million additional students every year. The States have made valiant efforts to keep abreast of their school construction but for the past 2 years bond issues for school construction have been defeated and construction has decreased because tax resources of the cities and the new suburban towns have been exhausted.

At the same time there is a critical teacher shortage due largely to the pitiful salaries they receive in most States.

And yet Secretary Flemming said flatly that legislation for direct school aid would meet with administration opposition. As President Eisenhower is always asserting that the States and localities should pay the bill for education, let me just outline rapidly what has happened to the tax situation in the past 50 years. Whereas in 1902 the Federal Government collected only 19.0 percent of all taxes, the States collected 13.9 percent and the local government collected 67.1 percent. The tables had completely turned in the later years of World War II, and have continued so down to the present time. The Federal tax collections in 1956 were 71.2 percent, the States 14.6 percent, and local government 14.2 percent. Last year about 75 cents out of every tax dollar went to the Federal Government, 15 cents to the States, and a mere 10 cents to local governments. Obviously, our States and city governments cannot meet their numerous heavy obligations in an urbanized society without Federal aid or without a thorough revision of our tax structure.

At the same time the number of children to be educated is 10 times larger than it was 50 years ago, and the costs of education are much higher for the following reasons:

1. We now expect much more of our schools in a technological age than we did when the Nation was predominantly rural. Scientific education calls for laboratories and other expensive equipment. Good language teaching also calls for new technical equipment.

2. In our urbanized society the school has heavy social responsibilities that used to be the province of the home and the church. This calls for additional personnel of different kinds, social workers, doctors, nurses, etc., to keep the schools in touch with the community.

3. If we are to desegregate our schools without sacrificing the education of the white children, we shall have to have smaller classes, more teachers, and more well-equipped classrooms. This is a heavy moral responsibility in which we cannot afford failure. But let's not deceive ourselves. If well done, the desegregation of the Nation's schools is a difficult and very expensive job.

Administration opposition to these stark realities is, of course, due to the sacredness of the budget despite our rising productivity, and a huge surplus. President Eisenhower, under the influence of his former Secretary of the Treasury, George Humphrey, has become convinced that a sound dollar is more important to the Nation than sound citizens. But before the Democrats begin to feel a sense of superiority, don't forget that the Democratic congressional majority let the President get away with this false sense of values.

Even before this new Congress convened, Secretary Flemming in the same statement which described the alarming conditions that prevail in our school system, added that a debt-service bill for school construction is the only kind President Eisenhower would sign. The President made this plain in his recent message. Moreover, it will not, as the President claims, encourage State and local effort. This empty gesture can be summed up by saying that it will increase the debts especially of the poorer States—if any of them make use of it—without being of service to the schools. It is so cumbersome to administer as to be unsound and unworkable.

It puzzles me why highways are built with direct Federal grants while schools must be built with borrowed funds. Have our political leaders no sense of logic? For every new road means new communities and new communities mean new schools.

Senate bill 8, introduced by Senator McNAMARA, is the most promising new legislation for Federal aid to education. It provides $1 billion exclusively for school construction to be spread over the next 2 years. This is, of course, a drop in the bucket when $500 million have to be divided among 50 States. I doubt whether the educators will support it. I hope they come before the Senate committee and demand at least a billion dollars annually for the next 4 years in direct grants to the States, the provisions in old Murray-Metcalf bill. Nothing else can make an impact of sufficient value on a situation that has become so critical.

But with such an adequate appropriation much money could be saved if the new legislation stated that the National Defense Education Act is thereby terminated. This would mean salvation for the independence of our State and local school systems. For in a truly democratic bill for Federal aid to education the State boards of education should be left free to decide whether they wish to use their share of the appropriation for school construction, for improving school equipment and curriculum, or for raising teachers' salaries. Nor should the States be asked to match the Federal contribution on a 50–50 basis which is one of the features of the National Defense Education Act and also of the McNamara bill though in the latter matching is on a sliding scale. For this penalizes the poorer States who have the highest number of children per 1,000 of the adult population and, therefore, need Federal aid the most. As a matter of fact, the States and localities now spend $14 billion for elementary and secondary schools whereas the Federal Government which gets most of our tax money, spends less than $500 million. So the local school systems already match Federal contributions by 30 to 1. The provisions for maintenance of State and local effort as set forth in the Murray-Metcalf bill, would make it certain that Federal funds will not supplant State and local school funds. On the contrary, Federal aid would encourage greater local support as people begin to realize the benefits derived from more and better education.

So I am tempted to ask you Democratic women, what are you going to do about this vital issue? I don't see how any Democratic candidate can come before the country as the protagonist of Federal aid to education, unless the present heavy Democratic majority in Congress stages a real fight for an adequate measure in this session. Since all the leading Democratic candidates are members of the Senate, how can they fail to take a strong stand and put through a sound bill for Federal aid to education, or forgo a great advantage in the coming campaign? If President Eisenhower should veto the bill, that would only strengthen the issue for the Democrats. And who knows—since this is a presidential election year—it is not impossible that the obvious Republican candidate, Mr. NIXON, might see the handwriting on the wall and persuade President Eisenhower to approve it.

For quite apart from the great need to give all our children an equal chance to develop their talents, we must ask ourselves this question: What kind of image of democracy do we project for the impoverished nationalities who yearn to raise their educational status, if the richest democratic nation in the world says that it is too poor to give all its children a proper education? Surely these nationalities must ask themselves, if Communist Russia can do it, why not the United States? For Russia, whose productivity by no means equals ours, is spending a higher percentage of its resources on education than we are. In addition, Russia is inviting thousands of Africans, Indians, and other Eastern peoples to come to Moscow free of charge to receive an education with a considerable dose of indoctrination in Marxist ideology and in knowledge of the Russian language. Yet in the face of these ominous and eminently sensible preparations for world conquest, we, who haven't even enough schoolrooms or teachers for our own children, and claim we cannot afford them, sit back and prate about peace and prosperity.

With the deepest sincerity and solemnity I will conclude with this statement: Our Nation is poised on a watershed. The way we turn now may mean destruction of freedom for us and for mankind. The greatest bulwark of freedom we have is a highly trained body of citizens. What happens to American education will determine what happens to America. And what happens to America will determine the course of history for generations to come.

Address by Hon. Wright Patman, of Texas, at East Texas Baptist College

EXTENSION OF REMARKS

OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, January 22, 1960

Mr. SYMINGTON. Mr. President, last October I had the great honor of participating in ceremonies at East Texas Baptist College in Marshall, Tex., honoring our distinguished colleague in the House of Representatives, WRIGHT PATMAN, of Texas.

It was a moving occasion, and the highlight of the ceremonies was the address by Representative PATMAN. In it he expressed some of the ideas and principles that have guided him during his long and distinguished career of public service.

I commend this able address to all my colleagues.

Mr. President, I ask unanimous consent that the address by the Honorable WRIGHT PATMAN, of Texas, delivered at the special convocation at East Texas Baptist College of Marshall, Tex., on October 6, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF WRIGHT PATMAN, MEMBER OF CONGRESS, TO EAST TEXAS BAPTIST COLLEGE, MARSHALL TEX., SPECIAL CONVOCATION, OCTOBER 6, 1959

President Bruce, trustees of East Texas Baptist College, members of the faculty, distinguished guests and alumna, you have been most kind and generous.

I can think of no greater honor that could come to any man than to be singled out as having made an effort on behalf of his fellow man which this great educational institution considers to be worthy of its notice and commendation.

It would be difficult to know how to reply to the extremely kind personal remarks that have been made here today.

It is not difficult, however, to know what to say to the teachers and the administrators of this great college. You have remained close enough to the sweep of history to know that, whatever doubts may have been raised by new and threatening physical forces, the humanizing principles of liberal education are still civilization's brightest and best hope.

About 30 years ago H. G. Wells wrote: "Human history becomes more and more a race between education and catastrophe."

He was not speaking of education in the sense of training more technicians and specialists to harness new and more powerful physical forces, though, of course, civilization badly needs more specialized training too—more scientists and technicians of all kinds. He was observing—as one must when reflecting upon the course of human history—that the race is between mankind's rapidly accumulating knowledge about the physical universe and his learning how to organize his society and better govern himself. He was talking about education in the liberal sense—education which forms the cultural bridge between the past and present and links the specialists of our own day into a common bond for civilization's advancement.

Few educated people doubt that the great problem of our age is to obtain more liberally educated people—people who have learned how to join together in voluntary associations to define and extend the common good. The problem of our age is not so much to extend further the frontiers of science, to discover new physical laws, but to bring about better law and order in the human society. In short, our problem is better government at all levels of human association, whether we happen to call the governing unit a government, an association, the United Nations, or just the family.

Making this commonplace observation does not mean that I share a view sometimes expressed that civilization is on the downgrade, or that we are witnessing an all-around moral decline.

They say that when you get to the point where you think the country is going to the dogs, that is a sign of old age. And they also say that being an incurable optimist about the future of mankind is a sign of muddleheadedness.

Admitting only to mature optimism, I would have to say that the progress in man's ability to govern himself which I have been able to observe has been marked with some notable advances.

Consider, for example, that discussions of scientific truths, and even conflicts of scientific truths, now observe very high moral standards. This achievement must be ranked among the priceless human freedoms. It has become almost unthinkable that any question in the realm of physics or biology would be answered by appeals to political authority. It is unthinkable that a scientist would try to establish a thesis by deliberate fraud, or that a scientific finding would be censored

or distorted by the newspapers and other commercial media of communication. This has not always been so.

Nor does it explain this advancement in the scientific fields to say that science is especially concerned with discovering the truth and, therefore, it is only natural to be extremely careful of the truth in matters of science. Men are seeking to find the truth in other fields, no less so than in science.

The explanation, I think, is to be found in two developments.

First, the people who make up the scientific professions are educated, almost without exception, not merely in techniques, but in the origins of their science and its contributions to the human culture. Being educated people, they are well aware of the long struggles that were waged to win freedom for scientific investigation and expression, and are no less zealous of this freedom than of the science itself.

Second, I would attribute the high moral standards being observed in the scientific fields to the voluntary associations that are the governing bodies of the people working in these fields. These associations would most certainly frown upon fraud, misrepresentation, and the like, if such were used in describing scientific matters.

Wouldn't it be a wonderful thing if our civilization were advanced to the point that discussions and controversies over political truths obeerved moral standards as high as those observed in scientific controversies?

Perhaps there has been progress in this direction, though I am not sure of it. The slambang assertion and the flamboyant claim have largely died out. But they have largely been replaced by the more subtle techniques of mass propaganda. So it may be that here improvement has been in form, while in substance there has been retrogression. Yet, I have no doubt, if I may be so bold as to make a forecast, that there will come a day when both politicians and those responsible for the machinery of mass opinionmaking will be as careful to distinguish between truth and innuendo, between hope and fact, as are the scientists.

As to the very difficult field of relationships, among nations, there have been some recent and unmistakable advances in man's ability to govern himself. We have now, in the United Nations, an organization for bringing the peoples of the world together in common support of common causes—most particularly to resolve differences by peaceable means. True, the United Nations has not lived up to the high hopes that many first held for it. But at least the nations of the world have found it possible to remain in association for orderly discussion of their common problems and their individual differences. Even this was not possible only a generation ago, despite the horrible lesson of the First World War.

Within my own lifetime there have also been quite notable advances in our country in recognizing and fulfilling our responsibilities for the common good on the national scale. There was time, within my memory, when it was widely believed that the people of this country could not, and should not, be mutually responsible for their common economic good. When I first went to Washington, the prevailing view then was that the economic condition of the people was a matter of no proper concern of the Federal Government. The great ebbs and tides of the business cycle were regarded as the workings of a mysterious force, almost sacred, not to be meddled with or controlled by the collective intelligence of people. Yet within a decade such beliefs and superstitions were discarded and a newly recognized responsibility for intelligent control of the economic climate was embraced. Indeed, following the last great war, we wrote this newly found responsibility for the common economic good into statute, declaring our national policy to be that of using all the plans, programs and agencies of the Federal Government to promote maximum employment, production and purchasing power.

To assure each man a job, no. To tell any man what his job shall be, how he shall try to satisfy his instinct for workmanship, no. But to an assured general prosperity, yes. To pledge opportunity for earning a livelihood, yes. To pledge economic freedom—meaning that each man shall have a wide and practical choice of ways in which to earn his livelihood, also yes. These thing we now recognize to be our responsibility on a national scale.

We have not acquired the best techniques for accomplishing these objectives as rapidly as we might like. And what may be more serious, responsible officials of govenment have not seemed to hold steadfastly to the objectives themselves. But this is to be expected. In human progress, some faltering steps seem always to follow a long forward step. But I do not see in this any fatal rhythm of history. Notable progress toward economic freedom has been achieved, and few people are so thoughtless as to entertain notions of abandoning this progress.

So much for the recent advances, as I see them, in our ability to govern ourselves.

At all levels of government—national, international, and so on—there seems to have been some advancement, and at least no serious retrogression, in all cases except one. But as I see it, the most important governing unit of all has been, and is now, undergoing a serious breakdown. I am referring to the individual family, which has, of course, been the basic unit of government in our civilization for as long as we have had a civilization.

Indeed, the family is an integral part of our religious heritage, and considering the values which are at stake, it is a wonder that our whole society does not cultivate and nourish this unit of government above all.

Yet we are today witnessing premature separations and splitups of so many families, and with such consequences, that we are witnessing in our own time a partial return to barbarism. It would be difficult to imagine any development more productive of present cruelty or more threatening to civilization's future.

There seem to be almost countless instances where grandparents—the old folks—have been separated from the family and set apart to spend their declining years in lonely surroundings and conditions of essential uselessness. Furthermore, these people are frequently being separated from their families at the very time their families most need the stabilizing influence, the wisdom, experience, and, in short, the whole cultural heritage which is theirs to hand down. And they are being separated from their families at the very time that they, too, are most in need of an opportunity to be of service to their families.

In almost countless instances, too, young children and teenagers are being turned into the streets, with little guidance, with hardly an introduction to our cultural hearitage, and left to try to work out a culture and a moral code in association with other dispossessed children. This is most disturbing.

If I may be so bold as to suggest causes, I believe that there are two factors at work contributing to the breakdown of so many units of family government.

First, too many people are forgetting the ancient truths while learning new dogmas.

We are, as a nation, too often neglecting the Lord's commandments while seeking moral guidance from psychological theories.

If I have correctly learned from my very wise and very wonderful pastor, Dr. Coggin, then I am right in thinking that when the Lord gave Moses the commandment, "Honor thy father and thy mother." He meant this commandment was to be taught to his children and his children's children for all time, and not just until such time as a Dr. Spock or a Dr. Gesnell might present added things that children should be taught.

A second cause of this wide-scale breakdown of family government seems to be, without question, that so many families are being split up because the younger people especially in the farm and smalltown areas of the country, such as ours, are being forced to migrate over long distances to find economic opportunity.

Thus, I believe, we must take prompt steps to expand economic opportunities here at home for the young people—and for the older people, too, as for that matter. It is not enough that the Federal Government does its part to maintain a general prosperity in the Nation. We must work through all of our associations—at the regional, State and local levels—and form new associations if need be, to see that economic opportunities are expanded.

This suggestion involves no new principle. In practice, it would be a renewal of our traditions of neighborliness. In the old days, when the country was young, our grandfathers gathered to help newlyweds clear a patch of land and establish a homestead. And they helped new settlers in similar ways, by all pitching in to build a barn and helping to plant the first crop. Both our State and Federal Governments also helped expand economic opportunities, such as by helping build the railroads to open new frontiers for settlement.

As I see it, we must today apply the same kind of group effort and shoulder the same kind of community responsibilities to expand the new forms of economic opportunity as they exist, or can be made to exist.

Nature has smiled on us and on the region in which we live. Our five talents are our bountiful land, our equitable climate, our pure water, our good people, and the unique community spirit which we have inherited.

Fortunately, our parents and grandparents have left us all these resources in good repair. The land is none the poorer for having provided sustenance for many offsprings. The water is still plentiful, and we are taking steps to conserve it. Our people have better education, plus the same stout hearts and willing hands.

We have good markets and growing markets here in our own area; and we have some of the basic industrial materials we need, not the least of which are iron and steel. We are close to favorable energy sources, especially natural gas and oil. Our transportation is on the whole good, and someday we will have, in addition, water transportation.

Providing more economic opportunity here at home will mean finding ways to bring about more industry to use our resources. Admittedly, attracting industrial settlers today is somewhat more difficult than attracting farm settlers in generations gone by. Traditions of neighborliness are different. Farmers have never regarded other farmers as competitors. It has never been the custom of farmers to discourage others from farming, nor to withhold information as to how others might produce more by better methods. Not so among industrial and commercial rivals.

Witness the fact that when efforts were being made to establish the Lone Star works—first the iron works and then later the steel works, which now comprise the Lone Star Steel Co.—these efforts were met with both discouraging advice and outright resistance. In fact, if we had not been so fortunate as to have the guiding genius of Mr. E. B. Germany in helping to establish a steel industry here in our area, our success might have been retarded for another generation.

We were told, among other things, that we could not make steel in this area because our

people did not know how to make steel and that they could not learn for a generation to make steel as good or as skillfully as workers in the great steel centers. As it turned out however, our people did learn very quickly how to make steel, and to make the best steel, and they learned with the help of only a few imported workers and technicians. This achievement is a tribute to the native abilities of our people, both to produce and to manage large enterprises. Such achievements can be repeated.

One of our economic problems today is that we are losing farm population very rapidly. Productivity on the farm, that is to say, actual farm output per man-hour of work, is increasing at a phenomenal rate. The technicians figure it at about 8 percent a year, which is several times the productivity increase in industry. We are still going through another technical revolution in farming. More mechanization, more fertilizer, more miraculous chemicals to control insects, fungus diseases, and so on, more plant hormones, new plant and animal breeds, and in all-around advancement in understanding and controlling the life processes of plants and farm animals.

All this means that a smaller and smaller percentage of the population is needed on the farm to turn out all of the food and fiber required by the whole country, plus much of that required abroad.

And, of course, farm people are not the only people who are moving away. We are also losing population from the towns and villages—people from the families who have performed the service, trade, and professional functions for the farmers. I do not mean that we are losing population in an absolute sense; of course not. But failing to provide for the normal growth of an area means an economic drain on the whole area.

And what is much more important, the whole Nation is losing the benefit of family government as a result of premature separation of family groups. The Nation is losing in moral fiber by reason of its irrational cruelty to its older people, and by reason of its turning its younger people into a generation of juvenile delinquents.

We need have no fear that the graduates of East Texas Baptist College will ever become juvenile delinquents—or adult delinquents either, for that matter. By the time the young people have completed their education here, they have drawn a large measure of wisdom from the great teachers, past and present. They have been made acquainted with our cultural and religious heritage sufficiently well to be able to mark their own guideposts when they leave here. But what about the children set loose to mark their own guideposts who are not so fortunate as to have the kind of education and training that young people receive here?

I happen to share the belief that there is no such thing as a basically bad boy—or a basically bad girl either. It is a belief which has received considerable support from some of the recent studies of juvenile delinquency.

Specialists who have made quite serious and competent investigations now report that what seems to us highly nonconformist conduct on the part of the juvenile delinquent is actually highly conformist conduct as related to the rules and ethics which have grown up within the juvenile gang. The youthful delinquent, we are told, is in reality guided by public opinion, but by a public opinion of small society that has somehow gotten out of the main stream of opinion in developing its ideas as to what is proper and improper conduct.

Since mankind has been given the means of accumulating knowledge over the whole span of the human experience, we might wonder why it is that some people seem to expect that each individual child might become civilized by some kind of divine intercession, rather than by education and training.

I do not suggest that all of the ideas and customs which have been embodied in the ethical codes of the past, or even in the best body of religious thought, were necessarily correct and suitable for all times. Obviously, many were not. And no doubt some of the ideas in our best body of ethics today will be changed with time and experience. That changes will be made is not so important as how they will be made, and this, I think, is the main significance of the family unit in our civilization.

Revisions to the ethical and moral codes are best made in a society of liberally educated individuals, living together under family government. In this kind of society revisions to the moral code will be made in the light of accumulated human experience and religious wisdom. In this kind of society the test of the ethical and moral code is not how well it accommodates individual, selfish interest, but how well it contributes to the continued well-being and happiness of the family.

National Safety Council and American Merchant Marine Institute Honors MSTS Crew of USNS "Pendleton"

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I have sent to Admiral Gano, commander, Military Sea Transportation Service, commending his gallant crew on their great seamanship during the rescue of 24 Japanese fishermen who survived the sinking of their ship a year ago. I also include the names of the crewmen who reside in San Francisco and clippings detailing this great exploit in the annals of maritime history. I am now and always have been proud of our MSTS service and their brave officers and seamen. May I commend to your attention these items:

Vice Adm. ROY A. GANO,
U.S. Navy, Commander Military Sea Transportation Service, Department of the Navy, Washington, D.C.

DEAR ROY: With the presentation of the National Safety Council and American Merchant Marine Institute Special Award of Merit to the skipper and crew of the USNS *Pendleton*, national attention has once again been drawn to the magnificent seamanship of the men under your command.

The rescue of all 24 of the Japanese fishermen who survived the sinking of their sampan *Chiyo Maru* a year ago December has already become a legend of the sea. It is rightly fitting that the National Safety Council and the American Merchant Marine Institute should single out Capt. Hans C. von Weien and his brave and skillful crew for this honor.

I wish I had been back in my hometown of San Francisco when the award was presented and been able to have taken part in honoring the splendid seamen whose courage and devotion to duty exemplify the highest standards of seamanship which are characteristic of the Military Sea Transportation Service.

JOHN F. SHELLEY,
Member of Congress.

CREW MEMBERS ON BOARD USNS "PENDLETON" ON DECEMBER 18, 1958

PRESENT ASSIGNMENT

Name and address

Fred S. Crowley, Jr., radio officer, 49½ Caselli Avenue, San Francisco; *Pendleton.*

Modesto L. Lauriano, Carpenter, 639 Excelsior Avenue, San Francisco; *Pendleton.*

Enicirio A., Adam, able seaman, 5 Porter Street, San Francisco; *Pendleton.*

Archie F. Moromisato, ordinary seaman, 1990 Sutter Street, San Francisco; RIF January 1, 1960.

Chee T. Wong, ordinary seamen, 2248 Mason Street, San Francisco; *Pendleton.*

Hom B. Pon, ordinary seaman, 728 Montgomery Street, San Francisco; *Pendleton.*

Murray W. Jewett, first assistant engineer, 903 Pine Street, San Francisco; receiving section.[1]

Hugh I. Morrison, third assistant engineer, 121 Yukon Street, San Francisco; receiving section.[1]

Shee H. Yip, fourth assistant engineer, 1170 Powell Street, San Francisco; *Miller.*

Wayne F. Wagner, licensed junior engineer, 938 Geary Street, San Francisco; *Pendleton.*

Gasper F. Ferro, oiler, 576 Geary Street, San Francisco; *Pendleton.*

Carroll L. Main, oiler, 1055 Quesada Avenue, San Francisco; *Pendleton.*

Donald Chew, oiler, 1464 Leavenworth Street, San Francisco; *Pendleton.*

Aurelio Ducosin, fireman-watertender, 654 Capp Street, San Francisco; receiving section.[1]

Damian A. Aguilar, fireman-watertender, 1351 Stockton Street, San Francisco; *Pendleton.*

Cornelio M. Manay, wiper, 1503 Scott Street, San Francisco; *Pendleton.*

Salvador P. Gancero, wiper, 281 Santos Street, San Francisco; *Patrick.*

Water L. Reed, second cook-baker, 235 Prague Street, San Francisco; *Patrick.*

Cornelio Villafuerte, assistant cook, 350 South Van Ness Avenue, San Francisco; retired May 31, 1959.

Rofino C. Forges, messman, 935 Kearny Street, San Francisco; *Pendleton.*

Cleto J. Mercado, messman, Post Office Box 1028, San Francisco; *Pendleton.*

Donato H. Visico, utility, 1478 Hudson Avenue, San Francisco; *Breton.*

Henry C. Verano, utilityman, Post Officee Box 7073, San Francisco; *Patrick.*

Manuel G. Carreon, utilityman, 234 Linden Street, San Francisco; *Pendleton.*

George, Cowans, utilityman, 1084 McAllister Street, San Francisco; *Pendleton.*

ADRIFT 29 HOURS—"PENDLETON" RESCUES 24 JAP FISHERMEN

In June 1944, the *Mandan Victory* slid down the ways to join the fleet of supply ships which helped win the war in the Pacific. Later, renamed the *Sgt. Jack J. Pendleton*, she worked for the old Army Transportation Corps, and in January 1950, she joined MSTS. Little of excitement or special note happened to her from them until last December when she picked up this message from Pac:

"Fishing boat *Chiyoh Maru*, 148 tons, 25 crew, large hole in hull, flooding seriously. SOS received. Position 17–48 N., 161–25 E. Divert to position. Render assistance as necessary."

The U.S.N.S. *Pendleton* acknowledged the message and altered course while her crew Next word from the *Pendleton* came 28 hours later when her new skipper, Capt. Hans C. made preparations for picking up survivors. Von Weien, sent this message:

"* * * picked up entire crew *Chiyoh Maru*. Twenty-four members all aboard at 18130Z. No apparent injuries. Men taken from makeshift raft. * * *"

[1] Awaiting reassignment.

With the 24 fishermen safely aboard, the U.S.N.S. *Pendleton* set course for Guam. Their raft, which was left adrift, was described by Captain Von Weien. It consisted, he said, of four oil drums, various wooden boxes and fishing balls, held together by a fish net. It provided standing room only and rode the waves in sections. Once aboard the *Pendleton*, the Japanese, who had been adrift for 29 hours, luxuriated in fresh-water showers and were given cigarettes and $5 apiece by the crew.

At Guam the *Pendleton* and her crew received heroes' welcome, including a Navy band at dockside and a 25-foot banner hailing the rescue.

Captain Von Weien and his crew received official accolades from COMSTS, Admiral Will; from commander in chief, Pacific Fleet; and from commander, Hawaiian Sea Frontier—all of whom sent dispatches—while Rear Adm. W. L. Erdman, commander, naval forces, Marianas, waited at the dock in Guam to greet them.

U.S. SHIP RESCUES JAPAN CREW ADRIFT

YOKOHAMA (KYODO).—All 24 crew members of a Japanese tuna boat, which sent out an S O S Wednesday southwest of Wake Island, were rescued Thursday by a U.S. military transport.

News of their rescue was contained in a report received yesterday by local maritime safety authorities from Wake Island.

The report said the 148-ton *Chiyo Maru* of Misaki, Kanagawa Prefecture, had been abandoned after it sprung a leak.

Skipper Kazuyoshi Taniguchi and the crewmen took to a raft and were picked up about 500 kilometers (300 miles) southwest of Wake at about 10:40 p.m., Thursday by the U.S. military transport *Jack Pendleton*.

The rescued fishermen were reported to be heading for Guam aboard the American transport, one of a number of U.S. and Japanese ships which rushed to the aid of the sinking boat. Planes also took part in the search for the craft.

MSTS SHIP RESCUES 24 FISHERMEN

YOKOSUKA, JAPAN.—The U.S. Navy said Friday a Military Sea Transportation Service cargo ship rescued 24 survivors from a stricken Japanese fishing boat at midnight Thursday about 1,800 miles southeast of Japan.

The MSTS ship *Sgt. Jack P. Pendleton*, a modified attack cargo ship, rushed to assist the fishing boat *Chiyoh-Maru* Wednesday after the Japanese vessel reported it had a hole in its hull and was flooding.

A Navy spokesman said word was received from the rescue ship that all members of the fishing boat's crew were rescued, including the Japanese skipper.

The Navy spokesman said the brief rescue message reported the Japanese vessel had sunk but did not elaborate on how the survivors managed to stay afloat.

The message quoted the Japanese captain as saying all persons aboard had been saved and that the boat was lost.

MSTS TO RESCUE—JAPANESE CREW SAVED

GUAM.—Twenty-four crewmen of an ill-fated Japanese fishing boat rescued Thursday by an American cargo vessel were transferred at sea Sunday off Guam to another fishing boat for return to Japan.

The Japanese fishermen had drifted 29 hours on an open raft with standing room only after sending an SOS Wednesday that their ship, the *Chiyoh Maru*, was sinking.

They were picked up by the U.S. Military Sea Transport Service cargo ship *Sgt. Jack J. Pendleton*. The *Pendleton* rendezvoused with the *Sazamu Maru*, a sister ship of the *Chiyoh Maru*, 3 miles off Apra Harbor, Guam.

The Japanese were transferred by Navy crash boat.

Vice Adm. John M. Will, commander of the MSTS in Washington, described the rescue as upholding the finest traditions at sea.

Capt. Hans C. von Weien, the *Pendleton's* master, had high praise for the Japanese survivors.

He said they had been adrift on a makeshift 8-by-10-foot raft assembled from four oil drums, wooden boxes and fishing float balls held together by fishing net.

The survivors said the raft rode the waves in sections.

The Japanese fishermen took long and vigorous showers aboard the *Pendleton* and were treated to haircuts by the ship's barber. The crew furnished them with clothing and rubber sandals.

Just before their transfer the Japanese were given $5 and a carton of cigarettes each as a farewell gift.

The *Pendleton* received a hero's welcome when it returned to Guam after the transfer. Rear Adm. W. L. Erdmann, commander, Naval Forces Mariannas, and the Navy band were on hand to greet the rescuers.

[From the Japan Times, Dec. 22, 1958]

CREW RESCUED BY U.S. VESSEL BOARDS JAPAN SHIP OFF GUAM

YOKOSUKA.—Twenty-four Japanese fishermen rescued from a makeshift raft in mid-Pacific by an American naval craft, were transferred Sunday to a Japanese fishing boat off Guam, the U.S. Navy reported.

The survivors, who were aboard the *Chiyo Maru* which sank Wednesday night 350 miles west southwest of Wake Island, were transferred from the attack ship *Sgt. Jack J. Pendleton* to the *No. 7 Sasayama Maru* 3 miles off Apra Harbor at 8:30 a.m. Sunday, the Navy said.

The *Sasayama Maru* was one of two Japanese fishing boats directed by Japan's Maritime Safety Agency to pick up the survivors at a rendezvous point off Guam. The *No. 3 Azuma Maru* was also reported heading for the same place.

The *Pendleton*, a U.S. Navy attack cargo ship was en route to San Francisco from Guam when it received an SOS call Wednesday night. She diverted her course and picked up the fishermen some 1,000 miles northeast of Guam Thursday night.

The survivors were found adrift aboard a makeshift raft that consisted of four oil drums, various wooden boxes and fishing glass balls securely enclosed in a fishing net, the Navy said. They were adrift for 29 hours.

The *Chiyo Maru*, a 1,481-ton tuna fishing boat, flashed a distress signal at 5:50 p.m. Wednesday and sank 55 minutes later.

Ukrainian Independence Day

SPEECH
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HOSMER. Mr. Speaker, commemorating today the 42d anniversary of the independence of the Ukraine not only serves as a reminder to us of the continuous hope for freedom of 42 million Ukrainians in the U.S.S.R. and behind the Iron Curtain but also affords us the opportunity to again urge restoration of freedom to all captive nations.

I join my colleagues in paying tribute to the Ukrainian people throughout the world who are dedicated to the belief that freedom is the right of all nations. It remains for us of the free world to help them sustain their faith in God and humanity, in their own survival and in their inevitable freedom. Words of encouragement and sympathetic expressions of understanding of their plight will mean a great deal to these people in their dark hours of desperation.

We must remain true to the cause for which these people continue to fight. We also must work diligently in support of freedom everywhere so all freedom-loving people of the captive nations may continue to hope fervently that they may soon enjoy the God-given right of independence with justice which should be the national heritage of all mankind everywhere.

A Crusade for Decency

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address given on October 11, 1959, in Salt Lake City, Utah, by Secretary of Agriculture Ezra Taft Benson before the general conference of the Church of Jesus Christ of Latter-day Saints. Secretary Benson is an apostle of the Latter-day Saints—Mormon—Church, and was speaking on this occasion as a member of the governing body of the church, and not in his official capacity as member of the President's Cabinet.

The comments of Secretary Benson are very timely inasmuch as Congress will be considering legislation during this session to strengthen existing laws regarding the dissemination of pornographic literature.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A CRUSADE FOR DECENCY

(Address by Elder Ezra Taft Benson, apostle of the Church of Jesus Christ of Latter-day Saints, given at general conference of the church held in Salt Lake City, October 11, 1959)

We live in a choice land. But we live in a time of anxiety—a time when the basic concepts and values of a free society, which we cherish, are being seriously challenged. This challenge is not only from godless, imperial communism abroad, but also from dangerous ideologies and practices here at home.

It is true that outwardly everything seems prosperous. More people are working at higher wages and enjoying a better standard of living than ever before in the history of our country. More of our people are enjoying travel, cultural, and educational opportunities than any time in our history. New churches are being erected at a rapid rate, and an increasing number of people are church-affiliated. Our Nation is at peace.

All these things should give a feeling of stability, inner assurance, and a sense of satisfaction, but they do not seem to do so. Discontent among our people, nationwide,

seems to be high. We view with alarm the ever-raising level of public and private debt and the threat of inflation. We note with fear the increase in crime, juvenile delinquency, alcoholism, drug addiction, and sex offenses.

We pay lip service to the principles embodied in the Declaration of Independence and the Constitution without realizing what they are and the danger of ignoring them. We demand more and more of Government, so Government grows larger all the while, marking the stampede away from personal responsibility which occurs at all levels of life. We passively contribute to the spirit and demoralizing philosophy of something for nothing.

Because sin is rampant and increasing, I make bold enough to call this Nation to repentance. Only through righteousness is there safety for our beloved country. There is no other way.

Today I speak out against one of the insidious and rapidly increasing threats against our young people.

As a church we have always placed great emphasis on youth. Our young men, if worthy, receive the priesthood at 12 years of age. We enlist a higher percentage of our young boys in scouting than any other group. We have a comprehensive program, combining Sunday school, primary, M.I.A., priesthood activitiees, and weekday seminary classes, to guide the activities of our youth, instill within them a testimony of the Gospel, and help them to grow up to be good citizens and faithful members of the church. Yes, we recognize full well that our boys and girls, our young men and women, are our greatest asset. They are our hope.

The youth of today are the trustees of the future. Sooner than we think the leadership of the church and the future of our country will rest in their hands. It is our grave obligation to help prepare American youth to be worthy trustees, to help them fit themselves for their coming responsibilities. This is the obligation of every adult citizen.

We have confidence in or youth, yes. But we know they face troubled times. They are beset by man temptations—temptations, which, if not new, are certainly more blatant, more prevalent, than ever before.

We know how important it is for our youth to posess clean minds in healthy clean bodies. "Be ye clean that bear the vessels of the Lord." Moral purity is an eternal principle. The Spirit of God "cannot dwell in an unclean tabernacle." Purity is life-giving; impurity is deadly. God's holy laws cannot be broken with impunity. Great nations have fallen when they became morally corrupt, because the sins of immorality left their people scarred and misshapen creatures who were unable to face the challenge of their time.

I speak about one aspect of this question of morality which affects all our youth. There are forces at work in this country today which are vicitimizing many thousands of our youth, undermining their moral fiber, poisoning their minds. There is being spread about in this land a veritable flood of obscene photographs, movie films for private showings, filthy books, and so-called comics that drip with depravity and obscenity.

Every day some 200,000 circulars are flooding our cities and towns, seeking to sell obscenity and filth to the American people. It is a $500 million a year business and growing fast. The sales volume of mail-order obscenity has doubled in the last 5 years.

Who are the targets of this drive? Three-fourths of these circulars are sent to our youth. Our schoolchildren are the targets, our boys and girls, particularly between the ages of 11 and 16.

The U.S. Post Office Department estimates that between 700,000 and a million children in American homes will receive unsolicited obscene and pornographic literature through the mails this year.

Our boys and girls need not have shown any interest in this vile stuff. It is thrust into their hands by racketeers who go to great lengths to get the names of our children. They buy mailing lists from standard sources. They get names from high school yearbooks and classbooks. They set up fake business fronts. A boy sends away for a model airplane, a baseball bat, a toy automobile, a stamp collection, often advertising at bargain prices—and the muck merchant has his name and address on his list.

Then the solicitations begin.

The smut dealers last year mailed out an estimated 50 million sales circulars under the protection of first class mail. Some of these circulars are in the form of pseudo personal letters in girl's handwriting, signed with a girl's name.

The smut dealers go further. They even seek to involve our youth as salesmen of their trash. One scheme is to sell our youngsters playing cards decorated with lewd pictures for perhaps $3 per deck—to be resold at 25 cents or 50 cents per card.

Many children fall into the trap of ordering obscene material. Traffic with children is a major and growing part of the filth merchants' business.

Postal inspectors in New York City recently raided one dealer in pornography. They confiscated 17 tons of highly obscene printed and filmed materials. They found mailing lists containing the names of thousands of high school graduates taken from high school yearbooks.

Some parents are almost frantic because of their inability to keep this unwanted material out of their homes. A mother in a midwestern State writes to the Post Office Department as follows:

"Enclosed you will find the filth that has been sent to my son for the past year. He is 14. Think what this could do to him, and how many other innocent boys and girls he could corrupt by passing this literature on to them. Can't you do something to stop it?"

Another parent in the East writes:

"Ads like this come to my minor son at the rate of one or two a week."

A lawyer tells how his son answered an innocuous appearing ad in a national magazine and received a batch of obscene pitcures and an order blank for more. His name is on the mailing list and nearly every week an ad for pornographic material comes in the mail. The lawyer says, "My wife and I are beside ourselves as to how to stop this flood of mail."

Now, what are the effects of this material on our youth?

Juvenile delinquency has become a blot on our country. Gangs roam the streets of some of our big cities. Arrests of juveniles for major crimes rose about 10 percent last year. Authorities have observed on repeated occasions that the obscenity racket is a prime contributor to the increase in juvenile delinquency.

FBI figures show that more boys of 18 and 19 are now committing the heinous crime of rape, then males in any other age group. The percentage of convictions of boys under 20 has grown substantially in recent years.

Now of course some people will argue that many children exposed to these pictures and books never become delinquent. This argument has no merit at all. Your child may be exposed to tuberculosis or polio and never contract either disease. In this a reason for deliberately exposing children to infection? Of course not.

It is true that people go wrong for many reasons. Children become delinquent in part because of such factors as broken homes, drinking parents, indifferent parents, and bad companions. But the wish is father of the dead. Thought precedes action. We cannot help but be influenced by what we read and what we see. A dirty book, a filthy picture, may be the trigger that sets off a terrible crime.

Reports from police chiefs and sheriffs indicate the tieup. Here are typical statements from city officials in Massachusetts, Colorado, and Pennsylvania:

"Teenager criminally assaults 16-year-old girl. Search of his room revealed 50 pornographic pictures beneath his mattress."

"Student molesting two teenage girls found to have pornographic literature in glove compartment of his car."

Let me quote from a report of a Senate subcommittee that has studied this problem. The report says in part:

"There is a peculiar resemblance to narcotics addiction in exposure of juveniles to pornography. There is the same pattern of progression. Once initiated into a knowledge of the unnatural, the impressionable young mind with the insatiable curiosity characteristic of those reaching for maturity inevitably hunts for something stronger, something with more jolt, something imparting a greater thrill.

"The dealer in pornography is actually aware of this progressive facet; his array of material to feed this growing hunger is carefully geared to the successive stages. Like the peddler of narcotics, his only interest is to insure that his customers are hooked. He knows that once they are hooked they will continue to pay and pay."

These are some of the direct results of the smut campaign. There are indirect results, too. Our children, our wives, our friends, may be the horrified victims of criminals who are triggered by obscene materials.

Well, what is the response of the smut publishers and dealers to these facts?

Their attitude is summed up in some such sentiment as this: My job is to make a dollar, not to look out for unstable children or adults. No wonder J. Edgar Hoover has said:

"The activities of the muck merchants are national in scope. Your child can easily become one of their victims."

What are we going to do about it? Shall we fold our arms, shake our heads dismally, and do nothing?

Shall we permit organized crime to continue and extend the obscenity racket—already a half billion dollar a year business—and make it really big and immeasurably more vicious?

Shall we allow more and more of our children to be victimized, allow them to be hooked by this menace to clean and right living, this threat to moral purity?

Shall we sit by and watch sex crimes grow and grow in number and violence?

Shall we permit these cheap peddlers of filth to undermine the moral fiber of our youth, the moral strength of our Nation?

I believe I know what our pioneer forefathers would have answered to these questions.

And I think I know what you and other responsible citizens will answer. They would have said, as we say today: "Forbid it, Almighty God. We shall not sit by any longer. We shall act in defense of decency and order and in the name of our country."

Our Government is striking with all the weapons it possesses against the obscenity menace. Until last year, purveyors of filth had to be prosecuted at the point from which they mailed their smut. This was a severe handicap to prosecution. Courts, notably in Los Angeles and New York, where the great bulk of the mail order business in obscenity originates, handed down soft rulings on obscenity. Few offenders were convicted and these usually paid a small fine and began operating again.

Legislation passed by Congress last year has now made it possible to prosecute where the mail is received.

The first case prosecuted under the new law was in Boise, Idaho. A man and his wife, who were mailing extremely obscene material from the west coast, were given 10 years in jail, plus a heavy fine.

A Virginia man and his wife dealing in obscenity were sentenced to a year in the Federal penitentiary and fined $2,000. In Louisiana, two more dealers in filth were given a year and 18 months in jail respectively.

This is a good start. But it is only a start.

If Government is to make full use of the new legislation, it needs and must have the cooperation of all our citizens and especially of all our parents.

The privacy of the mail is a basic American right. It will not be violated. The Post Office cannot open first-class mail even if it is certain the envelope contains obscene materials. The Post Office can act only if parents supply the evidence after the mail has been delivered. Here is what we as parents can do, what we must do:

1. If mail coming to your home is obscene, or solicits the sale of obscene materials: save all the material, including the covering envelope; put it promptly in the hands of the local postmaster either personally or by mail.

2. Do not wait for this danger to strike your home. Join with other parents, teachers, local law enforcement officers and civic groups in drawing public attention to the menace of this traffic in filth.

3. Work closely with teachers in your community to detect obscene materials in the possession of children and to determine the origin of such material.

4. Join with other parents and teachers in making a special effort to impress upon the community the fact that even children who are never exposed to the obscene material may be victimized by sex criminals.

5. Cooperate with the schools in taking positive, long-range steps to help children develop wholesome interests in good literature and art—making it readily available to them at home, in the classroom, through literary and library clubs, and through student groups.

6. Help civic groups bring about the establishment of a decent literature committee, broadly representative of the interested civic organizations in the community.

7. Get local judges, law enforcement officers, and representatives of the police force to talk before civic groups telling what they, as guardians of the community's laws, know of the relationship between the traffic in obscene literature and juvenile delinquency and sex crimes.

We must defend our youth, in the interests of this Nation which God has blessed above all others. We must rise to this task, stand up and be counted on the side of decency. We must show by our lives and actions that we possess the virtues that made America great.

There will be those who will cry censorship and suppressing of freedom of information. To these people there does not seem to be any difference between liberty and license—but there is a real difference. It is not a denial of liberty to forbid the sale of narcotics or alcohol to children, and neither is it a denial of liberty to ban the distribution of filthy, obscene, character destroying materials.

There has developed in this country, I am sorry to say, a species of so-called broadmindedness which tolerates anything and everything. It is high time right-thinking citizens showed they are fed up with such false broadmindedness. I for one fail to see where this so-called tolerance of evil has made society any better or individuals any happier. We cannot steer a safe course without a compass. We cannot build an enduring society except on principles of righteousness.

As Dr. Daniel A. Poling recently wrote in the Christian Herald, "it's time for a new crusade," a crusade for decency.

The youth of the church and of America deserve that we parents live up to our responsibilities in this regard.

Many centuries ago, a celebrated Roman matron, Cornelia, was asked by an acquaintance to display her jewels. Cornelia called to her children to step forward. "These are my jewels," she said.

The youth of the church and of America are our jewels. Let us prize them as they deserve. A clean America will be a strong America, a secure America, a prosperous America, a peaceful America, a free America, an America that will continue to merit God's blessings in the future as it has in the past.

God grant it may be so, I humbly pray in the name of Jesus Christ. Amen.

Old Truths for the New Frontier

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, January 22, 1960

Mr. HRUSKA. Mr. President, recently an honorary degree of doctor of humanities was conferred by the Indiana Technical College at Fort Wayne, Ind., to a noted fellow Nebraskan of mine.

He is Dr. Clayton F. Andrews, 33d degree, imperial potentate, A.A.O.N.M.S., of Lincoln, Nebr.

In his introduction of the honoree, Dr. Planck of the Indiana Technical College stated:

Today we are honored to pay tribute to a man who has devoted his adult life to relieving human suffering. He received his medical degree at University of Pennsylvania, served in World War I in the United States, England, and France, received the master of science degree in surgery for research and thesis done at the famous Mayo Clinic, and since 1923 has been practicing in Lincoln, Nebr. He is past president of the Nebraska section of the American Board of Surgery. He is affiliated with such organizations as the chamber of commerce, the University Club, Sons of the American Revolution, the Shrine, and the Newcomen Society, indicating that his interest in his fellow man is not entirely clinical. I am honored to present to you Clayton Farrington Andrews for the honorary degree, doctor of humanities.

President Keene, of that college, in presenting the degree itself, said of Dr. Andrews:

Because you have through the years considered, first, the physical welfare of your fellow man before your own desires and comfort; because you have given freely of your abundant talents, having labored to bring those talents to their highest level; because your skilled surgeon's hands have been gentled and guided by a warm and generous heart; and, finally, because in honoring you we are honoring all those courageous surgeons who through the centuries have dared to take human life in their hands that healing might result, Indiana Technical College, upon the approval of its board of directors, is honored to pay tribute to you and, through the authority in it vested by the State of Indiana, confers upon you the degree, doctor of humanities, honoris causa, with all of the rights, titles, privileges, and obligations appertaining thereto.

Mr. President, because the address delivered by Dr. Clayton Andrews on that occasion relates the well-considered philosophy and observations of a noted citizen, it is very much in order to share the substance of his address on a wider scale.

Therefore, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of this address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OLD TRUTHS FOR THE NEW FRONTIER

(By Dr. Clayton Andrews)

It is with a good deal of pleasure and joy that I receive the honorary doctor of Humanities from this exceptionally fine college. My previous degrees were all earned in the challenge and discipline of the life of the schoolroom. This degree comes to me out of the background of years in the schoolroom of life. I sincerely wish to express my appreciation to all and especially my close friend, Past Imperial Potentate George Stringfellow, as well as to President Keene the faculty, and students of this technical college.

As a physician and surgeon, my life and mission has been in the healing ministry. Naturally, then, you will expect me to take my illustrations and make my observations from the area of knowledge that has meant so very much to me.

Now, all over the world there are research centers solving and trying to find solutions for the many ailments of mankind. There are great foundations which provide the necessary funds for much of the research work. The university laboratory also provides great resources for research. And my thought carries back to one of the first research centers ever established.

It was on November 14, 1888, Louis Pasteur, out of the background of his interesting and challenging life, founded the Pasteur Institute.

Pasteur, who as a boy student was rated one of the bons ordinaires by his dominies, even as a youth showed his unusual brilliance in the field of research when he began to investigate the common blue mould, penicillin glaucum. It seems very odd that men should have been seeing bacteria in their microscopes since the 17th century without an idea that they lived, multiplied, and could devour or ferment. But it was Pasteur, still in his youthful teens, who made this discovery. He sought to find a way to exclude the elongated microorganisms and developed the first technique of sterility and gave spontaneous generation its death blow.

It is not my purpose to retell his life. But Pasteur had the ability to apply the insight and lessons he learned in the schoolroom to the perplexing problems facing his day. A disease of silkworms was ruining the south of France. Pasteur agreed to study the problem even though he had never seen a silkworm. In 4 months he had applied the technique of the laboratory to the disease and quenched the malady. He conquered chicken cholera, and in the attack upon the dreaded anthrax disease of cattle developed the principles of antitoxin to a science.

Then he began to meet personal attacks and vilification. He attempted to stamp out rabies by means of antitoxin. One day there came to this chemist's door two peasants bearing a child in the last stages of hydrophobia. "But I cannot save him," Pasteur

protested. "It is too late." They begged, but he resisted. Should the cure fail now, disrepute might blight the whole undertaking. But the agonies of the child spoke to his great heart. He plunged in the needle even though he knew it was too late and watched—the failure. The peasants then turned on him and ran through the village telling all that Pasteur had killed their child. This was the darkest hour of his life. Then came a stroke, illness from the difficulties of his struggle, but he would not give up.

Then came the aforementioned day in November 1888, when he knew his greatest triumph. It was at the inauguration of this institute that Pasteur closed his oration with the words I should like to use: "Two opposing laws seems to me now in contest. The one, a law of blood and death, opening out each day new modes of destruction, forces nations to be always ready for battle. The other, a law of peace, work, and health, whose only aim is to deliver man from the calamities which beset him. The one seeks violent conquest, the other the relief of mankind. The one places a single life above all victories, the other sacrifices hundreds of thousands of lives to the ambition of a single individual * * * which of these two laws will prevail, God only knows. But of this we may be sure, that science, in obeying the law of humanity, will always labor to enlarge the frontiers of life." It is that last line which intrigues me—"of this we may be sure, that science * * * will always labor to enlarge the frontiers of life." We sincerely pray this may ever be true.

Ours is a contest of science between nations and we are told that the outcome of the peace of the world depends upon our scientific achievement to match the scientific advancement of those who might challenge our way of life. But really, our great need is to push back the boundaries and to develop a science for creative living.

Ours is a world in which we have increased our information without having increased our wisdom of living. We are living in a world in which we have multiplied our riches without having learned how to use our wealth creatively. We have developed the natural resources of the earth without having developed correspondingly greater resources of the spirit. Our prayer still is:

"Give me men to match my mountains,
Give me men to match my plains,
Men with empires in their purposes
And great eras in their brain."

Only such men will be able to reach out and claim the new frontiers for humanity of which Pasteur spoke 71 years ago.

May we still have the faith of Pasteur that science will always labor to enlarge the frontiers of life.

If so, first of all we shall have to stress and stress again our need for clear thinking. This is not always easy. There is a good deal of truth in the old saw or maxim—"5 percent of the people really think, 15 percent of the people think they think, and 80 percent would rather die than think." Oh, we often hear, "Everyone has a right to his own opinion." But like many sayings this is only a half truth. Does anyone really have a right to his own opinion on public affairs, the issues confronting us, the important decisions of life unless his convictions are rooted in fact, subjected to criticism, and tested in the marketplace of competing ideas? Certainly I should not desire to be treated by a doctor who always followed his own opinions. No; the opinions of medicine are first tested in a laboratory, tried out very cautiously, studied closely for results and then placed in the hands of those who have been trained to evaluate, make decisions in regard to life or death and act in the light of all the available information.

The mental discipline needed for the thinking required to meet the ever-changing advancing life on the frontier of thought must be first of all, well informed. Ever alert to his own prejudices, ever watchful for half truths and willing to change his set opinions as new facts or accomplishments are presented.

An Oxford Don defined education as what you have left when you have forgotten all you have learned. What he was stressing is the need for a disciplined, well-informed, critical faculty, able to separate the essential from the unessential in the ever-increasing volume of facts in such a way that we have left the ability to penetrate to the heart of a subject, the power and habit of reflection and an alert and intelligent self with which to live. This makes of education an unending process and saves one from ever mentally growing old.

Again, the new frontiers will be claimed by those who have vocational competence. Still as of old, the honors of life go to the man who is able to accomplish, follow a plan or a dream until it becomes an actual accomplishment. It is said that if you wish to stay young, associate with young people, and if you desire to grow old, just try keeping up with them.

Henry Van Dyke, former professor of English at Columbia, minister and, during the First World War, Ambassador to Holland, once said that you could classify college graduates into three groups. He called the three ideas of education that he met in his world travels, first the decorative, which confers an air of distinction and enables a man to rate as a university man in the community. He can wear his fraternity pin, or perhaps a Phi Beta Kappa key, and stand apart as a man who has had the privilege of studying with some of the great instructors or professors in his chosen field. Secondly, the marketable, which looks on education as a profitable deal, financially rewarding. And then, the creative, which he noted reveres college training for the mental stimulus it affords. We have all met these three groups.

There are those who do reveal their education as a mark of distinction but never really distinguish life in service to mankind. There are those who financially climb the ladder of success but never think of life as an investment or accept the responsibility of stewardship. There are those who think of education as creative, the enrichment of life, and allow its beauty to permeate all of their actions. While I would not wish to disagree with Henry Van Dyke, for the life of me I cannot see anything to prevent all three of these attitudes being present in the well-balanced life.

A man should accept the privilege of his years of schooling as a mantle of competence, character and intellectual insight which directs his life. In the field of economics he should have grasped some of the tools which will enable him to be a sound workman having vocational competence. He also should possess an historical perspective, an understanding of the general knowledge which enriches life out of the heritage of the past. He should know what Emerson meant when he wrote: "The lesson of life is to learn what the centuries have to say to the hours." In the competitive struggle of life on a world, national and community scale, we need the best equipment we may secure to perform the work we have chosen in which to invest the precious gift of our life.

It is also unthinkable to me that anyone dare move out on to the frontier of life without some scientific understanding. Surely, in this school, here is one of the priceless gifts which may be acquired.

Now, it is unlikely that the intricacies of modern science will be understood by a great many people. But how important it is that the practical lessons of science be applied to daily living. We call this the scientific age but really it is an age in which great scientific advancement has been made by a few. Yet we still are challenged to apply the scientific spirit to the great problems confronting us. What problems our day faces.

There is the problem of increasing population growth. Every child means the need for more gifts and service. The only answer possible will be found in a scientific approach of providing food, clothes, housing, and a chance for the people in the great undeveloped areas of many of the nations of our world.

There is the problem of the struggle for power. America, with 6 percent of the world's population, uses 50 percent of the world's resources. Students all agree that this figure will change. The undeveloped areas are crying for a larger share of the world's goods. But in the laboratories, in scientific understanding, we know that we have but begun to tap the resources that may be found in the sea, the power of the sun, the new synthetics, or making a better use of the things we already have. But the answer will lie in the application of new insight through science to the problem before us.

Or here is the problem of automation. The industrial revolution has simply moved into a new phase of change in the life of industry.

That fateful day in August of 1945, when the first atomic bomb was exploded, ushered in a whole new era. They tell us that in one atomic bomb there is more destructive power than in all of the bombs dropped by the Allied air force during the years of the last World War. Here we understand what Pasteur meant when he said that "two opposing laws seem to me now in contest. The one, a law of blood and death, opening out each day new modes of destruction * * * the other, a law of peace, work, and health."

Some people in the face of the problems to be solved will think only of the difficulties. (Someone has defined the difference between a pessimist and an optimist by saying that a pessimist in any situation sees only the impossibilities while the optimist will take note of the possibilities.)

Others will try to turn their back on the problems, believing that solutions will come of their own accord.

But others, in a true American spirit, will accept a challenge, give all that they have and in faith and high courage apply the gifts of science and understanding to finding solutions to perplexing problems which will raise the standard of living for all.

Given real mental and moral discipline, vocational competence, scientific understanding, there is yet a need for spiritual conscientiousness. A doctor is dedicated to advancing life. The joy of being an American is that we not only think of life on the economic and material plane, but we hold the great spiritual ideals of freedom, of responsibility, our American way of life, the right to worship and our responsibility to God, all sacred in the growth and development of life. Still, as of old, the Master Teacher inquires, "What does it profit a man if he gain the whole world and lose his own soul?"

When a man gains spiritual consciousness he becomes aware of beauty, goodness, truth, and love. He thinks of his body as the holy temple of life. He seeks for worthy ends and purposes in the art of living. It means that at the heart of life there is a sacred shrine.

In our 50th State, Hawaii, every morning a contingent of sailors put out from the shore to go to the middle of the harbor to put the American flag up on a pole that rests in a concrete base jutting out of the water

Every night at sunset they go out and take the flag down and reverently bring it back to shore. Why do they do it? Well, in the middle of the harbor there is buried the battleship *Arizona*, which was sunk during the attack upon Pearl Harbor. In the sunken ship there is nearly an entire crew of officers and men who gave their lives to the last full measure of devotion. We must never forget that all over the world there are such monuments which must not be in vain.

We complain a great deal in America about the overhead of taxes, the high cost of living, but we should never forget the underground and the great investment that has been made by those who have gone before that we might live. Truly, every place we stand, in the light of the terrific sacrifice of the past, is holy ground.

A sound mind, in a sound body, with spiritual ideals, with the training necessary to make life creative and useful; this alone, it seems to me, is the type of life required for the many frontiers of our space age.

Ukrainian Independence Day

SPEECH
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. COLLIER. Mr. Speaker, on January 22, 1918, the Ukrainian people regained their freedom by proclaiming their independence and by establishing the Ukrainian Republic. That act, the founding of the democratic Ukrainian Republic, was the culmination, the happy climax, of a long struggle that had its beginning in the mid-17th century when the Ukrainians were brought under the autocratic Russian regime. It is one of the happiest climaxes in the modern history of nations fighting for their freedom, and as such constitutes the brightest page in the history of the Ukrainian people. But the happy period which followed the establishment of the Ukrainian Republic did not last long, for the forces of destruction and death, the aggressive Communist Red army troops, were on the march. Late in 1920 they invaded the Ukraine, overran it, treacherously put an end to freedom there, and brought the Ukrainian people under the oppressive Communist totalitarian regime. And for all these years, for almost four decades, they have been held down by their heartless overlords in their historic homeland.

The peoples subjected to the Soviet Union's totalitarian tyranny have suffered for decades, but it is no exaggeration to say that no people, perhaps at no time, have suffered for so long and have sacrificed so much in material wealth and in terms of human life, as have the Ukrainian people under the unspeakable Communist totalitarian dictatorship. The number of those who died because of the manmade, Stalin-administered starvation campaign, is counted in the millions; and many more millions lost their lives in prison camps and in forced labor camps in some forbidding parts of distant Siberia. Thus the price the Ukrainian people have paid for their survival, for their miserable existence, has been frightfully high.

Still, I am happy to say that these brave people have not ceased fighting their oppressors. They still carry on their struggle, ceaselessly and systematically, with all the means at their disposal, in the hope that eventually their righteous cause, the cause of freedom and independence, will win out. On the observance of the 42d anniversary of their Independence Day my best wishes go to these dauntless and courageous souls.

This Can't Be Allowed To Go On

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. CURTIS. Mr. President, as our Government continues to grow larger and larger, the liberties and rights of the people decrease. We have large Government operations that rule rather arrogantly. I ask unanimous consent to have published in the Appendix of the RECORD an editorial from the Farm Journal entitled "This Can't Be Allowed To Go On."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS CAN'T BE ALLOWED TO GO ON

Farmers are as much interested in protecting the public health as anyone. But with respect to feed additives, pesticides, and similar tools of modern agriculture, we have an intolerable situation.

1. We have a law that needs changing—the Delaney amendment, or "additive" to the Food Additives Act. It specifies that no substance which has ever caused cancer, in so much as a laboratory mouse, can be added to feed. It doesn't matter that the substance requires massive doses over an extended time; it doesn't matter that as little as one part per million of the additive may show up in meat, milk, or eggs, or that absolutely none shows up. Congress—not scientists—has said this is dangerous and can't be allowed. The trouble with the law is simple: It leaves no room for scientific judgment.

Never before has the Food and Drug Administration been hamstrung this way. It has allowed tolerances of some 2,000 potent substances which are judged by scientists to be safe in negligible amounts. Why not continue to let scientists decide?

Actually it has been proved that salt, pepper, eggs, or glucose solutions can produce cancer in experimental animals as readily as diethyl stilbestrol, which produced the recent poultry scare. Other estrogens, which act much like stilbestrol, occur naturally in alfalfa hay, corn, and wheat. Are we to stop feeding them, too?

The result of the cancer scare is that Food and Drug is not approving any new feed additive. Manufacturers are now required to prove not only that their product hasn't yet produced cancer but that under no conceivable circumstances could it do so—obviously impossible of proof. Hence progress with new and better feed additives has almost ground to a stop. The pesticide world has been thrown into confusion.

2. We have an able, though understaffed, Food and Drug Administration which is not completely running its own show. Decisions, if they have any publicity value, are being made by the Secretary of Health, Education, and Welfare. In the more spectacular instances, the pronouncements come from him, too—by press conference.

FDA is responsible to a Cabinet Officer, who is a political appointee, part of a political administration. We can't say whether Arthur S. Flemming, Secretary of HEW, is influenced by political motives or not. The point is he could be. And if he weren't, his successor might be. The Secretary of HEW doesn't have many opportunities to make the front page. When something like cranberries or capons comes along, it's a temptation to call a press conference, toss the word "cancer" about, suddenly achieve headlines and emerge as the great defender of the people.

What can be done? Well, first, we need a change in the Delaney amendment. Second, we need a change in the administrative setup. Third, farmers must absolutely follow labels—the responsibility is on them, too.

As to administration, we need to remove from the hands of any one man, particularly when he is a political office holder, (1) the power to panic American consumers with a mere ill-advised statement, and (2) the power to lay low with one blow an entire segment of agriculture.

How can we do it? We might make FDA an independent agency like the Federal Trade Commission. We might equip FDA with better advisory bodies than it already has—let these bodies assay the danger, make recommendations, and take over the function of announcing such news to the public. We might bring in the U.S. Public Health Service. Agriculture ought to have a voice somewhere—at least it should be heard. Maybe we need a new broad-based commission.

Certainly we need something better than we've got. The present situation cannot be allowed to go on.

Ukrainian Independence Day

SPEECH
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. O'NEILL. Mr. Speaker, the fair and fertile Ukraine has been the land of the unfortunate and unhappy for centuries. In the course of their modern and recent history the Ukrainian people have suffered under many cruel, autocratic, and oppressive regimes, and their present-day Communist oppressors have been most cruel towards them. Having robbed the Ukrainians of their newly regained freedom, these Communists, Godless agents of the Kremlin, have succeeded in enslaving the Ukraine's 42 million innocent and helpless inhabitants. For almost 40 years these people have been held down by the brute force of totalitarian dictatorship. But under unheard-of hardships and privations, and under indescribable misery, their spirit of freedom is not broken, and they still have their fervent desire for free-

dom. I have no doubt that eventually they will have their reward. On this 42d anniversary of Ukrainian Independence Day I extend my wholehearted sympathy to, and best wishes for, these stouthearted people.

Denver: The Mile-High City

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. ALLOTT. Mr. President, this Nation has enjoyed an almost unique position among the nations of the world from its very beginning. First settled as a haven for people seeking to worship as they please, the essence of fredom has been the very foundation of the United States of America.

Through the years, people of every race and of every faith have contributed to that foundation and have made of the United States a nation of men who may walk tall in the knowledge that they worship and work and act as independent, free-thinking individuals. We, in Colorado, are proud of the many peoples who took part in opening the West, in forging the basis for its great growth and great future.

Among those who have contributed vigorously to this growth and progress are members of the Catholic Church, whose missionaries were among the early western pioneers. A reflection of their work and their pride is contained in the December 1959 edition of the Catholic Digest.

Mr. President, I ask unanimous consent that this article by William E. Barrett be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DENVER: THE MILE-HIGH CITY—HER MEMORIES INCLUDE STALWART MISSIONERS, SILVER MINERS, COLORFUL JOURNALISTS, AND BUFFALO BILL

(By William E. Barrett)

Denver, Colorado's State capital, celebrated its 100th birthday this year. A century ago, the rush to the Rockies was inspired by the lure of gold. The anniversary rush has been composed of tourists seeking vacation thrills—fishing, hiking, horseback riding, mountain climbing, or driving on colorful highways against glorious backdrops of towering mountains.

Denver has many approaches: air, rail, and highway. The great road of the visitor is historic Route 40, which enters from the east, cuts through the heart of the city, and climbs into the mountains on the way to Salt Lake. This was the most difficult and dangerous route across the plains 100 years ago, the route of stagecoaches and freighters. It was known then as Smoky Hill Trail.

You can learn the history of Denver, and see much of it, without leaving Route 40. Your first impression may be deceptive. After the long miles of flat prairie and widely spaced towns in eastern Colorado, you may easily mistake Aurora for Denver. A sleepy suburb before the Second World War, Aurora is now the fourth-largest city in Colorado. It crowds the Denver boundary on its west and pushes out into the plains to the east.

Fitzsimons Hospital, on the right as you drive into the city, is the largest Army hospital in the United States. It is an imposing group of red-roofed buildings on 600 acres. When President Eisenhower was stricken with a heart attack on September 24, 1955, while visiting his mother-in-law in Denver, he was taken to Fitzsimons Hospital.

The old Smoky Hill trail ended at what is now the civic center. State and city government, symbolized by the capitol and the city and county building, confront each other across 15 acres of lawn, bisected by Broadway. Colorado's capital, a small scale copy of the National Capitol in Washington, D.C., is distinguished by the gold-leaf covering of its dome. The dome is floodlighted at night. One of the capitol steps is exactly one mile above sea level, and is so marked.

On the west side of Broadway is a centennial exhibit. It includes a small, gaudily painted locomotive from the exciting narrow-gage railroading days. Above the locomotive towers a huge missile, nose pointed to the sky. It is a Titan intercontinental ballistic missile, a two-stage, 90-foot, liquid-propellant rocket with a range of 6,000 miles at a speed of 15,000 miles an hour. The Titan is made in Denver at the Martin plant. It made its first flight from Cape Canaveral February 6.

South of the civic center is the new library. The Denver public library is famous for its western history and aeronautical collections.

Northward on Broadway is the Brown Palace Hotel; Denver's leading hotel since 1892. It has sheltered many famous persons. It became a temporary White House when when President Eisenhower was a visitor. The Brown opened a 22-story annex to celebrate the centennial.

Another hotel, the show place of its day, has been less fortunate than the Brown. The Windsor opened in 1880. The land on which it stood cost $200,000, the building $350,000, and the furnishings $200,000. Among its guests through the years were Presidents Grant, Cleveland, Theodore Roosevelt, and Taft. Mark Twain registered there; so did Oscar Wilde, Robert Louis Stevenson, George Bernard Shaw, Eugene Field, Robert W. Service, John L. Sullivan, and Grand Duke Michael of Russia.

Its most colorful guests, however, were the Tabors: H. A. W. Tabor, U.S. Senator, mining magnate, and builder of the Tabor Grand Opera House; and his second wife, the legendary Baby Doe. At the height of his fame, Tabor lived in the finest suites of the Windsor. After he had spent more than $12 million in a dozen years, he died in poverty in one of the Windsor's smallest rooms. He was received into the Catholic Church 2 weeks before his death. He was buried from Sacred Heart Church, the pioneer Jesuit church of Denver.

The Windsor Hotel, like Tabor, fell from glory to drab poverty. The neighborhood around it deteriorated. Still retaining traces of its former elegance in floors of black walnut and white ash, diamond-dust mirrors, marble tiling, and wide walnut staircases, it became a shelter for skid-row transients. It still stands, waiting hopefully for an angel to restore it.

Two blocks east of the capitol is another powerful symbol of Denver's past and present. Immaculate Conception Cathedral was dedicated October 27, 1912, 6 years after the laying of its cornerstone. It stands upon a hill, thrusting its spires 230 feet into the beautiful sky. It is a monument to Bishop Nicholas C. Matz, second bishop of Denver, and to Msgr. Hugh L. McMenamin, its first rector.

Denver's first cathedral was St. Mary's, a 30-by-40 brick building erected in 1860 by Father Joseph P. Machebeuf, the missionary priest who became the first bishop of Denver. When the first cathedral was built, the city had fewer than 200 Catholics in a total population of 3,000. Cathedral school claims direct descent from Father Machebeuf's school, opened in 1862 with one lay teacher.

When he died in 1889, Bishop Machebeuf presided over a diocese of 40,000 Catholics. In 1931, Denver became an archdiocese under its present archbishop, the Most Reverend Urban J. Vehr, fourth bishop of Denver and first archbishop. There are 140 parishes and 159 missions in Colorado today, and 274,119 Catholics. More than 20,000 children attend Catholic schools in Denver, more than 28,000 in the archdiocese.

Many men and women who played important roles in the winning of the West have been buried from Immaculate Conception cathedral.

One of the most spectacular funerals was that of Col. William F. Cody (Buffalo Bill) in January 1917. He was a convert of Father Christopher V. Walsh, a cathedral curate. Father Walsh, now retired, has been pastor of several churches.

Father Joseph Machebeuf came to Denver in October 1860 under orders from his companion in the missions of Ohio and New Mexico, Bishop Jean Baptiste Lamy (later Archbishop) of Santa Fe. The careers of these two men have inspired many books, including Willa Cather's novel, "Death Comes for the Archbishop."

The Methodists had built the first church in Denver. When Bishop Miège of Leavenworth visited Denver in June 1860, he said the city's first mass in a private home. Father Machebeuf, on his arrival, needed everything that a pastor could need; church, school, parishioners, and money. Eventually he obtained the first three, but even after he became the bishop, he always lacked funds. He lived in pioneer paverty to the end of his life, riding over a vast territory in wagons and on horseback, still doing the work of a missionary priest.

Five blocks south of the city and county building is a large plant in which the Register newspapers are printed. There was a Denver Catholic Register early in the century, but its circulation was small, its publication haphazard, and its influence slight. On October 1, 1913, Matthew Smith, 22 years old, was appointed editor. He had an 1890 typewriter, a couple of old desks, two chairs, no employees, a circulation of 2,800, and a debt of $4,000.

From that beginning, the dogged and devoted young man built the largest chain of Catholic newspapers in the world. He was ordained a priest in 1923. Msgr. Matthew Smith is still editor of the Denver Catholic Register and of the Register national edition. Newspapers of 31 dioceses are printed at the plant.

Denver has always been noted for colorful newspapers and picturesque newspaper characters. Bonfils and Tammen, the gambler and the bartender who combined talents to create the Denver Post, left legends which grow with the years. Gene Fowler, whose career began on Denver papers, wrote the Bonfils-Tammen story in Timberline.

Damon Runyon, Eugene Field, and Clyde Brion Davis worked on Denver papers early in their careers. The Rocky Mountain News, now a member of the Scripps-Howard chain, occupies its own building behind the Civic Center, facing the U.S. mint. It is Colorado's oldest newspaper, published continuously since April 23, 1859.

The mint is one of the two surviving mints in the country. Sixty-five percent of the Nation's coinage is produced there. It was famous once for silver dollars, which circulated more freely in Denver than paper dollars. No silver dollars have been minted since 1934, but they have been plentiful in

Denver again this year. The mint released part of its $15 million storage stock.

Denver's downtown district was until 5 years ago a monotonous group of low buildings, controlled by an ordinance restricting height of buildings to 12 stories. The one structure which escaped the ordinance was the Daniels and Fisher tower. The tower, modeled on the campanile of St. Mark's in Venice, dominated the skyline. It is dwarfed today by a whole series of new skyscrapers.

Denver has grown apace since the 2d World War. Lowry field was a training center for bombardiers and aerial photographers during the war and a separation center for Air Force personnel at the end. Many of the airmen returned with their families to live in Denver.

About 10,000 Air Force technicians are trained every year at Lowry Field. On the old bombing range, a launching site for the Titan ICBM is now being built. Lowry is linked with the North American Air Defense Command at Colorado Springs, and with the Atlas ICBM operation at Warren Air Force Base in Cheyenne, Wyo. The Air Force Academy was located at Lowry until its buildings were completed near Colorado Springs in 1958. Members of this year's graduating class, the academy's first, spent 3 of their 4 cadet years in Denver.

The odd angling of downtown Denver streets is due to the tendency in early Denver to lay streets parallel to, or at right angles to, Cherry Creek. The creek is now an unimpressive trickle. The first shacks were erected on its banks by the earliest gold seekers in 1858. Two rival communities came into being on opposite sides: St. Charles and Auraria. St. Charles disappeared with the organization of the Denver Town Co. in 1859. Auraria was absorbed on April 3, 1860.

The settlement was named after Gen. James W. Denver, Governor of Kansas Territory. Those early settlers were disappointed in their search for gold. They were harassed by Indians and buffeted by severe winters. But the town prospered by supplying the needs of gold seekers. Those who found gold in the hills came back to the town to spend it, but Denver's great boom days grew out of silver strikes rather than gold.

St. Elizabeth's Church stands on the west side of the creek, it spires visible from most of the downtown intersections. It is Denver's second church, built by Father Frederick Bender, a German missioner, in 1879. The population of the city was then 15,000, with about 3,500 Catholics. Franciscans took charge of St. Elizabeth's in 1887.

On February 28, 1908, Father Leo Heinrichs, one of the Franciscan Fathers at St. Elizabeth's, was fatally wounded by a fanatic while distributing communion at the 6:30 mass. Father Leo's cause has been advanced for beatification. If he is canonized some day, as many Denverites hope, he will be the second saint who has lived in the city. Mother Cabrini once worked at the Queen of Heaven orphanage. A shrine erected in her honor has a lovely mountain setting outside the city.

The University of Denver, near the southern city limits, dates from the founding of the Colorado Seminary of the Methodist Episcopal Church in 1864. The university is operated today on a nonsectarian basis, while retaining a seminary.

Two Catholic colleges stand within the greater Denver area. Loretto Heights College traces its history to the arrival of the first Lorettines (Sisters of Loretto at the Foot of the Cross) in Denver and the establishment of St. Mary's Academy on August 1, 1864. Last year, 625 girls were enrolled at Loretto. The Jesuits' Regis College accepted its first students as Sacred Heart College in 1884. It is now joined to Regis High School on a 94-acre campus. Enrollment at Regis College for the 1958–59 term was 1025.

St. Thomas seminary, founded in 1908, has trained 645 young men for the priesthood.

The first hospital in Denver was St. Joseph's, established in 1873. The most famous of the city's institutions of mercy is the National Jewish Hospital, internationally known for its contributions to the world's knowledge of tuberculosis, asthma, and heart surgery. Its motto is "None may enter who can pay: none can pay who enter."

Beyond the western boundary of the city lies the foothills of the Rockies. The mountain roads are beautifully banked and graded, easy to drive. You may follow Route 40 to Salt Lake City or turn off to explore Central City, the old mining town famous for its annual opera festival in an opera house the miners built.

You may visit Buffalo Bill's grave on Lookout Mountain, a shore drive from Denver, or Red Rocks amphitheater, a theater carved by nature which has been provided with a modern stage and seating for more than 10,000. The Denver Symphony Orchestra plays there in the summer.

Colorado will not celebrate its 100th year as a State until 1975, but if you cross the ranges to the western slope, you are reminded that this country is not new to history. The western half of Colorado was explored and accurately mapped by two Franciscan priests, Silvestre Velez de Escalante and Antanazio Dominguez, in the year of destiny, 1776. New Mexico, where they started on their expedition, had 11 Catholic churches in 1617, 3 years before the Pilgrims landed at Plymouth Rock.

Air Transport Rights for KLM

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, January 22, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Stick to the Rules," which appeared in the Washington Post on Monday, January 18, 1960.

The request by the Government of the Netherlands for aditional air transport rights for KLM, the national airline of that country, would require the United States to set aside the policies the United States has followed in agreements with more than 50 other countries, many of whom are also good friends and allies. To grant the request would be unfair to many other governments as well as to our own airlines.

The fairness and soundness of this position is well stated in the editorial "Stick to the Rules," which appeared in the Washington Post, Monday, January 18, 1960.

The denial of the most recent request can hardly be called unfair, because of the unprecedented advantage the Netherlands airline already enjoys from its rights in the United States. KLM operates air service to and from New York, Miami, and Houston. About one-third of KLM's total international revenues are earned from the rights it has in the United States.

Furthermore, according to Time Magazine for August 17, 1959, KLM earns $29,400,000 from its rights to carry passengers to the United States; but the U.S. airline serving passenger traffic to and from Netherlands points earns $1,700,000. In the face of this advantage, there is no justification for additional air rights for KLM. To make further grants could only arouse similar unfair demands by other governments.

I strongly urge our State Department to give serious consideration to the danger involved in abandoning the principles upon which our whole system bilateral agreements is founded.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 18, 1960]

STICK TO THE RULES

The Netherlands currently is seeking United States approval of an Amsterdam-Los Angeles route for the Dutch airline, KLM, in the renewal of a request that was denied 2 years ago. From the Dutch viewpoint, another rejection would seem to be discriminatory. As Netherlands spokesmen note, "KLM alone among the large European air carriers has been denied the right to serve the west coast." Jet airliners promise so fast a trip from California to Europe that there is little doubt that an increasing share of the American oversea travel market will develop in the West. KLM not unnaturally wants to be in on it.

Regrettably for the Dutch, they have had to develop and seek to improve their sizable role in world air transport under a serious handicap which neither they nor this country can do very much about. This is that Holland neither provides nor attracts a large number of air travelers. Yet the demand for travel to and from a country has by common agreement—including the agreement of the Netherlands—come to be the standard by which the nations attempt to allocate landing rights to each other.

The United States, which is the largest generator of world air travel, already has given KLM access to a considerably greater share of the American market than this rule would seem to allow. A very large proportion of those who fly KLM from New York to Amsterdam go directly on to other European destinations. KLM in effect has assumed a supranational character, tapping the American market far beyond the actual travel requirements to and from Holland. If this were not the case, or if KLM were prepared to give up flights in New York in exchange for west coast rights so that the relative advantage over other foreign carriers which it already holds at least would not be increased, the Dutch case would have more merit.

In its essence, the plea for even greater access to American travel dollars is a plea that the United States change—or at least wink at—the basic concept of air route allocations. Obviously rules of concern to many nations—many of them, like the Netherlands, friends and allies of this country—cannot be altered in the context of a bilateral negotiation. Whatever the shortcomings of the present method, no obviously fairer standard has been suggested.

As for winking, there has been plenty of this in the past out of respect for Holland's financial needs and its role in NATO. But if there are extraneous considerations, they should be dealt with in a different context. International aviation policy is fraught with enough complications as it is. The need is for a rational, even-handed application of the rules—until the rules, by common agreement, can be improved upon.

This Miracle America

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. ALLOTT. Mr. President, it is important that all of us continually review the pattern of American history, seeking guidance in the heritage of freedom which made this Nation great. This is true on both domestic and on international issues.

We learned in the depression days of a quarter century ago that our complex economy makes it virtually impossible for every American to assure completely his own security. We inaugurated a number of programs, some wise and some not so wise, which are designed to assure basic security and maximum opportunity.

Yet these programs and that opportunity and freedom are imperiled today by inflation and by too little respect for the great American traditions of individualism. It is a specter which haunts most the greatest number of Americans—those on wages and other fixed incomes. One of my constituents, Mr. H. G. Frankel, of Denver, recently wrote an article which poses this problem against the background of our heritage.

Mr. President, I should like to share some of Mr. Frankel's thoughts with my colleagues and accordingly request that excerpts from that article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MIRACLE AMERICA: WHAT MADE THIS MIRACLE—THE UNITED STATES OF AMERICA?

(By H. G. Frankel)

With less than 7 percent of the world's population, how is it possible that almost every nation on earth—both inside and outside the Iron Curtain—looks to us today for aid?

In 183 years we have attained a greater degree of freedom and a higher standard of living for the great mass of people than was ever dreamed possible in 10,000 years of recorded history.

Our wealth and industrial capacity were the deciding factors in two world wars.

Other nations have had as much or more territory; and many nations have had greater natural resources.

What, then, caused this miracle—this heaven on earth?

We believe it was due to the men who founded this country, and the free enterprise system of government they formed—a republican representative government unique in all history. We believe that these geniuses were the true liberals of the ages—that they were as God-inspired as the prophets of the Bible, and that their concepts of government are as true and binding today as they were in 1776 and 1789.

What were some of the basic concepts of these founders?

Individual responsibility as a corollary of individual freedom.

That without property rights you cannot have full human rights.

That the less the government and the more economical the government, the better the government.

A maximum of local self-government and a federal government of delegated powers only.

That a paternalistic government must ultimately lead to tyranny.

These concepts of government brought to our shores men who wanted opportunity rather than security. This new birth of individual freedom, together with the incentive that a man could retain for himself and his children the bulk of the wealth he created, brought forth this dynamic society and opened new horizons for civilization.

The ironic fact today is that those who hold fast to these principles—truly the most liberal in history—are labeled "reactionaries" by many self-styled liberals; whereas many of these pseudo liberals are diametrically opposed to most of the basic concepts of Washington, Jefferson, Franklin, and the other founders.

In the past 25 years we have traveled back a long way to European paternalism and collectivism, and the farther we travel that road, the more impossible it becomes to turn back. This road is plainly marked for all to see:

Unbridled expansion of federal government.

Unlimited increase of federal bureaucracy.

Wiping out the dollar by excessive Federal spending.

Then controls and more controls, and then finally—complete regimentation.

In times of depression, we are told that the only way back to prosperity is to open the flood gates of the Federal Treasury.

In boom times, we are told that continued prosperity depends on still more Government spending.

Pressure groups are encouraged to constantly demand more and bigger subsidies; and politicians vie with each other, to buy elections with the taxpayers' money, and to offer pie in the sky to everyone.

We are told it is impossible to ever balance our budget anymore because of necessary defense expenditures—so why even try?

And then, the most vicious fallacy of them all—"why even worry about the public debt, since we owe it all to ourselves."

The time has definitely come for the public to arouse itself from its lethargy and to realize that:

Free enterprise and individual liberty are so inextricably bound together, that one cannot survive the other.

That our free enterprise system cannot survive much more whittling away of the dollar.

That the decrease in the value of the dollar, and the increase in the cost of living must be in mathematical proportion to the amount of Federal deficit financing; and that this excessive Government spending is the prime and basic cause of all inflation.

That a welfare State cannot be a free State, and that responsibility for welfare funds, public housing, slum clearance, education, etc. should be given back to the States and the local communities where they belong.

That the way to economize is to economize, and the way to balance the budget is to balance the budget.

That we can maintain all necessary defense expenditures and still balance the budget—and in addition, redeem a minimum of $5 billion per year in times of prosperity, providing we resist any further grants or subsidies to favored pressure groups, and make a determined effort to reduce the present ones as rapidly as possible.

That public pressure forces Congress to eliminate at least part of its annual pork barrel legislation, and

Providing the Hoover Commission report is adopted in toto.

Our American way of life cannot be destroyed from without—only from within. Today we are at the crossroads. Surely all of us—farmers, merchants, labor, and capital—can forget our own selfish interests and can unite to prevent any further inroads on the most wonderful heritage any people have ever been blessed with.

Remember, this miracle—America—never happened before in all human history. But once destroyed it may never happen again.

Elimination of Racial Bar by Trainmen Forward Step in Securing Job Equality

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. NEUBERGER. Mr. President, a special convention of the 20,000-member Brotherhood of Railroad Trainmen has voted to eliminate the racial bar in the union's constitution.

I wish to congratulate the brotherhood on this action, which is in the best tradition of the union movement. The decision of the brotherhood is in accordance with the general labor ban on racial discrimination. Now only one union affiliated with the AFL–CIO retains a constitutional bar against admission of Negroes.

Removal of offensive constitutional language does not solve the problem of racial discrimination in unions. Practices and procedures can be shaped to subvert intent. It is my hope that American unions will continue to pursue with vigor—on the job as well as in the convention hall—the goal of equality for all workers.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article by A. H. Raskin headed "A Loss for Jim Crow" which appeared in the January 21, 1960, issue of the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LOSS FOR JIM CROW—TRAINMEN'S VOTE TO SCRAP RACIAL BAR SHOULD EASE FRICTION IN AFL–CIO

(By A. H. Raskin)

The merged labor federation has just scored its most dramatic breakthrough in its fight to eliminate racial discrimination in its affiliated unions. The victory took the form of an overwhelming decision of a special convention of the 200,000-member Brotherhood of Railroad Trainmen to scrap the color bar in its constitution. The action should do much to temper the bitterness that erupted in a floor fight over the race issue at the biennial convention of the American Federation of Labor and Congress of Industrial Organizations in San Francisco last September.

The debate had left in the minds of many Negro workers doubts about the sincerity of the federation's desire to wipe out Jim Crow rules and to give meaningful expression to the antibias guarantees embodied in the merger compact 4 years ago.

The unhappiest aspect of the bitter exchange was that it created the outward appearance of a rift over principle between the two men who had been most conspicuous in the implementation of the no-discrimination drive. They were George Meany, the federation's president, and A. Philip Randolph, its only Negro vice president.

DIFFERENCES OVER SPEED

Actually their differences have never been over which way the federation should go, but over how fast its progress should be and how much pressure it should exert to make it faster. One of their specific points of disagreement at San Francisco was whether the parent organization should set a 6-month deadline for action by the trainmen to erase their whites-only clause. Mr. Randolph said "Yes"; Mr. Meany said "No." Mr. Meany's view prevailed.

The top-heavy vote by which the brotherhood's convention put its constitution in line with the federation's policies of racial equality vindicated Mr. Meany's belief that more could be accomplished by moral suasion than by using the big stick of an expulsion ultimatum.

He labored quietly, but with typical bluntness, to make certain that the constitutional issue would be put before delegates to the special convention, which had been called primarily to deal with problems raised by the passage of the Landrum-Griffin Act.

He reinforced his behind-the-scenes activity with a telegram to the convention, urging that the brotherhood's basic law be brought into compliance with the general labor ban against racial discrimination. Yesterday, his wish fulfilled, he sent another telegram, in which he said:

"True trade union brotherhood knows no racial distinction—a fact which your brotherhood has now underscored. The trade union movement cannot and will not rest until the civil rights battle has been won."

NAACP PRAISES MOVE

The National Association for the Advancement of Colored People, which has been sharply critical of the federation's performance in the civil rights field, also registered its gratification.

Roy Wilkins, the association's executive secretary, called the action "a heartening reaffirmation of the American principle of equal opportunity for all."

He expressed hope that the decision would spur laggard unions to move forward in ending bias.

The National Urban League and the National Labor Service of the American Jewish Committee urged business organizations to match labor's zeal in promoting fair employment practices.

The trainmen's move leaves only one federation affiliate, the 87,000-member Brotherhood of Locomotive Firemen and Enginemen, with a constitutional wall against the admission of Negroes. This contrasts with 26 unions in the AFL alone that had such keep-out clauses in 1940 when Mr. Meany first went to Washington as the federation's secretary-treasurer.

However, it is fanciful to pretend that the mere setting right of constitutional language has opend union gates to Negroes evrywhere. There are many union locals, especially in the building trades, that are as opposed to integration as any member of the White Citizens Council.

At its midwinter meeting in Miami Beach next month the federation high command intends to strengthen the enforcement machinery that is designed to back up its standing committee on civil rights. Whenever the compliance efforts of the regular committee prove unavailing, a special committee of AFL–CIO vice presidents will be appointed to demand that discrimination cease.

No one expects labor to achieve perfection in this field overnight. The same problems, real and imagined, that block headway in education, housing, and most other aspects of community life operate to retard union leaders and rank-and-life members. But Mr. Meany has given new proof that he and his associates are dedicated to the proposition that bias must go.

Establishment of a National Seashore Park on Padre Island

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, January 22, 1960

Mr. YARBOROUGH. Mr. President, although the President and the Secretary of the Interior have not officially announced which three seashore areas they believe should be given National Seashore Park status, United Press International reports it has learned that one of the three heading the list is Padre Island.

If this report is accurate, the Secretary of the Interior has made a wise choice for there is no disputing that this beautiful 18-mile stretch of beach holds promise for the future as the finest seashore recreation area in America.

Recently three Texas organizations have passed resolutions favoring the establishment of a national seashore park on Padre Island. These include the Bayshore Rod, Reel, and Gun Club, of Boytown, Harris County, which has more than 2,000 members, the Democratic Women of Bexar County, and Southside Lions Club of Corpus Christi.

Mr. President, I ask unanimous consent to have the three resolutions printed in the Appendix of the RECORD:

Resolution by Bayshore Rod, Reel, and Gun Club of December 21, 1959 favoring establishing a national seashore on Padre Island;

Resolution by the Democratic Women of Bexar County, Tex., of December 8, 1959, for establishment of Padre Island National Seashore; and

Resolution by the Southside Lions Club of Corpus Christi, Tex., of December 8, 1958, in favor of putting a national seashore recreation area on Padre Island.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION OF BAYSHORE ROD, REEL, AND GUN CLUB FAVORING PADRE ISLAND NATIONAL SEASHORE

Be it unanimously resolved by the membership assembled in general meeting of the Bayshore Rod, Reel, and Gun Club at 3223 Minnesota Street, in the city of Baytown, county of Harris, State of Texas, the evening of Monday, December 21, 1959, That

Whereas a Padre Island National Seashore Recreation Area is approaching realization through efforts of many public minded citizens and numerous elected and appointed public officials; and

Whereas Bayshore Rod, Reel, and Gun Club has examined closely the merits of the project and has found it worthy of support: Then be it

Resolved, That the Bayshore Rod, Reel, and Gun Club supports the preservation as a national seashore recreation area of all of that part of Padre Island between the present county parks at the north and south ends of the island, including the Laguna Madre and the coastal lands up to the intracoastal canal, and be it further

Resolved, That this support shall be both continuous and active until passage of the required legislation in the Senate and House of Representatives of the State of Texas and the Senate and House of Representatives of these United States, including both enabling acts and appropriations of adequate funds for both purchase and development, all this so that our children and their children may enjoy the right to go down to the sea to enjoy the sports and pleasures thereof and derive inspiration therefrom as our Father has intended for man without let or hindrance from time immemorial.

In witness whereof we set our hands

W. T. HUNT,
President (Presiding).
C. W. PLATO,
Vice President.
JIM NELSON,
Treasurer.
N. T. WADDELL,
Recording Secretary.
J. E. WALKER,
Corresponding Secretary.
DUSTY RHODES,
Financial Secretary.

RESOLUTION OF DEMOCRATIC WOMEN OF BEXAR COUNTY, TEX., FAVORING PADRE ISLAND NATIONAL SEASHORE

Be it resolved by the Democratic Women of Bexar County in San Antonio, Tex., assembled in a regular meeting on the 8th day of December 1959, as follows:

Whereas that area of land forming a part of the State of Texas on the Gulf of Mexico and known as Padre Island is of great natural beauty and of tremendous resort and vacation value to an extent rarely equaled elsewhere in our Nation; and

Whereas such an area as Padre Island should be set aside and reserved for the benefit and use of all the people of the State of Texas and of the Nation;

Now, therefore, the members of the Democratic Women of Bexar County do hereby go on record in support of the creation of Padre Island into a national park duly established by the U.S. Government in the interest of all of the people of our country.

MAE B. TUGGLE,
President.
MARY M. WARD,
Vice President.

RESOLUTION BY SOUTHSIDE LIONS CLUB OF CORPUS CHRISTI, TEX., FAVORING PADRE ISLAND NATIONAL SEASHORE

At the regular meeting of the board of directors of the Southside Lions Club of Corpus Christi, Nueces County, Tex., held at 8 p.m. December 8, 1959, at the Mercantile National Bank, on motion duly made, seconded, and unanimously passed by the board of directors the following resolution is unanimously adopted:

"Whereas it has come to the attention of the board of directors of the Southside Lions Club that the Federal Government has set aside funds for the creation of a national seashore area at some place on the coast of the Gulf of Mexico; and

"Whereas Padre Island is under consideration along with other sites to be designated as this seashore area; and

"Whereas it being the opinion of this board of directors acting on behalf of the Southside Lions Club that Padre Island is ideally situated and suited for designation as such seashore area; and

"Whereas it appearing that a hearing will be held in Corpus Christi on December 14, 1959, relative to the matter of such national seashore area and that this club should go on record as favoring such designation of Padre Island: Now, therefore, be it

"*Resolved,* That the Southside Lions Club of Corpus Christi, Tex., favors the designation of Padre Island as the site for the proposed national seashore area and at the December 14 hearing relative thereto, the

action of this club in support of such designation be made known; be it further

"*Resolved*, That a copy of this resolution be sent to the Honorable Noah Kennedy, Jr., county judge of Nueces County, Tex., that he may in turn present it in behalf of this club at the December 14 hearing."

LESLIE CHAPPELL,
President, Chairman, Board of Directors.
Attest:
ORVILLE HARRIS.

Castro a Threat to the Americas

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. BRIDGES. Mr. President, the patience of the American Government is being taxed to the limit by the daily actions and words of the Cuban revolutionary government and its spokesman, Fidel Castro.

One of the great problems which the Castro regime has promoted—that of stifling the healthy development of business in our hemisphere—is the subject of an article by David Lawrence, which appeared in the January 21 edition of the Washington Evening Star. Mr. Lawrence displays a keen insight in his discussion of our problems with Cuba; and I ask unanimous consent that his excellent article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Jan. 21, 1960]

CASTRO A THREAT TO THE AMERICAS—DICTATOR SEEN HURTING DEVELOPMENT OF BUSINESS IN WHOLE HEMISPHERE

(By David Lawrence)

When will all the Latin American countries wake up to the fact that Fidel Castro is doing more to hurt the business development of the entire hemisphere than anybody else, unless it is the regime in Moscow?

Businessmen today are hesitating whether to invest money in Central and South America. They wonder if the same destructive influences which gave Castro power will arise in other countries besides Cuba. Most significant is a statement just made by William R. Mathews, editor and publisher of the Arizona Daily Star. He is widely known for his writings and has for years done a great deal of traveling to different parts of the world to report on political and economic conditions. He says:

"As one of the several newspaper and radio reporters who interviewed Castro of Cuba in his home near Havana last February 28 and saw what a rare opportunity he had to bring about the blessings of freedom and democracy to his country, the course of events has compelled me to change my opinion drastically.

"I have seen Communist operations all over the world. Castro, in my opinion, is a prisoner of the Communists. The time is not far away when he will have to bow to their will and establish a 'people's democracy' or make way for his brother and others to do it.

"Probably in the next year, if our present hands-off policy continues, we will be confronted with a full-fledged Communist nation on our doorstep. When that happens, inaction on our part will have a profound effect elsewhere in the world.

"Let us not overlook the fact that Commissar Mikoyan spent 10 days in Mexico a few months ago. For what? If we remember that the Castro revolution was hatched in Mexico, the reason for such a visit becomes more apparent."

Mr. Mathews suggests that maybe the time has come to invite the people of Cuba to come into the United States with the same free commonwealth status as Puerto Rico has. Certainly, rather than have Cuba go Communist, many Cubans would prefer to be under American protection.

But the people of Cuba undoubtedly want to preserve their independence and their sovereignty. The United States can do a great deal to assist Cuba to remain free from the control of any foreign gocernment. The problem, however, is not merely in Cuba but all through Latin America, where the Communist apparatus is at work infiltrating political and economic institutions.

Relations between foreign countries and Cuba are steadily growing worse, rather than better. Confiscation of property is continuing. The American Government has been patient, but already measures of reprisal are being proposed.

Thus, Senator SMATHERS, Democrat of Florida, has come forth with the suggestion that the United States withhold from Cuba its subsidy on sugar until Cuba repays Americans for confiscated properties. The subsidy is about $150 million annually, and comes about because the United States pays Cuba a certain amount above the world price for sugar. The idea would be to deposit the differential in a special fund until the Cuban Government makes proper compensation for seized properties. If, within a reasonable time, Cuba doesn't compensate those whose investments have been confiscated, then the money would be used to repay Americans for their losses.

The Florida Senator, before leaving on a 10-nation tour of Latin America with a Senate subcommittee studying international trade, urged a new appraisal of U.S. policies toward Cuba in view of the fact that the Cuban Government, as he sees it, is "playing the Communist game." He added:

"The time has come for overall strategy as to what we're going to do about Cuba."

On reaching Panama City, Senator SMATHERS made a further comment. He declared: "In Cuba, they have a government which has been following a strictly dictatorial line. The steps Castro has taken are identcal with the steps Hitler took in Germany."

In Buenos Aires, the influential newspaper La Prensa said flatly a couple days ago that the Castro regime in Cuba is a dictatorship. There have been similar comments from other Latin American newspapers, but there is as yet no concerted planning among these countries on what to do about the Communist infiltration that has, for instance, made Castro so cocky in Cuba and so indifferent to the pleas of other governments in this hemisphere.

For the problem is not solely the concern of the United States. It involves a direct threat to all Latin American countries. The Organization of American States is really the forum where the whole situation should be discussed publicly, but, before any action can be taken by it, there will have to be a good deal of informal private consultation between the principal governments. Meanwhile, President Eisenhower has asked a special study group, which includes Secretary of State Herter and Dr. Milton Eisenhower, to come up with some program or plan for dealing with the Cuban situation.

Adequate Housing for Elderly Remains a Major Problem Facing Older Citizens

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, January 22, 1960

Mr. NEUBERGER. Mr. President, the Senate Subcommittee on Problems of the Aged and Aging is currently conducting a detailed study of problems facing our older citizens.

One of the subcommittee's major preliminary findings is that a substantial segment of the older population can only afford low-income housing, much of which will have to be subsidized by the Federal Government.

This fact is well illustrated by citing the problem faced by my home city of Portland, Oreg.

Portland has the largest per capita old-age population of any U.S. metropolitan city. A survey by the Portland Housing Authority last summer showed that 3,750 persons on old-age assistance were housed in substandard housing. Since that time, 400 more residents of Portland have reached the age of 65.

Portland is attempting to remedy this situation, just as are numerous other cities which face similar problems. The magnitude of the problem places great financial burden on municipalities. Progress is slow.

Last year Congress approved a new housing-for-the-elderly program. It provided for mortgage insurance and direct loans to help finance new housing projects. No funds were appropriated last year to carry out the direct loan section.

Local government cannot adequately solve this problem without some help. The Housing Act of 1959 indicated the belief of Congress that Federal assistance should be strengthened. We must work to make that law effective through provision of needed funds and insurance of efficient implementation which will guarantee that its intent is carried out.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article describing Portland's housing-for-the-elderly problem, and its efforts to solve it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, Jan. 17, 1960]

LOW-COST HOUSING NEEDED FOR OLDER PERSONS

(By Marge Davenport)

The problem of adequate low-cost housing for the aged in Portland, like Topsy, continues to grow.

As a result of last August's survey by the Portland Housing Authority that revealed 3,750 persons on old-age assistance housed in substandard housing, a new 10-story apartment-type development is being planned that will provide 120 low-cost homes for old folks. However, during the past 6 months about 400 more Portlanders have turned 65.

Of course not all of these will need a place to live because they have reached the age of 65, but it is safe to estimate that retirement and limited incomes will force an increasingly large number to seek low-cost homes. Housing authorities agree that Portland, with the largest per capita old age population of any U.S. metropolitan city, and less public housing than any metropolitan city of comparable size, has a fast growing problem.

PROBLEM DEPLORABLE

This deplorable problem still finds thousands of Portland's senior citizens living in unhealthy, cold, drafty buildings, with unsafe stairways; buildings with vermin, rodents, debris and filth; buildings with inadequate plumbing or situations where too many people share a dirty, poorly lighted toilet facility.

Elderly persons of low income obviously cannot afford to live in retirement homes requiring substantial deposits and high-level rents. The average income of persons covered by the housing survey was $99.33 per month. Many oldsters on social security or insurance benefits are living on much less than this. A recent U.S. Department of Health figure shows an average total income of old persons in Oregon to be $77.15 per month. Rentals that these oldsters can afford to pay run from $10 per month to $45 per month (maximum rent allowed pensioners in Multnomah County by welfare).

NO HELP FOR SOME

A bill which passed the last session of Congress, designed to alleviate the housing situation, has not brought housing help to oldsters. Locally the first builder to take advantage of the 100-percent financing plan announced that rentals would range from $90 to $171 on new units for older persons.

Since last August's survey, a few oldsters in substandard dwelling, or those displaced by urban renewal, freeways, and other public works projects, have been relocated in existing public housing facilities. But these spaces are limited, and all units are full. A total of 96 elderly homes is provided in the total existing public housing dwelling units.

While city officials and housing authorities agree that the new apartment project scheduled soon for Portland's downtown west side will merely scratch the surface in meeting the critical need for decent, safe, and sanitary places for old folks to live—they do feel that it is a move in the right direction.

MAYOR TAKES HAND

Two years ago Mayor Terry Schrunk asked that an old persons' housing survey be made. Although the mayor feels that private enterprise should always provide housing if possible, he is aware of the critical shortage of adequate low-cost places for old people.

The new proposed 10-story structure will be a combination project with a total of 170 dwelling units, with 120 for elderly and 50 units for small families with preschool children.

According to Executive Director Gene Rossman, of the housing authority, oldsters will be housed in a wing of the building away from the family units. "But having the families there takes away the stigma of 'old folks' home' and makes the project more economically feasible," Rossman said.

Patterned closely after a similar and highly successful project in Cleveland, Ohio, the apartment will also include an area for a community service center available to tenants and others living nearby.

FAMILIARITY DESIRED

With the greatest concentration of old age assistance recipients in inadequate housing in the downtown Portland area, the new project was planned to be built as closely as possible to this concentration. Old people do not like to move away from familiar surroundings, friends, churches and stores to which they are accustomed.

A preliminary survey completed among these people this week, shows that at least 750 persons would like to move into the proposed 120 units when they are completed.

But what solution is there for the 3,500 others on old age assistance, and the many uncounted others with low incomes, who will still be in substandard housing after their more fortunate neighbors fill these 120 proposed apartments?

Senator MCNAMARA, who has made a study of the problems of the aging, recently said, "The country has not taken enough time and thought for the problems of its older citizens. No one is asking for a bed of roses for oldsters, but they have every right to expect and we have every moral obligation to insure them, a meaningful and adequately secure existence in their later years."

Ukrainian Independence Day

SPEECH
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. FALLON. Mr. Speaker, the Ukrainian people have waged an uphill fight for their right to freedom and independence. They finally attained their goal 42 years ago by proclaiming, on January 22, 1918, the establishment of the Ukrainian Republic in their historic homeland. Though that budding and promising republic did not last long and was ruthlessly shattered by Communist forces of destruction 40 years ago, and though since then the Ukrainian people have been subject to the most intolerable of tyrannies in their homeland, still they have not given up hope for their eventual liberation from the clutches of Communist rule. On this 42d anniversary of their independence day I gladly join all Ukrainian-Americans and voice the hope that the Ukraine will gain its rightful place among independent and sovereign countries.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Anniversary of the Birth of Robert E. Lee

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. ROBERTSON. Mr. President, on Saturday, January 23, the senior Senator from South Carolina delivered a stirring address in Statuary Hall commemorating the 153d anniversary of the birth of Robert E. Lee, general of the Confederacy.

Senator JOHNSTON, the able chairman of the Senate Post Office and Civil Service Committee, was invited to deliver this address by the United Daughters of the Confederacy, and I commend the UDC in their choice of a speaker.

Senator JOHNSTON is an outspoken defender of the rights of States, and one who carries on today in our mutual struggle to preserve in our Nation the principles to which Lee dedicated his life.

Mr. President, I ask unanimous consent that this address by Senator JOHNSTON be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR OLIN D. JOHNSTON COMMEMORATING THE 153D BIRTHDAY OF GEN. ROBERT E. LEE IN STATUARY HALL, THE CAPITOL, WASHINGTON, D.C., JANUARY 23, 1960

Madam President and Daughters of the Confederacy, one approaches a discussion of the life of Robert E. Lee in an audience of this character with a feeling of great satisfaction and deep reverence. To again be honored with your invitation is a source of no little personal gratification to me.

Robert E. Lee was a direct descendent of the famous Lee family which played such a prominent part among the Founding Fathers of our Nation. Richard Henry Lee, one of his uncles, as a Delegate from Virginia, signed the Declaration of Independence and also the Articles of Confederation. In fact, Richard Henry Lee was the author of the resolution at the Virginia Convention which resulted in the Articles of Confederation.

Robert E. Lee's father was the distinguished Revolutionary War hero, Henry Lee, a bosom friend of George Washington. His father is better known as "Light Horse Harry" because of his extraordinary exploits during the Revolution. As a consequence of this service, Lee's father became a major general in the U.S. Army. He later served as Governor of Virginia and as a Member of Congress. The Congress selected Lee's father to deliver their eulogy to George Washington upon the latter's death. It was he who was the author of the time-honored reference to Washington as the man "first in war, first in peace, and first in the hearts of his countrymen."

The distinguished ancestry of Lee stood him in good stead both as a southerner and as an American. He is now loved by men of good will in both the North and the South.

Theodore Roosevelt had as one of his aides Col. Fitzhugh Lee, a nephew of General Lee. President Roosevelt remarked about the general as follows:

"This Nation is big enough to revere the name of Robert E. Lee without sectional distinctions. He is no longer southern; he is American, and he belongs to the Nation, not to the South alone."

As a southerner, I am proud to acknowledge a debt to Mr. Roosevelt for the use of those words. It gives us heart to know that out of the blood and sorrow and suffering of war has come, at last, a healthy, mutual respect—yea, admiration—for the man on both sides of the Mason and Dixon line.

It is a trait of our race well to be glorified that we possess the inherent and cardinal virtues of forgiveness and forgetfulness.

There is a noble page in our history we will not forget. That was the last sad encounter between General Lee and General Grant at Appomattox. Lee, the highborn knight, the flower of chivalry, and the best the South could produce, met Grant, the plain man of the plain people of Ohio. Lee was there—in the words the Daughters of the Confederacy engraved on the stone marking the spot of surrender, which say:

"Here on Sunday, April 9, 1865, after 4 years of heroic struggle in defense of principles believed fundamental to the existence of our Government, Lee surrendered 9,000 men, the remnants of an army unconquered in spirit, to 118,000 men under Grant."

From the pen of a Union officer who accompanied General Grant to General Lee's headquarters on the day of surrender, we have a moving account of what transpired on that fateful day. Grant, upon entering General Lee's room, extended his hand, saying, "General Lee." The two shook hands cordially. The conversation started with General Grant saying, "I met you once before, General Lee, while we were serving in Mexico." "Yes," replied General Lee, "I know I met you on that occasion and I have often thought of it."

After a brief reminiscence of the Mexican campaign, in which General Grant was a captain and General Lee a colonel, General Lee requested General Grant to write out the surrender terms. After admiring the handsome uniform and sword worn by General Lee, General Grant said it would be an act of humiliation to require the officers and men to surrender their swords and side arms or their personal baggage and horses.

General Lee upon reading the terms of surrender was greatly relieved when he read the passage permitting his men to retain their horses and baggage. He said with a warmth of feeling:

"This will have a very happy effect on my men."

As General Lee left his office and mounted his famous Traveler, General Grant moved toward him and saluted. Returning the salute, General Lee left in a slow trot to break the sad news to the brave men under his command. It is said that General Grant sent an order to the Union soldiers that no salutes be fired by them, for, he said:

"The war is over; the rebels are our countrymen again; and the best sign of rejoicing after victory will be to abstain from all demonstrations in the field."

In this brief talk, ladies, which you were gracious enough to invite me to give, I shall not attempt to even give in summary a career and life so crowded with momentous historical events. The life and heritage of the man so overshadow all description that one would be presumptuous to feel otherwise. I am confident that you need little introduction to the subject matter.

Robert E. Lee was born January 19, 1807, at Stratford, the stately Lee Mansion in Westmoreland County. His background on his father's and mother's side was illustrious. His army service tempered the aristocracy of his birth. He never claimed preference or prerogative of birth or name. There was a cast to his mind, an elevation of spirit and a loftiness of thought which gave him a wholesomeness of spirit and action. He was drawn to the right as the needle is to a magnet. He never had to meditate on the truth; he spoke it by nature. Unconsciously, he set up as his life's model his father's distinguished friend, the illustrious George Washington. Lee followed that example as an humble aristocrat in thought, word, act, and deed.

Shortly after General Lee's death, a most distinguished Southern Senator, in an address before the Southern Historical Society, said:

"When the future historian shall come to survey the character of Lee, he will find it rising like a huge mountain above the undulating plain of humanity, and he must lift his eyes high toward Heaven to catch its summit. He possessed every virtue of other great commanders without their vices. He was a foe without hate; a friend without treachery; a soldier without murmuring. He was a public officer without vices; a private citizen without wrong; a neighbor without reproach; a Christian without hypocrisy, and a man without guile. He was Caesar without his ambition; Frederick without his tyranny; Napoleon without his selfishness, and Washington without his reward. He was obedient to authority as a servant, and royal in authority as a true king. He was gentle as a woman in life; modest and pure as a virgin in thought; watchful as a Roman vestal in duty; submissive to law as Socrates, and grand in battle as Archilles."

Lee was a military genius. He graduated from West Point, second in his class, at the age of 18 years. No one need labor the point of his military excellence. His record equals history's greatest. Distinguished historians, professional military men, as well as laymen, vie with one another in their praise of his military achievements.

The late James Ford Rhodes, the scholar and historian from Ohio, said of Lee:

"Drawing from a knightly race all their virtues, he had inherited none of their vices. Honest, sincere, simple, magnanimous, forbearing, refined, courteous, yet dignified and proud, never lacking self-command, he was in all respects a true man."

When the War Between the States became evident, Lee was offered the command of the Union forces. He resigned his U.S. Army commission and said:

"With all my devotion to the Union, and the feeling of loyalty and devotion as an American citizen, I have not been able to make up my mind to raise my hand against my relatives, my children, and my home."

We cannot know the agony of spirit which he must have suffered in his decision to leave the Union and remain with those on his native soil of Virginia. He must have paced the broad pillared veranda of Arlington House struggling with soul and mind as he saw the Capitol's dome. We must recognize in that hour of trial one of the finest products of the American way of life. As the years go by, surely we shall see in larger measure that such a life cannot be judged in a partisan measure or tone. All shall come to look upon him as the English now look upon Washington.

Sir Frederick Maurice, an English major general, said of General Lee:

"As he rode along lines, hundreds of his devoted veterans pressed around the noble chief, trying to take his hand, touch his person, or even lay hands on his horse, thus exhibiting for him their great affection. The general then, with head bare and tears flowing freely down his manly cheeks, bade adieu to his army. In a few words he told his brave men who had been so true in arms to return to their homes and become worthy citizens."

Such was part of the farewell to the army of the South. It is said that when Lee returned to Richmond after the surrender, the people flocked to cheer him. He was received with great acclaim by men and women alike. The record, the character of the man, had placed him forever in the hearts of his comrades and his people irrespective of war's misfortunes.

The integrity, humility, and devotion to duty of General Lee are among his great characteristics. Many have appraised his service after the war to be more important than his direction of the South during that struggle. He returned to his wrecked and prostrate homeland. By precept and example he called his fellow citizens to duty to their State and Nation. Among other things, he said:

"I have led the young men of the South in battle; I have seen many of them die on the field; I shall devote my remaining energies to training young men to do their duty in life."

General Lee accepted the presidency of Washington College at Washington, Va., which had been almost totally demolished by the ravages of war. Cheerfully, resolutely and with determination he set about his appointed task of building the character and educating the men privileged to attend the college which now bears his name along with that of Washington.

Lee's greatness is exemplified in his farewell message to his troops. That also becomes a good note on which to end this discourse. The great General we all love and respect so much said:

"After 4 years of arduous service, marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources. I need not tell the survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them; but, feeling that valor and devotion could accomplish nothing that could compensate for the loss that would have attended the continuation of the contest, I have determined to avoid the useless sacrifice of those whose past services have endeared them to their countrymen. By the terms of the agreement, officers and men can return to their homes and remain there until exchanged. You will take with you the satisfaction that proceeds from the consciousness of duty faithfully performed; and I earnestly pray that a merciful God will extend to you His blessing and protection. With an increasing devotion to your country, and a grateful remembrance of your kind and generous consideration of myself, I bid you an affectionate farewell."

A Tax the States Need

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. PELLY. Mr. Speaker, when one finds support for his own thinking it is not displeasing—the more so if the expression of similar views to one's own thinking emanates from a recognized and influential newspaper. So last week when I read an editorial in the New York Times entitled "A Tax the States Need," I was highly gratified for I have long favored strengthening local government by transferring certain sources of income from the Federal Government to the States.

In this connection, on January 19, 1960, I expressed approval of Governor Rockefeller's proposal that Congress allow the Federal excise tax on telephone service to expire and I inserted a table showing the revenue by State and region which could become available to the various States to meet going costs.

Following is the editorial referred to above:
